> "No director or officer of an insurance corporation doing business in this State shall receive any money or valuable thing for negotiating, procuring, or recommending any loan from any such corporation, or for selling or aiding in the sale of any stocks or securities to or by such corporation." [Note that Mr. Depew's confessed contract or guarantee was "to form a new company and issue bonds, which bonds they would deliver to us (the Equitable) for the property if he would turn it over to them."]
>
> "Any person violating the provisions of this section shall forfeit his position as such director or officer, and be disqualified from thereafter holding any such office in any insurance corporation."

There are, finally, other grave complaints and legal charges against Senator Depew as a director of the Equitable, in regard to which his letter is completely silent. In the Attorney-General's suit, it is set forth that the directors had "wastefully and improvidently procured and caused" the payment of salaries "largely in excess of the value of the services rendered." This squints hard at Mr. Depew, since he has admitted that it was his eagle eye which first perceived that James H. Hyde was worth $100,000 a year to the Equitable as vice-president. He says nothing whatever about that now, possibly because his counsel have advised him to wait and see if the courts hold him indi-

vidually liable for his waste and improvidence as a director. If they do, we have not a particle of doubt that Senator Depew will pay up, and with the "magnificent gesture" of Henry James's mendicant accepting money. But there is another specification by the Attorney-General which the Senator must know looks his way. It is that the directors "wastefully, improvidently, and improperly procured and caused . . . to pay excessive, improper, and unwarranted sums of money to various attorneys and counsellors at law." If this does not mean Mr. Depew's annual retainer of $20,000, what does it mean? He confessed that he could not well draw up an itemized account of services rendered. The public would gladly hear him again on this matter. Paul Morton ruthlessly cut off the Depew retainer; but if the Senator can now convince the committee and the courts that he earned thrice his fee, he should again receive his own with usury. Meantime he must in bitterness of spirit search even the partisan press in vain for apology or support, much less for the old-time adulation, in this crisis.

"A DISEASE OF CIVILIZATION."

The old question whether insanity increases as civilization advances is still open. It is a part of that larger problem, whether evolution is to be interpreted in terms of optimism or of pessimism. Many reasons, both theoretical and practical, have been given for supposing that the number of the insane is increasing. It has been argued that the nervous system of man is being developed disproportionately to the rest of his bodily organism. The body of the brute is adapted to its instincts; the body of man is an old bottle filled with the new wine of highly specialized intelligence and emotion. It has been supposed that the progress of evolution towards a happy ideal is interrupted and impeded more and more by dissolution and degeneracy. This doctrine, defended very skilfully by such writers as Maudsley and Nordau, has been partially justified by popular opinion and by statistics.

We are told that the industrial and commercial life of the present is so intense and rapid that even strong men bend and break under the pressure. There is work without recreation, excitement without rest, gayety without pleasure—in short, nervous expenditure without corresponding satisfaction. If the distribution of wealth and power be more equal now than in former days, there are men who are richer now than at any other period of history; and the moral history of the poor is deepened by examples of extravagance and luxury brought home to them by daily experience and the daily press. There is a struggle and stress in social life unknown in other times. Men, women, and children are overworked. There are sweat-shops, unwholesome factories, and long hours. Labor is so specialized that the joy of complete achievement is impaired. The rewards of success are great, but competition is greater, and the attainment of success more difficult.

Consequently, fatigue and ennui are more widespread than ever before. They predispose men to nervous disorders. Fatigue, disease, and sadness invite intemperance. It is not the intemperance of a former generation—the drunkenness of the three-bottle squire or of the luxurious rich. It is the intemperance of the poor, of the hard-worked men and women who live from hand to mouth, and who seek to bring a momentary idealism into their lives by an artificial stimulus. There are preparations of drugs innumerable, advertised everywhere, to add fuel to the fire beneath the cracked boiler, to urge on the jaded and depressed to morbid activity. Cities like flaming lamps attract the multitude like moths. Bad sanitary conditions and crowded tenements beget weak bodies and weak minds, breed immorality and consequent disease. Thus the idea has become more or less prevalent that society is going down hill as fast as heredity, self-indulgence, dissipation, and hard work can make it go.

But this pessimistic conclusion is greatly weakened by other considerations of equal importance. The statistical reports are particularly misleading. As Fere says, the greater the improvement in the care of the insane, the more gloomy the statistical outlook. Almost all those who now suffer from mental diseases are sent to asylums. Indeed, for many kinds of such disorders, there are private asylums and sanitariums to which people go as they would to a quiet hotel. Better accommodations for the patients, a greater number of institutions, the frequency of cures, the tendency to regard insanity as a disease like any other disease, and not as a moral obliquity—all these causes make people more ready to go or to send their afflicted relatives to public or private asylums for better care; thus the number of patients under treatment is increased, though there is no real increase in the number of the insane.

It is well known that the more intellectual classes, and even those who are hard-worked mentally, are not the groups from which most of the inmates of asylums are recruited. The alliance of "great wits with madness" and the eccentricities of men of genius are phenomena too uncommon to be made the basis of a wide generalization. The spread of insanity among certain races and the geographical distribution of insanity in certain regions show how irregular are its conditions. For example, previous to the civil war, insanity was extremely rare among the slaves of the South, but since their emancipation, they have come into competition with the whites, and either for this reason, or because of certain modifications in their life and habits, insanity has been steadily increasing among the negroes. The Indians, on the contrary, have been but little troubled by nervous disorders, either originally or after having been brought under civilizing influences. The energetic competition and rapid development of America seem to have had but little direct influence in producing insanity. Probably the Middle West is the region where life is most active and business most absorbing; but we find that the geographical distribution of nervous diseases is such that the Northeastern States from Maine to New York show an abnormally large proportion of insane patients, that the number decreases as we go farther west, until California is reached, where there are more people, proportionately, in asylums than in any other part of the United States.

Whatever view be taken of the relation of insanity to civilized life, it is at least encouraging that many of the horrors which used to be associated with the treatment of the insane have disappeared. We shall never see a return to the age described by Plato when madness was regarded as a divine inspiration and a blessing; but we may take some comfort from the theories of Moreau and Nisbet, who look upon insanity as a condition of true genius. Thus even the eccentricities of the great, who show symptoms of perversity and certain varieties of mania, may be forgiven when we reflect that the most excellent as well as the worst of the human family may be those who are touched with ecstasy.

ENGLISH EVANGELICALISM.

OXFORD, August 25, 1905.

Evangelicalism was for some seventy years or more—say, broadly, from 1760 to 1835—the religion of the vast majority of serious Englishmen; it created and governed that moral anomaly, "the religious world." Even as late as the Palmerstonian era (1855-1865), the Evangelical party was a power in the land. At that time there existed a sort of alliance between men of undoubted piety, such as Lord Shaftesbury, and a Premier who, though according to his lights a sincere English patriot, never affected to be anything else than an able man of the world, zealous for the greatness of his country. Forty years have passed since the death of Palmerston. Evangelicalism has become a thing of the past. This assertion is no denial of the fact that many Evangelical ideas, belonging as they do to permanent elements of English Protestantism, still exert a great effect. Still less is it a disparagement of the work performed by the Evangelical movement. What is meant is, that this movement, with its defects and its virtues, may well be examined as a thing

belonging to a period which has passed away.

Before, however, any man attempts to summarize the characteristics of a religious movement, he should remember that every appeal to the moral, the religious, or the spiritual emotions or beliefs of mankind must, if it is successful, share some of the characteristics of the age which it attempts to reform. Innovators have always much in common with their opponents, though this common element is the thing to which reformers and anti-reformers are in general equally blind. Teachers, or preachers, who speak a tongue which no man can interpret, of necessity make no converts. If we ask why Roger Bacon could not open a path for science as effectively as Francis Bacon, or why Wycliff failed where Luther succeeded, the answer is as certain as it is melancholy. The teaching of Roger Bacon in the thirteenth century and the reformation attempted by Wycliff in the fourteenth century missed their mark because few were the disciples who could understand the scientific or religious ideas of the master. Evangelicalism, on the other hand, partook of the weakness no less than of the strength of its age. It was a creed which, during the latter part of the eighteenth century, well met the wants of serious Englishmen. The preachers who, in the England of the eighteenth century, denounced the frivolities, the amusements, and the vices of their time, and by their denunciation reinvigorated practical religion among a society which seemed (though the appearance was to a great extent delusive) full of corruption, were, from one point of view, men of their time. Evangelicalism was closely connected with such eighteenth-century ideas as had taken hold of the English people. This consideration accounts for some, at least, among the characteristics of the Evangelical movement which to students of to-day are almost patent defects.

English Evangelicalism was marked by that prosaic element which underlies the thought and to some extent the sentiment of the eighteenth century. Earnest religious teachers were necessarily men capable of vivid enthusiasm; but enthusiasm or ardent faith is not the same thing as strong imaginative capacity. The fervour, the eloquence, and, above all, the dramatic power of Whitefield, achieved unrivalled rhetorical victories, and assuredly turned or converted whole crowds from darkness to light; but, for all this, no Evangelical writer possessed the imaginative power which lights up even the terrors of Bunyan's Pilgrim with a sort of poetic glow. That teachers whose creed was, after all, a form of Puritanism, should think little of imaginative writing such as poems, dramas, or novels, was almost a matter of necessity; and although it must have had the inevitable effect of blinding Evangelical converts to the æsthetic side of life, and must, moreover, have caused a division between them and moralists, such as Johnson, whose religion, colored as it was by High Churchmanship, allowed him to feel intense interest in polite letters, the common sense and prosaic view of existence natural to men imbued with eighteenth-century ideas and acceptable to business-like Englishmen almost of necessity led to a distrust of everything which could be called mystical.

Though, again, it is the vulgarest error to suppose that the leading Evangelical clergy were men lacking the education attainable in their time in England by industrious students, yet they assuredly undervalued the pursuit of knowledge. They suffered in this matter alike from their opposition to and their sympathy with ideas of their time. Eighteenth-century enlightenment, allied as it was with religious skepticism, inevitably aroused their opposition. The very fact that a "free-thinker" should have become equivalent to an infidel, and an unbeliever have been only too easily identified by religious teachers with an atheist, is significant; but if preachers bent on saving souls had little sympathy with the intellectual movement of their age, it is equally obvious that they derived from their time that aversion to the so-called historical method which was shared at once by Voltaire and by Voltaire's most strenuous opponents. This aversion, however, made the study and indeed the understanding of Biblical history an impossibility; and much of the doctrinal narrowness, as well as of the intolerance in matters of Biblical criticism, which may fairly be imputed to the Evangelicals, was due, in part at least, to intellectual deficiencies fostered by the anti-historical spirit of the eighteenth century. It is, at any rate, noteworthy that the High Churchmen who, from 1834 onwards, attacked the dominant religious opinion of their day, found that their most effective weapons were an appeal to the æsthetic sentiment which has always been closely connected with High Churchmanship, and to such aspects of history as exalted the authority of the Church and told against that belief in the verbal inspiration of the Bible which was cherished by the leading representatives of Evangelicalism. Add to all this one cause of weakness which arose from causes peculiar to England. Between the orthodox Nonconformist, such as Robert Hall and Isaac Taylor of Ongar, on the one side, and Venn of Huddersfield and Simeon on the other, there was little difference of fundamental faith, but the Evangelicals properly so called, whether clergymen or laymen, were members of the Church of England; they were also many of them Tories. A fusion between Evangelicals and orthodox Dissenters was therefore, from political causes and historical traditions, an impossibility. Unnatural division has been the cause of unnecessary weakness.

At the beginning of the twentieth century the deficiencies of Evangelicalism are obvious. They explain how it is that a movement which effected so much for England has, like the Puritanism of the seventeenth century, missed its mark. But at this moment it is of far more consequence to note how great were the results in fact worked by Evangelicalism.

To the Evangelical teachers is due an extraordinary revival of practical religion. Wesleyans who gradually separated from the Church, Evangelical clergymen, such as the Venns, who worked within the Church, did in fact accomplish a moral reform the results of which have not perished. Constitutional historians are constantly perplexed by this question: How did it happen that, whilst the government of England was from 1688 onwards all but avowedly based on a system of corruption which often took the form of almost open bribery, yet, from some influence of which it is hard to assign the cause, the public spirit of England improved as time went on; and whilst the anomalies of the Constitution remained unchanged, the moral tone of the country so changed as to reform the working of the Constitution? How was it, to put the same inquiry in another form, that a generation which had been guided or corrupted by Walpole, was succeeded by a generation which adored Pitt; how was it that Chatham handed on his ideal of public spirit to his son; how did it happen that, before the reign of George III. had come to an end, a kind of corruption had become impossible which, when he ascended the throne, statesmen might still practise almost without blame? The answer surely is to be found in the increasing influence of a middle class, the members of which had been aroused by Evangelical teachers to a new sense both of private and of public duty.

Nor did the service rendered to English public life stop here. Those who ask why it was that the passions of the French Revolution evoked on the whole so little sympathy among the English middle classes, find a true though partial answer to their inquiry in the consideration that the Evangelical revival enlisted under the standard of religion the Englishmen who felt most keenly the enthusiasm of humanity. Philanthropy which, on the Continent, was the opponent, became in England the ally, of religious enthusiasm. This is not the place in which to trace the close and intimate connection between English humanitarianism and English Evangelicalism, or to do more than to just note the extent to which, in works of humanity, disciples of Bentham stood side by side with disciples of Wilberforce or of Simeon. So close, however, was this connection that it is absolutely impossible to say whether, towards the end of the eighteenth and during the first half of the nineteenth century, philanthropy or religion did most to promote every effort for the diminution of human suffering. The abolition of the slave trade and the emancipation of the negroes are but the crowning triumphs of a policy the lines of which were marked out as much by the religious as by the philosophical reformers of England. To Evangelicalism, then, may be justly ascribed a revival of earnest, practical piety amongst the English middle classes, the moralization of English public life, and the triumph of English humanitarianism.

AN OBSERVER.

Correspondence.

AN UNINTENTIONAL INJUSTICE.

TO THE EDITOR OF THE NATION:

SIR: In to-day's *Nation* is printed a paragraph concerning the volume recently issued by us for Prof. F. W. Bain, 'A Digit of the Moon.' The writer of the paragraph says: "It does not appear whether the present edition is original or pirated."

We are surprised that any writer having to do with the literary department of the *Nation* should not have better knowledge of the uniform policy of our house than to make the implication conveyed in the

above words. We will now state for his information that, since the date of its foundation by the late G. P. Putnam, our firm has maintained (in advance of and irrespective of any restrictions of international copyright) a consistent routine in issuing American editions of no books by living authors, excepting under arrangement with these authors or their representatives. It is our contention that, with such a record for over half a century, the imprint of the house ought to be sufficient guaranty that a book bearing its imprint is *not* a "piratical publication."

The four stories comprising the volume in question were first printed in Oxford in four separate volumes. The author, Prof. F. W. Bain, now holds a chair in the College of Poonah, British India. He was for a number of years a fellow of All Souls College, Oxford, and is a personal friend of the writer of this letter. It was our suggestion to Professor Bain that we should be interested in printing in one volume, and in more attractive typographical form than that used for the original issue, the first three stories as published in Oxford. Professor Bain asked us to delay the publication of our American edition until he could complete the fourth story, which is now included in our volume.

We had requested the author to prepare for this volume, addressed to American readers, a general introduction. He decided, however, that the prefaces printed with the four stories as originally issued in the separate volumes ought to meet the requirements. We have, therefore, no preface for the *volume*. The preface which caused the perplexity to your reviewer, bearing date of 1898, has to do simply with the story "A Digit of the Moon," which gives its title to the volume.

G. P. Putnam's Sons.

New York, August 31, 1905.

[The word was ill chosen, for we meant not to impugn the publishers' good faith, but to express surprise that nothing in the volume betrayed the fact that it was a reprint of stories which originally appeared some years ago in England. In this sense, "it does not appear [in the volume before us] whether the present edition is original or a reprint" would have been a better phrase, as corresponding to our thought.—Ed. Nation.]

THE HEATH PAPERS.

To the Editor of The Nation:

Sir: I am greatly obliged to you for calling attention to the inexplicable blunder in printing Part III. of the Heath Papers, which had not before been brought to my notice. Through the carelessness of some one in the printing-office the electrotype of page 153 of Part II. was used in printing page 153 of Part III., instead of the plate which had been made for the new part. Of course the volumes which have been already distributed will be immediately recalled, and others printed from the proper plates substituted for them, without expense to any one who has received the misprinted volume.—Very truly yours,

Charles C. Smith.

Massachusetts Historical Society, Boston, September 1, 1905.

Notes.

From Houghton, Mifflin & Co.'s fall list we select 'James Russell Lowell,' by Ferris Greenslet; 'Charles Godfrey Leland,' by Elizabeth Robins Pennell, in two volumes; 'Sidney Lanier,' by Edwin Mims; 'James G. Blaine,' by Edward Stanwood; 'American Literary Masters,' by Leon H. Vincent; 'The Chief American Poets of the Nineteenth Century,' edited by Curtis Hidden Page; 'The Words of Garrison: A Centennial Selection, 1805-1905'; 'The Poems of Trumbull Stickney'; Byron's Complete Poetic and Dramatic Works, edited by Paul Elmer More; 'The English Works of George Herbert,' newly arranged, annotated and considered by Prof. George Herbert Palmer; 'The Love Poems of John Donne,' edited by Charles Eliot Norton; 'The England and Holland of the Pilgrims,' by Morton Dexter; 'A Short History of Italy,' by Henry D. Sedgwick; 'The Tsar and the Autocracy,' by a member of the Imperial Court; 'The Valerian Persecution,' by Patrick J. Healy; 'The Development of Religious Liberty in Connecticut,' by M. Louisa Greene; 'Mount Desert: A History,' by George E. Street; 'A History of the Town of Middleboro, Mass.,' by Thomas Weston; 'A Sketch of Etna and Kirkersville, Licking Co., Ohio,' by Gen. Morris Schaff; 'Louisiana,' by Albert Phelps, and 'Rhode Island,' by Irving B. Richman, in the "American Commonwealths Series"; 'The Proceedings of the International Congress of Arts and Science at St. Louis, September, 1904,' in eight volumes; 'Part of a Man's Life,' by Thomas Wentworth Higginson; 'Ways of Nature,' by John Burroughs; 'Two Bird-Lovers in Mexico,' by C. William Beebe; 'English Hours,' and 'The Question of Our Speech' (including 'The Lesson of Balzac'), by Henry James; 'The Fixed Period,' by William Osler; 'Noah's Ark,' by E. Boyd Smith; and Holmes's 'One Hoss Shay,' illustrated by Howard Pyle.

A. S. Barnes & Co. will publish during the autumn 'The Journeys of La Salle and his Companions, 1668-1687,' in their original narratives edited and introduced by Prof. Isaac J. Cox of the University of Cincinnati, in two volumes; 'The Voyages and Explorations of Samuel de Champlain, Narrated by Himself,' newly translated by Annie Nettleton Bourne, with an introduction by Prof. E. G. Bourne; and 'The Spanish Explorers,' a uniform edition of the original narratives of De Soto, Coronado, and Cabeça de Vaca, selected from "The Trail Makers."

During the present month, McClure, Phillips & Co. will bring out 'The Torch,' Prof. George E. Woodberry's series of Lowell Institute lectures in 1903. The last four lectures relate to Spenser, Milton, Wordsworth, and Shelley.

Dodd, Mead & Co. will publish during the present season a history of the Declaration of Independence, by J. H. Hazleton, and the Minutes of the Committee of Safety of the County of Tryon, N. Y., 1774-1775, edited and illustrated with portraits, views, and facsimiles.

Further announcements from Macmillan are 'The Character of Renaissance Architecture,' by Prof. Charles H. Moore of Harvard; 'How to Collect Books,' by J. H. Slater; 'A Handbook of Physiology,' with three-color plates, by Dr. Austin Flint, and 'The Italian Lakes,' painted by Ella DuCane, described by Richard Baghot.

Albert Brandt, Trenton, N. J., will publish 'The Building of the City Beautiful,' a social vision, by Joaquin Miller, and 'Cape Cod Ballads, and Other Verse,' by Joe Lincoln.

A 'Motor Year-book,' with many illustrations and diagrams, and a chapter on the law of motoring, is forthcoming from Methuen & Co., London.

The Grimm Society of Cassel has decided to publish its rich collection of unpublished letters and other documents of the Brothers Grimm, with a promise of throwing considerable light on the history of the learned world in the last century. The first volume is to appear early next year.

In five years, even in Edinburgh, things have moved. Otherwise Mr. John Geddie's 'Romantic Edinburgh' (E. P. Dutton & Co.) might safely be commended as a suggestive guide or a meditative memory. But it is an untouched reissue under a new date, and still bears references to 1900 as the year of its origin. We noticed it when it first appeared.

For range of territory traversed and variety of adventure, 'The Personal Narrative of James O. Pattie, of Kentucky' (1824-30), just published in Cleveland by the Arthur H. Clark Co. among its "Early Western Travels," is, perhaps, unrivalled in that series. From the Missouri (near Omaha) to Santa Fé, the Gila River, the Colorado, the peninsula of Lower California, the headwaters of the Big Horn and Yellowstone, this adventurer and his father sought furs, and endured wounds and imprisonment from savages and Spanish Mexicans, in the true spirit of frontiersmen. The mere thought of the warlike and ferocious conditions among the Indians here displayed as existing less than seventy-five years ago in a region now traversed by railways, if still sparsely settled, is amazing. There are a few plates of the original editions of 1831.

Another meritorious reprint is of Sylvester Judd's 'History of Hadley' (Springfield, Mass.: H. R. Huntting & Co.), first published in 1863 and edited after the author's death by Lucius M. Boltwood. Judd was the father of his more illustrious namesake, the author of 'Margaret'; and was a diligent and painstaking antiquary. His compilation is replete with authentic information as to manners and customs, and is highly browsable. He tells on page 146 of a squaw who gave tidings of an Indian descent on Hatfield and the adjoining towns in 1675 (during King Philip's war), and was ordered by Capt. Mosely "to be tourne in pieces by dogs, and shee was so dealt withall." "The excessive cruelty and atrocity of the Indians," comments Judd, "their burnings, massacres, and tortures, exasperated the English, and sometimes led Christian men to act like merciless barbarians." At page 261 he records the hanging of Jack, a negro slave of Wethersfield, for house-burning, his dead body being then burnt in the same fire that consumed Maria, another black incendiary, alive. This was done in Boston in 1681. The present reprint is distinguished by an introduction, by George Sheldon, to disprove the legend of the regicide Goffe's apparition for the

defence of Hadley against the savages. He does strip it of all support, as Hadley was not attacked, but his argument is not very orderly or lucid. Of greater importance are an appendix bringing the town history down to date, an index to the History, and another to Mr. Boltwood's family genealogies, both new. There are also several pleasing and judicious photographic illustrations. A map might have been looked for. The town (native to Gen. Hooker) appears to have been fortunate in escaping a soldiers' monument.

We long ago announced the inception of an enterprise which was sorely needed, viz., an Index of Persons to the first fifty volumes of the *New England Historical and Genealogical Register*. There now lies before us Part 1, Volume I., of this Index—Aaciye—Bigland (Boston: New England Historic Genealogical Society). It agrees in form, of course, with the *Register*, and is in closely but clearly printed triple columns. Its making was directed by Mr. A. P. C. Griffin of the Library of Congress, and by Miss Edna F. Calder of Dedham, Mass., and the editor for the press is a Radcliffe graduate, Miss E. Louise Chapman. There will be eighteen parts in all, issued six yearly. Nothing more need be said to any who are interested in American genealogy. No public library should fail to procure this master-key to the incomparable *Register*.

No date is attached to the Routledge-Dutton one-volume edition from Ellis and Spedding of 'The Philosophical Works of Francis Bacon,' but if it be a reprint, the plates are in good condition. To bring all within 1,000 pages, fine print was indispensable, and one can only say that here is the matter for whoever has curiosity and eyesight to pursue it, from the 'Advancement of Learning' to the Essays.

It is a pity that Mr. Wollaston's illustrated 'Sword of Islam' (E. P. Dutton & Co.) cannot be more heartily recommended. It is an omnium-gatherum, having as a nucleus a previous volume, 'Half-hours with Muhammad,' and containing a very anecdotal account of Muslim dynasties, sects, theologists, etc. It consists largely of quotations, often unacknowledged, from most multifarious authorities, and is thus of very inconstant value. The student might find it a curious but unsatisfactory pastime to hunt its "sources," evidently largely European, but the general reader, for whom it is intended, will be sorely befogged. Yet there is a real need in English of some such broad and popular presentation, and this volume may stimulate an interest which it cannot satisfy.

M. Gaston Rouvier's 'La Nièce de M. Jacob Gaspard' (Paris: Charpentier) is a story of some sensational power, working itself out from a humorous description of the village of Niederfelden, which one easily places precisely six miles from the *gare* at Zurich, just at the covered bridge over the Sihl, between Lagnau and Gattikon. Whether there actually is such a village or not, the reader will with difficulty rid himself of the idea that there is, and that the characters of the story live there, droll as they are, and romantic as their doings become when the plot thickens. The usurer who seeks an election, the meeting of hero and heroine on a hill above the village, the country fête, the criminal accusation against a near relative of the heroine, and other like details remind one of 'La Grande Marnière' of Georges Ohnet; and the novel, in its humbler way, endures the comparison very well. We may add that it is entirely free from those distasteful things which are so apt to spoil French fun for us—with the single exception of one incident whose raw brutality might just as well have been veiled. M. Rouvier's characters talk a French that is highly amusing, and his own is not quite that of Paris. He writes "esbrousse" for *esbroufe*, "effiloquée" for *effilochée;* he hears a breaking mirror *tintant* and rustling silk *crisser*, etc.

In view of the lexicon difficulty which all teachers of Hebrew have to face, it may be worth while to draw attention to the Hebrew-German *Taschen-Wörterbuch* just added to the Langenscheidt series. It covers the vocabulary of Genesis, Exodus, Samuel, Kings, Psalms, Isaiah, about half of Joshua and Judges, and some other smaller portions, is evidently accurate and well printed, and costs, in cloth, only two marks. The forms are given very fully, but no passages, of course, can be quoted in its 300 small pages.

The *Deutsche Literaturzeitung* reports that Mommsen had entrusted the posthumous publication of his minor writings to Karl Zangemeister and Otto Hirschfeld. As the former predeceased Mommsen, the work devolved upon Hirschfeld alone, who has just issued the first volume of the new series. The contents are chiefly researches of a legal character, the number of separate articles being sixteen, dealing with problems of Roman and Egyptian law. Mommsen had himself already made a beginning of this collection. The second volume will contain his discussion of Roman jurists and Roman lawbooks; and the third, contributions to the history of Roman law.

We have received the fifth annual report of the commissioners of the Palisades Interstate Park, dated March 25. Steady progress is evidenced in the acquisition of new tracts, amounting last year to 438 acres, having a Palisades frontage of 9,500 feet, at a cost of $46,490. A profile map shows the present state of public and private holdings. There yet remains to be acquired a shore frontage of 17,710 feet.

Already several numbers have appeared of a German monthly, *Der Buddhist*, edited by Karl B. Seidenstricker, and published by the Buddistischer Verlag in Leipzig. The contents consist of original articles, translations, essays in apologetics, etc., intended to make the character and scope of Buddhism better known to the Western nations. It is accompanied by a supplementary sheet entitled "Die Buddhistische Welt," and promises to furnish valuable contributions to the comparative study of religions.

Female education in India received a significant impulse at a meeting recently held in London, at which the subject of early marriage was discussed wholly by Indians. The opening paper was read by a young Sikh Sirdar, and, though his supposition as to the origin of the custom was not accepted by some of the speakers, they all denounced it as a curse, whether considered from a physical or a moral point of view. In 1901 the number of wives under five years of age was more than a quarter of a million; between five and ten over two millions; while nearly seven millions were between ten and fifteen. There were, besides, nearly half a million widows under fifteen, of whom 20,000 were less than five. The life of misery to which these poor innocents are condemned, the hardship, the irksome penances, the unmerited shame, are inconceivable to Europeans, the speaker said, yet are enforced by Hindu custom. Reform has been attempted in the native States of Mysore and Baroda by the passing of mild measures of permissive legislation, but this course is not open to the Indian Government, as its policy is one of absolute neutrality in regard to religious customs, except when, as in the case of suttee, they are contrary to natural rights. The eradication of the evil, all agreed, can be accomplished only by female education. The influence of women is as powerful in the East as in the West, and the education of men only will do little towards the mental and moral development of the people, so powerless are they when confronted by the dead wall of female ignorance, prejudice, and superstition.

Oxford was the scene of a significant gathering when a joint conference of trades unions, coöperative societies, and educational authorities met there on August 12 to discuss measures for the promotion of the higher education of workingmen. The Dean of Christ Church presided, and the Bishop of Hereford offered a resolution urging the Board of Education to make inquiry as to the feasibility of enjoining compulsory attendance at evening schools to the age of seventeen. He maintained that the present truncated system of popular education in England involved an amount of waste so great as to constitute an act of national folly, and it was in the direction of continuous education of the people that he looked for the avoidance of this waste and the beginning of a wiser public action with regard to the well-being of the people.

The unemployed were one of the subjects discussed at the recent University Extension Meeting at Oxford. The problem, according to Mr. Masterman, who gave the opening lecture, was not how to treat the paupers or chronic unemployed, nor the casual class who worked only occasionally, but the periodic unemployed. By this term he meant the class which, when trade was good, were required, but when trade was bad were thrown out of employment. The fact must be faced that at intervals a considerable number of workmen would not be required; and when these could be provided for, the problem of the unemployed would be settled. In treating of the remedial side of the question, he warned his hearers not to be misled by the objection to any particular course of action that it was contrary to the law of nature or of political economy. It was for the intellectual part of the nation and not the political to provide some guidance in this matter.

Assyriologists will feel much interest in the cuneiform tablet which has just come into the possession of the University of Liverpool. It was found at Yurghât, north of the Halys, and obtained some months ago at Constantinople by Professor Sayce.

The long inscription upon it is written in the same tongue and form of script as the two Arzawa letters discovered at Tel el-Amarna. This fact is important, as it gives us a further clue to the situation of the land of Arzawa, with which the Egyptian court held intercourse under the Eighteenth Dynasty. Owing to its numerous Assyrian words and expressions, the new tablet will prove of assistance in explaining the Arzawa texts. In grammar and vocabulary its language is seen to be similar to that brought to light by Professor Sayce when recently deciphering the Hittite hieroglyphic monuments. We find Cappadocia described as "the land of the Hittites."

The Report of the Imperial Library in Tokio for 1904-5, in both Japanese and English, shows that, of the 226 581 books now on the shelves, 45,276 are European. Of 9,415 volumes added during the year, 1,109 were in Occidental languages. Of the eight classifications, that of history, biography, geography, and travels won the greater number of readers; the figures for Chinese and Japanese books being 39,059, and for European 5,530. Literature and language followed next in order, but, as against 37,335 Oriental, there were 10,952 Occidental books. Useful science, encyclopædic and miscellaneous works and the physical sciences follow next in demand. The average of readers on 332 days was 413, the excelling reading months being March April, May, and June. July and August also drew large numbers, but October, November, and December, when outdoor life is most alluring in Japan, show the lowest figures. The decrease of readers, as compared with the previous year, amounted in the one month of July, 1904, to 10,557, and is manifest in every month until March, 1905—a striking phenomenon of the war. Besides the tables, acknowledgment of gifts, etc., the growth of the library and use of books is shown in the red and black lines of a diagram.

—The Easy Chair, in *Harper's*, discourses pleasantly this month of Mr. Bernard Shaw's self-confessed ability to write as good poetic drama as Shakspere, maintaining that Shakspere could make out a defence for himself against modern detraction not to be invalidated even by the foolish fanaticism of worshippers who can see no defect in him. "He might well stoop from his altar and entreat that ridiculous rabble to be done with their service of praise, and to own him human and full of errors not inconsistent with the merits of what he had had the luck to do, or the chance to do." Apparently "the real editor" did not secure the advice of the Easy Chair as to the value of Mr. Swinburne's critical comment on "Othello," published in the October number of last year. William J. Long takes another turn at the question of animal reason. The one thing that stands out most clearly in this rather overdone discussion is that neither side has thought it worth while to define terms with sufficient precision to get at any conclusions of real scientific value. Mr. Nevinson's account of the new African slave-trade is still in the introductory stage, dealing with Loanda and the country round about. He has no difficulty in showing that the system of contract labor is necessarily pure slavery in practice, since the ignorant natives are utterly powerless to enforce their rights under the contract. But Mr. Nevinson tells as that "there is no need to be hypocritical or sentimental about it. The fate of the slave differs little from the fate of common humanity. Few men or women have opportunity for more than working, feeding, getting children, and death." If this be so, then Mr. Nevinson is on a fool's errand after all.

—The lively passion for historical study and research which for thirty years has possessed Mr. Charles Francis Adams, was created by an invitation in 1874 to deliver a memorial address at the 250th anniversary of the permanent settlement of Weymouth, Mass. That town, originally styled Wessagussett, is second in age to Plymouth, and it chanced to be the birthplace of the orator's great-grandmother, Abigail Smith (Mrs. John Adams). The address, a brilliant beginning, has just been reprinted by the Weymouth Historical Society, together with an excellent one by its secretary, Mr. Gilbert Nash, read in 1882, "Weymouth in its First Twenty Years," and a third by Mr. Adams again, last September. Mr. Adams chose to survey his own past, and on the whole pronounced good his maiden effort; but he now sees, thanks partly to Mr. Nash, that the real interest of the first years of Wessagusett lies in a contest between Church of England settlers and the Puritans of Massachusetts Bay. "Weymouth was the traditional plague centre of prelatical poison—we designate it Episcopacy—the seat of the Gorges settlement, the abiding place of Morell, the spot whence Blackstone and Walford had emerged. No mercy was to be shown it. The last vestige of the ritual was to disappear from within the limits of the colony of Massachusetts Bay." "Every person on the Massachusetts shore connected with that earlier settlement, the old Gorges 'planters,' so called, was soon or late either harried out of the country, or made so uncomfortable in it that he voluntarily withdrew—in other words, went into exile. Morton of Mount Wollaston, he of Maypole fame, was the first victim."

—This is the capital feature of Mr. Adams's review, and is one more indictment of the Puritans which their apologists must meet. The historian is also now able to show, from a map discovered meanwhile, that the site of the original settlement and of Weston's blockhouse, in which Miles Standish assassinated Wattawamat and his fellow-savages (April 6, 1623), has been improved out of existence as a gravel pit, and is actually subject to tidal overflow. We wish the Society had reproduced this map (borrowing from the Massachusetts Historical Society's facsimile), together with a general shore view from Boston to Wessagussett; moreover, that a table had been appended showing the early settlers year by year, so far as they are namable, and distinguishing the several companies to which they belonged. In other words, we crave a second index, cartographical and chronological. The address would not be Mr. Adams's if it were lacking in original and suggestive excursuses, such as his picking a bone with Longfellow for his feeble handling of the Standish massacre, or his drastic exposure of Revolutionary and civil-war patriotism in the community he is addressing. He would in future crises abolish volunteer enlistments and resort at once to conscription and the draft. Nor does he spare the morality and humanity of the elder day, as in the treatment of the poor or in chastity. "The early church records of Weymouth no longer exist, and, perhaps, it is well for the good names of not a few of your families" that a fire destroyed these records in 1751. Here the allusion is to entries which are found alike in all New England church records, even in Quaker meeting records. Weymouth was simply not an exception.

—The interval between the close of the Summer School and the opening of the college year is long enough for meditation; and the question whether the summer service pays will appeal to many an American professor. It has always been the consolation of this pecuniarily underpaid individual that his deficient wage is in a manner made good by the length of his vacation. When the hard-worked business man has jollied the professor on having such a lazy time of it in summer, the ready answer has been that the three months of leisure are part of his salary. To the old-fashioned schoolmaster type of professor only is the summer season one of rest. Modern professors take but a short vacation from real work. A fortnight's loafing at the end of the college year but prepares them for that which they feel to be their purest pleasure, and investigation or "original work" is their subsequent occupation till the chapel bell begins to toll again. Now so long as summer schools were manned by those to whom original work was an unknown factor in professional life, it was perhaps a gain to entrap the too-leisurely teacher into making himself useful in the only way he could. But nowadays the summer school boasts that its staff is composed of veritable professors; and, with the addition of Yale to the list, the spectacle of three great Eastern universities turning their professors into perpetual drudges may cause the thoughtful to ask whether it pays either the professor or the university. Six weeks of summer teaching leave little time and less energy for independent work on the part of the professor who joins the teaching staff of the summer school. The summer pupils are mainly teachers who wish to be coached "up to date" in their respective lines. The professor is expected to "do it all," while the quondam teacher, now scholar, takes notes and revises himself with the modern theories which have become current since the teacher-pupil himself left the university.

—This is all very well for this kind of a pupil. It is probably the best way for him to spend his vacation; certainly the cheapest way to "keep up," much less arduous than reading and less expensive than giving up his position to take a year in proper study. But how is it with the professors? It must have occurred to many of the "original work" men who gave instruction to these pupils during July and August, that the few hundred dollars received for their services formed no adequate compensation for the loss of that productive leisure which alone attracts such men toward the academic life. Possibly even the trustees of the universities may be led to inquire whether the entailed loss of original investigation is not also a loss to the reputation of the university. Even from the pedagogical point of view, it is

open to doubt whether six more weeks of harassing teaching will leave the professor in good trim for his winter's grind. At any rate, for the professor himself, it threatens to become a serious problem whether he can afford this sacrifice, and for the trustees whether it is well to encourage the younger men, whose leisure for their own investigations is almost confined to the summer months, to cut so large a slice from the time given to them for their own intellectual advancement, the output of which is, or should be, the chief care, as it is the chief glory, of every university worthy of the name.

—To their series of books illustrated in color, Messrs. A. & C. Black (Macmillan) have added 'Ireland,' described by Mr. Frank Mathew. It is refreshing to read for once an account of Ireland's beauties rather than her sorrows. She is the island of saints, of ruins, of the sepulchral calm that follows storms and strife, of an indifference that is only the passive side of discontent. Passion, not action, is the true expression of her spirit under those soft gray skies that almost touch the land. The history of her romantic past, her foreign settlers from Denmark and Norway and Spain, her long resistance of the English, her absorption of English colonists till they became more Irish than the born Celts, all the picturesque outlines of the story of the four provinces Mr. Mathew tells effectively enough. In such a book little was needed beyond an objective description of Ireland as she strikes the eye. The main motive of the volume lies in the seventy-seven page illustrations in color by Mr. F. S. Walker. They are beautiful, and admirably reproduced, but they will satisfy no one that knows Ireland. It is not that the colors are too vivid. There are days in Ireland now and then when the sky is as blue and cloudless as on the shore of the Mediterranean, and there is no water bluer than the mountain tarns or the Atlantic on the west coast. But one misses in nearly all Mr. Walker's pictures the inevitable grays and dull browns that soothe the eye on the brightest Irish day. His browns are too red, his favorite purple is a shade that we have never seen under the Irish sky. He has neglected the opportunities of heather and loosestrife and gorse that make all the beauty of Irish hills. In some cases he has sacrificed truth to prettiness. Nothing is so rare in the remote districts as the picturesque peasants who sit in his neat cabins; his street in Galway has the coloring of Naples, yet nowhere are the tints of dress and stone so subdued as in those old, decaying, sordid streets. As for the picture called "Wild Rhododendrons in Connemara," we can safely say that there is no such thing as a wild rhododendron in all Galway, and the tourist who should take this bit of Kylemore garden as representative of Connemara's gloomy scenery would be much disappointed in the reality. Ireland is a sadder, grayer country than Mr. Mathew has described or Mr. Walker painted.

—France has succeeded better than any other European country in thoroughly blending the diverse constituents of its population, and it is not likely that an effort at political independence will ever be made by one of these sections. The movement, however, for separating the South intellectually from the domineering North, which began about the middle of the last century, has not died out, and the leader of that movement, Frédéric Mistral, is still living at the village of Maillanne. He will celebrate his seventy-fifth birthday on the 8th of this month, apparently the sole survivor of the band of seven poets who formed the "Félibre" Association, the object of which has been to restore the literary glory of Provence. In the South he is idolized; his bust is in all museums, his photograph in the shop windows. The bestowal on him, last year, of a Nobel prize of $40,000 (one-half of which he promptly turned over to the Provençal Museum founded by him at Arles), made his halo still more luminous. In *Die Ziet* of Vienna Dr. Georg Wegener gives an interesting account of a visit he paid the aged poet at his elegant villa. Mistral himself responded to the bell and opened the gate for his visitor. He is still good looking, enjoys excellent health, and his mind is bright and active. Secluded from the world, he spends most of his time with his books. He showed his visitor, among other things, a bookcase containing about a hundred volumes of manuscript letters, alphabetically arranged, his correspondence of half a century. "There is much that is interesting in these volumes," he said, and when asked if he intended to publish any of them he replied: "Non, je suis un peu rassasié de publicité." He added, however, that he had just completed his Memoirs, which were to appear at the same time in Provençal and French. Of his letters, he said the majority and the most important were from Daudet. While he professed the greatest admiration for that writer, he nevertheless laughed at his exaggerated representations of the Southern Frenchman in many of his books. In truth, he said, Daudet was more excitable than any of his characters; and he told how Daudet, as a young man, once jumped from the old Roman bridge at Nimes into the torrent below, though he could not swim, simply *par bravade*, following, like his Tartarin, a sudden impulse.

STUBBS'S LETTERS.

Letters of William Stubbs, Bishop of Oxford. 1825-1901. Edited by W. H. Hutton, B.D. E. P. Dutton & Co.

Sir George Trevelyan, in opening his classical life of Macaulay, gave two reasons to support his belief that the public would welcome a biography of his uncle. One of these was the phenomenal popularity of Macaulay's works, and the other, the impossibility of discovering from them the nature of the writer's habits and disposition. Mr. Hutton would hardly be able to make the first of the above claims on behalf of Bishop Stubbs, since, whatever may have been the merits of his writings, they never passed outside a narrow circle of scholars. But when it comes to the note of impersonality in the published word, Stubbs kept himself out of sight much more completely than did Macaulay, and hence, on the second ground which Sir George Trevelyan suggests, there is a peculiarly strong appeal in the present case to the reader's curiosity. Thus, Mr. F. W. Maitland has said that on finishing the last volume of the 'Constitutional History' he could not have told how the author would vote, and that, had he hazarded a guess, it would have been a wrong one. Even those who came in close contact with Stubbs found it difficult, as his biographer shows, to fathom the depths of his reserve. He was a most generous man and full of humor. Those who had the honor of his intimate friendship, whether ecclesiastics like Church and Liddon, or historians like Freeman and Green, could have felt no doubt regarding his qualities or his quality. On the other hand, where the relationship was official rather than personal, one might meet him for years without forming a just appreciation of his temper and ideals. This fact is to be associated with his intense dislike of everything that resembled affectation or a parade of feeling.

The career of one who from a servitorship at Oxford rose to be Bishop of that diocese and Chancellor of the Order of the Garter, is necessarily a record of unusual powers put forth with steadiness and outward success. But the yardstick which is suited to the measurement of most bishops and chancellors of the Order of the Garter does not apply to Stubbs. Mr. Hutton, who is appreciative without suffering from *lues Boswelliana*, opens the present volume with these words:

"When the history of the intellectual movements of the Victorian Age in England comes to be written, one name will stand out in the science to which it belongs as the name of Butler stands out in the religious philosophy of an earlier day. A great school arose in the middle of the nineteenth century, which embodied and expressed the enthusiasm of the time for an ordered study of the past. Of the workers in that school, the greatest was William Stubbs, and his fame, if it be possible for the generation which knew him to predict it, should be beside that of Gibbon as the greatest historian of his country and his age."

Mr. Hutton is fond enough of this comparison with Gibbon to use it several times. To us it seems not altogether a happy one, quite apart from the attitude of the two men towards Christianity. At any rate, Stubbs, whether or not the chief of English historians since Gibbon, stands first in his class, and is entitled to almost as much homage as Mr. Hutton would have us pay him.

Nothing could be farther removed from what is merely brilliant or spectacular than the virtues and attainments which are here described. Stubbs's parts were solid rather than showy, and such was the thoroughness of both his character and his preparation that at every step of his advance he had an adequate reserve fund of power. His enthusiasms and beliefs were stronger than those professed with volubility by the leading historians of his day, for he had the reticence which often accompanies depth of conviction, while a remarkable sense of fairness prevented him from looking out for tactical advantages. His most inbred trait was conservatism—not the stiffness and stubbornness of a narrow reactionary, but a trait of mental constitution which furnished him with principles no less sacred than were those of radicalism and progress to Mazzini. In religious matters he was a high-churchman, and for all his love of freedom he never had any leaning towards Whiggery. During the summer of 1859 he wrote: "I have lost all respect for Bright—I never had any for Lord John." In another sphere it was a singular chance which

made Algernon Swinburne his private pupil, and, though their points of view must have been violently antagonistic, the two seem to have been very good friends. Stubbs appreciated Swinburne's gifts much more thoroughly than Jowett did at the same period, and the poet has recently written of his old tutor: "It would be impossible for me to say with what cordial and grateful regard I shall always remember him. His kindness was as exceptional as his other great qualities. I am sure no young man who ever had the honor to be his pupil—however little credit the pupil may have done him—can remember his name without affection as well as admiration."

We have dwelt for a moment upon the most marked of Stubbs's traits before taking up the incidents of his life, because there is little in the outward development of his career which distracts one's attention from the *nœud vital* of personality. He was born in 1825 at Knaresborough, and belonged by class to the rugged, tenacious yeomanry of Yorkshire. His father, William Morley Stubbs, was a solicitor who died at forty-two, leaving his widow and six children in narrow circumstances. For the excellent education he received, Stubbs was indebted to the self-denying care of his mother and to the good offices of her friends, particularly Dr. Longley, then Bishop of Ripon and afterwards Primate. When at nineteen he became a servitor at Christ Church, Oxford, his deep interest in religious matters had already begun to disclose itself, and he had taken a first step towards mastering the mediæval history of England by deciphering the original documents preserved at Knaresborough Castle. But few men have ever owed a deeper debt of gratitude to their university for training of faculty or enlargement of horizon than did this Yorkshire boy, whose poverty and sense of filial duty gave him a stern incentive to make the most of his advantages. The first-class in classics which he took at graduation is at least a proof of his diligence, and years afterwards he told one of his sons that he thought he could have taken a first in mathematics but for the prohibitive cost of the books. Of equal importance were the impression which his scholarly habits and breadth of reading made upon Dr. Gaisford, the Dean of Christ Church, and the profound satisfaction which was felt in his progress by his patron the Bishop of Ripon.

By a striking coincidence, Stubbs, as fellow of Trinity, took the place that Freeman vacated through his marriage, and, while holding this post during the years 1848-1850, he began, self-aided, the more technical part of his training for historical research. Theology and early church history were his chosen subjects at the moment when he left behind him the routine of a prescribed curriculum and began to voyage alone through the strange seas of independent scholarship. His ordination and settlement in the country parish of Navestock gave final direction to his activities by making him a professional ecclesiastic and giving him leisure for historical study. The latter statement must not be taken to imply that Stubbs performed his parochial duties with less diligence than might have been devoted to them by a priest of the Chaucerian type. For over sixteen years he did his work as parson with the zeal of a truly religious man, and a systematic thoroughness which was inseparable from all his acts. If he found time to write monographs on the mediæval chronicles of England, such as have furnished the Rolls Series with its choicest prefaces, it was because he had abundant vigor and intense power of application. Often in the solitudes of his Essex parish he found the lack of books a bitter hardship, but the great historical texts of the eleventh, twelfth, and thirteenth centuries he mastered there with a completeness of knowledge which would have been unequalled even without his grasp of critical principles. During the same years Darwin at Down and Stubbs at Navestock were gaining an assured control of their very different subjects. Country life does not always benumb the mind with a round of soporific pleasures.

The work which Stubbs did as an editor for the Rolls Series placed him in the front rank of contemporary historians, and gave him confidence to apply for the librarianship of the British Museum on Panizzi's death, in 1865. Though his candidature proved unsuccessful, the testimonials which were forthcoming on his behalf bore witness to the unstinted admiration which had been evoked among specialists by his 'Chronicles and Memorials of Richard I.' His editions of Benedict of Peterborough, Roger Hoveden, Walter of Coventry, William of Malmesbury, and other monastic annalists, belong for the most part to the period when he was Regius professor of history at Oxford. This appointment, which was given him by Lord Derby in 1866, he continued to hold until Gladstone made him Bishop of Chester eighteen years later. It was during his tenure of the history chair that his *magnum opus* was written and published, the 'Constitutional History of England,' in three volumes, which beyond all question is the finest work of its kind in our language. Stubbs was an extremely rapid as well as accurate writer, a fact which could not easily be guessed from his cautious and guarded form of utterance. He was at his best in dealing with the large historical problems that centre round the rise and progress of institutions, but no form of historical inquiry was destitute of interest for him. His command of genealogy was phenomenal, and not to be surpassed by the knowledge of German intermarriages which George II. possessed in the eighteenth century, and Dr. A. W. Ward has at present. His familiarity with the main movements of European history at large was also wide and detailed. That he should exercise a profound influence at Oxford through his lectures was rendered impossible by the nature of the educational system there established, and one may doubt whether under other conditions his influence would have extended beyond the ranks of genuine scholars. For those who could profit by it his personal stimulus was strong, but his gifts were very different from the gifts of Michelet.

Between 1878, when the last volume of his 'History' was finished, and 1889, when his connection with the Rolls Series ceased, Stubbs edited six volumes of Chronicles and gave various lectures at Oxford. The bulk of his historical work, was, however, completed when, in 1879, he accepted from Disraeli the canonry at St. Paul's, which had just been rendered vacant by Lightfoot's appointment to the See of Durham. The five years during which he held the office of canon were endeared to him by a close and affectionate friendship with Dean Church, whose love of history and cast of theological opinion furnished a double bond of intellectual and spiritual kinship. The translation from Oxford and London to Chester, with its episcopal duties and different associates, cut Stubbs largely off from the occupations by which he had first risen to eminence, and in which his real happiness lay. "Whatever you do," wrote a clergyman in the diocese of Oxford to his biographer, "do not say that he was a great bishop." "Perhaps," continues Mr. Hutton, "it shows a mutual misunderstanding that I find the bishop describing one of this clergyman's letters to him as 'insolent.' And yet there were few better bishops or better priests than these two. But, certainly, in the sense in which greatness is to be predicated of modern bishops, Bishop Stubbs was not, at Oxford, great."

In this passage a distinction is clearly drawn between the efficient work of administration which Stubbs did in the diocese of Chester and his comparatively ineffectual rule of Oxford between 1889, when he was translated to that more important see, and his death in 1901. To discuss his acts as bishop, whether at Chester or Oxford, is no port of our purpose, but we may be permitted to conjecture that most of the adverse criticisms which were cast upon his labors in this capacity sprang from difference of theological outlook or difference of theory regarding the mode of disharging episcopal functions. Certainly there is nothing to show that Stubbs grew less conscientious or laborious during the last years of his life than he had been in his prime. If we were concerned to emphasize the religious and ecclesiastical aspects of his career, many passages might be taken from the letters published by Mr. Hutton to show that he did not make a mistake when he accepted the bishopric of Chester, even though this step meant the relinquishment of his labors in the field of history. We must avoid creating the impression that Stubbs in the rôle of bishop was a failure, save when judged by a high standard of effectiveness. It was, perhaps, his misfortune that, the character of his work down to 1884 having been unexceptionable, he should have undertaken an office wherein a very rare and peculiar combination of gifts is required to secure perfect success.

Religion was the mainspring of Stubbs's effort, the centre of his inner existence, but the talents which he possessed were not distinctively those of the ecclesiastic. At Chester, people cared little for his sermons because, as one observer points out, it required a little thought to appreciate them. He was a true-hearted man whose genuineness forbade parade of emotion, even if his keen sense of humor had not led him to suspect exaggeration. Regarding his love of jest and drollery there is material for a whole article, and doubtless many honest, unsprightly clergymen thought his manners unpreliatical. When at Oxford he had for domestic chaplain the Rev. E. E. Holmes, in whom he placed implicit trust and to whom he began letters as "Dear Vizier," "Dear Monseigneur," "My dear Oeconomus," "My dear Trea-

surer," "My dear Cardinal," etc. The body of correspondence that he addressed to Mr. Holmes is particularly striking because it shows how he could pause amid the press of tedious and irksome business to console himself with a bit of fun or a touch of caustic criticism like this, apropos of a sermon: ". . . was exasperating; the world could not have been saved but for the faith of the B. V. M., and miracles were impossible unless somebody or other had faith"; and again, of the same person: ". . . . excelled himself on Sunday; five minutes' sermon in the morning, fifteen in the evening; absolute trash; no redeeming point at all, and dogmatic. Ugh."

The nature of Stubbs's playfulness is to be seen most clearly in the doggerel verses which he composed with great ease, and used as a means of relieving tension at times of high pressure. After his translation to Oxford he was compelled to reside at the episcopal palace of Cuddesdon, much against his will, for he did not take pleasure in rural pursuits and grudged the money he had to throw away in maintaining what semeed an idle form of state. It was not without protest that he took up his residence there, and when the Archbishop of Canterbury politely declined to let him give up his country seat, he sought relief at Whitsuntide of 1889 in writing an elaborate parody on Alexander Selkirk. It begins:

> "I am Bishop of all I survey,
> Dean and Chapter don't matter a fig,
> In the central demesne of the See
> I am master of Peacock and Pig.
> O Cuddesdon, where can be the charms
> The Commissioners see in thy face?
> Kettle Hall had been better by far
> Than this most inaccessible place."

The most celebrated, however, of Stubbs's jests—and some of our readers may be pleased to know that it was a great favorite with John Fiske—took the form of a double hit at Kingsley and Froude. Kingsley had just been attacking the credibility of history in his farewell lecture at Cambridge, while Froude, as Lord Rector of one of the Scottish universities, had been impugning the veracity of the clergy. In a letter to Green (December 17, 1890), written from Kettel Hall, Oxford, where he lived during his tenure of the history chair, Stubbs says: "I have made a hymn on Froude and Kingsley; thus—

> 'Froude informs the Scottish youth
> That parsons do not care for truth.
> The Reverend Canon Kingsley cries
> History is a pack of lies.
> What cause for judgment so malign?
> A brief reflexion solves the mystery—
> Froude believes Kingsley a divine,
> And Kingsley goes to Froude for history.' "

Of Stubbs the historian we have not attempted to speak in this notice of Mr. Hutton's excellent biography, wishing to keep his character in the foreground rather than that splendid body of accomplishment with which all scholars are familiar. But since he brought to the study of the past a most unusual combination of gifts, we hope at some future time to estimate the extent of his services to historiography. Whoever would attempt such criticism will find a vast amount of material and suggestion in the present volume.

THE ART PRESERVATIVE.

Printing: A Practical Treatise on the Art of Typography, as applied more particularly to the Printing of Books. By Charles Thomas Jacobi. 3d ed., revised and enlarged. London: Bell; New York: Macmillan. 1904.

The Book of Specimens, Stanhope Press. Boston: F. H. Gilson & Co. 1904.

Author and Printer: A Guide for Authors, Editors, Printers, Correctors of the Press, Compositors, and Typists. . . . An Attempt to Codify the Best Typographical Practices of the Present Day. By F. Howard Collins. Henry Frowde. 1905.

After Mr. De Vinne's model series, "The Practice of Typography," Mr. Jacobi's manual must needs appear both less full and less clear. The English author, though he has published many volumes on his craft and writes from the vantage ground of the Chiswick Press, is neither very skilful nor orderly in his presentation. Still, he is a late-comer, and, for example, besides the Linotype and Monotype, he has a more novel typesetting and distributing machine to describe, and much may be learned from his pages regarding the usages and technical terminology of the English printing-office: *e. g.*, font is fount, and form is forme; the proofreader's copyholders are here designated as reading-boys, implying a non-use of women so commonly employed among us, just as librarians' assistants across the water are assumed to be young men only. The rates of pay, again, afford an interesting comparison with those in vogue in the United States. An appendix gives the examination papers in typography of the City and Guilds of London Institute for the years 1902-04, apparently prepared by Mr. Jacobi as examiner. We are not aware that any such discipline exists in this country. These are followed by a glossarial index, and this in turn by bound-in samples of paper, which usefully supplement the tables, diagrams, and practical illustrative cuts of the text.

Specimens of book paper bulk largely in the Specimen Book of the Stanhope Press, and are attended by a goodly number of samples of cloth and leather for binding, with their technical names. The rest of the book exemplifies the respectable resources of this Press in ordinary and special work; but the only readable portion is a brief chapter on illustrative processes, including the three-color.

Mr. Collins's manual is a dictionary, though this would not be guessed from the title-page, wherein it is stated that the compiler is author of 'An Epitome of the Synthetic Philosophy of Herbert Spencer.' From this fact might be inferred a certain eccentricity which marks the present production. Mr. Spencer, by the way, is quoted in the preface as throwing his weight with Dr. Murray in favor of the suffix *-ize* (as opposed to *-ise*); and later, under " 'and' or, ',and,' " as very characteristically standing up for the comma after the penultimate of a series of coördinate adjectives, *e. g.*, "black, white, and green," an equal emphasis being claimed for each. Mr. Collins startles us with the assertion in his preface that "every work in the following list of 'Authorities Consulted' was read through, and all suitable words, phrases, etc., copied on 15 separate slips." Now among these authorities are Larousse, the Encyclopædia Britannica, the Oxford English Dictionary, and the London *Times!* But what was the needle he was looking for in this mighty haystack? He nowhere tells us distinctly, his clearest pointing being towards words likely to be met with in general reading and spelt in more than one way; and certain foreign phrases because the accents are generally bungled (leaving out of sight those in several languages which have no accents). But this is a very inadequate account either of his criteria or his contents, as will appear.

And first, what were the "suitable" words for his card catalogue, which were to be three times sifted by many learned and experienced colaborers? On page one occur *Abbildung* and *Aberglaube*, for no reason discoverable on our part; and Abeokuta in Western Africa, as there is a danger that it may be spelt Abb-. But is this a word the general reader is liable to encounter? Emily Faithfull is entered—perhaps because some might spell Faithful; just as we are reminded under Whistler that his middle name, McNeill, must have a double *l*. But suppose one is in doubt if Edward FitzGerald capitalized his *g:* he will not find Old Fitz in Mr. Collins's list. Lafayette, as the name of our American College, we are told is one word; but the great Frenchman's practice, or modern practice, regarding it goes unindicated, though the French are very loose in writing such compounds.

We will now give some idea of what has come to the surface in Mr. Collins's dragnet. Under "Abbreviations" he lays down the rule that the period must invariably be used except with the shortened forms of counties, to which he refers, but not to "per cent," which he denies the period. "Assemblies" gives a handy list of the names of national parliaments. Under "Authorities" is well displayed the conventional mode of citation, as of act, scene, line, etc. "Chess" marshals a number of names of leading players. "Division of Words" deals curtly with a very difficult subject thus: "Never separate a group of letters representing a single sound; and so divide a word that each part retains its present sound." Hence pho-*tog*-ra-phy; but the digraph *tr* in the next instance, sub-*trac*-tion, pleads for *gr* being united in the previous word. May not each be called "a single sound"? But again: what light does the rule throw on such problems as disgrac-ed, advanc-ing, chang-ing? Do the roots here retain for *c* and *g* their "present sound"? "Forbear" is declared better usage than "forebear" (ancestor), yet, since one may choose, why not follow the spelling less likely to cause confusion of different words, while better revealing the etymology? "Italian" covers alphabet, punctuation, etc.; and, as for accents, "there are two, grave and acute—any vowel may have either." This is misleading, as if their use were perfectly arbitrary, and it throws no light on the actual employment of grave and acute, which has undergone a change in quite recent years; the circumflex, too, has its function. Under "Law," the curious fact is recorded that there is "practically no punctuation used in [British] legal documents." Under "Press (freedom of the)," we read, also for Great Britain: "Every person who prints anything for hire or reward must, under a penalty of £20, keep one copy at least of the matter print-

ed, and write on it the name and place of abode of the person who employed him to print it." This refers to the statutes 32 and 33 Vict., ch. 24.

"Punctuation" occupies seven pages in double columns, and is introduced with the statement that "the chief difficulty lies in the use of comma, semicolon, and period." This is far from true, and, in fact, Mr. Collins yields as much space to the hyphen as to the comma, and more than to the period. The hyphen is really by all odds the most troublesome point to reduce to rules, and Mr. Collins's treatment of it is anything but masterly. For its use in the division of words, one must refer to that earlier rubric. We are at one with our author in thinking needless any reinforcement of the dash with the comma, and we note that his preferred English usage is *not* to place a comma after the street number. This we were hardly prepared for, as the use still prevails in private correspondence. A hundred years ago, American printing-offices, and not a few writers, followed the English style in this particular, and, as we first emancipated ourselves, our British cousins may be said to have adopted one more Americanism. The period is required after Roman numerals "except when these refer to page numbers, or another stop follows"; but a better rule would be, "except when it can be dispensed with without liability to confusion." The lower-case Roman numerals in especial are always liable to appear like fragments of a word of which some letters have dropped out.

In conclusion, we can pronounce this compilation useful, if almost without rhyme or reason and certainly not highly authoritative. We are not likely to turn to it to discover, under "Pagination," that Leslie Stephen would have had every page of a book numbered; or that Leveson-Gower is pronounced "loo'sn-gor." And if we follow it implicitly, we may fall from the frying-pan of Prchevalsky into the (prescribed) fire of Prjevalski, which is not to be compared for phonetic utility with Przhevalsky.

The Yellow War. By "O." McClure, Phillips & Co. 1905.

Partial evidence that a participant's version of his personal share in a battle is true, is its restricted range. When a junior presumes to describe the operations of others under fire, it may safely be assumed that he himself took no part, for he should have been too fully occupied with his own duties to observe others. Judged by that canon, the verisimilitude of these sketches, particularly those of the sea, is high; and the anonymous author consciously recognized the rule when he wrote: "Those who would know of war should learn of it from the standpoint of the humblest atom that goes to furnish the whole." "To follow the fortune of the whole is but to indifferently usurp the rôle of the historian" (p. 238) Despite its split infinitive, that represents a fundamental condition. Nor need we doubt that, as claimed, every character in these tales represents a living actor. There is too much corroborative evidence in the less vivid accounts by professional war correspondents to question the substantial truthfulness of these. Their charm lies not merely in fidelity to nature, but in reproducing the underlying and controlling spiritual conditions; in bringing before one the actors' hearts, in presenting exalted patriotism, and scorn or mastery of frost and heat, fatigue and hunger, perils by sea and by land—all in the country's service. The exploits themselves appeal as adventures to the spirit of adventure. But there is more. There is a moral, not introduced as such, but running along the lines with each. "The Naval Sub-Lieutenant's Story," for instance, is typical of how any well-trained young officer of the white race, ambitious to retrieve disaster, would carry himself, with incidental recognition of Russian inefficiency. It describes, lucidly enough for a landsman to follow, the preliminary affairs and the great battle that shattered the Pacific (not the Baltic) fleet. The narrator ends: "But this I can promise you, my friend—that, even if it takes Russia ten years to build another and an adequate fleet, and if it is manned by the same material as the last, it will sweep everything in these waters before it. We have learned our lesson." That is an aspiration. It is an unlikely prophecy to come true in a decennium.

The Japanese characters are faithful to that exalted, or transcendental, patriotism which the war has unveiled, but clearly has not created. Both the spirit of the nation and its achievements are marvellous. But that spirit has not been born since Mississippi Bay was renamed for Perry's flagship. It is in the blood; and this superb loyalty, the never-ceasing loyalty of the insignificant as well as of the great, sprung from ages of affectionate reverence, is the crowning grandeur of Dai Nippon. Japan's mechanical successes are the outcome of centuries of hereditary skill concentrated, since the awakening, upon civil and military engineering, warships and ordnance, agencies for physical defence. Stories like these would have been incredible before the opening of the present drama; there was no precedent in Oriental life, as far as that life was known across the sea, for either fact or sentiment as here described. We do not err in accepting these tales as real now, although some of the settings may be imaginary, and the man with red blood will complete every one of them that he begins to read. Women, because they reverence courage, will find the chivalry of the past revived in "Champions," and will weep, as men's hearts will tremble, over "The Sacrifice of O-Teru-San." Partly because O-Teru-San might make it, but chiefly because Tanaka, after accepting that sacrifice, could abandon the devoted soul, is the spirit of Japan—superb in its public relation, awry and out of harmoney in essential delicacy and vital honor. This incident need not be typical, but only reasonably possible, to condemn the society in which it may occur.

The author writes of what has happened, not of the future; and Western blood and Western thought, Western sentiment if one will, do not flow easily in Eastern channels. Evidently what may be is not clear to him. He does not put the question aloud, but he may be asking himself what future awaits this new Power. The Elder Statesmen may counsel political isolation, in succession to the old-time seclusion. They may realize that national poverty, a certain difference in mental constitution, the waste of the Pacific and the bulk of Asia separate them from the other world of action; and, with the Russian danger shaken off, it would be better to maintain a dignified but kindly isolation. But will young Japan acquiesce? Has she not in China an inexhaustible reservoir of men-at-arms—not her own impetuous heroes, perhaps, but, properly led, an economical, intelligent, swarming infantry, resistless from its very multiplicity? Is not China an infinite storehouse of agricultural and mineral wealth, scarcely touched by modern methods? And, however the Japanese may affect to despise Mongols and Mantchus alike, do they not understand the working of the Chinese mind, and do they not know that they do? May not the political and commercial equilibrium of the future be menaced? The storyteller lingers on the remark he attributes to a typical modern Japanese: "You can teach us how to build ships and guns, . . . but you can teach us nothing in diplomacy."

Originally contributed to *Blackwood*, and on its face a collection of detached recitals, many of them thrilling, but not incredible, this volume, when carefully read, reveals more than tales of adventure. The anonymous writer is clearly distrustful and unsympathetic, but he tries to be impartial. Hard conditions were imposed upon the official observers. "Courteous discourtesy hedged them in on every side," and want of frankness leads to some holding-off. "The Japanese officer in charge of the foreign guests brought his spurred heels together with a snap, bowed low, smiled his superior smile, and expressed his sympathy. This sympathy was as insipid and cheap as the Japanese imitation of lager which the unwilling hosts produced on feast days" (p. 98). The irritation must have been severe for an English gentleman to express himself thus in print. Climate and food, when both are poor, do react upon the equanimity. In the mouth of a Japanese, and as antedating the war is put (p. 92):

"Don't be gulled by the enthusiasm of fanatical savants. There is one creed which rules all Japanese public morality. Balance the chances, and then pursue the wisest course. All conditions must be subservient to the means by which you attain and maintain the wisest course. Take, for instance, our alliance with you [the English]. . . . It is not what we desired most. . . . It would have suited us better to have effected the alliance with Russia which Ito failed to negotiate. This alliance would have been offensive against you. Having with Russia's aid undermined your power in the Far East, we could have dealt with Russia in our time. . . . Are you so blind as not to see that our aspirations to blot you out, our main menace in the Far East, failed through Russia's rapacity? Well, her blood be upon her own head, but there are those who wish it had been the other way."

Whether this was ever formulated, and most probably it never was, it is evident that the writer regards it as thinkable, and that, with intense admiration for the rank and file in their appropriate place, he has a doubt as to the advantage Japan's rise into a world-power will be to Britain. Except to say that this profession of Japanese strategy does not commend itself to us as probable, there is no occasion for comment. "The Path in the East is Strange," from which this long extract has been taken, will bear reading more than once. The probabilities, but not the possibilities, are against it, but its gruesome

climax, which would show that Western lacquer may be a removable dressing on occasion, is not quite four-square with the incidents as recorded.

Nos Enfants au Collège. Par le Dr. Maurice de Fleury. Paris: Armand Colin. 1905. 18mo, jésus, pp. 315.

Six years ago, almost to a month, we noticed a volume of fifty thousand words (the present one has not seventy thousand), by Dr. Fleury, entitled 'Le Corps et l'Âme de l'Enfant,' a very sensible and detailed book, readable by mothers, concerning the bringing up of children from three to fifteen, and strongly marked by the characters of a medical man and of a Frenchman impressed by Anglo-Saxon superiority. He was full of Herbert Spencer, in whom he admired a trait which it needed his fine observation to discover, Spencer's wit and humor. It seems that that volume contained the results of studies which the author had been led to make by his having a son of his own; and the same circumstance has caused the present sequel. Dr. Fleury's ways of thinking remain what they were, those of a physician interested in psychology, and given, for example, to going about and asking many people the same question in order to tabulate the answers. He is not at present in quite so admiring a mood toward the Anglo-Saxons. In his former volume he marched under the Anglomaniac banner of Demolins, talked of our "vital superiority," our "vigor of expansion," and so forth. At present, he wishes it distinctly understood that he does not agree with Demolins, and talks of Anglo-Saxons, especially the American breed, as pirates eaten up with jingoism and imperialism.

For the moment, he is strenuously in favor of the suppression of Latin as a general study for boys. He says he could formerly recite the entire second book of the Aeneid, and now could not read it without a dictionary. Does this mean that if a man has once read a book, and subsequently is for any reason in no condition to reread it and cannot repeat much of it, the reading can have done him no good? He gives about five pages of quotations from a book by André Beaunier, in which we are told that there are only five or six works in Latin that are worth reading, and that the principal reason for learning it is that it enables one to understand the formation of French words. Dr. de Fleury himself speaks as if one of the chief reasons for learning Greek is that it furnishes information of the meanings of technical terms such as "telegram." Really, it does not heighten one's respect for a writer on education to learn that, knowing Latin and Greek, he has found them of no service to him.

The author is alive to the medical side of educational questions; he has read physiological psychology and takes it into account, and he has the physician's skill in dealing with situations that he does not half comprehend. There is much good sense in the book. Thus, it is rightly insisted that the greater part of the labor of mental work consists in getting one's mind riveted down upon the problem in hand. This has been said often enough before. It accounts for a powerful intellect's need of a physical constitution which can go long without sleep or food, the first few hours being unproductive drag. Of course, it is as undesirable as it is impossible that boys and girls should accomplish any memorable thinking; and it is also true that very young children can gather all the mental power in their possession in a few minutes. But this is far from being the case with the big boy. In one hour he will not have got his second wind, he will not have reached the stage of enjoyment of mental work; and if at the end of one hour he is invariably set upon doing something else, it is the inexorable law of psychology that he should look upon study as thoroughly disagreeable. Who could ever write a book if his attention were entirely taken off from it for five minutes every hour? The really fine thinking is done in seconds; but hours must prepare for them, and many more hours must seize upon the product of these seconds and utilize it.

As in his former volume Dr. Fleury gave two highly useful chapters to the study of "l'enfant colère," two to "l'enfant peureux," three to "les paresseux," and one "sur le mensonge," among other subjects of the same order, so here he does not fail to consider the proper plan of treating inattention, the *mauvais vouloir*, and other things which some people still seem to think beyond the scope of science. His book has three parts: "La Vie Physique," in 44 pages; "La Vie de l'Esprit," in 150 pages, and "La Vie Morale," in 91 pages. It is not a great work; but it is a very agreeable and extremely useful series of talks.

The Memoirs of an American Citizen. By Robert Herrick. The Macmillan Co. 1905.

In an earlier novel Mr. Herrick showed how the sight of the success of the unscrupulous, and the desire to get rich at least as quickly as one's neighbors, may corrupt a man who starts in life with the most honorable intentions. The 'Common Lot' was an unpleasant picture of the conditions of the building industry in Chicago, but the collapse of the hero together with his shoddy structures left the reader with comfortable assurance that justice had limped behind to some purpose and was well up with the wrong-doer. In the 'Memoirs of an American Citizen' Mr. Herrick paints the picture of a Chicago pork-packer who from the first had no scruples to lose. Harrington's steady nerves were never shaken by the constant expectation of dishonor. Publicity for this resourceful hero always meant ruin, but at the critical moment he never failed to buy a fresh lease of secrecy. Mr. Herrick has made him tell his own tale, which is of course the only effective way of describing an unscrupulous man. Yet Harrington is no villain in the old-fashioned sense of the word. He is merely gifted with an imagination for commerce which blinds him to the ordinary distinctions of right and wrong, and he has hours of almost spiritual exaltation when the magic idea of controlling "the entire food products business of the country" ceases to be wholly an affair of dollars, and carries him away like any mediæval hero on a quest. Mr. Herrick is wise in not laying too much stress on this view of pork-packing, and just avoids the revolting features of the canting millionaire. There is a sort of honesty in dishonor which to some extent saves Harrington with the reader. "There are no morals in business that I recognize except those that are written on the statute-book. To my mind, there was something childish in the use of those words 'better' and 'worse.' Every age is a new one, and to live in any age you have got to have the fingers and toes necessary for that age. For my part, I went with the forces that are, willingly, gladly; believing in them, no matter how ugly they might look. So history reads: the men who lead accept the conditions of their day."

The lesson of the book is that scruples and morals are "college talk" and end in failure, as in the case of Harrington's old employer Dround, who refuses to profit by rebates, private agreements, and "all the underground machinery of the packing business." In the end the youth from Indiana who had arrived in Chicago in the seventies with fifteen cents in his pocket, buys himself a seat in the United States Senate, after the Spanish war, with as much ease and almost as little secrecy as though he were acquiring the directorship of yet another great industrial concern. His brother, who had been handicapped by moral scruples, sinks into poverty in the Chicago slums. The love interest, as in other novels of this type, is entirely subordinate to the commercial. Harrington is not the man to fall under the sentimental influence of a woman. But he has his Egeria in Jane Dround, his employer's wife, a sphinx-like person, who reminds one of a Wilkie Collins heroine except that her passion is commercial rather than social intrigue. In the company of Jane, Harrington breathed more easily, and her glance was enough to inspire him with all the details of a new "merger." Happily, her influence was only intermittent.

This is not a book that we should care to see in the hands of youth. No one demands that a novelist should be didactic. But who, on the other hand, desires to entertain his leisure with a cynical apologia for commercial dishonesty? Success never seemed more unlovely, but it is still success, and this time justice is hopelessly beaten in the race.

A Treatise on Chemistry. By Sir H. E. Roscoe and C. Schorlemmer. New edition, completely revised. Macmillan Co. 1905. Vol. 1. 8vo, pp. 931.

The appearance of the first volume of a thoroughly revised edition, no doubt the last one that will have all the advantage of its author's skill, of Sir Henry Roscoe's 'Treatise on Chemistry,' is an appropriate occasion for noting the value to science of literary culture. The student of chemistry has no small task before him when he sits down so to impress upon his memory all the facts contained in these eight large volumes (as they probably will be, though they may be numbered as three) that each fact is ready at hand at the moment it becomes pertinent. In this undertaking he can receive from no other handbook in any language the degree of aid and comfort that he will gain from "Roscoe and Schorlemmer," because the facts are here set forth very plainly and with no suspicion of artifice, yet in such a way as to make him alive to them to the very end of the twenty-five hours of reading a day which is said to be necessary for the young chemist.

They are not only stated as they appear to the experimenter, but they are clothed in good, pure English that does not annoy and does not draw attention from the facts to the words. There is no branch of science in which there is so low an average of general cultivation, or education, as there is among chemists; and yet on the average they write rather well. Perhaps that power of nice manipulation which they must have by nature and by severe training, that clean purposiveness in each muscular contraction and in every designing of an experiment, which renders it a keen æsthetic pleasure to see a good chemist perform—not a show experiment, but a serious analysis—may evidence itself in their use of words. It would certainly be very easy to name some fascinating books of chemistry; but no chemist has directed his literary accomplishments to a more useful office, lowly as ambitious vanity might deem it, than Sir Henry Roscoe has done in the composition of this treatise.

The most embarrassing question for the writer of a chemical handbook, and one which hardly any two have answered alike—a diversity most annoying to those who consult these books—is in what order to take up the elements, both in the main divisions and in the subdivisions. The simplest rule (and the more one considers it, the more one finds to approve in it) would be always to give precedence to the element of lower atomic weight. The effect of this would be revolutionary, no doubt; but it would be a salutary revolution, since it would put organic chemistry—the simpler subject, and in itself, no doubt, much the smaller subject, as well as the better understood subject—before inorganic chemistry, concerning which, in the ordinary treatment of it, the student acquires many ideas (as, for example, about saline solutions) that he has afterwards to unlearn as being exploded. The first compounds of any importance that would, in the proposed arrangement, be brought to his attention would be the hydrocarbons, the compounds of which our knowledge is the most nearly complete, while he would have impressed upon him at the outset the salutary lesson that our acquaintance with chemical substances is extremely slight at best. Then would come the ammonias, amines, nitrites, etc., that do not contain oxygen; and here, too, we are upon a good solid ground of theory, relatively speaking. Oxygen would introduce him to more difficult questions, which have, however, in organic chemistry, been tolerably well answered. The separation of series of elements, such as F, Cl, Br, I, in this arrangement would force the student repeatedly to review, one by one, the facts that he had already learned, and would thus ensure the accuracy of his recollections. But, of course, the capital advantage would be the simplicity of the arrangement.

"Roscoe and Schorlemmer" suffers as much as any book we know from inconsistencies of arrangement. Its general idea, like that of many other works, is to treat the elements in one column of Mendeléeff's table together. But no writer has ever adhered to that plan consistently. The result of doing so would be too atrocious. In this volume, oxygen follows after iodine. Boron is wedged between arsenic and carbon, simply because, at the time Roscoe studied chemistry, it was supposed to be allied to silicon through their non-volatile, glass-making acids—a circumstance which certainly does not affiliate boron with carbon. Nitrogen, phosphorus, and arsenic are treated in this volume; while antimony and bismuth go over to the third as being metals, although the metal tellurium is allowed a place here. A student who wishes occasionally to refer to this work along with a half-dozen other handbooks, all differently arranged, will be annoyed by the absence of any plain rule of arrangement in any of them.

The revision has been admirably performed. Its thoroughness and accuracy, and the sound scientific judgment shown wherever fact or theory is in doubt, are striking. A careful reading has disclosed but one or two slight errors. The historical statements are particularly careful, though we cannot assent to the credit allowed to Watt and disallowed to Cavendish as to the composition of water. The latter said that the two gases "are turned into water"—an expression of which the scientific caution at a time when there was no evidence whether that which was given off (which we now know to be heat-energy) was matter or not, ought to be commended in contrast to Watt's unreflecting haste. It is absurd to treat *his* remark as a great discovery. What is supposed to have been the imperfection of the statement of Cavendish? Probably, his not explicitly recognizing that the imponderable something which escaped when the two gases were "turned into" water was not matter. But even Lavoisier in his chemistry, and all the treatises of his school, reckoned caloric among the chemical elements; so that really we cannot see that Cavendish conceived the fact otherwise than Lavoisier afterwards did.

Rifle and Romance in the Indian Jungle: A Record of Thirteen Years. By Capt. A. I. R. Glasfurd of the Indian Army. With numerous illustrations by the Author and from photographs. John Lane. 1905.

The man behind the gun seldom becomes the man behind the pen, and if one's enjoyment of Capt. Glasfurd's spirited descriptions is somewhat marred by the solecisms to be found therein, one can cheerfully forgive the author, whose tales are so vividly told. In this collection of reminiscences and fanciful stories, the latter could easily be spared; the ghost-story and the well-seasoned tale of impossible horrors are more amusing around the camp-fire than in an otherwise admirable series of scenes from the jungle; moreover, the parody of 'Hiawatha' might better have remained in the author's desk. Yet these are slight errors of judgment compared with the real worth of the book as a whole. If one wishes to get out of the beaten tracks and plunge into Indian life as seen by the devout hunter, one cannot do better than peruse Capt. Glasfurd's narrative of tigers, bears, and deer, bagged or lost according to the whim of the hunting-god. The captain himself does not seem to be a remarkable shot; but, as he does not mind telling how often his rifle misses aim, so has his story a greater air of verisimilitude than attaches to most hunters' yarns. To one who enjoys an imaginative flight with less sentiment than pleases Mr. Thompson-Seton, the "Biography of a Tiger" will prove a pleasure. Less happy, perhaps, are the following biographies of the *sambar* deer and antelope. The last, indeed, is a severe tax on the imagination. One can fancy a jungle antelope in India using English and Hindustani; and "*shábásh*, little one," is no shock when one has heard the antelope describe how it crossed a *nála*, escaped three *párdís*, and entered the fields of *jawári*. But when the same animal talks about getting caught in a *cul-de-sac*, one's best endeavors to envisage the little polygot fail utterly. Even a Hindu deer is not likely to talk French. On the other hand, the chapter entitled "Reminiscences of Junglypur" is a genuine bit of hard-earned and well-spent experience; adventure and description being in well-balanced proportion.

Yet to an American the sport of India seems rather tame. The only really exciting fun is pig-sticking. One chases a boar, and either sticks a spear into him or gets stuck by the boar. But deer-hunting is without danger, and tiger-hunting is the tamest sport of all. To have a bed slung in a tree and to doze there with soda-water, sandwiches, and tobacco at hand, until a tiger comes to the bait below, and then shoot him without exposing one's self to danger, may be sport to those accustomed to the bravery of fox-hunting; but no American need lament that he cannot hunt tiger, either in this quiet way or in the more costly method, when one sits on an elephant. Even buffalo-hunting seems to be rather wearisome than virile sport. That out of such materials Capt. Glasfurd has succeeded in composing so excellent a book is greatly to his credit. He makes each tiger-hunt as realistic as possible; and as he weaves into it everything on land and in the sky, the result is satisfyingly picturesque, though the real excitement seems to be that of the poor little "bait," a goat or heifer tethered beneath the tree to entice the tiger. But the Indian sportsman wastes no more sympathy on his "bait" than the country boy on his angle-worm.

What Capt. Glasfurd says of the manufacture of "trophies" ought to bring the blush of shame to many of the bold hunters who proudly exhibit to friends at home the horns and hides they take back from India as their own spoils. It appears to be the practice nowadays to buy one's bag in the secret market exposed by the author in the matter-of-fact chapter "Round the Camp-Fire," where, by the way, one may also learn how to dress skins and what rifles to use in India. In the same chapter the author discusses the "depopulation" of India (meaning the extermination of game), and urges that, if the country becomes depleted of her game, she may "hold out fewer inducements to young men of sporting proclivities" and so "cease to attract to her public services many recruits of a desirable type."

In a new edition such slips as follow can easily be rectified: "Of he who," p. 167; "is into," p. 232; "every other creature scatters," p. 309; "I should have liked to have watched," p. 312; "a fauna," p. 317. The book is well illustrated.

William Bodham Donne and his Friends. Edited by Catharine B. Johnson. E. P. Dutton & Co. 1905.

"Donne," said FitzGerald, "ah, there is a man without a fault—the least selfish man

I ever knew." In the small circle of FitzGerald's intimates was more than one man of talent from whom his friends expected more than he achieved. Spedding was one of these, the "J. S." to whom Tennyson addressed the beautiful verses beginning:

"The wind that beats the mountains, blows
More softly round the open wold;
And gently comes the world to those
That are cast in gentle mould."

Spedding never aimed high enough or wide enough to please his friends, but at least he secured an honorable mention in literature as editor of Bacon. W. B. Donne was cast in the same "gentle mould," had the same tastes and the same associates, but he is practically forgotten. He had inherited a small property at Mattishall in Norfolk, and after he left Cambridge he settled there, and added to his small income by writing reviews and articles for *Fraser's*, the *Edinburgh*, and the *Saturday*. On the death of Fanny Kemble's brother, John M. Kemble, in 1857, Donne was appointed examiner of plays, and for the rest of his life he lived in London, filling also the post of librarian to the London Library. He was considered somewhat too strict as to the plays he licensed, and several cartoons at his expense are reproduced in this volume. It was said that he never allowed the word "God" to be heard on the stage, and a story is told of a gentleman who called on him and found him revising manuscripts with the help of his children. As he entered he heard a voice say, "Here's another God, father," and the answer, "Very well, my dear, cross Him out, and put 'Heaven' as usual." Nevertheless, when, in 1874, he retired from the censorship, he had won the good will of all the theatrical managers in London. He died in 1882 at the age of seventy-five.

The best biography of such a man, whose life, like FitzGerald's, was essentially private and sedentary, consists of a selection from his letters. His granddaughter, Mrs. Johnson, has collected in this attractive volume not only about half of Donne's extant correspondence, but also several unpublished letters of FitzGerald to his beloved "W. B. D.," and of Fanny Kemble, who was one of Donne's most intimate friends. Donne's own letters are in style much like FitzGerald's, to whom many of them are addressed. He was an excellent letter writer, and, like his friend Bernard Barton, FitzGerald's Quaker father-in-law, taxed the energy of his correspondents, some of whom, such as Fanny Kemble or Archbishop Trench, led a more active life than himself. It is usually the sedentary life that produces good letters, and Donne's will always be valuable. The reader will find in them abundant gossip, always kindly, about the FitzGeralds and Kembles and their friends. Donne's eldest son married Fanny Kemble's niece, a daughter of John Kemble. His mother, Anne Donne, had been brought up by her aunt, Mrs. Bodham, who is worthy of mention as the lady who presented Cowper, the poet, with his mother's picture, a gift which inspired him with the poem beginning "Oh, that those lips had language"—lines which Tennyson could not read without tears. The mother of Cowper was in fact herself a Donne of the eighteenth century, and the famous portrait is now in the possession of the Donne family. The pedigree attached to these letters begins with William Donne of Norfolk, who died in 1681, and was supposed to be descended from the family of the poet Donne, the Dean of St. Paul's; but the connection has never been satisfactorily proved.

Mrs. Johnson's collection of letters is excellently illustrated with portraits of Donne's friends, the Kembles, Trenches, FitzGerald, Blakesley, the editor of Herodotus, etc. It is very light in the hand for its size, and is altogether a model of what such a record should be.

American Insects. By Vernon L. Kellogg, Professor of Entomology and Lecturer on Bionomics in Leland Stanford, jr., University. With many original illustrations by Mary Wellman. Henry Holt & Co. 1905. Large 8vo, pp. 674, ff. 812. 13 plates.

This is a large book in every way; so large as to be almost unwieldly, and yet not too large to cover the subject. "If man were not the dominant animal in the world, this would be the Age of Insects." So the book starts, and, after a brief explanation of its purpose, the subject is taken up systematically. On the whole the plan is similar to that adopted by Prof. J. H. Comstock (to whom the book is dedicated) in his 'Manual for the Study of Insects'; but it is much more elaborately carried out, especially in the parts dealing with the development and structure, while the spiders and myriapods are omitted. Ten years have elapsed since the 'Manual' was published, and in that period the study of insects has made great strides, and the number of interested students has correspondingly increased. Professor Kellogg has essayed the difficult task of making "easy reading," while at the same time giving systematic knowledge in tabular form, and anatomy and physiology by figures. Just how far he has succeeded is perhaps a question, but the book certainly contains a great deal of entertaining general information. The beginner has not been forgotten, and directions for collecting, preserving, and studying insects are given at some length. The chapters on "Insects and Flowers," "Colors and Patterns and their Uses," "Insects and Disease," are all highly readable. The last-named consists largely of quotation. When writing it, Professor Kellogg could not have seen Dr. Blanchard's exhaustive work on the natural and medical history of the mosquito; but in any case the theory that mosquitoes are the sole agents in the transmission of certain diseases, including yellow fever, is fully adopted.

The treatment of the mosquito subject in the body of the work is very brief, and, unfortunately, already antiquated. Instead of "nearly 60 species" in North America, almost as many are recorded from New York State alone. It is more to be regretted that the exploded statement that "mosquitoes do not fly far" is repeated so positively, for it seems to have been definitely proved that some species do fly many miles from their breeding-places. Furthermore, the eggs are said to be always laid on water, and to hatch soon afterward; whereas, as a matter of fact, most of the species lay them in damp places where they may remain for months and do remain, with some species, throughout the winter. These matters have been known for two years or more, and, evidently, this part of the book was not brought up to date after it was once written. Several other omissions at other points also indicate that the work of preparing the book has been spread over several years.

In general, entomologists will agree with the schemes of classification, though the propriety of the use of the ordinal term "Aptera" may be questioned. The author follows Dr. Sharp, in this instance, and not Comstock. As to the illustrations, they are of all sorts—some indifferent, the majority good; some well-known reproductions, but many are original. Some are line and some are half-tone work, both good and poor. The half-tone reproductions of some of the microphotographs are not so clear as figures of such structures should be; the use of somewhat sketchy linework is an innovation—on the whole, perhaps a good one. The colored plates are by the three-color process, and are mostly to be praised. The paper, type, and presswork leave little to be desired, and an exhaustive index adds materially to the value of the work.

Three Notable Science Books

Kellogg's AMERICAN INSECTS

By Prof. VERNON L. KELLOGG. With 813 illustrations and 11 colored plates, $5.00 *net*. By mail $5.38.

A sumptuous volume for student or nature lover, covering the entire American insect world, including moths, butterflies and beetles, to which separate volumes are sometimes devoted. (Circular on application.)

"Written with the greatest regard for scientific accuracy and thoroughness, but in such a way as to interest the average intelligent reader. Numerous illustrations add to the value of the volume, which is not only an excellent reference book, but which contains much interesting reading for any nature-lover."—*The Outlook.*

"An attractive popular natural history book. The language is clear and intelligible, the information is accurate and according to the latest discoveries, and the pictures by Miss Wellman have character and are very numerous and illustrative. An excellent book for the boy who is developing interest in bugs."—*N. Y. Sun.*

Jordan's GUIDE to the STUDY of FISHES

With 934 illustrations, $12.00 *net*. Carriage extra.

Probably the most comprehensive, sumptuous, up-to-date and authoritative book on its subject. (Circulars with sample pages on application.)

"Most comprehensive treatise on American ichthyology. . . . An authoritative and comprehensive discussion of this great section of the animal world, and an impartial review of the salient biological facts and theories of ichthyological science. . . . Dr. Jordan brings the great and inexhaustible store of his information gathered in decades of research and an intimate knowledge both of the fishes and whatever has been written about them. . . . But the best of the work is the author's own simple, direct, homely but well-balanced and comprehensive story of the fishes, making a book which is indeed valuable to technical students, interesting to anglers and nature lovers, and instructive to all who open its pages."—Prof. CHAS. ATWOOD KOFOID, University of California, in the *Dial*

Champlin's Young Folks' Cyclopaedia of NATURAL HISTORY

By JOHN D. CHAMPLIN, assisted by FREDERICK A. LUCAS, late of the U. S. National Museum. With some 800 illustrations. 725 pp. $2.50 retail. Circular on application.

One of the most important books of the year, especially for public and school libraries. Covers the entire animal kingdom, including the more important extinct animals. Readable and entertaining, full of anecdotes and personal experiences.

"While specially designed for young people, they are of general value . . . profusely illustrated . . . clearly written . . . subjects treated in good proportion as to relative importance."—*The Outlook.*

"The present work is a successful attempt to put in a single volume an outline of the entire animal kingdom. . . . The descriptions are marvels of intelligent condensation."—*Chicago Tribune.*

"A book such as this in the hands of the young will do much toward bringing up a generation of naturalists."—*Philadelphia Public Ledger.*

ALONG THE LINE OF HISTORY, POLITICS, AND PUBLIC AFFAIRS

A History of Political Theories from Luther to Montesquieu

By **WILLIAM ARCHIBALD DUNNING,** Ph.D., Lieber Professor of History and Political Philosophy in Columbia University. *Cloth, 8vo, $2.50 net (postage 17c.)*

Professor Dunning continues into the 18th century the review begun in his "History of Political Theories, Ancient and Mediæval," which is an indispensable part of the preparation essential to any thorough study of the subject of modern politics.

Professor Paul S. Reinsch's Colonial Administration

is the third and concluding volume of the series including "World Politics at the End of the Nineteenth Century" and "Colonial Government," by Prof. Reinsch of the University of Wisconsin. It takes up the methods through which the work of colonial development is carried on. The great question of the meeting of different civilizations, and of their mutual influence, is the centre of discussion. *Citizens' Library. Half leather, $1.25 net (postage 11c.). Published this week*

Mr. Henry S. Haines's Restrictive Railway Legislation

Follows the full growth of railway legislation corresponding to the development of the existing system in its incorporation, finance, construction, operation and traffic. *Cloth, 12mo, 355 pp. $1.25 net. Ready next week*

Mr. Hugo Richard Meyer's Government Regulation of Railways

A STUDY OF THE EXPERIENCE OF THE UNITED STATES, GERMANY, FRANCE, AUSTRIA-HUNGARY, RUSSIA AND AUSTRALIA,

is a book of timeliness and importance, dealing in practical, masterful and thoroughgoing fashion with one of the most pressing questions of the hour. Its author, Dr. Meyer, Assistant Professor of Economics in the University of Chicago, is considered by railway men the best posted man on the subject in the world. *Cloth, 12mo, 472 pp. Ready very shortly*

The Modern Trust Company *Its Functions and Organization*

By F. B. KIRKBRIDE and J. E. STERRETT, C. P. A. *Cloth, 12mo. Ready shortly*

This book is the first to give a full and consistent description of the various lines of work in which a modern trust company engages. It discusses the duties of trust company officers and the relation of trust companies to the banking community and the public, and gives in detail the most recent methods of organization and accounting for trust companies in their functions of banker, trustee, etc. The volume contains facsimiles of many thoroughly up-to-date bookkeeping forms. The authors have reinforced their long experience with a careful study of the methods in use in the most important trust companies of this country.

Mr. William E. Smythe's Constructive Democracy

This book is not a catalogue of evils, but a bold programme for constructive progress. Its discussions of socialism, "The Taming of Monopoly," "The Surplus Man," and "The Unfinished Republic," are full of novelty and marked with vigor; but the tone of the work is judicial and distinctly optimistic. *Cloth, 12mo. Published this week*

Prof. Frank W. Blackmar's The Elements of Sociology

is intended to furnish the general reader, for whom such topics are in the air, with a brief outline founded on the principles established by standard authorities. *Citizens' Library. Half leather, $1.25 net (postage 11c.) Ready Sept. 27*

JUST PUBLISHED

Gannett, Garrison, & Houston's Commercial Geography

Price, $1.25

This text-book for commercial students has been prepared by eminent authorities, and is intended to serve as a practical tool in leading pupils to an appreciation of the physical conditions and economic principles on which depend the successful production, manufacture, and exchange of the world's great commercial staples. It treats of: 1. Commercial Conditions, physical, social, and economic, that influence commerce in every region; 2. Commercial Products, vegetable, animal, and mineral, together with the treatment of the soil and its cultivation; 3. Commercial Countries, with special reference to the industries and commerce of each. The very latest statistical information has been used, and the present condition of the world's commerce is accurately portrayed. Among the useful and striking features are the numerous maps and graphic percentage diagrams, from which, because of their clearness and simplicity, definite information can be acquired at a glance.

Memoirs of Henry Villard

JOURNALIST AND FINANCIER

1835-1900

Two volumes, with Portraits and Maps, $5.00 *net*. Postage, 35 cts.

An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

"This posthumous autobiography of the late Henry Villard is a work of exceptional interest."—*Commercial and Financial Chronicle*, November 12, 1904.

Have You Read "THE QUAKERESS"?

By CHARLES HEBER CLARK, author of "Out of the Hurly Burly."

THE JOHN C. WINSTON CO., Publishers, Philadelphia

AN EDUCATIONAL DIRECTORY.

I.—*The Nation* stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in *The Nation* has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

IMPORTANT ANNOUNCEMENT — *READY IMMEDIATELY*

RED FOX — **The Story of His Adventurous Career in the Ringwaak Wilds and of His Final Triumph over the Enemies of His Kind.**

CHARLES G. D. ROBERTS
Author of "The Heart of the Ancient Wood," etc.

Square 12mo. With cover design and fifty full-page illustrations, including a frontispiece in colors, together with many minor decorations by Charles Livingston Bull. $2.00.

JUST PUBLISHED

THE FLIGHT OF GEORGIANA
A Romance of the Days of the Young Pretender

The New Love Story by
ROBERT NEILSON STEPHENS
Author of "Philip Winwood," etc., etc.

Frontispiece in color and five illustrations by H. C. Edwards.

"Mr. Stephens writes with the easy grace, assured method and experienced touch of a born story-teller. His smoothly flowing sentences reënforced by lively, racy colloquy and vivid description, contain surprise after surprise, culminating in his final extrication from danger by a most daring exploit, as unexpected as audacious."—From an advance review in *Phila. North American.*

A POWERFUL AMERICAN NOVEL OF TO-DAY

THE GRAPPLE

GRACE MACGOWAN COOKE
Author of "The Last Word," etc.

With colored frontispiece and cover design by Charles Livingston Bull.

A modern love story, of which the plot centres in the struggle between mine owner and men during a great strike in the coal fields of Illinois.

THESE THREE NOVELS ARE BEING READ BY ALL LOVERS OF GOOD FICTION

MRS. JIM AND MRS. JIMMIE

STEPHEN CONRAD
Author of "The Second Mrs. Jim"

With Frontispiece in colors. $1.50.

"Mrs. Jim's experiences are very funny. More than that, they have real pathos, humor, and sound philosophy. Stephen Conrad has struck a very happy vein."—*Chicago Inter-Ocean.*

CAMERON OF LOCHIEL

CHARLES G. D. ROBERTS
From the French of De Gaspé

The adventures of a young Scotch captain in a Highland regiment during the war for the possession of Canada.
With Colored Frontispiece from drawing by H. C. Edwards. $1.50.

"Makes a strong appeal to readers of sound and able fiction."—*Boston Transcript.*

RETURN — **A Tale of the Georgia Sea Islands in 1739** — *5th Edition*

ALICE MACGOWAN and GRACE MACGOWAN COOKE
Author of "The Last Word," etc.

With six pictures from paintings in oil by C. D. Williams. $1.50.

"A story of great value, rich in color, and crowded with telling characters."—*New York Sun.*

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 14, 1905.

The Week.

The Government Printing-Office, the Mergenthaler Company, and the Lanston Company are all roughly handled in the report of the Keep Commission and President Roosevelt's comment on it. "In view of the intimate political and personal relationship between the Public Printer and Gen. Michener, the counsel of the Lanston Monotype Company," says the report, "it is our opinion that this purchase should not have been negotiated at the private residence of Mr. Dove and Gen. Michener, but at the Government Printing-Office, and that the method followed in this case was highly improper." From this conclusion no one but the Lanston people, who profited by the extraordinary performance, can dissent. There will also be general agreement on the proposition that ownership of stock in a typesetting-machine company by the wife of an employee of the Printing-Office who is in a position to exert influence in the matter, is a gross impropriety.

The Keep Commission would have had the contract with the Lanston Company cancelled on the ground that the tests which served as an excuse for the purchase of the Monotype machines were grossly unfair to the Mergenthaler Company. The President, however, holds that the contract cannot legally be set aside. He censures severely, and very justly, the Mergenthaler Company for bringing against the Lanston Company an unproved charge of corruption. We cannot, however, quite follow the President's reasoning in one paragraph:

> "Had not this charge of corruption been made, I should have entirely agreed with the conclusion of the committee that if it were possible (which it is not) it would be desirable to cancel the contract in question."

The Mergenthaler people deserve sharp punishment if they cannot sustain their allegations, but the Printing-Office should not suffer in order that this good may be accomplished. This remark of the President's, however, is an *obiter dictum* to which one need not attach deep significance. The main point is that he has dealt vigorously with the incompetence and the improprieties which have characterized the administration of Palmer. To that régime he has put an end.

The ousting of Palmer was overdue. All competent observers agree that under him the office has become a hot-bed of extravagance and corruption. Slackness, waste, pilfering, scandals in the purchase of equipment—notably in the case of the Lanston Monotype machines—have been the distinguishing marks of his administration. There has been no branch of the Government service in which the outlay has brought such a relatively small return. The reason why things have gone from bad to worse is no secret: the place has been honeycombed with politics; men have been given positions, not because of ability and honesty, but because of political influence. Of course, it is hard, under the most favorable circumstances, to secure for an annual salary of $4,500 a practical printer who is capable of conducting such an enormous enterprise. But when the purpose is not to secure an ideal man, but to reward a political heeler, the task is practically impossible. President Roosevelt will be expected to break the tradition, and to have an eye single to the efficiency of the service.

"An unfortunate connection" is the phrase which Secretary Wilson applies to the relations between Dr. Salmon and his label-printing company. Perhaps this may be the "portmanteau" expression for which publicists have been so anxiously looking—something that will accurately describe the misfeasance of a popular official without offending him or his friends. Since "unfortunate connection" is by implication proposed as a permanent part of our political vocabulary, it should be critically examined. A stickler for accuracy might possibly take exception to the adjective. The dictionary defines "unfortunate," among other things, as "not prosperous." Of course, this may not be perfectly descriptive of a transaction which involved $300,000 Government contracts in five years; but "unlucky," the next equivalent given, could not be improved upon for one that was found out. This pearl of a phrase will doubtless be Secretary Wilson's enduring monument as "Let us have peace" was Grant's, or "The Union, it must and shall be preserved," was Jackson's. 'Tis a pity we did not have it earlier! It might have salved the wounds of Machen and Beavers; it did not even come in time to alleviate Holmes's sufferings. If we cannot make theft and graft disappear from the world, let us at least make them disappear from our vocabulary.

As the Crop Estimating Board exists (so we might infer) only to gratify speculators, its report on September 5 on the condition of cotton shows that Secretary Wilson will have to dismiss some more men, and try once again to please. The "condition" which the market had confidently discounted was 70; the estimate puts it at 72, which proves that there is something rotten in the Department of Agriculture Denmark. Can there be anything more certain than that an event which speculation has "discounted" will come to pass? Figures may lie, but discounts never. Any cotton bull, we are persuaded, could take the reports of the correspondents and agents of the Bureau, and sit down quickly and write 70 for 72. That being so, Secretary Wilson will find it hard to defend himself.

So our unsatisfactory trade with South America is to be "investigated" again. We wish Judge Penfield joy of his job. What can he discover and report except the same thing as all his many predecessors? At whatever door an honest investigator goes in, he always comes out at the conclusion that our tariff is the great obstacle to trade with South America. Our consuls and ministers have told us this, world without end. So impressed was even President McKinley by the representations of our Minister to the Argentine Republic that he consented to a reciprocity treaty making concessions on Argentine wool and hides. Of course, the Senate strangled it; but the facts remain the same. If we will not buy, we cannot sell. It may be worth while for President Roosevelt to send a special agent to discover that truth once more, but the real question is what Congress will do about it. Under the domination of a purblind and greedy protectionism, it has shown itself able to shed economic truth and statistical facts as a duck's back sheds water. One more report, another set of reciprocity treaties, it will simply laugh at. Unless the President has something more than that in his plan, his labors will be in vain.

For so firm a stand-patter, Speaker Cannon is betraying a good deal of restlessness. Instead of standing pat, he is reported to be walking the floor o' nights. The mounting deficit will not let him sleep. Where to find a determined cheese-parer for chairman of the Committee on Appropriations is a worrying question that drives him to midnight vigils. But all this, with due respect to Mr. Cannon, is only to tithe mint and cummin. The weightier matters he neglects. Every really intelligent watchdog of the Treasury knows that it is the larger policy which causes the smaller drains to accumulate so remorselessly. As the Chancellor of the Exchequer often explains to the grumbling English taxpayer, it is policy that makes swollen

expenditure; and if you vote to sustain the policy, you have got to provide the money to carry it out. The anxious and troubled Speaker should consider these things. Measures necessarily involving extravagant outlay cannot be offset by driblets of saving. Moreover, Mr. Cannon ought to look at the general trade situation at least as carefully as President Hill. That gentleman points out that "there is a wall around this country." Our manufacturers cannot get over it successfully. The ingenious Dingley, who built it to keep foreigners out, did not perceive that it would all too successfully shut Americans in. Hence the tariff-revision movement, the reciprocity agitation, the alternate hope and fear caused by intimations that President Roosevelt is at last to call for a radical overhauling of our customs laws. But Uncle Joe is thinking only of how not to do it. He says, Let sleeping dogs lie. When they are not asleep, however, but yelping and snapping at your heels, it is time to wake up yourself.

The Republicans of Maryland last week fell in behind the Democrats, and included in their convention resolutions a plank decrying "negro domination" and "social equality" between the races. The party has a good issue, the Poe disfranchising amendment, and a courageous leader, Secretary Bonaparte. Why its platform should mention the question of race antagonism and dignify the Gorman machine's taunts, is hard to see. Of course, any fear of negro domination in Maryland is absurd. As a correspondent of the *Evening Post* lately pointed out, only 53,029 negro voters are registered in Maryland, to the 235,018 white voters, and the percentage of the colored to the white voters is decreasing year by year. Surely there is no actual fear of "social equality" in the party that Mr. Bonaparte is directing, and a reference to it is about as appropriate, it would seem, as a resolution condemning morganatic marriages in a convention of New York State women's clubs. Aside from the convention's excursion into the race issue, the platform holds close to the serious questions involved in the Poe amendment. The attempt of the Gorman organization to fasten itself on the State is exposed and vigorously condemned. National issues are not touched, and the party is evidently united, under Mr. Bonaparte's leadership, on the vital local question of preserving the suffrage free.

It has long been argued by the opponents of "primary reform" that the party convention is a naturally evolved product, meeting a genuine need, while the direct primary is a mere modern invention, and can never fill its place. They will find some color for this view in the current politics of Wisconsin. That State is the only one thus far to abolish all conventions, State and local, and even prescribe that the party platforms shall be made by the candidates themselves, instead of by the delegates. But there are already signs of the generation of a substitute, a sort of pre-primary caucus. During the State Fair week, for instance, a meeting is to be held at Milwaukee at which it will be decided what candidates the La Follette men are to support on the direct vote a few weeks hence. Whether the advice is gratuitous or the voters really demand to be led, experience will show. If, however, these extra-legal bodies are regularly to dictate nominations, the direct primary will merely have put in one more intermediate step between the boss's fiat and the election of his candidates. This may be well worth while in itself, but it is not all that has been claimed for the reformed system.

Gov. Pennypacker's attempts to ridicule "reformers" at the West Chester Republican celebration on Saturday is the latest sign that the organization expects the wave of virtue on which Mayor Weaver has been carried into public view soon to subside. The action of the City Councils a few days ago in putting through a resolution calling upon the Mayor to justify his recent removals from office of the ring's creatures, and its refusal to confirm the new appointees, were a direct defiance of reform sentiment. Hardly had this been done when it was seen that the "deposed" leaders, Durham and McNichol, were getting deeper and deeper into the councils of the Republican City Committee, that famous "reform-within-the-party" body. Now, Representative Plummer, the "gang's messenger," who is running for State Treasurer, declares that he will pay absolutely no attention to the widely published charges against him in connection with his acts in the State Legislature, made by Henry C. Niles, a reputable lawyer of Philadelphia. The *Inquirer*, the machine organ of Philadelphia, has taken up the cry that Weaver is merely the creature of some ambitious politicians. Evidently, the ringsters think it has about blown over, and that they may stick their heads out again.

Now that the health certificate has become an indispensable adjunct to life in the South, an interesting discussion has arisen regarding the machinery for issuing these documents, their price, and, we might almost say, their etiquette. The State of Arkansas begins by issuing the certificates free of charge. A Tennessee paper holds that the quarantine is a local matter, and that the health officers should be paid by the communities which enjoy their services. But the plan actually adopted in some localities is to charge the expense to the person who receives the certificate. "It becomes a serious question," says the *Age-Herald*, "whether the merchants of Birmingham can afford in the months of September, October, and November to have a tax of one dollar a head levied on their customers. It would be more enterprising and prudent to hire a doctor and a notary and pay them by the week or month." We have here the materials for a very pretty sanitary-commercial war. One town gives health certificates free. Another might throw in an extra course of disinfection, or a third offer a paid-up policy of life insurance as evidence that it really believes in the traveller's soundness.

The riotous scenes at Tokio last week were not by any means the first demonstrations of their kind against an unpopular treaty. In fact, an instructive parallel may be found in events that took place within half a mile of the site of our present writing. On July 18, 1795, a mass meeting was called to protest against the treaty which Jay had just negotiated with England. While the speaking was under way, an enthusiastic band, who had been burning the treaty at the Battery, came marching up Broadway, headed by the French and American flags, and joined the assembly. At about the same time Alexander Hamilton began to speak in favor of the treaty and urged adjournment. Stones were thrown at him from the now turbulent crowd, and one of them struck him on the forehead. Thus, one hundred and ten years ago, an American Secretary of the Treasury enjoyed the same enviable experience at the hands of his excited countrymen as the Japanese Premier a week ago, and for very similar reasons. Jay himself was burned in effigy at Boston and Philadelphia, and in the former city a Federal editor's offices were attacked, as were those of the *Kokumin Shimbun*. It must be remembered, of course, that most of the demonstrations here were made before the treaty had been ratified; and if the Senate had been sufficiently impressed by the popular hostility, it might still have been defeated. They cannot fairly be compared, therefore, to outbreaks over an act virtually completed and beyond recall. Yet the imaginary need for a second ratification by the House of Representatives was here used as a pretext for prolonging the demonstrations, much as the equally visionary hope of an Imperial refusal to ratify was given as justification for the Japanese outbreaks.

The purchase which assures the preservation of the fine old Harvard house at Stratford-on-Avon will naturally gratify more Americans than Englishmen, though the case is not like that of a

memorable antique, such as a painting or a Shaksperian First Folio. To Americans, however, the house in which John Harvard's mother used to live makes a special appeal; for us the associations are precious. Harvard is the oldest and most famous university of our country, the *alma mater* of us all, "first flower of the wilderness." Of the tens of thousands of visitors who flock to Stratford annually, at least one-fourth are Americans; and every one of them, it is safe to say, goes to look at the Harvard house. The picturesque, half-timbered building in High Street, bearing the date 1596, ranks in interest second to the relics of Shakspere. The fact that a Chicago meat packer has bought the property will be regarded by Englishmen as an exquisite illustration of the American alliance between commerce and education.

Mr. Chamberlain has several times, in his tariff propaganda, addressed great labor meetings, and said that, without the votes of laboring men, he could not hope to succeed. Consequently, the declaration of the Trades Union Congress on September 6 is one more damaging blow to him. By a vote representing 1,253,000 members as against only 26,000, the delegates asserted that any form of protection would "press most heavily" upon the working classes, and ought therefore to be opposed by them. They also made their condemnation cover Mr. Balfour's pet variant of protection, or political dodge, "retaliation." It has been said that all men divide into two classes—free traders, and "free traders, but—." English workmen are evidently free traders without the but. Their resolute withstanding of Chamberlain's appeals will make him ready to say, what he is already reported to have said of his fiscal policy to a friend, "I wish I had never touched the —— thing."

France has received due apologies and reparation from Morocco, so that threatening quarrel is happily settled. The incident was entirely apart from the proposed international conference on Moroccan affairs, and had nothing to do with the general reforms necessary in the government of the Sultan. It was simply a case of an outrage on a French subject. He was seized by a Moroccan official, loaded with irons, and thrown into prison. It does not matter what offence was charged, since, under existing treaties, France has extra-territorial jurisdiction in Morocco. It was of the greatest importance for her to assert and vindicate this prerogative, since she governs some 6,000,000 Mussulmans in her African colonies, and any violation of French rights or impairment of French prestige, in the way attempted by Morocco, would have serious political consequences. But M. Rouvier's protests and demands, with the threat of force behind them, have now been heeded, and there will be no need of a military expedition. Germany, it should be noted, has given France hearty support in this controversy.

At the autumn manœuvres of the French army there will be extensive employment of infantry mounted on bicycles. The plan was disapproved last March by some of the highest military authorities, including the Minister of War and the Chief of the General Staff; but it had a warm advocate in Gen. Langlois, who defends his opinions principally on the ground of the difference in the strategy of the French, as opposed to that of the German army. In the event of war, Germany would adopt the plan of envelopment, France that of manœuvre. The method of envelopment is best suited to a nation with superior numbers and power of rapid mobilization; that of manœuvre requires great mobility, which Gen. Langlois thinks can well be attained by a bicycle corps. Infantry mounted on horses are too slow; cavalry are not so effective. But troops on bicycles can be transferred with great speed from one point to another. Bicyclists take up more space in marching than do infantry, but they move more quickly; they are not more exposed than others to offensive attack, for they can readily dismount. Obstacles will not arrest their advance, because the wheel is easily carried. Gen. Langlois says nothing, however, about punctured tires and muddy roads. If the experiment is successful, we may expect to see in the war reports of the future mention of the gallant officer who had three bicycles shot under him in battle.

The announcement that Prime Minister Fejervary is to be impeached as soon as the Hungarian Chamber meets on September 15, shows how far the crisis is from having been composed during the Parliamentary recess. Negotiations have gone on between the coalition majority and the Ministry, and Kossuth has seen the Emperor again; but, instead of reaching a compromise, the prospect is that the strife will be more bitter than ever. The issue remains partly that of the language of command in the army. This is implied in Kossuth's remark that Francis Joseph needs only to "break with a prejudice which time and the conversion of the army from a paid force into a popular institution have proved to be unjustified." In addition, the Constitutional irregularity of the Fejervary Cabinet, in refusing to submit itself to a vote of no confidence by the Chamber, will naturally be a favorite point of attack. But the Premier had not been idle. Through his Minister of the Interior, he has declared for manhood suffrage, on an educational basis. This has been eagerly caught up by the Socialists, who have long contended for that principle. They have begun a campaign in support of the Government on this issue, which is not a little embarrassing to the coalition leaders. The latter take the movement as a sign that Fejervary means to advise the Emperor to dissolve the Chamber, and to make the suffrage question his main dependence in the election to follow. Impeachment proceedings would seem to be intended to forestall such a programme, though they would not necessarily do so.

The unexpected never happens in Spain—at least not in general elections. The Government always wins. Consequently it is no surprise to learn that the new Liberal Ministry will have a "sufficient" majority in the Cortes elected on Sunday. What was hardly looked for, however, was the revival of Republicanism in Catalonia and the southern provinces generally. Under Salmerón's leadership, the Republicans have captured several seats, and will have a respectacle numerical strength in the new Cortes. Their success may be due in part to the famine caused by failure of the crops in Andalusia. Protectionist republics are not the only ones that hold their rulers responsible if wheat and corn do not grow; and the Spanish monarchy has too much posed as an earthly Providence to escape grumbling and opposition when things go wrong. But whatever Government, Liberal or Conservative, is in power in Spain, has a task not to be envied.

A strange mixture of race, class, and religious hatreds is responsible for the outbreak and outrages at Baku. Among the 40,000 workmen in Balakhani, there has long been a Socialist and even revolutionary ferment at work. A letter in a recent number of the *Européen*, written from Baku on July 24, describes the methods of this labor propaganda, which had from the first the plan of making demands upon the Government; and apparently the present juncture was seized as a fitting time for the labor organizations to show their teeth. Race hostilities are also involved. Many different nationalities are employed, just as the owners of the works range from a Rothschild to a Nobel and a Mantacheff. The most arduous tasks are performed by Tartars, and their Moslem prejudices have added a peculiar ferocity to the conflict. As for the Armenians, whom all accounts make out the steadiest and most inoffensive of the lot, they seem to have been impartially massacred by both Russians and Tartars. The authorities apparently have the affair well in hand at present.

THE INSURANCE INVESTIGATION.

While the introductory testimony, at the hearing by the Legislature's investigating committee on Wednesday week, proved that policyholders exercise no more direct control in mutual than in joint-stock companies, it proved nothing that was not known beforehand. The experience of the Mutual Life, at whose last election only 199 out of half a million qualified policyholders appear to have voted, was fairly typical. To infer from this, however, that the policyholder's real interests are no better safeguarded in a mutual than in a joint-stock company, would be inferring altogether too much. Absence of personal interest in the election of their officers is no more common in the case of insurance policyholders than in that of shareholders for similar amounts in the great railway or industrial corporations. The reasons for indifference are in both cases the same. Either the minority voter is content with the existing management and aware that it will be perpetuated without his assistance, or else he argues that his isolated vote in opposition will count for nothing. In most cases, neither the insurance policyholder nor the company shareholder even troubles himself to fill out his proxy.

Still, the fact remains that the policyholders have the power to unseat a management and rebuke its official actions, and in an emergency can do so, though only by thorough canvass and organization of the qualified voters. Moreover, it would be absolutely essential that the character and purposes of the proposed new management should be known beforehand. Under such conditions, however, the successful assertion of the policyholders' opinion is quite conceivable; it would be no more surprising than the removal of discredited railway managements, which has repeatedly been effected in exactly this way. Had the mutual system existed, three or four months ago, in the Equitable Life, we should have had no talk of "a situation without an outlet." The proposition at one time seriously considered, to wind up the company because a discredited officer refused to relinquish his position, would have been simply absurd. It was a serious possibility then, because the officer in question absolutely controlled the stock of the company. With a purely mutual system the policyholders, under conservative leadership, would have proceeded to settle the question of management for themselves.

The two questions on which the Insurance Investigating Committee took testimony on Thursday—the relation of trustees to underwriting syndicates, and also of the life companies to subsidiary institutions—may properly be said to occupy the foremost place in public interest. It was these questions to which the Frick report devoted most of its attention in the case of the Equitable, and it was its conclusions and criticisms on these points which drew forth the strongest endorsement from public opinion. The Equitable, it was shown, had in the first place been accustomed to buy securities in substantial amounts from underwriting syndicates in which its own officers and trustees were participants. It also appeared to have involved itself so deeply in the undertakings of trust companies under its own control that, in August, 1903, when the Equitable's books showed $37,945,958 on deposit with these companies to its credit, President Alexander wrote of the security market that "we should be buying a good many such things were it not that we are so strapped for money by engagements already made." These two disclosures, sustained by evidence, were accepted by the public as conclusive proof of unsound methods in American life insurance. The Armstrong committee was appointed chiefly in response to a public demand that the method of other life-insurance companies should be investigated, in order to determine how far the Equitable's practices were peculiar to itself, and how far they represented laxness throughout the insurance world.

The testimony of Mr. Frederic Cromwell, treasurer of the Mutual Life, bore particularly on the two questions to which we have referred. It appeared, from the facts frankly stated by the witness, that the Mutual trustees had not imitated the practices of the "James H. Hyde and Associates" syndicate, in organizing as intermediaries for the sale of securities to the company, but that trustees had been in the habit of participating in underwriting syndicates to which the Mutual Life had become a party. That is to say, they were not, in the same sense as the Hyde syndicate, receiving "any money or valuable thing for . . . selling or aiding in the sale of any stocks or securities to or by such corporation," and therefore were within the letter of the law, as the Equitable's officers were not. But whether, except in a technical way, the position was different from that of the Hyde syndicate, there appears to be a real question. Mr. Cromwell stated thus his own view of the matter:

"I will say frankly that there seems to me to be no impropriety in these men going into the syndicates. Others, of course, may differ from me. But it is a thing I have thought of seriously, because for some time I declined to go into some of the syndicates."

We imagine that the same serious question will occur to a good many readers of the evidence. The counsel for the investigating committee brought out the matter clearly in the following colloquy with the witness:

Q. "Of course you understand that the subscription of the Mutual Life, with the large amount of securities that the syndicate was bringing out, would greatly aid the success of the venture?" A. "Yes, sir."

Q. "And that any participators would be benefited by the success?" A. "But if you never allow anything to affect your judgment in the original investment——"

Q. "You mean that you do not allow the fact that the Mutual Life is going in to influence you?" A. "Yes, sir.' "

Morally, the distinction between this practice and that of an underwriting syndicate of trustees which sells bonds to their company and pockets the commission, seems to us somewhat fine-drawn. The comment of the Frick committee on the Equitable underwritings was that trustees and officers of such companies, in their relation to the Society's funds, "are in the highest sense fiduciaries, and are governed by the principles of the law of trusts, which are not less strict—in some instances stricter—than the moral code itself."

It was shown very plainly in the course of Thursday's testimony that the practice of investing heavily in the stock of trust companies, fostering such companies by leaving continuously with them large sums of money, and utilizing them in connection with large financial operations, was not peculiar to the Equitable. The Mutual's treasurer, after describing such relations between his company and its various auxiliary concerns, made the point that its investment in such enterprises was extremely profitable. This is not the point of first importance, however. The Frick report made this pregnant comment on precisely this argument:

"The theory on which the purchase of these interests was justified is that the Society might thereby derive the larger profits which are possible from the class of investments which may be lawfully made by trust companies, but which may not be legally made by insurance companies.

"Judging these investments either on general principles or on their specific results, their wisdom is gravely questionable. The very foundation of these extensive stock ownerships is an attempt to do by indirect, that which may not be done by direct, means; and this in itself is a departure from that dignity which should attach to every phase of life insurance.

"Having made the investment, the Society finds it necessary to protect and nurse it. The Society then finds itself involved with interests which, to quote the words of President Alexander, used in another connection, 'are not necessarily parallel with those of the policyholder.' "

The truth of this statement of the case is perfectly well known to every one at all conversant with Wall Street history in the past half-dozen years. It was the plain intimation, in the Equitable scandal, that the trust fund had been used in these indirect ways to foment the wild stock-jobbing mania of the period, which most of all arrested public attention, and fixed in the policyholder's mind the determination to see whether recurrence of such a mischief could not be prevented. We presume that, as the legislative investigation proceeds, we shall have more light on this highly important phase of the life-insurance situation.

Mr. Charles E. Hughes, the counsel of the committee, has shown himself keen and fearless. On Friday he drew

damaging admissions from Edmund D. Randolph, treasurer of the New York Life. This company, through all the troubles of the Equitable, has been making professions of superior virtue. One of its circulars announces: "There is no insurance law, requirement, regulation, or provision in the world, with which this company is not now fully complying. No other insurance company in the world is in so impregnable a position as the New York Life." Another reassuring declaration is: "The company does not invest in stocks of any kind." Both these pledges were, according to the confession of Mr. Randolph, deliberately evaded. A few years ago the Prussian Government insisted that the company, if it were to do business in Prussia, must not have any stocks in its schedule of assets. The mode in which the New York Life "fully" complied with this requirement was to make a fictitious sale of certain stocks. Two or three employees—one on an annual salary of $600—assisted by giving their notes in sums aggregating over two millions of dollars. Thus these stocks were, in the words of Mr. Randolph, "taken off the books." The details may be somewhat complicated for a layman; but the purpose of the transactions is so plain that every man can draw his own conclusion.

INDUSTRIAL CONDITIONS IN GREAT BRITAIN.

The British Board of Trade has recently issued an interesting series of "Memoranda, Statistical Tables, and Charts" relating to industrial and commercial conditions in Great Britain and certain foreign countries. Although the data are necessarily fragmentary at many points, and are subject to various other limitations which affect their value for scientific purposes, this latest Blue Book presents some of the most important statistics ever gathered upon at least two subjects of vital interest—changes in the cost of living, and fluctuations in the labor market. Upon the first topic, moreover, the results reached by the Board of Trade invite comparison with recent investigations by our own Bureau of Labor, which acquired no little notoriety during the late Presidential campaign.

The figures which the Board of Trade gathered concerning changes in the cost of living are drawn from the family budgets of workingmen in London and a number of other cities. They show, when reduced to a series of index numbers, that the cost declined from an average of 121.7 in the year 1880 to an average of 91.7 in 1896; a reduction of practically 25 per cent. in a period of sixteen years. In 1897, however, the index numbers began to rise, on account of the general advance in prices, until, in 1901, the average stood at 102.4. For 1903, an average of 101.4 is indicated, the increase since 1896 being nearly 11 per cent.; yet, when compared with 1880, the index number for 1903 shows a net reduction of about 20 per cent., so that one hundred shillings would purchase as much as one hundred and twenty would have commanded in the former year.

In the general tendencies disclosed, if not in the precise rate of change, the results of the British investigation are substantially similar to those reached by our Bureau of Labor. The American figures, which, however, do not go further back than 1890, show a marked decline in the cost of living until the year 1897, when the index numbers began to move sharply upward, reaching the highest point in 1902 and falling slightly in 1903. Further than this it would be unprofitable to carry the comparison, since the Bureau of Labor based its estimate of the cost of living solely upon the retail price of food, while the Board of Trade included such important items as clothing, rent, and fuel. Of the four items investigated by the British statisticians, the cost of food and clothing showed a marked decrease from 1880 to about 1896, which was followed by a moderate increase; rents, however, steadily advanced from 86.6 in 1880 to 102.2 in 1903, and the outlay for fuel and lighting rose from 74.1 to 82.5. The increase of rent, at a rate of nearly 20 per cent., during a period when the average cost of living declined by 20 per cent., is striking proof of the desirability of including this factor in all investigations of this character. It is true, of course, that the British report relates to workingmen in cities, with whom this item is far more important than it would be for laborers in country districts; but it should be remembered, also, that it is chiefly with the workers who live in industrial centres that most of our labor statistics deal.

In its investigation of fluctuations in the labor market, the Board of Trade was able to collect, from a number of the oldest trade unions, statistics which cover a period of forty or fifty years—a source of information available to no such extent in any other country. By ascertaining the numbers of members receiving out-of-work benefits, it was possible to construct index numbers showing the amount of non-employment among trade unionists from 1860 to 1903. The tables disclose an interesting series of fluctuations indicating successive waves of good or bad times which usually affected all trades almost simultaneously. Thus, it appears that 1858, 1862, 1868, 1879, 1884, and 1893 were the years of the greatest lack of employment; and that 1853, 1860, 1865, 1872, 1882, 1889-90, and 1899 were the years in which non-employment was at a minimum. Any one who is familiar with the history of English commerce and finance will immediately perceive the connection that exists between these data and the fluctuations in the general prosperity of the country. In the statistics now before us we have an important contribution to the history of commercial crises.

Even more significant is the showing which the figures make when grouped by decades. From 1860 to 1869 the index number exhibiting the average condition of employment is 98.6; from 1870 to 1879 it stood at 99.2, revealing a slight improvement. From 1880 to 1889 the average was 97.6, the lowest of any of the four decades, this result being attributable to the very bad years of 1885 and 1886, which were the worst on record. From 1890 to 1899 the average rose to 98.2, which was nearly the same as the figures for the first decade investigated; so that it appears that, decade by decade, conditions have not changed very greatly from 1860 to 1899. The bearing of this result upon the claim of the Socialist that the capitalistic system of production is foredoomed to ultimate disaster through the increased frequency and intensity of industrial depression, should be sufficiently obvious. From 1900 to 1903, although the figures show the influence of the recent depression in English industry, the index number is 98.7, which is almost precisely the same as that for the decade from 1860 to 1869.

In its gross output of official statistics, the United States surpasses all other nations in a degree as marked as that by which its output of cotton or corn or pig iron surpasses the product of other lands. In point of quality, however, our preëminence is not so well established; and the British Blue-Book now before us is a suggestive reminder of that fact. The Board of Trade may not have a statistical broadside ready for every emergency in British politics; but it does not omit such items as rent, clothing, and fuel when it computes changes in the cost of living, and it can secure data concerning non-employment which cannot be matched in any other country. It may be well for us to keep our statistical mills in constant operation, but we should pay more attention to the quality of the grist which they turn out. At a time when we are beginning to appreciate the importance of a national pure-food law, it might be well to give more attention to the statistical pabulum which the Government supplies to our people. We might at least require that every volume of statistics display clearly upon its wrapper just what ingredients are compounded in its tables, and what elements essential for a proper intellectual diet have been omitted. Even, like our British cousins, we should at least know what kind of statistical poison we are consuming.

JAPAN IN CHINA.

A common inference, in the first great surprise caused by the Japanese assenting to peace without an indemnity, was that they are now bent on business rather than on war. If their rulers are convinced that the future of the Empire lies in the development of the territory which has fallen under Japan's sway, in the expansion of her commercial fleet, in the building up of a great foreign trade, then the wisdom and patriotism of Marquis Ito and the other Elder Statesmen in accepting an unpopular treaty clearly appear. It is, indeed, now generally expected that Japan means to follow up her dazzling military successes by making herself a formidable competitor of the industrial nations. Apprehension on this score seems to have animated the Emperor William when he said, the other day, that Japan now "indirectly owns" China. What conquering Japan will do in the Middle Kingdom is, indeed, a question of deep concern to the whole world. Much light is thrown upon it by the article of M. René Pinon in the *Revue des Deux Mondes* of August 15, on "La Japonisation de la Chine."

He points out once more the immense advantages which the Japanese have in attempting an "infiltration" of China. Not only proximity aids them, but adaptability in a high degree. Their appearance, dress, language (they learn Chinese with great facility) allow them to pass into the interior almost unperceived. "Where a European would provoke a riot, a Japanese establishes himself without exciting any feeling. Peddler, journalist, barber, photographer, merchant, he makes himself everywhere useful, soon indispensable; clever and ingratiating, polite to the point of obsequiousness, . . . he understands everything, sees and retains everything." Japanese naval aptitude is no longer doubted. An American Admiral lately recognized in the captain of a Japanese vessel his former cook! But M. Pinon avers that the Japanese are as natural traders as they are sailors; and he maintains that the penetration of China by the mercantile and other agents of Japan has gone to such an extent, and betrays such signs of an organized and directed movement, that it has the air of an "immense complot."

No one has better brought out the skilled and patient work of Japan in reorganizing the Chinese army. Military instruction in all schools save two, where Germans are retained out of complaisance, it is said, to the Krupps, is given by Japanese, or by Chinese trained in Japan. In the military school at Canton, the six foreign teachers are all Japanese. Officers of the reserve usually fill these posts, as also that of military adviser to Chinese generals. So important does this work appear to the Tokio Government that, in spite of the great loss of officers in the war, none of the military instructors were recalled from China. Chinese cadets also study in Japan. M. Pinon states that the Chinese army now has more than 3,000 officers instructed in Japanese methods. Two years from now, it is reckoned, China will be able to put an army of 100,000 men into the field, well armed and drilled, and commanded by a general staff which is either Japanese or educated in Japanese fashion. The latest news is that China, at the instance of Japan, is to set about restoring and strengthening her navy also.

Upon the civil education of China, as well, Japan is exerting a powerful influence. Chinese students flock to Tokio and other Japanese schools and universities. Some 2,500 young men from the Chinese provinces are there now, supported by their governments (at an annual cost of from $200 to $250 each), acquiring European science through Japanese books and teachers. These Chinese students are made significantly welcome. In Tokio a special society in the University exists to aid the Chinese youth in every way. They are expected to return home to help make over their country on the Japanese model. Indeed, Young China, as we may call it, reformist China, is already deeply imbued with Japanese ideas. "This new China," asserts M. Pinon, "will be a Japanese China. It is under Japanese influence that all the reforms have been decided upon and accomplished. The report of the President of the University on 'the reorganization of education in the Chinese Empire,' . . . was directly inspired by the Japanese, . . . and advises that all professors, except teachers of foreign languages, should be chosen in Japan. In fact, in the normal schools which have just been founded, all the foreign teachers are subjects of the Mikado. . . . It would be needless to dwell upon the enormous influence which cannot fail to result from this educational mission of the Japanese."

Japan's progress towards the commercial conquest of China is, so far, only relative. She has more than doubled her Chinese trade in ten years, but it is still less than a quarter of Great Britain's. Yet in certain articles she is pushing her rivals hard—some grades of cotton goods for example. Japanese matches have practically driven out all other foreign makes. And Japan is steadily increasing her imports of raw material from China, especially cotton. Her chief commercial penetration has been in the province of Fo-kien, over against Formosa. Yet here some of the methods of Japanese traders have roused resentment, and led, as in the case of the attempted monopoly of the camphor trade, to successful protests by British consuls. All told, the commercial supremacy of Japan in China can he won only after long years of effort, and the employment of much more capital and a more highly organized manufacturing system than the Japanese now possess.

Nor should it be thought that, in other matters, Japan will not meet with serious obstacles before she can dominate China. One of them is the lack of a close-knit government. The loose congeries of vice-regal governments stands in the way of centralized projects of any kind, whether military or educational. Moreover, the spirit of nationalism, once awaked, cannot easily be controlled. Already there are signs of Chinese suspicion and dislike of Japanese pretensions. Japan trains young Chinamen, but the real lesson they learn from her is that of setting up for themselves. Even the Chinese are capable of vast ambitions for their own country. M. Pinon quotes from a sort of hymn, or prayer, intended for use in the primary schools of the province of Kiang-su: "May my country surpass Europe and America and conquer Japan. May our Empire, like a sleeping lion suddenly aroused, leap with a roar into the arena."

THE AUDUBON MOVEMENT.

When a warden employed to guard the nesting-places of the Florida white herons was killed by plume-hunters last July, his name was recorded as "the first martyr to the cause of bird protection." While game-keepers had often enough been shot by poachers, no doubt, the fight to preserve the native birds, apart from the interest of hunters, had hitherto been bloodless. But this tragic occurrence ought at least to call more general attention to the real accomplishments of what is known as the Audubon movement.

The effort of which the outside public has heard most has been that directed against the use of native birds in millinery, and incidentally the sale of song-birds in the markets for food. So far as these objects are concerned, the whole situation has been changed in twenty years. In this city, where in 1886 Frank M. Chapman found forty species of the most beautiful native birds on women's hats, the shops could be searched now and not a handful of skins discovered. The "model law" drawn up by the American Ornithologists' Union is in force in thirty States and the District of Columbia. The organized bird-lovers ask for the enforcement of the laws against bird slaughter as other bodies of citizens ask to have enforced those against policy-playing or burglary. The Federal power has been invoked in the Lacey law, which excludes from interstate commerce all birds killed illegally in any State, and makes those legally killed subject to the law of the State into which they are brought.

Until a few years ago the makers of air-rifles invariably advertised that the half-toy weapons would "kill small game at fifty feet." As a glance at magazine advertising pages will show, they do not emphasize that feature any longer. It is merely another sign of the great growth of humane feeling which has accompanied the enthusiasm for "nature study" in the last few years. This has been undoubtedly one of the forces which have helped the present Audubon movement succeed where an earlier one failed. But if any one supposes that these sharpened sympathies would have secured results without the aid of stringent restrictive laws, let him consider the case of the aigrette. Of all forms of feathers worn for adornment, no other is secured at such a cost in bird life or under circumstances so calculated to awaken human pity. No other instance of bird slaughter has been so constantly dwelt upon by the Audubonites. Yet in a State like New York, where the efforts to secure a law prohibiting the sale of aigrettes have been unsuccessful, these delicate plumes, even at rapidly advancing prices, are worn, for all that evidence can show to the contrary, about as much as they ever were. It was in revenge for interference with their highly profitable trade that the Florida plume-hunters killed Guy M. Bradley.

In filling gaps in the existing laws and resisting attempts to weaken them, constant work has to be done. Last year, for instance, a law prohibiting the trap-shooting of live birds was passed in Iowa; a bill excepting the robin, catbird, and some others from the protection of the law was successfully fought in New Jersey. But the occupation of the Audubon Societies would not be gone even were they able to secure model laws everywhere. In fact, having passed the "millinery stage," they are now entering on a work that promises to be permanent. There are thirty-five State societies, and they are doing their work in ways suited to their special conditions. In Connecticut, for example, and in several other States, the Society has worked chiefly through the schools, sending out travelling libraries, issuing bird books of its own, and generally making itself a centre for the study of bird life. Other States have arranged for public lecture courses or classes on ornithological subjects. The gulls and terns of Massachusetts, the egrets and pelicans of Florida are guarded in their nesting-places by wardens, and in Louisiana President Roosevelt has recently designated seven small islands for bird breeding-grounds. In North Carolina, which is unique in this particular, the State has given to the Audubon Society the powers usually lodged in a State game commission. Its president is chief warden, with a force of forty men under him, and the bird and game laws are for the first time being vigilantly enforced.

Generally, however, the Audubon Societies do not trespass on the field of the State game wardens. But they do insist on one point—a fundamental one, as most sections of the country are already realizing—namely, that if the game of this country is to be conserved at all, it must cease to be regarded as an article of merchandise. The laws prohibiting or restricting the shipping of game out of the State where killed, as well as those forbidding the sale out of season of game killed in season, all recognize this principle. A State that might attract sportsmen for years to come by careful protection of its game, is likely to lose this valuable asset in a very few seasons if it permits killing for the market.

It is obviously profitable to save the game birds from extinction. The motive of self-interest is less powerful in the case of the non-game birds, though, when the boll-weevil made its inroads, the cotton States were prompt in taking steps to protect their insectivorous birds. Yet the Audubon work would have abundant reason for existence even if it had no economic aspect. Largely through it America, so generously endowed with bird life, is being saved from the condition of those Old World countries where the last half-dozen nests of moribund species have to be kept under guard to prevent absolute extinction.

FONDNESS FOR OLD FOLLIES.

"Why," asks Andrew Lang in a recent essay, "why, as science becomes more cocksure, have men and women become more and more fond of old follies, and more pleased with the stirring of ancient dread within their veins? As the visible world is measured, mapped, tested, weighed, we seem to hope more and more that a world of invisible romance may not be far from us, or, at least, we care more and more to follow fancy into those airy regions, *et inania regna*." The trait which Mr. Lang remarks manifests itself in various ways—in faith in fantastic religions, impossible social systems, wild theories as to the cosmic order, incantations and magic, nostrums and quacks. Every man has his private superstition. He may talk condescendingly of "the Christ myth," and still may shudder as he sits down to a table of thirteen. Through the broadest and least imaginative of minds there often runs a soft streak of the most infantile credulity, like a glittering vein of gold through adamantine quartz. A stock-broker who appears as unemotional as the "ticker" itself, may take tips on the market from Thomas W. Lawson or a professed clairvoyant; while graduates of college who have specialized in science may be dazzled by advertisements of sure cures for cancer. P. T. Barnum said frankly that men love to be gulled, and he acted on his conviction. He has had many worthy and successful followers.

The ways of that large tribe of them who are called quacks are discussed by Dudley F. Sicher in the September issue of the *Popular Science Monthly*. The thing which impresses Mr. Sicher is "the extent and ancient origin of quackery, and the ineffectual fight against it." The fight will doubtless be kept up till the heavens shall be rolled together as a scroll, but it will, we fear, always be ineffectual. In 1605 men were indifferent to Dr. Guybon's "Caveat to Sick Folkes to Take Heede of Unlearned Phisitions and Unskilfull Chyrurgians"; and exactly three hundred years later they are quite as unmoved by the warnings of boards of health and medical societies. Indeed, as Mr. Sicher observes, there has recently been "an enormous spread of quackery, along with progress in scientific medicine and the growth of education." Among the causes of this spread he reckons the insufficiency of orthodox medicine, the pain and dread of disease, and the depraved skill of the quack in magnifying minor ailments, in claiming credit for the work of nature, and in clever advertising.

All of these causes are steadily at work; and of them all, the venality of the press is as malign as any. Relatively few newspapers in this country today refuse to open their advertising columns to the most impudent frauds in medicine, and these few have scarcely any circulation among the poor and ignorant, who furnish most of the victims. The recent outbreak of yellow fever in New Orleans, for example, has afforded the maker of "Peruna," in alliance with the publishers of the *Times-Democrat*, an unusual opportunity to urge the nostrum as a preventive of the scourge. This is a peculiarly aggravated case of prostitution, but in principle nothing worse than what the yellow journals of this city offer us habitually. The insufficiency of orthodox medicine we have more than once discussed. There is, and there will continue to be, more or less guesswork about it; but the guess of a trained physician is, in the majority of cases, right. Furthermore, admitting all that may be laid to the dread of disease and the effrontery of the quack, we feel that on two causes Mr. Sicher might well have laid even more stress than he does: the discoveries of modern science, and—what we have already mentioned—the ineradicable mysticism of the human mind.

"The progress of scientific medicine and the growth of education" are the very things that have helped to fill the pockets of the quack. We read of the extraordinary achievements of surgery. The brain can be opened and tumors cut out; nearly every organ except the heart can, at least in part, be perma-

nently removed, and many of them can be taken out altogether; laparotomy for all sorts of diseases of the abdomen has within twenty years become commonplace. We are just beginning to apply X-rays, radium, and other radio-active substances in therapeutics; and for doctors as well as laymen the whole subject is still enveloped in much obscurity. No one knows the possibility of these agencies. These known and admitted miracles of chemistry, electricity, and magnetism pave the way for a belief in almost any marvel. Forces are busy about us which the highest experts confess that they do not wholly understand. In some ways, then, it is easier than ever before to persuade the gullible to try an "absolutely new method of treatment, no drugs, no knife." Dr. Henry Kane's "radium-cure" swindle, exposed in this city last January, was a very prosperous enterprise, simply because the recent discoveries about radium have prepared people to accept anything that any one may promise in regard to its wonderful powers. And thus to the end of time every advance of science will be imitated by a feat of quackery.

But at the bottom of it all is—to borrow a phrase from Prof. William James—the will to believe. The sufferer from a presumably incurable malady very naturally turns with hope born of desperation and agony to Christian Science, osteopathy, electric healing, or anything else that proffers relief. Almost as naturally the average man in perfect health follows some system-monger or charlatan whose doctrines seize the imagination or tease the common hankering for a mystery. The exact sciences give us all headaches. Knowledge and reason are feeble weapons in a struggle against passion and prejudice; for a man, as Jeremy Taylor noted, will "believe anything he hath a mind to."

SCARRON.—I.

PARIS, August 25, 1905.

M. Henri Chardon, a former pupil of our École des Chartes, well prepared in consequence for the study of literary and historical subjects, has published two large octavo volumes on Scarron. The first husband of the celebrated Madame de Maintenon owes more to his union with a person who was for a long time the anonymous Queen of France than to his literary works, which are fallen almost into oblivion. I wonder if many people, many scholars even, have the patience to read now the 'Roman Comique.' That droll picture of the life of provincial actors and actresses in the seventeenth century had, in its time, considerable success. I saw a copy of it not long ago in the catalogue of a sale, with the arms of the famous Vauban, the engineer who constructed so many French fortifications, the reformer who planned, in his "dîme royale," a complete system of taxes for the kingdom, who was one of the most serious and profound minds of his time. Great men must have a pastime, and Scarron was so fortunate, it would seem, as to have given a moment of amusement to Vauban.

M. Henri Chardon must have devoted years to the study of this writer. The first of his two volumes has for its title: 'Scarron Inconnu'; the second, 'Les Types des Personnages du Roman Comique.' In his preface, he says:

"People believe that Scarron's life is well known: it is not so. One can even say that, till of late years, his life was completely shrouded in obscurity. It was only the fine study by M. de Boislisle, published in 1893 and 1894, in the *Revue des Questions Historiques*, that threw some light on the existence of the author of 'Virgile Travesti.'"

Scarron was essentially a comic—I should rather say a farcical writer. We have, nowadays, such a regard for poetry that we cannot read, with any pleasure, such parodies as the 'Virgile Travesti.'

M. Chardon is interesting when he enters into the private life of Scarron and of the various people who became, under assumed names, the types of the personages of the 'Roman Comique.' The real object of his study is to demonstrate that this novel is what we call now a "roman à clefs"; that Scarron depicted the persons among whom he lived in Le Maine, as well as the actors in the troupe of Monsieur le Prince, whom he saw at Le Mans. The first part of his life is as obscure as that of Mademoiselle d'Aubigné, who became his wife. He was the son of a councillor of the Parlement of Paris, and was baptized on the 4th of July, 1610, at the church of Saint Sulpice. The witnesses of the baptism were a Capt. d'Elbène, first *maître d'hôtel* to the Queen, and Marie d'Aligre, wife of Philippe de Béthune, governor of Monsieur, the King's brother. The Scarrons, it may be inferred from these names, moved in good society; Scarron's mother belonged to a family of Poitou; she was the niece of an historian of the wars of religion, Le Poplelinière. Scarron lost his mother when he was three years old; his father was remarried to Françoise de Plaix, who seems to have been a very contentious woman, as he called her afterwards "la plus plaidoyante du monde." The boy's education was rather neglected, and Segrais tells us that at the academy he was thick with young noblemen who were rather dissolute. He was, however, destined for the Church, and became an abbé at the age of nineteen, wore what was called the *petit bonnet*, and, after the fashion of the time, was attached as a sort of secretary to the Bishop of Le Mans, Charles de Beaumanoir, of the illustrious Lavardin family, a prelate who was fond of letters and of men of letters. It was in that capacity that Scarron spent the best years of his life, which he so much regretted afterwards, and it was at that time that he made the acquaintance of many people who became the types of his 'Roman Comique.'

The young abbé accompanied several bishops who were sent to Italy on a mission. He found in Rome a large and distinguished colony, where he made many friends. A journey to Italy was at that time a part of the education of young gentlemen and of the "abbés de cour." Scarron made in Rome the acquaintance of the famous painter Poussin. The young abbé was more influenced by the easy life which he led in Rome, in company with libertines like the poet Maynard, a disciple of Malherbe, and a few others, than by the spectacle of the Roman capital. He remained cold before the Coliseum as well as before St. Peter's. The special embassy of Bishop Beaumanoir came to an end, and Scarron returned with him to France. He obtained a canonry in the chapter of Saint Julian on the 18th of December, 1638. At this date he lost his protector, the Bishop of Le Mans, and soon after was attacked with a malady which made the elegant young abbé a cripple for life. M. Chardon examines at great length the nature of his disease, and professes to have found it out. According to what he considers a legend, fathered by La Beaumelle, editor of the 'Memoirs and Letters of Madame de Maintenon,' published in Amsterdam in 1755, Scarron's paralysis was owing to the fact that during a masquerade he threw himself into a cold river.

"Scarron," says La Beaumelle, "without sobriety, without temperance, fond of all pleasures, lived fast. . . . He had gone to his canonry to spend the carnival. At Le Mans, as in most provincial cities, the carnival ends in public masquerades. The Abbé Scarron wished to participate. But under what guise? He had at the same time to preserve the singularity of his character and the decency of his state—the Church and the burlesque. He covers his whole body with honey, rolls in a bed of feathers, and turns in it till he is feathered like a savage. He runs thus through the crowd. . . . At this spectacle, the people become angry; Scarron escapes through the mob; pursued, covered with honey and water, he finds a bridge, jumps heroically over it, and conceals himself. . . . Sciatica, gout, rheumatism followed, and, sometimes together, sometimes separately, made the young abbé a picture of human misery."

M. Chardon believes that this anecdote is a mere invention of the writer. Scarron's malady has been the object of various studies; it has sometimes been called "ataxie locomotrice," and by other doctors "polyarthrite déformante." Professor Lannelongue believes it to have been a tuberculous affection of the vertebræ—what is now called "Pott's Disease (or Curvature)."

In 1640 arrived in Le Mans, in exile, the favorite of Louis XIII. Madame de Hautefort had inspired the melancholy son of Henri IV. with a Platonic passion, and had been sacrificed by him because she had incurred the jealousy and hatred of Richelieu. She was a 'précieuse," fond of poetry, and became acquainted with Scarron, who made verses for her:

> "Madame Sainte Hautefort, . . .
> Dame de vertu non commune, . . .
> La vertu la plus consommée,
> La fille la plus renommée, . . .
> L'air qu' auprès de vous on respire
> Aux esprits les vertus inspire," etc.

She was very kind to the poet, who was already very ill; he took in 1641 the waters of Bourbon l'Archambault, but his health did not improve. He wrote there, and addressed to Madame de Hautefort, his two 'Légendes de Bourbon,' which are delicate, and form an agreeable contrast with his burlesque works. He had run in debt at Le Mans, and did not return there. His talent had two sides: the first is found in his 'Légendes de Bourbon' and various other small poems written in the period during which he was under the influence of Madame de Hautefort; the other is found in the 'Roman Comique.' The manuscript of this was completed at Le Mans, where he had known the people who served him

as models, but only in 1650 did he occupy himself with the publication of the first part of this novel.

Scarron established himself in Paris, where he lived in various places, trying always to find a remedy for his ailments. While he was at the Hôtel de Troyes, near the Luxembourg, he became acquainted with a Madame de Neuillan, who was spending the winter months in Paris, after the fashion of many provincial ladies, and who had with her a young relative, reduced to extreme poverty, Mademoiselle Françoise d'Aubigné. There were old family relations between the two families of Scarron and D'Aubigné, which have only lately been discovered. M. Chardon gives long details on this subject. Acquaintance was soon made between Scarron and the young Françoise. The poet learned that the daughter of the D'Aubignés was very poor, that she was living on the charity of an avaricious old aunt. He took pity on her, and offered to marry her. "I preferred," she said afterwards, "marriage with him to a convent." They formed the project, which was never accomplished, of going together to America for his health. The famous Ninon de Lenclos was to be of the party; a scheme of colonization was framed, which is alluded to by Loret in his *Gazette:*

"Une prudente maréchale
Dans l'Amérique occidentale
Va, dit-on, planter le piquet, . . .
Ninon, la belle courtizane,
Est aussi de la caravane,
Et le sieur d'Aubigny, dit-on . . ."

Loret speaks also in his *Gazette* of the marriage of Scarron, "esprit insigne." The marriage contract has only lately been turned up by M. Campardon; he communicated it to M. de Boislisle, who published it in the *Revue des Questions Historiques.*

Scarron intended to keep his marriage secret for family reasons. He had given up his canonry. He left Paris and went to live for some time in a small country house, near Amboise. He wrote to a friend:

"Depuis que je suis venu boire
Des eaux du beau fleuve de Loire
Et que, de crainte d'un blocus
Et de la disette d'écus,
J'ai quitté Paris sans trompette . . ."

This letter was written during the Fronde. Scarron was afraid of being shut up in Paris during a siege. He feared also the wrath of Mazarin, as he had written some of the "Mazarinades." This, more than a pretended journey to America, was the reason why he took his young wife to Touraine.

Correspondence.

THE PRESIDENT AS PEACEMAKER.

To the Editor of The Nation:

Sir: One who knew nothing of the history of recent events in the United States, Great Britain, and Continental Europe, might properly infer, from the profuse expressions of gratitude to the President as peacemaker, that Yankees, Englishmen, and Europeans in general are peace-loving people, and that the President acted as mediator between Japan and Russia because he is also a lover of peace.

Unfortunately, beyond these spasmodic declarations of joy, the evidence tends to show that these several nations are about as bloodthirsty as Indians, being always getting ready for war, and alert to pick a quarrel; and also to show that heretofore Mr. Roosevelt has not been averse to war. The inference seems to be a fair one that the President interfered because he feared that Japan would further humiliate Russia, and would become too powerful in the East to suit the comfort and convenience of the invaders of the Orient from the West.

Frank W. Proctor.

Fairhaven, Mass., September 4, 1905.

[We have purposely abstained from dwelling on the humor of the President's new rôle, and there was a time when it would have been superfluous to point it out to the American people. We equally forbore to comment on the grotesqueness of his submarine descent in the *Plunger*, a war-engine, at the moment when, having exhausted his resources to effect an agreement at Portsmouth, he should have waited with the rest of the world—but *à fortiori*—in deep and dignified concern for the beam of fate to turn in favor of peace. Had he, on the contrary, chosen to ascend with that luckless Western aeronaut blown to pieces the other day while demonstrating with dynamite the balloon's utility as a war-engine, he would hardly have afforded stronger evidence of his inherent levity. Such capers show that, in his "strenuous" perspective, he sets no more weight by his initiation of international peace than by the gratification of his love of excitement and adventure. As regards a Japanophobic motive for his intervening, we should like to have the opinion of the Russian plenipotentiaries as to whether, in the second stage, the President seemed more Russia's partisan than Japan's. —Ed. Nation.]

SALARIES.

To the Editor of The Nation:

Sir: I heartily endorse your comments on the impropriety of the large salaries and fees paid to Mr. Alexander, Mr. Depew, and others by the Equitable, but can you tell your readers why it is not equally improper to pay Mr. Morton $80,000 as salary? Mr. Alexander was an expert in insurance; Mr. Morton is not. Mr. Depew is a lawyer (more or less), and might be supposed to be able to give a legal opinion; not so Mr. Morton, and his record of violations of the law in his railroad work would not indicate that he would be "too scrupulous" in his methods if he could make large sums of money.

Yours truly, Geo. S. Wilson.

Chicago, September 9, 1905.

PRE-REVOLUTIONARY COMMITTEES OF CORRESPONDENCE.

To the Editor of The Nation:

Sir: In the issue of August 17, 1905 (p. 144), your reviewer of Mr. Kennedy's 'Journals of the House of Burgesses,' etc., refers to the resolutions of the Virginia Assembly of March 12, 1773, as the "appointment of the first committee of correspondence and inquiry appointed by any colony for 'correspondence and communication with our sister colonies.'" This is a wholly misleading statement. As early as October 18, 1764, the New York Assembly appointed a committee to correspond with the neighboring colonies with reference to the late acts of Parliament on the "trade of the northern colonies." Early in the year 1766 the Sons of Liberty in New York appointed a committee to correspond with the Sons of Liberty in the other colonies. Similar committees were appointed in New England, Pennsylvania, Maryland, and South Carolina, and for two months an active correspondence was kept up, the MS. records of which are still preserved. Finally, in 1769, the New York merchants appointed a committee to see to the enforcement of the non-importation association which they had signed the preceding year. Boston and Philadelphia and many other towns appointed similar committees, and from 1769 to 1770, when the association was modified, these committees kept up a more or less continuous correspondence.

The old idea that Sam Adams or the Virginia Assembly invented the correspondence committee, it appears is not dead yet, notwithstanding Mr. H. B. Dawson's careful treatment of the precise point in question many years ago ('Westchester County,' etc., p. 61, note). The truth is, that New York was hardly at any time without a correspondence committee (sometimes two), legally or extra-legally appointed, from 1764 to the end of the war. Doubtless the same is true of many other colonies.

Carl Becker.

Lawrence, Kansas, August 29, 1905.

[We had no intention of referring to events occurring prior to 1773, and this might have been more explicitly stated. Occasional committees previously appointed on matters of trade, or even on the Stamp Act, were not under consideration, but the statement made applied to the Committees of Correspondence, universally so called, and characterized by Jefferson as "committees of national correspondence." As to the origin of these committees, see Bancroft (ed. 1854, vol. vi., pp. 454 ff.), Frothingham (1872, pp. 279 ff.), and Virginia Historical Collections (vol. xi., 1892, pp. 5 ff.), where the matter is gone into very fully. Mr. Dawson says ('Westchester County, New York, during the American Revolution,' quarto ed. of 1886, p. 8, col. 2, note): "The repeal of that obnoxious statute [the Stamp Act] rendered that appointment inoperative." He dwells at great length on the meeting at Fraunces's Tavern on Monday, May 11, 1774; but this was fourteen months after the passage of the Virginia resolutions. Moreover, in both cases, these were popular meetings, and not a legislative assembly, as in Virginia.—Ed. Nation.]

THE ACCURACY OF ITALIAN SCHOLARS.

To the Editor of The Nation:

Sir: The note in a recent *Nation* in reference to Italian scholars (in the field

of historical and archæological town study) "seeking no other reward than the consciousness of work well done," leads me to repay, to some extent, a long-deferred debt of gratitude to two Italian scholars in a field in which other nationalities have long been held to reign supreme. I refer to three geographical works: Prof. G. Garollo's 'Dizionario Geografico Universale,' and Dr. Ettore De Toni's 'Vocabolario di Pronuncia dei Principali Nomi Geografici Moderni,' and 'Repertorium Geographico-Polyglottum' (written ostensibly for the use of botanists, but of universal value).

I am, to be sure, familiar only with the first work, a condensed universal gazetteer in 16mo, with 100,000 titles covering all the countries of the globe, which for two years I have had occasion to consult almost daily, comparing its statements with those of similar works in other languages. During all that time I have never discovered a single error of fact in any of its descriptions, and my experience has been duplicated by that of a scholar (well known to you) whose right to speak with authority you will concede. He accords equal praise to the 'Vocabolario' and the 'Repertorium'—works displaying, like the 'Dizionario,' a wealth of learning as rare as are the self-denying industry and modesty brought to bear upon a task which lesser minds might have considered beneath them.

It is not well to generalize in judging nations, either by way of praise or blame, but I am tempted to regard these three admirable works as exemplifying the highest type of qualities displayed by Italian scholars in so many fields of research. And, by an interesting and pathetic coincidence, both Professor Garollo and Professor De Toni have adorned their works with dedications the tender sentiment of which reflects that extraordinary epigrammatic skill in condensing the language of grief and appreciation which we so often meet with in Italian inscriptions. Professor Garollo's is: "All' adorata memoria di mia moglie, Contessa Felicità. Marziani 'Il tuo pensiero, o santa, mi sostenne nel lungo lavoro;' " and Professor De Toni's "Alla santa memoria di mia madre e della mia bambina, che non si videro in terra, ora in terra ed in cielo congiunte, quest' umile lavoro, incominciato con letizia, due volte interrotto fra le lagrime, coll'animo sempre in angoscia offro."

Truly yours, GUSTAV POLLAK.

NEW YORK, September 8, 1905.

THE LATIN THESAURUS.

TO THE EDITOR OF THE NATION:

SIR: Your recent notice concerning the 'Thesaurus Linguæ Latinæ' calls for a slight corrigendum and an important addendum. Prof. F. Vollmer, having been elected to the chair left vacant by the retirement of Woelfflin, has *entirely* severed his connection with the Thesaurus, but the committee, in recognition of his past service and in order to avail itself of his long experience, co-opted him as a sixth member, the others being as heretofore the "Cultusminister" of Austria, von Hartel, chairman, and Professors Buecheler, Brugmann, Diels, Leo, and Woelfflin. Professor Vollmer's successor will be Dr. E. Lommatzsch of the University of Freiburg, a former member of the Thesaurus staff.

One of the chief obstacles to a more rapid progress of the Thesaurus was due to the difficulties encountered in the treatment of proper names. Thus, to mention only one of these, the letter B contained no fewer than 7,000 separate names to 1,000 appellatives. The committee, therefore, at its annual meeting in June, decided to relegate all "nomina propria" to an independent *Onomasticon Latinum*. Those already incorporated under A and B will be reissued as an initial volume of the *Onomasticon*.

This afterthought, involving, as it does, a somewhat radical departure from the original plan, will, however, bring about the completion of the herculean undertaking many years earlier than would otherwise have been possible; a prospect which will doubtless be welcomed by all Latin scholars, even though the bifurcation should eventually result in additional demands upon their at best none-too-plethoric purses.

Yours respectfully, A. G.

MUNICH, August 31, 1905.

AN ALLEGED PICTURE OF CHRIST IN CHINA.

TO THE EDITOR OF THE NATION:

SIR: I have just received to-day from London a copy of 'An Introduction to the History of Chinese Pictorial Art,' by Herbert A. Giles, Professor of Chinese in the University of Cambridge, and, to my astonishment, read at the end of the preface that the illustrations of the book "include an unpublished picture of Christ, which was probably inspired by Nestorian priests, and has been handed down, recut at intervals, from the seventh century." This illustration is on page 37, and is described on page 40 as a

"very curious woodcut, entitled 'Three in One,' consisting of a figure of Christ, a Nestorian priest kneeling at his feet with one hand upraised in benediction, and another priest standing behind. Nestorian Christianity soon disappeared from China, leaving the famous tablet in Si-ngan Fu as a witness that it had reached the Far East—an honor which must in future be shared by this unpretending picture, which contributes one more to the early portraits of Christ. Three Chinese characters to the left signify 'May not be rubbed—Sacred,' and were probably inserted at the instance of the Nestorian priests."

To prevent students of art from being led astray by this misinterpretation, and that it may not be further perpetuated in general works on the history of art, I take the liberty of making the following remarks. Mr. Giles is very careful not to state the source from which his "picture of Christ" is drawn; but I recognized at a glance that it is a copy from an engraving in a well-known book, 'Fang shih mo pu,' published in 1588. This is a very scarce book nowadays, but in Peking I secured a copy of it, which is now in the American Museum of Natural History. Its author was a famous manufacturer of Chinese ink-cakes, and published, for the benefit of his customers, an extensive series of woodcuts, reproductions of the engravings on the ink-cakes manufactured by him. The representation in the picture in question is a very well-known subject in Chinese art, and readily understood by every Chinaman. It is styled "Picture of the Three Saints," who are Confucius, Laotse, and Buddha. The underlying idea in the combination of these representatives of the three principal religions of China is to symbolize the close association of the three creeds in the minds of the people, which is the meaning of the phrase translated by Giles "Three in One." The personage taken by Giles for Christ is unmistakably the figure of Buddha, with the characteristic tonsure of the head, barefooted, and robed in the garb of an Indian monk—an exact copy of the well-known Buddha statues and paintings of India. In no representation of Christ is He pictured with a tonsure. The "kneeling Nestorian priest" of Mr. Giles is Laotse, who is not kneeling at all, but standing erect; and the other "Nestorian priest" behind him is Confucius. The expression "pu ko mo," the characters to the left of the picture, understood by Giles to mean "May not be rubbed—Sacred," is there merely to indicate that the cake of ink should not be rubbed, because of the sacredness of the subject represented on it; or, in other words, that this ink-cake is not for use as such, but should be regarded as a work of art.

Representations similar to this picture of the three saints are very frequent in Chinese and Japanese art, and are found also in temples in the form of sculptures. A splendid colored woodcut of this motive after a painting by Masanobu Kanō (1453-90), is given in the fourth number of the *Kokka*, a Japanese journal devoted to art and archæology.

The original woodcut reproduced in Giles's book is not older than the middle of the sixteenth century. Without giving any reason or explanation, Mr. Giles attributes it to the end of the seventh century, and connects it with the name of a certain painter, Yen, of that period.

How a professor at the University of Cambridge could give out such an absurd interpretation of this picture, is incomprehensible; and the fact that a well-known publisher actually distributed broadcast an advertising circular trumpeting forth this purported discovery, lends a humorous color to the whole affair.

In his preface, Mr. Giles remarks that Professor Hirth of Columbia University some years ago projected a work in German which would have rendered the present volume superfluous. I am very happy to announce that Professor Hirth's book on Chinese painters, written in English, is in course of publication; and it is confidently hoped that, when it appears, it will prove Mr. Giles's prophecy to be correct.

BERTHOLD LAUFER.

NEW YORK, September 4, 1905.

"LOAN" AND "DOVE."

TO THE EDITOR OF THE NATION:

SIR: Anent the use of *loan* as a verb, discussed in your issue of August 31, let me call your attention to the fact that Mr. Edwin F. Mack, cashier of the Royal Trust Company Bank, Chicago, published in 1901 a pamphlet of 14 pages, entitled 'Money to "Loan."' In this pamphlet, privately printed, I suppose, Mr. Mack exhausts the question of *loan* as a verb; especially valuable are his statutory and judicial citations of the verb in this country.

Concerning *dove*, as preterite of *dive*, I

believe that Longfellow used the form in the first edition of 'Hiawatha,' but subsequently changed it to *dived*.

J. M. HART.

CORNELL UNIVERSITY, September 6, 1905.

Notes.

Longmans, Green & Co. have nearly ready 'A Levantine Log-Book,' by Jerome Hart, illustrated photographically.

A Life of General W. T. Sherman, by Edward Robins, will be the next volume in the "American Crises Series," and will contain a chart of that general's marches and battles.

Messrs. Harper will be the American publishers of Mr. Theodore Watts-Dunton's new novel, 'Carniola,' and of a new Wessex Edition of Thomas Hardy's works in twenty volumes.

The Memoirs of the famous American court dentist in Paris, Dr. Thomas W. Evans, edited by a personal friend, Dr. Edward A. Crane, will be published during the present season by T. Fisher Unwin, London.

'Wessely's French-English Dictionary,' rewritten and enlarged by Edward Latham (London: Routledge; New York: Dutton), is of coat-pocket size, very compact and clearly printed. It is noticeably attentive to idiomatic phrases, and in this particular is likely to supplement any work of its class. It has lists of nouns in both genders which are apt to be mistaken in respect of gender (the masculine list consists wholly of nouns ending in *e* mute), and of the principal irregular verbs very fully set forth.

'Christus Liberator; An Outline Study of Africa,' by Miss Ellen C. Parsons (Macmillan), is the apt title of the fifth volume of a series intended to promote the study of missions—the other countries already treated being India, China, and Japan. Sir Harry Johnston furnishes an introductory sketch of the geography, races, and history of the Dark Continent, while the body of the book is devoted to an account of the rise and progress of Protestant missions in the several countries. The necessarily dry array of facts and statistics is enlivened by anecdotes and descriptions of native life. There are tables of important historical events and dates, a short bibliography, and a map showing the political divisions. We thus have a useful handbook, containing much information in a compact and readable form.

Dr. S. Margoliouth, the well-known English Arabist, publishes in the latest issue of the Journal of the Royal Asiatic Society an interesting account of the new Arabic translation of Homer's Iliad, prepared by Sulaiman al-Bistani, and published a few months ago by the Hilal Press of Cairo. The report of the Egypt Exploration Fund for 1903-1904 had already anticipated this work as "the literary event of the season," and Margoliouth's enthusiastic praise of it as completed is in full harmony with the above pronouncement. He declares that there is no doubt that a renaissance of Arabic literature is in progress, in which translations of the European classics will be an important factor. Bistani has produced a "work of art," vastly superior to Arabic renderings from the Greek in former ages by way of the Syriac. The translator began to make his version from French and English, but soon found himself compelled to learn Greek for his purpose, which he did from Jesuit missionaries. The translation is accompanied by a commentary, which consists largely of interesting Arabic parallels to the Greek heroic age taken from the pre-Islamic period. Rather notably, the translator has employed ten different metres for different parts in accordance with their particular contents. The introduction shows that Bistani has carefully studied the "Homeric Question." He is an ultraconservative unitarian. The translation appears in one volume of 1,200 pages, accompanied by a series of illustrations, but costs one pound, which Margoliouth fears will interfere with its spread.

Paul Becker's 'Die Kämpfe um die akademische Freiheit einst und jetzt,' just published by A. Mieck in Prenzlau, discusses a subject of special interest in Germany at present, owing to the recent attempt of the Prussian Government to restrict academic freedom. Vigorous protests arose from professors and students in all parts of the Empire, and showed that the struggle may be renewed even in the twentieth century. The account of the origin and evolution of academic freedom forms one of the most interesting and important chapters in the history of modern culture. Halle was the first German university to free itself from the trammels of scholasticism and to regard the principle of intellectual liberty (*libertas philosophandi*) as its corner-stone. With its organization on this basis and its development in this direction the names of the jurist Christian Thomasius, the theologian and Oriental philologist August Hermann Francke, and the philosopher Christian von Wolf are intimately and worthily associated. Frederick the Great favored perfect freedom of instruction independently of religious belief, but, under his successor, Frederick William II., the Prussian Minister Wöllner issued in 1788 his notorious edict forbidding any teaching contrary to established creeds. In 1794 he went to Halle to enforce this decree, but the students smashed the windows of the hotel in which he lodged, and he deemed it prudent to leave for Berlin on the next stage. The influence of William von Humboldt as the real creator of the University of Berlin determined its character as a seat and centre of academic freedom. Becker's treatment of the subject is based on thorough research, of which the results are presented with clearness and conciseness, and deserves to be widely read.

We may also refer briefly to Prof. Dr. Ewald Horn's 'Akademische Freiheit: Historische-kritische Untersuchung und freimütige Betrachtung, nebst einem Anhange über studentische Ausschüsse' (Berlin: Trowitsch & Sohn). The author discusses academic freedom as a legal institution, and traces its historical development from the year 1158, when the Emperor Friedrich Barbarossa endowed the University of Bologna with special privileges in the liberty of teaching and learning as exercised and enjoyed by professors and students.

A larger number of candidates, 14,222, presented themselves at the Oxford local examinations this year than last, but fewer certificates, 9,732, were awarded. Of the girl candidates 21 were placed in the first class, 163 in the second, and 710 in the third, while 37 showed sufficient merit to receive certificates qualifying them for admission to the university degree of B.A. and B.Mus. In the examination generally there was a distinct improvement in religious knowledge, in English, and science.

The one-hundredth anniversary of the raising of Bavaria from an electorate to the rank of a kingdom will be celebrated by a general industrial, trade, and art exposition at Nuremberg, from May to October, 1906. The object is to give a complete view of all the resources, productions and industries of the kingdom. In addition to the numerous articles of manufacture for which Bavaria has a world-wide reputation, and the art department, which promises to be of peculiar interest, the Government will make collective exhibits of articles and appliances connected with military, educational, sanitary, and municipal institutions.

The Sixth International Congress for Applied Chemistry has been called to meet in Rome in the spring of 1906. The King of Italy has consented to be its patron. Professor Paternò di Sessa is chairman of the committee of arrangements, and Professor Villavecchia secretary. The preliminary report, just issued, states that the work will be done in eleven sections, and that the official languages of the Congress will be Italian, German, French and English. In addition to the sessions of the sections, there will be two plenary meetings.

It has now been decided not to publish the literary remains of Gaston Paris. Some time ago the Société Gaston Paris appointed a committee to examine them, consisting of three professors of the Sorbonne, Antoine Thomas, Morel-Fatio, and Mario Roque; it found that no one of the researches he had begun was completed, nor was it possible for others to complete them.

Comparatively little original literature in modern Japanese is worth the serious attention of foreigners, either in the author's text or in translation, but in the Transactions of the Asiatic Society of Japan (vol. xxxiii.; Part I.), a "Modern Japanese Problem-Play" is sure to attract notice. The author, Dr. Kitasato, cousin of the famous bacteriologist, has already written dramas both in Japanese and in German, and some of his productions in the latter language have been acted on the boards of a theatre in Germany. Prof. Arthur Lloyd, besides furnishing a pleasing and luminous introduction, has translated the play, which is a drama in four acts. It illustrates strongly the conflict of legal and moral forces now going on in Japan, in which the rising individualism rebels against old communal oppression. In a society founded on ancestor worship (which in Japan is not indigenous but borrowed from China), the deficiencies of blood are made up by the adoption of sons or daughters from other families. Hence, marriage is necessarily an arrangement made by parents. Besides the degeneration of ancestor worship into pure formalism when carried on by those who have merely the name without the blood, there are other grave objections to the system. In the face of modern civilization, it seems (at least in many details) little short of ridiculous or even absurd, not only to educated young persons but to

all reformers of the new mind. Though lacking in dramatic incidents, making it perhaps unsuitable for the stage, this piece, with the introduction, is a very valuable addition to literature. In the same number of the Transactions, Prof. E. W. Clement furnishes a paper on "British Seamen and Mito Samurai in 1824," with a sailor's sketches. It shows, incidentally, the frequency, at that period, of the visits of English, and more particularly American, whalers, and the prevalence in all the Japanese interviews with foreign visitors and waifs of the suspicious fear that the only object of Occidentals in the waters of Japan was espionage with a view to conquest.

—The September *Atlantic* brings to light an essay entitled "A Theory of Poetry," presented by Henry Timrod at Columbia, South Carolina, on some public occasion during the winter of 1863-64 and kept in manuscript for thirty-five years by the lady whom the author afterwards married. Of the essay itself it must be said that the title is somewhat misleading, since the presentation of a complete and clearly delimited theory is scarcely attempted. It does credit to the young Carolinian's breadth of view, however. Agnes Repplier contributes another of her amusing stories of girl life in the convent school. We are glad to see these lifelike sketches announced for publication in book form. They bring out forcibly the old but readily forgotten truth that human nature in its fundamental traits is very much the same, no matter what the social or religious garb under which it masquerades.

—*Scribner's* opens with a paper by William T. Hornaday, on "Heads and Horns," finely illustrated from his own well-chosen collection. As a naturalist keenly interested in the preservation of the various forms of wild animal life, he of course deprecates horn-collecting as a mere "fad" or for commercial purposes. The first of a series of extracts from the letters and diaries of George Bancroft appears in this issue, edited by M. A. DeWolfe Howe. The extracts cover Mr. Bancroft's student days, and are filled with interesting comment on the prominent representatives of German scholarship whom it was his good fortune to meet, including Goethe, Wolf, Schleiermacher, Humboldt, Blumenbach, Gauss, Savigny, and Ritter, the latter giving him a very appreciative estimate of Madame de Staël as a woman of the highest moral character, heartily interested in every good cause, lavish in her private charities, an enthusiastic advocate of the highest ideals of parental love and maternal duty, an excellent housekeeper in her own home, though deficient in taste in matters of personal adornment, and liable to be misunderstood because of a certain masculinity of manner and a disregard for the strict conventions of society. The highest admiration is expressed for the great mental power and vast erudition of Wolf, but the Puritan morals of the young student call forth sharp censure of the eminent scholar's moral defects, his vanity and his laziness. Goethe's flaws in character and bearing also come in for censure, and, "indeed, all the German professors and men of letters are horribly dirty fellows in their dress and manners." To be just to the young critic, however, he finds himself wondering how he can mind defects of dress in the presence of so many evident marks of greatness as Goethe bore about him. Thomas F. Millard continues his efforts to apply the brakes to the rapidly flying wheels of pro-Japanese enthusiasm, dealing in this number with the financial dangers which loom up in the path of the victors, despite their success in the field. In brief, he thinks Japan has staked her all in a great gambling venture, in which every one of various chances must turn in her favor to insure success. But he admits that "the nerve to play the game is not lacking."

—The Italian Humanists from Petrarch to Bembo are so little known that a series of lectures on them will be welcomed by all who appreciate the historical importance of their work. It was very natural that Dr. Sandys, whose 'History of Classical Scholarship to the End of the Middle Ages' (1903) closes with the thirteenth century, should have selected this theme when invited to deliver a series of lectures at Harvard on the Lane foundation. The seven chapters of his 'Harvard Lectures on the Revival of Learning' (Macmillan) relate respectively to "Petrarch and Boccaccio," "The Age of Discoveries," "Theory and Practice of Education," "The Academies of Florence, Venice, Naples, and Rome," "The Homes of Humanism," "The History of Ciceronianism," and, finally, "The Study of Greek." Dr. Sandys's method of treating his theme is the same as that adopted in his 'History of Classical Scholarship,' a method wholly alien to that of his chief predecessors, Voigt, Burckhardt, Geiger, and Symonds. He never ventures to philosophize; he is safely statistical throughout, although he occasionally relieves the extreme aridity of his dates and data by rather outworn oratorical expedients. The chapters on the hunt for manuscripts of the classics and on Ciceronianism will be read rather more patiently than the rest of the little volume. Dr. Sandys cannot bear to omit a name; consequently, Codrus Urceus, Michael Apostolius, Janus Lascaris, and dozens of other insignificant persons must be briefly introduced to the reader who is impatient to hear more of Chrysolorus or Valla. There is no word of the significance of the Revival of Learning in the development of the Western world, no tolerably adequate picture of the spirit and ambitions of a single scholar. It is a sad pity that so much patient investigation should be so little clarified by a sense of proportion and historic insight.

—The Hon. Frederick Leveson Gower is of a well-known family: one of his namesakes (they all seem to use the two names without the hyphen) was celebrated in the 'Ingoldsby Legends.' This one, a nephew of the Duke of Devonshire and brother of Lord Granville, was in Parliament for over thirty years, and has been in touch with men, women, and things British for twice as long. At the age of eighty-six he concluded to write out his reminiscences, for the reason which determined Charles Wesley to marry at forty—that, if the thing were to be done at all, it had better be done now. Conscious of failing memory, and able to give only "a disconnected account," he sensibly steers clear of politics, and confines his recital to "social gossip," wherein "some inaccuracies do not signify." With small pretensions to wit or learning, he shows a clean and level mind, a kindly temper, and a lack of "bounce" which might disarm hostile criticism; his remarks on several more brilliant brethren whom he admired indicate that mental balance is high in his scheme of virtues. His 'Bygone Years' (Dutton) is not a momentous book—he calls it "rambling patchwork ill put together"; but it is passably readable. If it lacks the spice which scandal and self-assertion give to some more popular collections than this is likely to be, a few of its anecdotes are already going the rounds—as that of Motley's dinner party being spoiled by Lady Waldegrave's avoidance of the Turk, and of Jowett's alarm when a young lady asked him to "marry" her, and relief on finding that he was wanted only to officiate. Carlyle's estimate of Mrs. Stowe (p. 103) as "a poor foolish woman who wrote a book of wretched trash called 'Uncle Tom's Cabin'" may have been quoted before now, and so perhaps may Tennyson's wish (p. 304) that the Irish were all "at the bottom of the sea," and Bishop Wilberforce's (p. 301) for Pius IX.'s death, since, "if his life be prolonged, he will make my brother-in-law Manning a cardinal, which will be bad for him and bad for other people"; but these amenities were uttered in Mr. Gower's presence. His impression that Dickens and Thackeray, though professing to be friends, did not care much for one another, and his remark on Gladstone as an "engrossed" reader, are not wholly new; his detection of Matthew Arnold at a solitary and expensive dinner in Paris is mentioned in Arnold's letters. More notable are Lowell's differences (at Mr. Gower's house) with John Bright "as to the correct use of words," and with Gladstone as to "his American fellow-subjects" (pp. 292-3). On pages 298-9 are preserved some complimentary and jocose verses sent by Lowell to his host, which, the poet said afterwards, his correspondent "ought to have put in the waste-basket." Browning, we read, was obnoxiously boisterous at table. There are items galore about the Hollands, Lady Blessington, Sir Henry Bulwer, and other eminences; and since many like this kind of book, this is the kind of book they will like. The proofreader should have corrected the punctuation of the line unhappily given on page viii. as "I give thee all I can, no more."

—Germany at last has her 'Who's Who'—'Wer Ist's? Unsere Zeitgenossen' (Leipzig: H. A. Ludwik Degener; New York: Lemcke & Buechner). It follows the British example in reaching out beyond Germany, as the names of Houssaye, Chilovi, Goldwin Smith, Carnegie, Witte, etc., show. There is in the preface, however, no hint of the criterion employed, and in the case of the United States the selection seems eminently capricious. Our college presidents, Hadley, Woodrow Wilson, E. F. Smith, Harper, and Jordan are unaccompanied by Eliot or Butler, R. Swain Gifford is unattended by Lafarge or St. Gaudens. We meet with Professors John Dewey and Calvin M. Woodward, but not with Goodwin or Gildersleeve. Neither the poets Gilder and Woodberry, nor novelists James and Howells, nor savants Newcomb and Langley, nor historians

J. F. Rhodes and H. C. Lea, nor statesmen Cleveland, Roosevelt, Lodge, Taft, are "our contemporaries" in Herr Degener's view. We do not complain of this, regarding even the American names included as intruders in a German onomasticon; but the assortment illustrates once more the mistaken policy of foreign cyclopædic works in conducting an American department without American editorial oversight. For the German part, certainly, we can only be thankful. The work is printed clearly if compactly in Roman letter; the biographical notices are constructed on a scheme ensuring uniformity and brevity, and have been furnished or revised by the subjects themselves. The alphabetical list is preceded by some convenient national and foreign statistics, and is followed by a collection of German and Austrian pseudonyms, and by a necrology for the period of passing through the press. So a hearty welcome to 'Wer ist's?'

THAYER'S HISTORY OF VENICE.

A Short History of Venice. By William Roscoe Thayer. The Macmillan Co. 1905.

In one small volume, which the active reader will assimilate during a single day, Mr. Thayer endeavors to interpret the spirit of Venice. It is true that others have made the same attempt under a different form. Ruskin, for example, has devoted numerous volumes and an effective eloquence to the task of showing how Venetian art expresses the aspirations and magnificence of a great community. But with all his profusion of detail and diffuseness of comment, he considers only one aspect of the civic life, or, if he brings in religion and politics, it is because they supply spiritual pabulum for the architect and the painter. Mr. Thayer has something of the Ruskinian purpose, though his methods and materials are so different. The form of an historical narrative he adopts because in no other way can the evolution of a whole community be traced. But he would not thank any one who styled him an annalist. To indicate the phases of a secular process, to depict the heroic personality, to expound the physiology of the state rather than its anatomy, and to furnish just standards of comparison—these, it is clear, are Mr. Thayer's main objects. His book, from being very downright, is of a type to invite or even challenge criticism, but it can leave one with little doubt regarding the author's attitude towards historiography.

We shall devote no portion of our space to remarks upon the splendor of the theme, since the superb individuality of Venice and her achievement in commerce, politics, and art justify the most minute research, and offer extenuation for the most rapturous panegyric. Occasionally it does happen that some writer of consequence confesses to a sense of disappointment at the physical aspect of the town, and inveighs against it as Gibbon did when, in one of his letters, he styled the canals mere stinking ditches. The modern tourist, however, even when most sordid, seldom fails to react when in Venice or in the Bernese Oberland; while for the historian, the Piazza of San Marco becomes an increasingly vital spot as more is known of the relations between East and West during the Middle Ages, and of the part which the Republic had in the life of Europe from the War of Chioggia to the seventeenth century. Assuming that one's appreciation of Venetian greatness must be keen, the real issues centre in degree, in scale, in relationship. The old question of Venice versus Florence which has been agitated with such copious waste of ink, Mr. Thayer leaves wholly aside, and his index contains only three slight references to the city of the Arno. In searching for a touchstone he goes quite beyond the range of city life, whether in Italy or the north, and boldly places Venice side by side with Empire and Papacy.

"The Papacy, the Empire, and the Venetian Republic were three independent institutions which rose out of the chaos into which the ruin of Rome plunged the ancient world. Church and Empire claimed to be universal; Venice was perforce local. Lacking the incalculable advantage which its religious pretensions gave the Church, or the advantage which the Empire drew from its attempt to revive magnificent traditions, Venice served civilization not less truly than they. Her vitality was as durable as theirs; her achievements not less splendid.

Here we have a passage which is of capital importance in helping us to grasp Mr. Thayer's conception of Venetian history as related to the whole scheme of European progress. Following out the details of this comparison, it is obvious that Venice performed her most signal function in maintaining a commercial bond between East and West, with the inevitable result of stimulating culture through human intercourse. When the Church was enforcing uniformity of dogma at the point of the sword, Venice was being brought to a mood of toleration by the exigencies of maritime trade and an expansion of outlook which accompanied the growth of her international interests. The Empire comes into this little group of institutions as hardly more than a *tertium quid*, but Mr. Thayer has such deep convictions regarding the Papacy that these assume a prominent place in his book. To us he seems not at his best when writing about the Holy See. It is doubtless a mere matter of opinion or of taste, but we must confess to have found a good many of his phrases against the Curia overloaded with invective, while in one case at least he rather goes out of his way to pour contempt upon the Church of England. After calling the Papacy the "worldliest of mediæval states and the most irreligious," he proceeds in the same paragraph to say of Venice: "She saw England cringing in the thirteenth century before the Roman legate, and shaking off the Roman shackles in the sixteenth century only to substitute for them an emasculate and disingenuous form of Romanism." If Mr. Thayer refers in the first part of this sentence to John and Pandulf, it will be remembered that the cringing was done by a king whom the English hated; and, as for the second part, it would be interesting to have had upon it the observations, we will not say of Lightfoot and Westcott, but of Creighton and Stubbs. We cannot quarrel with Mr. Thayer for using strong language or for expressing his opinions in his own way, but we doubt whether historians at large will consider his numerous castigations of the Roman Church to be the most telling feature of the present work. And when he says: "Pope Alexander VI. most nearly embodied absolute wickedness of any monster in the annals of human depravity," we fear he has by no means plumbed the depths of the abyss.

We were led into this digression from the main theme by Mr. Thayer's love of direct, unqualified utterance, a trait which sometimes makes him generalize rather sweepingly on subjects that lie outside the life and thought of Venice. We should, however, convey a false impression of this vigorous and animated essay were we to let the foregoing remarks assume a more than incidental character. Even those who, like ourselves, find isolated passages too highly colored for their taste, may well turn in a mood of warm appreciation to the essential portions of the work. A writer less permeated by the spirit of Venetian culture might have been content to correct a long series of popular misapprehensions regarding the political methods of the Republic and the subjection by its sons of public honor to business considerations; but such a partial or negative treatment of his great theme is not for Mr. Thayer. With an enthusiasm begotten of active sympathy with the enlightened yet serious humanism of Venice as she was in her best days, he seeks to portray the ideal which prompted her effort and glorified her attainment. "Her decadence offers nothing peculiar to her; whereas her growth and prime were truly characteristic. By these she should be judged; just as the greatness of Imperial Rome should be judged by the achievements of Julius and Augustus and the Antonines, and not by the failures of the Valentinians." Mr. Thayer answers detractors like Daru and the enemies of oligarchy; but less in detail than by disclosing the causes of that authentic grandeur which was so long enjoyed by a unique State.

For the world at large, Venetian history begins in the era of the Crusades and closes with the death of Titian. Mr. Thayer, taking a broader view, follows each stage of its evolution with unabated interest. In his eyes the period which precedes the Crusades is hallowed by the struggles of the islanders for independence; while after the death of Titian come Sarpi's contest with the Papal Court, the Candian war, and the exploits of Francesco Morosini in the Morea. Most writers working within the limits of one small volume would think it a proper expedient to treat the day of small things in a rapid prologue and to dismiss the two centuries of decline in a still briefer epilogue. For purposes of picturesqueness alone this method of approach ought perhaps to answer, but Mr. Thayer does not look at Venice from the outside as one who would exploit her history by turning it into a series of brilliant pictures. He works from the inside, following an organic conception, and seeking at every point to interpret rather than to describe. The age of splendor naturally assumes larger proportions than the strife with Pepin or the era of the Badoeri, but every chapter shows signs of the most careful modelling.

When we advance to the heart of the subject and ask under what form Mr. Thayer sets forth the distinctive features of Venetian life and genius, the discussion grows complex, for though Venice is so characteristic as to be unique, the elements which entered into her greatness cannot be formulated in any single phrase, or set of phrases. Her isolation, maintained amid the most widely ramified relations with both East

and West; the piety which reared San Marco, coexisting with a patriotism of such intensity that she could say, "Venetians first, Christians afterward"; the keenness of her business instinct, which at the same time did not kill her passion for beauty; her breadth of outlook, accompanied by a degree of espionage that often interfered with the efficiency of her political leaders and her generals in the field; her pride of spirit and the subtlety of her diplomacy—these and many more contrasts are bound to catch the notice of every careful observer, and to demand explanation before a final judgment can be formed. In his preface and at intervals during the progress of his narrative, Mr. Thayer gives us glimpses of what Venice means to him as a political theorist, as a moral philosopher, and as a lover of the fine arts, but it is only in his concluding pages that he attempts to coördinate all these manifold impressions into a single epigraph:

"Venice," he says, "proclaimed the joy of life—the glow of health, the exhilaration of conquest, the sweetness of prosperity, the confidence which comes with mastery. Was it not well that once in recorded history one nation should dare to proclaim that life on earth is passing good? There is no danger that races or men will be long allowed to forget the transitoriness of the human lot, or its horrors and failures and bereavements. . . . But to transmute wealth and power into joy, to live grandly, as if the gods had not merely lent for an hour, but had given for eternity, bespeaks great character. Joy is so much rarer than virtue; so very rare among the powerful and the very rich!"

A good deal of this has been expressed with much terseness by De Commynes, who saw Venice at the height of her magnificence. Writing of her as she was thirteen years before the League of Cambrai, he calls her the "most triumphant city in the world." Triumphant and joyous she undoubtedly was during the best years of the Renaissance, beyond all parallel among the towns of Europe. And though at last the element represented by mere pleasure became too large in the scheme of civic existence, the frank humanism of the men who most perfectly expressed her genius was marred by neither profanity nor bravado. "The Venetians," says Mr. Thayer, "revered the human, and simply magnified it in order to attain the fittest incarnation of the heavenly. They shunned other-worldliness, for to them this life was the great reality. . . . After making what deductions we will for the claims of pride and glory, and for the enticements of luxury, we must realize that the Venetian painters glorified the human as the highest revelation of the divine."

"Vivete lieti!" exclaimed the dying Bandello, who was not a Venetian, but yet a true son of the Renaissance. The injunction to live joyously is the watchword of a movement which from Naples to Milan swept through every centre of culture in the whole peninsula. That Venice had a monopoly of humanistic enthusiasm, Mr. Thayer does not imply; but the mood which Lorenzo de' Medici expresses in his lyrics and Bandello in his novels, the Venetians realized more truly and raised to a higher plane. The nobler spirits of Tuscany and Umbria were never genuine humanists, however strongly they may have reacted to the intellectual side of the classical revival. The Venetians alone accepted without misgiving or reserve the pleasure which comes from the exercise of brilliant faculties seeking to make life yield its fullest measure of warmth and beauty. According to Ruskin, no true critic can fail to perceive that the religion of Angelico is genuine, while the religion of Titian is assumed. In this case Mr. Thayer's form of statement would be very different, for to him Titian's art is perfectly sincere, and fraught with an inspiration which is none the less genuine because its source is in the splendor of the world we see.

We have singled out this one subject partly because in any case it would furnish a crucial instance, but more particularly because Mr. Thayer makes Venetian achievement lead up to and culminate in the works of Titian and Tintoret. "To the painting of Venice," he says, "we must turn if we would see the truest expression of the genius of a race which had known how to overcome incredible physical difficulties, had conquered its enemies, and had risen naturally to a magnificent and balanced scale of life. That expression, in its Color, its Reality, and its Beauty, remains one of the most precious revelations of Art, a legacy such as only Greece has bequeathed for the joy and exaltation of mankind." To say this of Venetian art in the Cinquecento is to place the Venice of the Renaissance before the Venice of the later Middle Ages. There are those who think that the brightest era in the annals of the Republic had closed before the dawn of the fifteenth century. With the outlook towards life which such a view involves, Mr. Thayer is unable to sympathize, and to him, as we have seen, Venice is above all else dear for her refusal to admit that mankind should make its present habitation a vale of tears. Not only does the volume take its general tone from this conception, but its details show how carefully the perspective has been adjusted to set a central idea in high relief.

Mr. Thayer, besides his wide acquaintance with recent literature from Romanin to Hazlitt, is a student of Venetian history at first-hand, and the breadth of his reading in other fields is attested by copious illustrations and comparisons. It would not be impossible to make up an unimportant list of slips, but the more numerous of these affect the form rather than the substance of the statement. A few, however, need correction—for example, the reference to Robert Guiscard as the founder of the Norman Kingdom of Sicily, who thence proceeded to Italy, and the passage about Nelson's return from the West Indies to Abukir Bay. We should say nothing at all about the presence of petty inaccuracies, were it not that Mr. Thayer's willingness to express an unhesitating opinion tends to accentuate minor misstatements of fact.

In conclusion, we must relegate small cavils to the background, and speak with warm recognition of the skill, discernment, and idealism which mark this book. So far as essentials are concerned, Mr. Thayer has succeeded in compassing his object. Besides freeing the general reader from many misapprehensions about the political and social structure of the Republic, he has written with sincere eloquence of the nobler Venice, whose painters and patricians "lived grandly, as if the gods had not merely lent for an hour, but had given for eternity."

THE PROGRESS AND POLICY OF FRANCE IN NORTH AFRICA.

La France en Afrique. Par le Commandant Edmond Ferry. Paris: Armand Colin. 1905.

This little volume takes for its motto a declaration made in 1904 by the French Minister for Foreign Affairs (then M. Delcassé): "C'est avant tout par son empire africain que la France est assurée de demeurer une puissance mondiale." It is written to show what France is doing, what she ought to do, and what results she may attain in North Central Africa, where she has now acquired a nominal control over a vast region stretching south from her possessions in Algeria and Tunis to beyond the Niger, and as far as Lake Tchad on the southeast, and Senegal on the southwest. The author has himself travelled through the southern part of this region, from Senegal eastwards towards the Sudan, and gives some graphic pictures of it, especially of Timbuctu. He is a clear-headed and thoughtful man, who writes with much point and in a measured, sensible, unrhetorical way. Though patriotically anxious to extend and consolidate his country's power in these new territories of hers, and duly suspicious of English designs, he perceives the difficulties in the way, and he outlines a policy which is moderate and prudent compared with much that comes from the Expansionist school in France, in Germany, and in England. The book seems to have been written before the recent agreement (1904) between France and England relating to Morocco and Egypt, and published before the action taken in the Morocco matter in the spring of the present year by Germany—an action which has, of course, seriously complicated the situation, and may retard the forward movement of France.

Commandant Ferry begins with a very instructive description of the policy pursued towards Islam by Napoleon Bonaparte when he entered and occupied Egypt. Every one knows that he tried to conciliate the Mussulmans of that country by putting forward France as the friend and protectress of their religion, and went almost to the length of professing himself a convert to it. Here we are given a good many curious details showing how vigorously, ingeniously, and skilfully he carried out his idea of enlisting Mohammedan sentiment on the side of France against England and Russia on the one hand and against the Turks, who claimed suzerainty over Egypt, on the other. He proclaimed the superior sanctity of Cairo and its mosques and its learned men to those of any other Mussulman city, except, of course, the two preëminently sacred cities of Mecca and Medina. He played off Mecca against Stambul, the Shereef of Mecca against the Sultan—a policy which it has often been suggested to the English that they should follow in their quarrel with the Turks, but which they are apparently afraid to venture on. Napoleon, busy as he was, held long discussions with Sheykhs and Muftis over the interpretation of the Koran and the precepts of the Sacred Law. When he defeated the Turks at the battle of Mount Tabor, in Syria, he sent the captured standards to be hung up in the mosques at Cairo. This policy attained a considerable success, and would doubtless have done much to strengthen the hold of

France upon Egypt had it been possible for her to remain there. But Napoleon himself, seeing the chances which the weakness of the Directory gave him at home, decamped hastily from Egypt. The lieutenants whom he left behind were not capable of carrying out his ideas; Kléber was too harsh, Menou too indulgent, and presently Kléber was murdered, and the English, whose fleet had kept Egypt isolated from France, defeated the French army at Abukir. Egypt was lost to France; and, after many vicissitudes, it has now practically passed under the dominion of England. Our author dwells upon all these matters for the sake of showing that the policy of Napoleon is the policy which France ought to resume to-day; that it is by posing as the friend of Islam, willing to respect its sacred places, its usages, its holy men, that she ought to conciliate the fierce nomads of the Sahara and the blacks of the Western Sudan whom she now counts among her subjects.

This leads him to a long account of the actual state of affairs in the regions which lie between Algeria and Morocco on the north, and Lake Tchad and the Niger on the south. Nearly the whole of this vast space is desert, and most of it hopeless and irreclaimable desert; a desert in which oases and even wells of half-bitter water are so few that camel caravans do not attempt to cross it. It is inhabited by tribes mostly nomadic, some akin to the Berbers of Morocco and Algeria, some belonging to the race, probably itself a branch of the Berber stock, which we call Tuariks or (as M. Ferry spells the word) Touaregs. They are few in number for so huge a space, perhaps not two hundred thousand in all, but they are fierce fighters, the Tuariks especially. They live for and by plunder, they are easily accessible to the influence of Mussulman preachers. These tribes infest the caravan routes and make incessant raids upon the agricultural negro population of northwestern Nigritia, round and all the way east from Timbuctu. The first question for France is how to deal with them. Is it worth while to try to reduce them to submission by a general assault upon the oases where some dwell and to which the rest resort? Ought a railway to be constructed across the Sahara from southern Algeria, say from Biskra on the edge of the desert, to Timbuctu or some point half way between the middle Niger and Lake Tchad? Questions like these are always presenting themselves to the Germans and the English in the parts of tropical Africa which they have occupied. Although, fortunately for the United States, the Philippines are accessible all along the coast, questions not altogether dissimilar present themselves in Luzon and Mindanao also. M. Ferry answers in a reasonable way. He assumes that France, having gone to North Central Africa and claimed, not only its habitable lands but the Sahara also, as within her sphere, must stay there and ultimately establish order. She has, as they say nowadays, "a civilizing mission." Whether in the case either of France or of Germany or of England the game is worth the candle—that is quite another question. France has come, France will remain. But M. Ferry points out that the trade of these regions is insignificant, and what there is of it will come out much more cheaply from Senegal than by caravans across the desert. There is a little gum; there are ostrich feathers; there may be minerals. All these are better sent to Europe by sea; and by sea also must European goods come in. Accordingly, apart altogether from the engineering difficulties, he rejects the notion of a trans-Sahara railroad, because its expense would be utterly disproportionate to any traffic it could carry. Troops, also, are better sent in by sea, though in fact France polices these countries and conducts her punitive expeditions by native troops, raised on the spot and led by French officers. Nor does our author advocate any large forward movement to subdue Berber Moors and Tuariks. He falls back upon the Napoleonic policy of appeasing the religious sentiments of the people by professing friendliness to Islam, and by getting hold of the "holy men" and heads of the various orders which are established here and there over these countries and have great power over the people. Something may be done by following up and punishing predatory attacks. Even more may be done by seizing points of importance, and controlling both the wells and the supply of millet, the grain on which the natives support their precarious lives. Such measures are in his view essential not only for the protection of the settled black population, now comparatively obedient—a population partly fetishistic heathen, partly fanatical Mohammedans—but also in order to facilitate French designs on Morocco. It is from the Desert on the south that the troubles of Algeria largely come, because raiders or rebels escaped from French territory into the trackless regions where it was hard to follow them. So, too, if Morocco is to be pacified and rendered submissive to French influence, she must be girdled in on the south by French posts and made to feel French pressure on every side. France will have a troublesome task if she perseveres in her plans for the permeation and ultimate reduction of Morocco; nor is it yet clear how far Germany will permit this process to go. But M. Ferry is right in thinking that to cut off the Moors of the Atlas from the tribes of the Desert will make that task easier, if the French are willing to spend the money that will be needed for so tedious a process.

A short chapter deals with the future of Tripoli and its Hinterland, a region part of which was fertile, populous, and prosperous in Roman times, though now there is only a sparse population along the shore and a few nomads in the interior. The Turks have strengthened their hold on the coast and planted garrisons as far inland as Ghadames and Ghat. But the Turkish Empire will break up, some day, not improbably within the next half-century, and then who will get Tripoli? Italy has long wished for it, and has already the bulk of the shipping trade. M. Ferry is good enough to say she may have it—that is, she may have the coast regions. But he will not let her have Ghadames, conceiving that the routes which lead through that oasis and Ghat are so important to France, as the holder of Tunis on the northwest and of the central Sudan far away to the south, that she must not let them pass to other hands.

Tripoli suggests the Senussi, that singular Mussulman brotherhood about which we have heard so much during the last thirty years, and still know so little. Our author has not much that is new to tell us. He believes that this sect or order, founded by the Sheykh Si Muhamad ben Ali Senussi about 1830, still continues to extend its influence over all North Africa, west of Egypt. He recognizes that it is hostile to the Turks and hated by them, being in their view both heretical and schismatic. He tells us that the Senussi have done much to improve the material condition of the districts they dominate. They dig wells, create irrigation works, increase the cultivable area, recalling in this respect the services rendered to Utah and Idaho by the Mormons. In his opinion, they are not so violently fanatical and so dangerous to France as has been generally believed; nor does he despair of repeating with them that Napoleonic policy to which he constantly reverts, of using the internal dissensions of Islam to weaken its collective resistance to European progress. Use one sect against another; set the Senussi against the Turks as Napoleon set Cairo and Mecca against Constantinople. A general declaration of war against the Senussi would be premature and therefore stupid. Tact and craft may prevent them from barring the path of a Power professing itself friendly to Mussulmans and reserving its hostility for the pretended Khalif of Stambul.

The last chapter of the book (for the souvenirs of the author's journeys along the upper course of the Niger are relegated to an appendix) deals with the *"action civilisatrice"* proper to be followed by France in Africa. It describes the condition of the negro races which have passed under her dominion, their ignorance and superstition and timidity, their subjection to the rule of custom, their indolence, their simplicity, their kindliness and hospitality, but also their mental backwardness and their savagery when excited. Tracing the picture of native life with no unsympathetic hand, M. Ferry concludes that on the whole European rule has been a boon to the peoples which have now passed under it. It has stopped slave raiding, it has mitigated slavery, it has put an end to the cruel invasions beginning with general massacre and ending with famine, the result of devastation, which from time immemorial has swept across these unlucky countries. He concludes that whatever Count Tolstoy may say against it, civilization does more good than harm, and gives more chances of happiness to the natives of barbarous Africa than they possessed in their primitive condition.

The Growth of the Manor. By Dr. P. Vinogradoff, M.A., Hon. D.C.L., etc. London: Swan Sonnenschein & Co.; New York: The Macmillan Co. 1905.

In this volume Professor Vinogradoff attempts to take stock of recent special investigations of early social and economic conditions in England. Of late years Maitland and Pollock have been disclosing important facts in early English law; Round has been extracting the statistical significance of Domesday; and Seebohm has bent his scrutiny upon early Celtic institutions. When Vinogradoff in turn comes to add his contribution to this accumulating mass, it is not surprising that he finds the situation

vastly altered since 1892, when he appeared as the protagonist of the free village community. In 1892, investigators of early English economic conditions were divided into two camps. The one supported the traditional view that Anglo-Saxon settlements in England consisted originally of village communities composed of free men who tilled the land, which was held in common. The other subscribed to the view of Seebohm, who in 1883 had advanced the thesis that English social history began with "communities in serfdom under a manorial lord." More than a decade after publishing his 'Villainage in England,' Professor Vinagradoff finds himself called upon to harmonize the "clash of opinions and arguments," and to present a sketch of the growth of the manor which will be intelligible to the student of general history. The need for such a sketch was sore; but how far the author has succeeded in his double purpose of mediating between opposing views, and of creating a readily understood outline of manorial development, is very much of an open question.

He divides his study into three main subdivisions—the Pre-English Period, the Old English Period, and the Feudal Period, giving about three hundred pages to the text and almost a hundred to the notes. As regards the first, or Pre-English period, the verdict rendered must be, on the whole, unfavorable. The facts cited relative to Celtic arrangements are too few, scanty, and disconnected to afford any real historical basis for manorial origins. Analogical dubiety is an uncertain foundation for an historian. There is practically no age or people that could not thus be made the focus of a great many erudite pages. Collect all hints from monuments of the epoch, collate everything known of similar races and times, mix freely a large amount of probable speculation, and it would not be impossible to write a substantial volume on Palæolithic Jurisprudence. Something of the same taint attaches to the treatment of the Roman occupation. The Romanizing influence is "guessed down." For the widespread prevalence of the open-field system there "seems to be hardly any other explanation . . . than . . . that the influence of Rome went to further the economic development of these parts without altering the fundamental cast of extensive husbandry and communalistic arrangements in the occupation and distribution of land" (p. 67).

Professor Vinogradoff is occasionally given to transmuting unconsciously a statement that began in the potential mood to the same proposition in the indicative. An instance is afforded on page 70. An administrative procedure which "may be even supposed" to have been "convenient" becomes, five or six lines lower down, a device by which Roman administrators of colonial districts *"were able"* (*sic*) to escape certain annoyances in the treatment of "the population of backwoods and pastoral tracts." In his delineation of this obscure period Professor Vinogradoff's conclusions remind one of a description of Sir Robert Peel's speeches in the House of Commons—"they have no stays." And yet, unlike Cardinal Newman's safe theologian whose mistiness was "the mother of wisdom," our author's mistiness is the child of erudition. He knows so much that he will not keep absolutely quiet in a dark place; and he knows *too much* to enunciate any important proposition in this nebulous domain without guarding himself immediately thereafter "from being supposed to exclude the contradictory."

Undeniably incapacitated as Professor Vinogradoff is through the very fulness of his historical knowledge from giving in sharp outline an account of the growth of the manor acceptable to the general student of history, our author's intrinsic excellence appears in the treatment of the two later periods of manorial history. Experience has convinced us that the best way to follow Vinogradoff is to read first the concluding summary given at the end of each chapter. With that synopsis well in mind, the details in their order may well prove enlightening and instructive. It is really curious how our historian almost invariably excludes every specific date from the text. He evidently hates to tie himself down to anything which will take the plasticity out of his material. Except in negative criticism he has, if not a horror of, at least a very pronounced distaste for, categorical statement. The final paragraph of the second part of the work (p. 235) is characteristic: "On the whole, we are, perhaps (*sic*), warranted to conclude, firstly, that the manorial system arises at the end of the Old English period mainly in consequence of the subjection of a laboring population of free descent to a military and capitalistic class, and, secondly, that the personal authority of the lord of the manor is gradually gaining the mastery over a rural community of ancient and independent growth."

The communal element in the manor Vinogradoff traces to the original tendency of the Teutonic invaders to organize on a quasi-tribal system of settlement in *túns* or villages (p. 150, *sq.*). But this original settlement, while it had communal elements, was far from an early agrarian communism. To it neither the Roman conception of a corporation nor the modern conception of a joint stock company is applicable (p. 324, *sq.*).

"The fabric . . . of the township community is substantially organic. It grows and is not based on agreement, people cannot accede to it or recede from it without being admitted, by some natural process—birth, marriage, adoption—to the union of holdings, and, theoretically, it is the holdings in their unconscious and unwilling combination which form the group and define its aims." . . . "People had to till the land very much in common because their agriculture was very much mixed up with pastoral pursuits. . . . At the same time they did not look up to their community as to a kind of socialistic providence"; . . . "not equality and redivision, but shareholding and customary tradition, were the results, and these . . . opened gaps through which individualistic development was free to shoot forth in a rank growth" (p. 326).

In the concluding part, covering the Feudal Period, the work is of value mainly because of the brilliant analysis of the terminology of Norman jurisprudence. Artificial simplifications and artificial contrasts both resulted from the application of the hard-and-fast concepts of Norman lawyers to a welter of social conditions. Vinogradoff contends (p. 340) "that the terminology of Domesday does not give any clue to legal distinctions between classes of persons, but rather applied to the size and character of the tenements, whereas both the Old English and the feudal classification start from legal and personal distinctions." Thus the villain (*villanus*) of Domesday has been "the origin of much confusion," being quite distinct from the "villains" of feudal records "who formed a distinct legal order of men."

This power of brilliant scientific intuition in individual instances, along with his vast general erudition, is what makes Vinogradoff so admirable. He is preëminently a "case historian." But the power of summation, of vividly portraying the march of change in its broad currents, he does not possess.

Western Empire in the Fifth Century: An Aftermath. By the late E. A. Freeman, D.C.L. The Macmillan Co. 1904.

This volume, for which a preface has been written by Mr. T. Scott Holmes, is based upon a series of Oxford Lectures, and will enable the reader to see how Freeman used the opportunity that was afforded him by his tenure of the Regius professorship. Whatever his limitations and mannerisms may have been, he felt deeply interested in many periods and many nations. Just at the close of his life he was, as is well known, eager to carry forward his History of Sicily, but this dominant desire did not lead him to make his lectures at Oxford a by-product of Sicilian researches. Had he lived longer, he doubtless would have written a book on the state of Britain in the fifth century. To such a work the eight studies here published would have been the natural preface. Few subjects of great historical interest are rendered more obscure by dearth of satisfactory records than is the emigration of the Jutes, Angles, and Saxons. Freeman's idea was that, being one incident in the *Völkerwanderung*, light might be thrown upon it by the forward movement of the Germanic tribes in Gaul. Hence he broke ground for his projected study of the Germans in Britain by considering the state of continental Europe as it was during the last days of the Western Empire.

In point of form these lectures are not more rhetorical than Freeman's other writings—especially those of his middle and later period. An excessive fondness for allusion, the iteration of phrases, and the determination to hammer a point through you till it comes out at the other side, are tricks of his with which every one is familiar, and all of them receive ample illustration here. When the author departed on his fatal trip to Spain, he had done little to prepare the present volume for the press, although he clearly designed to publish it. What he left in manuscript, Froude, his successor, was the last man in England to edit, but the late Prof. York Powell proved more sympathetic, and to him is due the credit for the preliminary labors connected with turning a mass of more or less finished notes into a book. The second title, "An Aftermath," is a fit definition of the contents; but, though the piece is unfinished, it contains quite enough good material to justify publication. Freeman's breadth of knowledge and love of footnotes went hand in hand. Were his survey of Western Europe from Alaric to Clovis nothing more than a comment upon the sources, it would merit the notice of those who have studied

the German inroads in Dahn and Pollmann, in Hodgkin and Dill.

Freeman's wish was to write a fuller and more connected narrative than existed of those events which led to the establishment of Germanic kingdoms on Roman soil. In his opening words he says: "The movements within and without the Empire which, in the course of a few years at the beginning of the fifth century, altogether changed the face of Western Europe, have never, as far as I know, been told in our own tongue, perhaps not in any other tongue, as a connected tale."

This passage, which was written before the publication of Dahn's 'Urgeschichte,' fixes the point of departure, and, later on, Freeman makes it clear that he really intended to write a consecutive narrative. As the teller of a plain tale, however, he was not successful. Whether the story of the fifth century could be told by anyone within the compass of an ordinary octavo may well be doubted. At any rate, such a task was beyond the powers of Freeman, with his irresistible impulse to bring in extraneous matter. Take, for example, the following sentence, in which he means to convey the fact that Toulouse became a Visigothic capital:

"Tolosa, whence Caepio carried off, as man deemed, the gold of Brennus, Tolosa, seated on no hilltop, but planted by the fierce stream of the broad Garonne, and looking back to the hills which the skill of later times has taught to guard her, Tolosa, whose capitol has proclaimed her to all ages as the true child of Rome, Tolosa, where the first basilica of the holy Saturninus must have already risen beyond her walls, that renowned city now passed into the hands of the Goth to become his kingly seat."

Outbursts like this may be well enough in an essay, but in a piece of narrative they consume too much space. And if Freeman cannot make a plain statement about Toulouse, let the imagination picture what he has to say when he comes to Trier and Arles!

The book is not, then, as its author meant it to be, a simple bit of narrative, but a collection of eight essays, which, while possessed of greater unity, bring at once to mind Freeman's earlier series of essays. It has the same virtue of first-hand knowledge and strong historical enthusiasm, the same vices of dogmatism and exaggeration. It is interesting to learn that there were Saxons at Bayeux before there were Saxons at Winchester, but a single statement of the fact would have sufficed. We are willing to admit that a writer like Polybius would have made the historiography of the fifth century something very different from what it actually is, but why continue to mourn for Polybius when there could be no reason to hope for a historian of his calibre amid the misfortunes of a falling State? The tricks which to many make Freeman an impossible author, crop out in his essays as well as in the 'Norman Conquest' and other works filled with that "strenuous prose" which J. R. Green said was, to his ear, "neither prose nor poetry, but like somebody holloaing." However, after we have got past the mannerisms, the good in the book comes out, and Freeman seldom wrote anything which did not bear the stamp of genuine scholarship.

The two principal subjects to emerge in this survey of the fifth century are the careers of pretenders, like Constantine and Maximus, and the settlement of the Visigoths in southwestern Gaul. There is comparatively little in Freeman's treatment of the latter theme that has not been brought out already, and the more striking portion of this work will be found in its account of the rivals who rose up against the authority of Honorius. In the chapter entitled, "Constantine, Emperor, and Maximus, Tyrant," the outstanding figure is Constantius, the future husband of Galla Placidia, and father of the last Theodosian, Valentinian III. Freeman seems inclined to place him higher in the scale of fifth-century worthies than it has been the custom to place him heretofore. Most writers have seen in him the sinister figure of one who had Olympios shorn of his ears and clubbed to death, but to Freeman he "may be looked on as in some sort continuing that great line of Illyrian princes which had given the Roman power a renewed life. . . . We see in him traces of the generosity and greatness of soul of an older day. . . . He may fairly claim a place, on his own account, as at least one of the least evil in a bad time." Coming, as Constantius does, between Stilicho and Aetius, a rehabilitation of him would be interesting work, though he could never be made to rank beside either the great Vandal or the hero of the battle against Attila.

Besides Visigothic kings and candidates for the Roman purple, another famous figure is brought by Freeman into his account of the fifth century. We refer to Clovis, who, as "Chlodowig the Frank," receives a whole chapter to himself. In this fragment, for the chapter is left unfinished, the central topic is Clovis's conversion, and the part taken in it by Clotilde. As for Clovis himself, he is merely made a standard whereby to measure the superior stature of Theodoric. It is with a contrast between the noble Ostrogoth and the brutal Frank that Freeman's work as an historian closes. Nor must one's last word of him be marked by aught save sympathy, for of those who in the last generation wrote history, none had a deeper love of it than he.

The Faroes and Iceland: Studies in Island Life. By Nelson Annandale. With an appendix on the Celtic Pony, by F. H. A. Marshall, D.Sc. Henry Frowde. 1905. 8vo, pp. vii, 238, ills.

The deputy superintendent of the Indian Museum at Calcutta has given us here the result of a series of summer and autumn holidays spent between the years 1896 and 1903 in the Faroes and Iceland, and occupied chiefly with natural history and ethnology. Several of the studies included in the little book have appeared in part in more technical form elsewhere, but for present purposes have been enriched and simplified for the general reader, while for valued suggestions and criticism the author expresses his indebtedness to Prof. E. B. Tylor, Mr. Henry Balfour, and other eminent authorities. The book may be regarded as a series of sociological studies of isolated and rather primitive though civilized communities. As such it has exceptional interest and value, especially since the communities selected for study are of ancient establishment, and have not, in recent years, been the subject of any analogous description.

The Faroe Islands form a portion of the Kingdom of Denmark, comprising seventeen inhabited islands lying in the open sea some 200 miles northwest of Scotland. They support a population of over 15,000 souls, and have a capital town called Thorshavn, on the Island of Stromoe, though the largest settlement, Thrangisvaag, is situated on Suderoe. The islands send two members to the Danish Parliament, but, owing to their distant and isolated position, have a certain measure of local independence, exercised by an assembly called the Lagthing, elected by ballot every three years, and presided over by an Amtmand appointed for life by the Danish King. There is no compulsory military service, the customs and taxes are light, and the population so law-abiding that the police have been abolished. Misdemeanants, when there are any, are punished by imprisonment on a diet of bread and water; and as this, during a long sentence, seems too severe, the prisoner is permitted to serve three days at a time, alternating with three days of freedom. There are elementary schools, and a small teachers' college, but most of the instruction is given at home. Even the simplest peasants often have a wide knowledge of history and geography.

The language spoken is a dialect of Danish. The race is described as well built and handsome, the women rather delicate; and both sexes have an air of refinement and dignity. The ancient distinctive costume is practically obsolete. The Faroeman, according to the author, "by his combined hospitality, courtesy to strangers, sane gayety, cleanliness of person and home, resembles what was best among the heroes of the ancient sagas"; while centuries of peaceful living have destroyed in him the tendencies to cruelty and bloodthirstiness and to some extent those which lead to drunkenness. For the details of his chiefly fisherman's life, history, legends, superstitions, etc., the reader is referred to the book itself; we will mention only the singular practice of feeding the cattle on boiled dried whale's flesh and cod's heads, in default of a sufficiently abundant hay harvest.

Iceland is better known to the average reader than the Faroes, by reason of several now antiquated books of travel which had once considerable vogue, and which have served to supply the stock descriptions of geographies and cyclopædias for many years. The world-renowned geysers and the volcano Hekla have always attracted a certain number of tourists. Mr. Annandale, however, does not find the old descriptions applicable at the present day to the condition of the people, and, unfortunately, the changes seem to have been in the direction of degeneracy. He has much to say of the decay of native taste and capability in the household arts, such as carving and embroidery; of the prevalence of diseases due to personal and domestic uncleanliness. In the home life, squalor seems to be the rule. Sloth and vainglory are prevalent vices, drunkenness is very general, and "religious piety appears to have completely perished" (p. 155)—the churches are frequently used as warehouses by the parish. "The Icelandic farmers are no longer simple peasants; some of them are learned men, even

scholars. Yet they live in a state bordering, so far as external conditions go, upon savagery" (p. 159), and "seem to make a virtue of squalor." For this, poverty may be urged in excuse, but the Faroemen manage to use the scrubbing-brush.

In these northern regions the wildfowl are an important economic factor, and one of the most interesting chapters in the book describes the life of the inhabitants of the Westmanna Islands, who depend largely for their subsistence on the seabirds. Next to the sheep, the most important domestic animal is the pony, and it has recently been pointed out that the ponies of these isolated communities largely belong to an ancient stock specifically distinct from the ordinary horse, and which has been named the Celtic Pony. Illustrations and a monographic summary of the facts about this animal are furnished in an appendix by Dr. Marshall. On the whole the book reaps an interesting harvest in a new field.

Le Vers Français: Ses Moyens d'Expression, son Armonie. Par Maurice Grammont, Paris: Alphonse Picard & Fils. (Publications de la Société des Langues Romanes, Tome XVII.) 1905. Pp. 454.

We have here conclusions sincerely held, based upon genuinely original conceptions, and fortified by much personal investigation, together with collection of material. in places—as, for instance, (p. 37) concerning the expression of immensity, (p. 46) as to the character of certain verses of Hugo, (p. 328) as to the nature of vowels, and elsewhere—we encounter a readiness to substitute assumption or affirmation for proof. When M. Grammont is surest of assent, we find him oftentimes unconvincing, as in his analyses of lines from Heredia (p. 19), from La Fontaine (pp. 20, 22), from Hugo (pp. 40, 44); in his proclamation (p. 327) of the secret of the harmony of French verse; in his grading (pp. 370-375) of certain poets in respect to the relative harmoniousness of their lines. Also, we are a bit startled at his views (pp. 75, 76) on the relation of the length of a line to its speed. But these are minor matters, and our objections to them are such as we might offer to details of any similar book without loss of confidence in its general value.

The work appeals far less to foreign than to native students of French verse, and most to French versifiers, young or yet to be, as it definitely advocates specific reforms in or modifications of the mandatory rules of French prosody; for instance, redefining "cæsura" (p. 45), proposing (p. 284) a total revision of the classic rules as to hiatus and (p. 303) a radical rectification of the basis of distinction between masculine and feminine rhymes, and setting forth (pp. 404-415) the archaic and artificial character of French poetic language as to its usages in respect to *e* mute, diæresis, and the aspirated *h*. Elsewhere the author clings to old rules, as, for instance (p. 35), approving the ban excluding from the sonnet alexandrines of other than classic mould. Such affirmations of traditional formalism he always justifies, however, by arguments of his own.

These and other special pleadings, addressed particularly to present and future creators of French poetry, take up, however, no great portion of the book. The bulk of it is devoted, as the title indicates, to fully illustrated analysis, in the first place of the means of expression available in French through variations in the sounds employed or in the character of the rhythm; and, in the second place, of the harmony resulting from such variations. Of the three sets of analyses, that of the rationale of harmony in French verse, in Part Three, is least effective. It has all the pomp of an impressive machinery of apparatus in the way of ligatures, leaded lines, and other such devices, with a prodigious show of displayed vowels; but the spirit seems somehow absent. M. Grammont apparently succeeds in proving what he sets out to prove, and yet we are not persuaded. The formulæ seem too cut-and-dried, the deductions too easily arrived at, the examples too obsequious to what is required of them. Certainly the author's hypothesis that harmony in French verse depends solely upon the vowels and upon their corresponding within each line, in pairs or triads, appears altogether too simple and obvious, if true, not to have been perceived long ago. If true, French verse, by its basis of harmony, is differentiated sharply from English verse, wherein haunting beauty of melody seems to arise, not by any means from a neat series of vowel-correspondences, but rather from a perpetual variation of syllabic effects, exquisite, elusive, and irreducible to any simple diagrammatic recipe.

The study in Part Two is of sounds as means of expression, and here M. Grammont's utterances in respect to rhyme, his modestly put "opinions" on hiatus (pp. 273-275), show a sensitive consciousness and accurate thinking. Very well chosen are his examples (pp. 284-289) of the bad effect of the consecutive repetition of identical syllables. The first part, on rhythm as a means of expression, contains an excellent exposition of the evolution of the varieties of the French alexandrine. This, we take it, is the most valuable portion of the book. It does not so much traverse or impugn the results of Becq de Fouquières or amplify his investigations, as approach the material from another point of view and in a different way. It is original in method, informing in results, and decidedly interesting to a Gaul or a foreigner.

There are not a few delectable passages in the book, as (p. 16), M. Grammont's just observation that rhythmical divisions are superposed upon grammatical divisions, but do not necessarily coincide with them; his comprehension (p. 67) of the alteration in the rhythmic character of a phrase as the tone of delivery varies, of variations in phrasing (p. 71), his remarks (p. 84) on the emphatic effect produced by the unexpected intrusion of a short line, on the limitations of Lamartine as a poet (p. 125), on the superiority of suggestion to exposition as an instrument of expression (pp. 160, 161), where his amplification of Musset's pronouncement is good and well reinforced by De Banville's analogical illustration from foliage painting.

Some of his best things are worth quoting:

"The greater part of our citations of Romantic verses have been taken from Victor Hugo, he being almost the only poet who uses them judiciously, in conformity with the idea to be expressed. They occur commonly at haphazard among other modern poets, and can only be regarded as negligences, authorized by a great example ill-understood" (p. 34).

Again:

"As a means of expression, verse has made no gains since Hugo; but the poets have ready to their hands a still more supple and delicate instrument, that permits a still more varied cadence—a resource for talent, a danger for mediocrity" (p. 452).

"If these two pieces be read successively, we quickly feel that it is no longer the same art. The poet has grown old, the poetry has drooped, the diction and the rhythm have lost their suppleness, but the harmony has increased. The author has perceptibly perfected his instrument in this respect, which is, unfortunately, in a certain measure, secondary."

This is clinched by the quotation, with approval, of Musset's dictum: "Il n'y a pas de si belle pensée devant laquelle un poète ne recule si la mélodie ne s'y trouve pas." Finally, when M. Grammont says (p. 422): "La rime est absolument indispensable à toute espèce de vers libres," he is probably right. Certainly, France has not yet produced any poet capable of creating verse disproving this contention.

The Evolution Theory. By Dr. August Weismann. Translated, with the author's cooperation, by J. Arthur Thomson and Margaret R. Thomson. Two volumes; illustrated. Longmans, Green & Co. 1904.

Probably no single author has exerted so profound an influence upon the currents of biological theory and research since Darwin as August Weismann of Freiburg. An enormous literature has grown up during the last two decades upon Weismannism and its refutations, involving not only the most recondite questions of philosophical biology, but particularly some of the most practical problems of animal and plant breeding and human stirpiculture. Not unnaturally, therefore, the interest in Weismann's teachings is by no means confined to the biological public, and both lay and scientific readers in large numbers have grappled with the intricacies of his more technical works, some of which have long since been translated into English.

But Professor Weismann's views have grown rapidly with advancing knowledge, and there are many, even among biologists, who have not mastered either the original theories or their more recent variants. Accordingly, widely diverse groups of readers will welcome this translation of the second edition of the lectures, which have grown under their author's hand as he has repeated them to his university classes for upwards of twenty-five years; they give his distinctive views in their full setting as part of a general theory of nature.

That author and translators have combined to produce a work which will be widely read is matter for congratulation. That it will be easy reading no one will claim, but we think Weismann has succeeded in his endeavor to produce a book "to be read, not one to be referred to," and that his hope is justified that "any one who *reads* the book and does not merely skim it, will be able without difficulty to enter into the abstruse questions treated of in the later lectures." The presentation of Weismann's theories in comprehensive and readable form will be especially welcome to

teachers for another reason. The modern laboratory method and the whole theory of inductive science-teaching are based on the doctrine that the pupil must be given a thorough knowledge of the facts of the science before he is permitted to build up any theoretical superstructure. This dogma is sometimes carried to so extreme a perversion that a bright student may drudge through a course of experiments in physiology or of dissections in zoölogy with no insight into their meaning, and may even be permitted to finish the course with no hint of correlation or interpretation. Laboratory science which has been thus degraded and mechanized (and this is by no means uncommon even in our better schools) is no whit better than the old dry-as-dust text-books which it displaced. As a matter of fact, even the beginner in science of high-school or college grade requires from the start enough of the philosophy of his subject to vitalize it, and vigorous protests are now being registered against the all too common practice of cramming the student with minute systematic and anatomical detail before opening up to him the wide perspectives of his subject. That the latter can be accomplished without any sacrifice of the spirit of the inductive method, every successful teacher daily illustrates. And now Professor and Mrs. Thomson have in this translation made it possible for even the elementary student to study not only Weismannism, but also one of the most logical and philosophical presentations of the theory of evolution, at first hand.

Teachers may not agree with many of Weismann's theories, and may regard his whole system as a somewhat ill-balanced apotheosis of natural selection. Yet its inspiring quality all have felt, and that quality has been well preserved in this excellent translation. Professor Thomson has already shown his skill in the art of presenting the elements of zoölogy in a philosophical and thoroughly stimulating manner, and Weismann's book has suffered no loss at his hands. Every page of the translation, moreover, has been read and revised by the author himself. The publishers, too, have done their work well; the text and illustrations being beautifully printed.

Chinese Life in Town and Country. Adapted from the French of Émile Bard. By H. W. Twitchell. G. P. Putnam's Sons.

This view of Chinese life reaches us through French spectacles, but the text on that account loses no sparkle. The translation, or rather adaptation, is one that takes away all stiffness and puts the reader at his ease. The bane of most books on China is the patronizing air of the writer, which, with those who know something of Chinese civilization, creates both contempt and disgust. This Frenchman is less cynical, and shows slight tendency to that omniscience which most aliens assume who tell us about the Middle Kingdom. The three or four years of his residence among the pagodas helped him to correct the inevitably wrong first impressions of the newcomer, and there is an agreeable spirit of modesty manifest in the book. Furthermore, the adapter has done his work well. One must not expect here the profound analysis, clear vision, and keen sympathy which a master observer and scholar, like Arthur Smith, has shown in his 'Chinese Characteristics.' On the other hand, the reader of this book is not oppressed with either weight of learning or assumption of the author's superiority. One feels rather that he is riding on the same seat, or chatting in a company where both Chinese and aliens forget that they are mutually hostile critics, recognizing each other's touches as well as touches of human nature. One, as he reads, is reminded of the Chinese mandarin visiting Yale College Library, who, when shown the amazing quantity and number of books in every other division of the library, on reaching the comparatively small alcove devoted to mathematics, exclaimed with both satisfaction and smiles, "The one thing on which we all agree."

We have here a good picture of the greatest of human societies, which, like all other things human, and even more because of its magnitude, is so delightfully full of contradictions and inconsistencies. There is in China a great democracy with a vast amount of local liberty, and an Emperor whose powers are virtually unlimited, the commonwealth lacking the great middle term of individuality. Everything in China is communal. There is a race, but hardly a nation; a social, but not in the Western sense, a political system. There is, normally, no regular army and no police force, while the number of officers and subordinates in the magistracy is astonishingly small. Those burdens of taxation to support vast armaments and a mighty police organization, under which Europe and our boasted Land of the Free groan, are for the most part things unknown to the Chinese. Only the new "civilization" and foreign relations compel them. The people expect the Government to interfere with their affairs as little as posible, and arbitration in case of disagreement is largely practised. Official salaries are ridiculously small, and there are no rich men in China in the American sense of that word. Since the death of Li Hung Chang, who made his money largely out of his multifarious dealings with foreigners, good and bad, China has no one man whose heaps of coin tower over those of his fellows. Nevertheless, nepotism and squeezing of fees are quite equal to anything we have had in the United States. High officers appointed from Pekin live at their posts like strangers, taking little interest in the welfare of the people. For the most part they are deaf to remonstrances and accusations, since at the expiration of their term of office they will go to some other part of the empire. Too often they themselves are entirely at the mercy of their assistants, who are the virtual administrators, because they know the rote, belong to the district, and speak its dialect. There is no Chinese "empire" in the sense of that term as applied to the British, German, or Russian political structure.

The Chinaman, as painted in these pages, is insincere and inexact, knows not the value of time, is indifferent to comfort, and looks upon women simply as beings hard to get along with, but impossible to get along without. His face is toward the past. Land and labor are the two wheels of his wagon, which is hitched to no star. He not only honors the soil, but he worships it. The ancestor and the soil are his true gods. Those religions which the foreigner discriminates and analyzes are merely formal elements in his culture. The author devotes two chapters to missionaries, but, as he is a Frenchman, one gets little idea of what Protestant missionaries are doing. His abilities in exaggerating their divisions and the bewildering character of the doctrines which they hold, are marked, but his skill is less manifest in showing their constructive power in the making of a new China that may yet become a true nation. In treating of journalism, education, government, justice, paupers, socialism, and the higher commercial topics, he appears to be more the reader and man of the club and hong than the dweller among the people, who knows their language. Among merchants, he is more at home. He tells us that although the Chinaman is a man of his word in the matter of keeping contracts, yet this does not prevent frauds in the quality of the merchandise delivered. The average Chinese dealer in indigo and silk, in feathers, wool, down, and hides, is almost equal to his American brother who rents a pew in the middle aisle and then sells adulterated food. If any one doubts the kinship of our human nature, one need only compare the bricks and pieces of iron in the bales of Chinese merchandise with the large percentages of alcohol in our "strictly temperance" tonics and patent medicines. No shadow of the "yellow peril" disturbs our author, who cannot see that China, even if newly born to industrial life, could supplant nations having behind them the experience of generations of enlightened capitalists and skilled, alert workmen. In a not particularly clever epitome of the nation's history, he pays a deserved tribute to the Empress Dowager, "this Catharine of the East." Her official life, though ugly, has been ordered by the one motive of preserving China. Practically she has been the State.

With index and illustrations, this makes one of the books on China most pleasant for reference and reading.

Annual of the British School at Athens. No. X. Session 1903-1904. Macmillan. 1905.

The British School was able to celebrate the meeting of the Archæological Congress last spring by the dedication of its new library, a memorial to the late Mr. F. C. Penrose, who, in addition to his other well-known work as an archæologist, was the first Director of the School. The addresses made on the occasion are included in the present volume, along with the customary reports, and a full baker's dozen of archæological papers. First and foremost in professional interest will be the articles by Mr. A. J. Evans on the Palace of Knossos, and by Mr. R. M. Dawkins on the progress of the excavations at Palaikastro. The excavations at Knossos in 1894, it will do no harm to repeat in these columns, formed the fifth campaign on that site. They contributed much towards the distinguishing of the two periods of construction of the later palace. Of outlying remains, a "Minoan" roadway, paved with well-fitted slabs of stone, was traced for some seven hundred feet, and the existence determined of various important public buildings bordering upon it. A rich

deposit of inscribed clay tablets relating to royal chariots and weapons, and two officially sealed chests containing a large number of (carbonized) arrows with bronze heads, point to the possibility of the royal armory being situated here. Further excavations along this roadway are projected.

About half a mile north of the palace a "Minoan" cemetery was discovered, and a hundred tombs opened. These contained many vessels, implements, and arms of bronze—one of them a sword with a gold-plated handle, engraved with a design of lions hunting goats. Painted ware, especially "stirrup vases," and jewelry were also abundant. In one tomb a saw and other carpenter's tools lay beside the skeleton. The tombs were of three sorts—chamber-tombs, approached by a passage, shaft-graves, and pit-caves. Most of them belonged to a period immediately succeeding the fall of the palace. A scarab was of the late Eighteenth Dynasty type.

About two miles north of this cemetery a square chamber-tomb, about eight by six metres in dimensions, was discovered, with a pit-grave in its centre, and side walls arching in "Cyclopean" fashion towards a gable, which, however, had been destroyed above. The main cell had a portal roofed in similar manner, communicating with a lofty entrance hall, and this with a rock-cut dromos. The form of the mausoleum is unique. The contents of the tomb had been rifled for metal objects in ancient days, but enough remained to show the wealth of the occupant. Mr. Evans is unwilling to recognize in this fine monument, on its imposing site, the traditional tomb of Idomeneus; chiefly, as it would seem, because no sufficiently important tomb was found near it to answer for that of Meriones. Let us hope for more luck later. A full report on the cemetery and Royal Tomb is to be published in *Archæologia*, and also in separate form.

For the information of those who have not kept pace with the vagaries of archæological nomenclature, it may be remarked that "Minoan," in Mr. Evans's use, covers remains of the bronze age in Crete, and has various chronological and stylistic subdivisions.

At Palaikastro the chief interest is in the discovery of five fragments of an inscription consisting of a six-stanza hymn to the Cretan Zeus. The lettering is said to be of the third century of the Christian era, but the language points to the sixth or seventh century before Christ. The inscription proves that in classical times a temple to Zeus Dictæus stood on the site of the "Minoan" town at Palaikastro, and that the Hellenic name of the place was Heleia.

The School has also entered upon a new sphere of work in Lakonia, hoping to make eventually a systematic exploration of the entire area of the province. Interesting first-fruits are visible in the present volume in the shape of articles by Mr. Tod, the Assistant Director, on Teams of Ball-players at Sparta, and by Mr. E. S. Forster on Sites and Inscriptions in Southwestern Lakonia. Another especially valuable article is by H. Schäfer on "Altägyptische Pflüge, Joche, und Andere Landwirthschaftliche Geräte."

The School is to be congratulated on accomplishing a great deal of important work at a minimum of expenditure. One may hope that it will be more fully appreciated in England, and more liberally supported. The advice to students (p. 267) is interesting to read. We note, with a disposition to our own amendment, the remark of the Director that "students from English universities will never have the love of formal lectures which distinguishes those from America."

The "Nation's" praise of the rewritten and up-to-date Wallace's Russia. $5 retail.

"A book of extreme value on a remarkably difficult subject has been rendered invaluable—nay, indispensable—for those who wish clearly to understand present conditions and future possibilities in the realm of the Tsar. . . . Good judgment, together with keen comprehension of the really important factors and of what the public wished to know, formed the most salient characteristic of his original work. . . . Sir Donald's well-known clarity of comprehension, arrangement, and statement have not failed him in treating these complicated topics; and his conspicuous fairness, as well as his reasonableness, wins the admiration of the reader. . . . All that it is possible for any man to contribute to an understanding of that situation at any time in the future he has succeeded in the highest measure in supplying by the firm foundation of this admirable volume."

Rec'd SEP 22 1905 B.P.L.

EARLY FALL PUBLICATIONS

THE ENGLISH WORKS OF GEORGE HERBERT

Edited by GEORGE HERBERT PALMER

It is very fitting that Herbert, in whose work the purest poetry and the most devoted piety are mingled, should have been treated with such fidelity and taste as characterize this incomparable edition.

Professor Palmer has added a worthy introduction, which, together with the notes, make this the most complete, and critically speaking, the final edition of Herbert's works. With 29 photogravure and half-tone portraits, views, and facsimiles. In three volumes, $6.00 *net*. Carriage extra. (Ready in October.)

LIFE OF CARDINAL WOLSEY

By GEORGE CAVENDISH

A sumptuous edition of the first biography written in the English tongue, from the most authoritative text. Beautifully illustrated with photogravures in sepia and red chalk tints mainly by Holbein. 1,000 copies, in buckram, price per copy, $7.50 *net*; postpaid.

TWO BIRD-LOVERS IN MEXICO

By C. WILLIAM BEEBE

A delightful book of travel through Mexico, giving interesting descriptions of the varieties of animal life encountered by Mr. and Mrs. Beebe while "roughing it." Profusely illustrated from photographs by the author. $3.00 *net*. Postpaid $3.23.

CICERO IN MAINE

By MARTHA BAKER DUNN

Humorous essays dealing with such attractive topics as "Book-Dusting Time," "Piazza Philosophy," etc. $1.25 *net*. Postpaid $1.36.

THE ROMANCE OF THE MILKY WAY

By LAFCADIO HEARN

The last book by the greatest American writer on Japan. $1.25 *net*. Postage extra. (Ready in October.)

THE IMMANENCE OF GOD

By BORDEN P. BOWNE

An admirable presentation of the ever-living, ever-present God. $1.00 *net*. Postpaid $1.08.

THE QUESTION OF OUR SPEECH

By HENRY JAMES

A volume of unusual literary interest in which Mr. James gives some very wholesome advice in regard to American carelessness in pronunciation and use of words. $1.00 *net*. Postage extra.

THE WORDS OF GARRISON

A Centennial Selection (1805-1905)

Characteristic sentiments from the writings of William Lloyd Garrison. With a biographical sketch, bibliography and chronology, and a fine portrait of the great reformer. $1.25 *net*. Postpaid $1.34.

BYRON'S POEMS

Edited by PAUL E. MORE

The latest volume in the Standard Series of Cambridge Poets. With portrait, notes and indexes. $3.00.

POEMS OF JOHN VANCE CHENEY

The best poems of one of the most successful of American magazine writers. $1.50 *net*. Postpaid $1.60.

THE GREAT ADVENTURE

By GEORGE CABOT LODGE

Sonnets in sequence, dealing respectively with life, with love, with death. $1.00 *net*. Postage extra.

JAMES RUSSELL LOWELL

By FERRIS GREENSLET

A compact and readable narrative of the life of Lowell, giving the reader a lively sense of his personal quality and flavor. With portraits and other illustrations. $1.50 *net*. Postage extra.

THE VALERIAN PERSECUTION

By PATRICK J. HEALY

An impartial study of the relation between Church and State in the Third Century, A. D., showing the herculean task which confronted the first apostles of Christianity. $1.50 *net*. Postpaid $1.62.

KATE DOUGLAS WIGGIN'S *new love story*

ROSE O' THE RIVER

A new story by the author of "Rebecca of Sunnybrook Farm," full of Mrs. Wiggin's wit and characteristic humor, and dealing with the same kind of village life as in "Rebecca." Rose is a "Down East" girl, and, like Rebecca, dominates over her little world. With 10 full-page illustrations in color. $1.25.

THE MACMILLAN COMPANY, Publishers, 64-66 Fifth Ave., N.Y.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 21, 1905.

The Week.

If President Roosevelt has yielded to the Czar the initiative in convening the Hague Conference again, it is an act at once graceful and full of tact. All that the President promised the Inter-Parliamentary Union last year was that he would take steps to have the Conference summoned. If that is now done by its begetter, every one will be satisfied; and the President will have done something to disabuse the universe of the suspicion that he means to set up as its care-taker. Under whatever prompting brought together again, it is certain that the Hague Conference will be the scene of fruitful labors in the cause of humanity. War has been made to appear not less, but more, barbarous and wicked by what has taken place since the first Peace Conference at The Hague. Several of the participating nations will come in chastened spirit; and all should be ready to do something not only to mitigate the atrocities of war, but to make it seem more and more heathenish and impossible.

That seems a peculiar arrangement by which the Civil Service Commission is to bring it about that negroes in the South are "voluntarily" to relinquish clerkships in post-offices which they "will not be allowed to hold." Having investigated several cases in which black clerks had been forced to resign, sometimes by maltreatment, the agent of the Commission found that "the negroes have been made to know" that they cannot retain such positions. But the objection to them as mail-carriers is not so strong; consequently, if those who pass the examinations will only signify that they prefer to act as carriers, not as clerks, there will be "no discrimination against an eligible because of his color." Well, if negro or white man could not reason better than that, he ought not to be an eligible for any position where common sense is required. All you have to do, it seems to be thought, is to make "voluntarily" mean "compulsorily," and the problem is solved. And, of course, when Southern sentiment rises to the point of forbidding black men to be carriers, some equally fine verbal shift will be invented to explain away the discrimination. This is the strangest version of the square deal that we have yet encountered. Compel a man to accept a crooked deal, and that makes it square.

An issue of tremendous importance has arisen in the campaign now being conducted by Hoke Smith and Clark Howell for the nomination for Governor of Georgia: Did Hoke Smith, while Secretary of the Interior under Cleveland, appoint negroes to office? This live and even burning question has been discussed in the columns of rival Atlanta newspapers controlled by the candidates, and the impression is given that the State is convulsed over it. The *Constitution* presses Clark Howell's charge that, under the Hoke Smith régime, two of Bishop Turner's sons were appointed to places in the Interior Department, one as clerk at a salary of $1,000 a year, and the other as an assistant messenger in the Pension Office at $720 a year. Another negro, Mick Mitchell, it is charged, enjoyed a $900 clerkship by reason of Mr. Smith's tolerance. To emphasize its point, the *Constitution* compares the princely salaries of the Turner boys and Mitchell with the $600 clerkship given to Peter J. Williams, a white man and the son of a Confederate veteran. Now what has Hoke Smith to say about that? His newspaper, the Atlanta *Journal*, hotly replies that both Mitchell and the $1,000-a-year Turner boy were already in the Interior Department, "under the civil-service blanket," before Smith entered Cleveland's Cabinet. Those negroes whom he did appoint, he declares, were given "menial positions" only. The question whether the appointees were efficient seems not to have arisen. Smith's condemnation or vindication rests upon the disposal of the charge that he actually recognized negroes as human beings.

On September 13, "Governors' Day," at the State Fair at Concord, Gov. Glenn of North Carolina told the people of New Hampshire that the only thing the South denies the negro is social equality. That is denied, he says, "because we believe that God made the whites a superior race to any other." Judge Kittrell of the Texas Supreme Court, speaking for Gov. Lanham, invited the people of New England to go out and help Texas to realize her splendid destiny. He said reassuringly: "The law is as well enforced there as it is in New Hampshire. I say to you that the blackest negro that ever crept from a prisoner's cell to a prisoner's dock can get as fair a trial as the whitest man in New Hampshire." Those who deny that negroes are given a "square deal," Judge Kittrell declared hotly, are "slanderers of the courts and people of a great State." As "Governors' Day" rhetoric, these statements are impressive, but as attempts to summarize the facts, they are not convincing. The New York *Age* says that, since July 1 of this year, seventeen lynchings have been recorded in the South. It quotes from a Dallas account of the burning, near Howard, Texas, on September 7, of Steve Aaron, a negro charged with the "usual crime": "The mob was so strong that it did not fear the local officers, and the isolated location, off the railroad line, made it comparatively free from molestation by State troops, if any should be ordered out."

There was an unhappy, far-off time when Senator Lodge did not believe in ship subsidies. He confessed as much in his speech at Peabody, Mass., on September 13. But he went on to tell the reason of his conversion in terms that must indeed have thrilled his audience. The Senator—to his great credit be it said—is one of the few Republicans with the courage to utter the word "subsidy." That there has been a prejudice against the word and the thing signified he acknowledges, and owns that it was this prejudice which made him think subsidy legislation impossible. But he has made a discovery which changes the face of the question completely. It is not too much to say that every one on whom the same light dawns will at once become a subsidy advocate. To carry out the policies he favors, the Senator says, would cost $4,000,000 a year. "But the best of it is," he adds with an unwonted burst of enthusiasm, "that we could provide for it all without a cent of new taxes on the American people." By this he means that the expense will be defrayed by a shuffling of port and light charges. It did seem as if the American consumer, who for more than fifty years, as the protectionist tells us, had not had to pay a penny for the support of our Government, might have been glad to assume this modest sum out of sheer patriotism. But no, the uncomplaining foreigner, who has grown accustomed to paying the entire tariff revenues of our Government, is to shoulder this new burden too.

A miracle, from the point of view of devout standpatters, has been openly wrought. Republican petitioners for reciprocity have at last demanded, not only that the duties on their raw materials be abolished, but that the rates on their manufactured goods be cut down. The Massachusetts committee of one hundred are advocating a plank in the platform of the coming State convention of the Republican party, calling for the placing of hides, coal, iron ore, lumber, and wood pulp on the free list, and also for a reduction in "duties upon manufactured and other articles." This will frighten Lodge and his machine as much as it enrages the Home Market Club. But it is a sort of "millennial sign," to be added to those which

Dr. Holmes enumerated. Representative McCleary said the other day that he never expected to live to see any tariff revisionist admitting that his own pet duty was too high. The sight of these Massachusetts reciprocity men, ready to have their own tariff favors cut off, must make him feel like singing his *nunc dimittis*.

The reason why Germany is not more seriously alarmed by our Government's intention to develop for ourselves the South American trade is apparent from the very phraseology in which this great movement is announced. "The authorities at Washington," we are told, "mean to go forward 'full steam ahead' to capture" the markets to the south. The thing is talked about as if the Secretary of State were preparing in his own person to make shipments of canned roast beef, and the Chief of the Consular Bureau to do up calicoes for the sub-tropical trade. But the "authorities at Washington" have nothing to sell, and all their "activity" can accomplish is to collect information about South American opportunities, and try to induce individual manufacturers and merchants at home to take advantage of them. Now adaptation of methods to the preferences of foreign consumers has never been in the past a strong point of our manufacturers. Every batch of Consular Reports contains evidence of this. Our agent abroad finds out that particular goods for a particular place must, to be salable, be prepared or packed in some particular way. But the manufacturers frequently go on sending their goods to this spot of queer foreign tastes in the dress that suits Decatur, Ill. Perhaps an assiduously cultivated worship of the "home market" has had something to do with this. Certain it is that, while alert and enterprising business men may work up a foreign trade for themselves without help from their Government, the Government's own energy can accomplish nothing unless the commercial interests are prompt to accept the chances it obtains for them. As the German commercial bodies point out in the case of Cuba, even the discrimination in favor of American imports there has not decreased the sale of German goods. Other nations have actually made larger sales to the Cubans since the action which was to transfer this business bodily to our hands.

It has been some time since the fur-seal appeared as an international issue of importance, but, according to the news from Washington, that interesting creature is likely soon to enjoy its old prominence. Under the present agreement between this country and England, Americans may take male seals on the Pribyloff Islands under certain restrictions. All sealing operations are prohibited within a zone of sixty miles about those islands, but a large fleet of Canadian vessels engages every year in extremely profitable pelagic sealing outside the protected zone when the seals come to the rookeries in the spring. The seals killed at sea are largely females, and thus, as this country has always contended, the continuance of pelagic sealing threatens the very existence of the herd. On the other side of the Pacific a very similar situation exists, the seals which breed on islands owned by Russia being taken by the Japanese in waters further south, though without such an agreement as that between England and the United States. It is a fact which hardly needs statistical verification, though this is abundant, that, as pelagic sealing has grown more profitable, sealing on land has declined. If, as is reported, the end of the war in the East is to be made the occasion for negotiations between these four nations for a sealing agreement, there is likely to be a protracted debate. The nations which own seal rookeries assert, with scientific testimony to back them, that the carefully regulated killing of "bachelor seals" is the only form of sealing that does not menace the existence of the species. But before consenting to the entire prohibition of pelagic sealing, the countries now engaged in that industry are likely to insist on participation in the sealing operations on land.

The completion of the revision of United States statutes, begun four years ago, has naturally drawn attention to the many slovenly, ambiguous, and nugatory provisions which can be pointed out in the statutes at large by any one in the habit of searching those entertaining volumes. The publishers of a compilation of these statutes a few years ago observed in their preface that "the complexity of bills passed was too much even for members of Congress itself to unravel. We have come upon amendments to laws that have been repealed, amendments that overlook previous amendments, new laws reënacting existing and forgotten laws, etc." The story is told that Mr. Botkin, chairman of the commission now finishing its work, promised his colleagues an oyster supper if they could discover from the statute-book what was the legal rate of pay of a cook in the corps of engineers, and they, after many days of searching, were compelled to give it up as hopeless. The purpose of the revision, of course, is to bring the whole body of Federal laws into consistent and perspicuous form. But, once this is done, as it should be by the next Congress, the need of keeping the laws in the same orderly condition ought to be considered.

Mr. Everett Colby's rout of the Essex County (New Jersey) bosses, backed by rapacious corporations—a rout so complete that it left them dazed—is a political event of uncommon significance. A corrupt and tyrannical machine, believing itself all-powerful, was directly challenged, and was blown away like tissue paper by the popular vote. The smashing defeat of Major Lentz is a long score for the new primary law. Under the old plan of stuffing caucuses and putting through a slate, Lentz would have beaten Colby easily. It was the opportunity for a wider appeal to the voters which wrecked the machine. The New Jersey law in force for the first time this fall is not, to be sure, a direct primary law. But, in the case under consideration, as occasionally happens, the voters of the party were offered a fair count and a practical choice of candidates, which amounted to the same thing. Nevertheless, the method should not be thought of as a cure-all for our political ills. It is a contrivance which the bosses will learn to work in time, if the citizenship is neglectful, as skilfully as they do other parts of the electoral machinery. Indeed, but for Mr. Colby's remarkable appeal, sustained through a long and vigorous campaign, he could not have won even under the new law. The latter simply gave personality and a sound issue a chance to make themselves felt. No political system can save a people that fails in its political duty, just as none can really prevent an aroused and determined electorate from eventually having its way.

The State Democratic Executive Committee of Tennessee, at a meeting in Nashville last Saturday, resolved: "That on Saturday, the 12th day of May, 1906, between the hours designated for regular elections, the polls shall be open at each of the usual polling-places in all the counties of Tennessee, for the purpose of holding a direct primary election to select the nominee of the Democratic party of Tennessee for United States Senator, for the term beginning March 4, 1907, and ending March 4, 1913." This is the latest extension of the primary principle to the selection of candidates for Federal office, following closely upon the Virginia experiment. Tennessee had already legalized the primary as applied to State elections, but had balked at authorizing it in the case of an election of a Senator or Representative. The State Committee's action, therefore, is to become effective only because Senator Carmack and ex-Gov. Taylor, the rival candidates before the Legislature of 1906, have agreed to abide by the result of the primary, and the Democratic county committees are unanimous in deciding to conduct the test in May. Somewhat inconsistently, the State Committee rejected the proposal to submit the question of choosing a candidate for

Governor by a direct primary vote. The State will, therefore, have an excellent opportunity to contrast the primary and convention methods, for the Gubernatorial convention will occur three weeks after the Senatorial primary of May 12.

The anti-pass fight is on in earnest in Nebraska. Following the action of the Republican State Convention of Thursday in declaring against the railway pass, Gov. Mickey and two other State officials have given up their passes, and announced that hereafter they will pay their own fare. Even United States Senator Elmer J. Burkett spends good money for a ticket to Washington. "The will of the convention," says the Attorney-General sententiously, "is law to me. Now that the convention has spoken, a Republican can do nothing but surrender his passes." To the man up a tree it would seem as if the proprieties of the case are exactly what they were before the oracles of the Republican convention spoke. The question is a very simple one: Should a State officer, who may be called upon to decide matters of vital interest to the railways, accept favors from them? To put the question is to answer it. Sane men can hold but one opinion on this subject. The railways are not giving away their passes for nothing. In the long run they find their advantage in securing the good will of men in place and power. In the meantime we shall be interested to learn whether loyal Republican editors likewise accept the verdict of the convention. Will these great tribunes of the people also guard against any secret and subtle bias toward benevolent corporations; or are they sure that their minds are so soldered in virtue that nothing can swerve them from their devotion to the commonwealth?

A bust of Thomas Paine was last week set up in Independence Hall, Philadelphia. It was, according to the *Ledger*, presented to the city in 1876, but, because of the prejudices against Paine, was refused. At the end of nearly thirty years it is again offered and accepted. That these three decades have witnessed a distinct change in the common estimate of Paine is not to be doubted. The city fathers of 1876 must have recalled that in their boyhood the name of Tom Paine was a bogey to the orthodox. Through the first half of that century everybody who went to church was accustomed to hear Paine thundered at from the pulpit. "Give us more of them awful deathbeds of Voltaire and Tom Paine," said the old trustees to the young Methodist minister in 'Theron Ware.' With the disappearance of Paine as a popular critic of the Bible, and with the growth of toleration, men are able to make a juster appraisal of his worth. As a writer he merits more honor than he is generally awarded. His style is not that of the scholar, but it has the far higher qualities of energy and directness; it is full of pithy and quotable phrases. Unrestrained enthusiasts have held that the pen which wrote 'Common Sense' and 'The Crisis' was as potent an aid to the Americans as the sword of Washington. As a political philosopher, Paine made important contributions to the theories embodied in the framework of our republic. He is, says Leslie Stephen, "the only English writer who expresses with uncompromising sharpness the abstract doctrine of political rights held by the French Revolutionists. His relation to the American struggle and afterwards to the Revolution of 1789 gave him a unique position, and his writings became the sacred books of the extreme radical party in England." Paine clearly deserves a high place in our national pantheon.

On Wednesday week, Frederic Cromwell, treasurer of the Mutual Life, declared with much emphasis that in these days membership in syndicates is a necessity. Time was, twenty years ago, when the income of the Mutual was small and the company "could buy from bond-dealers and pay the broker's profits"; but now the company must go into syndicates in order to get satisfactory investments, "get them in sufficient size and at 'ground-floor' prices." "I go so far as to say," added Mr. Cromwell, "that unless we went into the syndicates, we should not be able to invest our funds." The only difficulty with this lucid and plausible exposition is that a syndicate is formed, not for the purpose of buying bonds, but of marketing them. Capitalists unite to "float" an issue of Government, railway, or industrial securities, and they are expected to "stay in" till this end is accomplished. Indeed, Mr. Cromwell himself testified that when the Mutual backed Speyer & Co. to the extent of $5,000,000 in obtaining $35,000,000 of Cuban bonds at 89, it did not withdraw its share of the bonds and lock them up in its vaults. On the contrary, it went into a second syndicate which took over $20,000,000 of the bonds at 91. The Mutual understood when it entered the original syndicate that it was not to withdraw any of the bonds which it had underwritten. Then, too, the Mutual did not join the "Pennsylvania 3½ convertible bond" syndicate for the purpose of securing "ground-floor" prices. The company, as a stockholder in the Pennsylvania Railroad, was entitled to $1,666,000 of the bonds at par, but did not care to avail itself of that chance. The Mutual put $1,500,000 into a syndicate which bought "Southern Pacific first refunding 4s" at 93½, but the Mutual itself bought $3,000,000 of the bonds at the public offering at 97, less the commission. Other syndicate operations were similar in character.

Policyholders of the New York Life now know that on December 31, 1903, the company sold $800,000 of International Mercantile Marine bonds to J. P. Morgan and Company, and on January 2, 1904, took them back again. The transaction was managed by George W. Perkins, a partner of the banking firm and also vice-president of the New York Life and chairman of its finance committee. The object of this feat of financial legerdemain was, as Edmund D. Randolph, treasurer of the insurance company, admitted, to show in the annual report only $3,200,000 of International Mercantile Marine—a bad investment—whereas the company actually had $4,000,000. The chief use of an annual report in a mutual company like the New York Life is to let the policyholders know exactly how their affairs are being managed. "Frankness" is, according to President John A. McCall, the admirable motto of his administration. "The New York Life," says a recent circular, "has for years believed in and advocated publicity." In the shift of $800,000 just mentioned there was neither frankness nor publicity. The policyholders, the agents in the field, and perhaps some of the officers in New York, were deliberately misled as to the actual condition of the investment.

An article by M. Brunetière on "Les Mensonges du Pacificisme" has caused animated discussion in France. His criticism of those who advocate peace and disarmament has called forth replies from M. Passy and from the French Senator, D'Estournelles. The title of M. Brunetière's paper was probably even more provocative than were his specific objections to the peace policy of the international committee. The answers of his opponents are, it must be admitted, rather disappointing, for they virtually concede some essential points of M. Brunetière's original argument. If it had come from a less clever writer, it would deserve but little notice. After accusing the advocates of "pacificisme" of cowardice, he tries to prove that disarmament in Europe would be inexpedient, chiefly for reasons of social economy. National industries, he thinks, are helped by the continuance of standing armies which require supplies of many different kinds, and thus give employment to a large part of the population. As for war, it is a national safety-valve. It has a great and good influence upon the individual character, inspiring courage and affording an opportunity of moral self-realization. With every advance of the military art, new orders go to the factories, and, in the event of war, the food market is abnormally active. But the manufacture of ploughshares and pruning-hooks ought to be quite as profitable, if so many men were not engaged in military service.

INSURANCE AND POLITICS.

What close observers have long been morally convinced of, is now proved to be the fact. The great life-insurance companies have been in politics. They have given blackmail or bribes to party machines. Mr. George W. Perkins testified on Friday that the New York Life had contributed at least three times to the Republican national campaign fund. Last year it gave nearly $50,000 to promote the election of Mr. Roosevelt.

To the President, this must have come as a shocking piece of news. If he had really known what his agents were doing, he could not have displayed such heat as he did in his reply to Judge Parker, on November 4, 1904. He then declared it to be "a wicked falsehood," and an accusation which "if true would brand both Mr. Cortelyou and me with infamy," that contributions had been extorted from corporations to aid in his election. Of course, President Roosevelt was careful to use such words as "blackmail," and a "promise" of "future immunities"; but every one knows what gentlemanly blackmailers go about before elections. They weep and deeply sympathize, like the walrus, as they sort out the corporations of the largest size, but the latter understand sufficiently why it is that they are asked to make a campaign contribution. And as for a "promise," a really high-toned management would be ashamed to demand so vulgar a thing. A wink is as good as a bond between the bearer and the filler of the campaign bag. No; Friday's revelations will go far to convince plain men that Judge Parker spoke but the truth when he said that the large corporations were contributing heavily to President Roosevelt's election.

Judge Parker is justly entitled to rub salt into the Republican wounds. The open confession that the New York Life financed the campaign against him last year gave him his opportunity, and he rose to it on Monday last in admirable temper. He did not profess that his party possessed superior virtue in the matter of accepting funds from corporations, but only maintained (and the evidence certainly supports him) that the big corporation checks went to the Republicans. The Judge does not point out, what he no doubt observed, the care that was taken to conceal the transation. Not until a month after the election was the New York Life check drawn. Mr. Perkins advanced the money personally, to be repaid later. Now suppose that, on the eve of the election, Judge Parker had specifically accused the New York Life of giving trust funds to elect Mr. Roosevelt; President McCall could have made a solemn affidavit that not a cent had been paid—"Come and examine our check-book." The contribution was both illegal and craftily planned to be beyond detection.

But Judge Parker's statement is more than a pointing to his own justification. It contains weighty and timely words on the great evil of corporation money in politics. Nothing can be more to the point than his fine repudiation of the alleged "Democratic faith" of President McCall, advanced in extenuation by Mr. Perkins. "Men like McCall," he remarks, "have no political convictions that stand in the way of their personal advantage. Such men desire the triumph of that party which will better serve their personal financial interests." We all know the type. It has been familiar since Jay Gould's day. Among a certain class of financiers, political differences vanish at the dollar's edge. They are Democrats or Republicans for revenue only. In a case in the South Wales Circuit, the leading counsel identified himself with local interests. "Come, come," said the judge, "you cannot make yourself out to be a Welshman." "But I have made a good deal of money out of Welshmen in my time." "Well, well," rejoined the Judge, "we may call you a Welshman by extraction." There are Democrats and "acting Republicans" in plenty of that lineage. Strictly speaking, however, they no more deserve to be called party men than do those Philadelphia thieves whom Secretary Root denounced for daring to assume the name "Republican."

Everybody knows that life-insurance companies and other corporations do not underwrite political parties without expecting a profit. Their motto is strictly, *do ut des.* The kind of reward they count upon is well described by Judge Parker. Having bought "control" of a party, they intend to use it for their own benefit. They doubtless supposed that they had securely purchased the Republican party last year. President Roosevelt has done much to show that he, at least, was not privy to that bargain. In many respects, it is certain, the corporations do not look upon him as their best friend. But there is one particular in which the President has, thus far, laid himself open to suspicion. Judge Parker asserts that one purpose of the contributions made by corporations to the Republican party was to retain "permission to manufacturing corporations to levy tribute on the people." In other words, a syndicate of stand-patters was at work. Now, what are the suggestive facts? In his letter of acceptance President Roosevelt turned his back on his former tariff utterances, and posed as the best stand-patter of the lot. After election, he began again to talk tariff revision earnestly—in private. It was known, for the fact has been published, that he intended to send a special tariff message to Congress; but he was somehow diverted from his purpose. Republican tariff revision was slaughtered in the house of its friends. The question now is whether President Roosevelt will consent to lie under the malign implication which many have seen in this course. He has it in his power to make a more complete answer to Judge Parker than he made last November. Let him indignantly brush away all these rumors of a stand-patter purchase, by coming out squarely for tariff reform, and urging it with every argument and influence at his command. In that way he can at once put his detractors to confusion and rejoice his friends.

We may yet distil goodness out of this evil thing if we follow up these revelations of corporate bribery in politics by drastic legislation making every act of the kind criminal. The penal code is your great purifier. Let every director or officer be made to know that if, directly or indirectly, he gives or allows to be given one dollar of the funds of his corporation to a politician, or the agent of one, the jail will yawn for him. Let the terror of the law be held also over the head of campaign committees and their solicitors. By both State and Federal statute, let the practice of either soliciting or giving corporation money for partisan purposes be so outlawed that the director who is besought will feel that he is invited to commit a crime, while the party treasurer who is seen going to interview financial magnates will be regarded, even though he be the most respectable of whited sepulchres, as no better than a sneak thief.

"ADMINISTRATIVE ADMINISTRATION."

"You must know that we old residents of Washington regard this as the best administrative Administration we have ever seen." The foregoing is an extract from a letter of one veteran Republican to another. It was written, however, in 1888, and referred to the Administration, not of Theodore Roosevelt, but of Grover Cleveland. What the writer would say of the succession of scandals which have broken out in one department of the Government after another; of the discoveries of lurking graft in corner after corner; of the general suspicion, uneasiness, and fear permeating and demoralizing the whole service, we do not know, but we are sure he would not call them signs of good administrative administration.

The phrase is suggestive. As originally applied, it provokes comparisons not wholly unfavorable to Mr. Cleveland. His first term was singularly free from administrative scandals. Attorney-General Garland's connection with the Pan-electric promotion is about all that sticks in the average man's memory; and Loomis and Paul Morton have since made that affair look like a laughable peccadillo. On the whole, Mr. Cleveland succeeded in infusing into the Government service an admirable spirit of industry and economy. He speedily made

himself known as "the business man from Buffalo." He himself set the example of unflagging labor. No President before or since can have surpassed his almost cruel devotion to his work. And he had able executives—not ornamental phantoms—about him in his Cabinet. From him and them the spirit of quiet application and fidelity spread out and down. "Let them attend to their work," said Mr. Cleveland when only President-elect, upon the report that the clerks at Washington were restless and apprehensive; and "Let them attend to their work" was his motto all through. There was nothing clamorous, nothing galvanic, nothing of the self-advertising in the conduct of public business during those four years; but there was a steady discharge of duty, and an increasing command of popular confidence, which are of the essence of good administration.

Now how has it happened that we have seen such a lamentable change under a President who is personally as honest as the sun, and who hates an official rogue almost as heartily as he does his imaginary weakling? Why have these repeated shocks come to the people—frauds following upon frauds—so seriously impairing their belief in the purity of the Government, and leading them to say in their haste that all public servants are grafters? Personal blame attaching to Mr. Roosevelt must be of the smallest. His clear rectitude of general purpose cannot be challenged. It is true that he has been a little careless in finding or making offices, or "jobs," for some of his personal friends. Open spoilsmen shelter themselves behind these unfortnate examples of his. It might also be argued that his whirlwind methods are not good for the satisfactory dispatch of business, and are a bad model for his subordinates. But all these things can account for but a trifling part of the governmental delinquencies which have been overcoming us like a summer cloud, to the special wonder of nobody, we presume, more than of Mr. Roosevelt. The insidious corruption has intrenched itself in the public service not because but in spite of his being President. He should be the first to inquire what its real causes are, since he himself is conscious of innocence.

If he did inquire deliberately and dispassionately we think he would discover ample reasons why the past eight years of Republican rule have borne the fruit of which we all find the taste so unpleasant. In the first place, there was a change from the policy of economy to the policy of lavishness. President Cleveland both preached and practised the homely virtue of saving. So far as he could by recommendation and veto, he kept expenses down; so that the Government, under him, was actually run for less money, though the population expanded—that facile excuse for extravagance. But with the incoming of the Republicans, the whole temper was changed. "God help the surplus," became the popular cry. "This is a billion-dollar country." We had much goods laid up for many years, like the other rich fool. Now such a spirit of waste makes stealing as well as want. With the big men openly gloating over the big plums, the little fellows will inevitably be secretly anxious to get their fingers on the little pickings. Hence defalcations; hence bribes and dishonesty and the breakdown of the public service. Graft is a barnacle always found clinging to extravagance.

But there is a more specific reason for an outcrop of scandal under a Republican Administration. Eight years of crying up the duty of the Government to make every man rich cannot fail to produce such results as we see. All corruption is not due to the protective tariff, but every protective tariff necessarily carries corruption with it. This is mainly why philosophical statesmen like Lord Rosebery dread its introduction in England. The virus of protection is too strong for the finest political virtue. Let men once get into the habit of running to Parliament or Congress for laws to put money in their private purse, and public demoralization follows as the night the day. It is folly to think the manufacturers and the other special interests can go and get their special booty unobserved, or without awaking cupidity in millions. They set the example of demanding a living from the Government, and every Government employee, every ne'er-do-weel with political influence, is exposed to the infection and begins to think how he, too, may get a lift from the Treasury. To buy a tariff law is too much like taking bribes for doing one's official duty, or for permitting exemption from the law; and the Republican great ones who do the former, directly encourage the latter.

By being so frequently compelled to strike at corruption in the Government, President Roosevelt, we should hope, may be led to reflect upon its political causes. They are apart from his personality. He did not himself sow the seed; neither will his angry lopping off the offending growths as they appear make an end of the crop. For deep-seated corruption, deep-working causes must be sought; and he who would cut the evil up by the root must dig down to governmental lavishness—with the avarice and unscrupulousness it excites—and to the protective system, with its proved provocation to bribery, perjury, cheating, and grafting in every form.

THE NATIONAL QUARANTINE.

The governors of twelve Southern States and the chambers of commerce of the important Southern cities have signed the call for a conference to be held at Chattanooga on November 9 and 10, to consider questions relating to quarantine and immigration. The most important object is to devise "some uniform system of quarantine that will allay apprehension of the people and minimize the dangers resulting from an outbreak of yellow fever." "This is necessary," says the call further, "if we would save our land from the demoralizing and brutalizing tendencies of a panic-inspired quarantine."

Not in a good many years, certainly, has the general temper been so favorable to the passage of effective national quarantine legislation. The Southern press has been full of expressions favorable to this policy. It has been openly insinuated that New Orleans got into her present plight and brought danger to all her neighbors simply by reason of over-leniency toward a fruit trade she was very anxious to retain. Underneath all considerations of local pride is the conviction that, in matters of this kind, Federal laws have a habit of getting themselves enforced, while State and local regulations are frequently unequal to an emergency.

The confident prediction is made that the next Congress will give the country a complete national quarantine system. When the chief executives of South Carolina and the other old-time States'-rights commonwealths take the lead in asking that State control in this particular be superseded by Federal, the chances should be altogether favorable, especially as there is no opposition apparent, and medical and scientific authorities are a unit on that side. But history has been in the habit of repeating itself in this matter, and the same course of events has been reënacted almost every time that an epidemic broke out or was threatened here. First, the local authorities in their distress call for the aid of the national Government. This is promptly and efficiently given, and does not prove in any way subversive of anybody's liberties. "The thing to do," says every one, "is to put this under Federal control from the start." So agitation for a new law begins, but, before Congress gets around to the subject, the particular epidemic has been stamped out, and the need no longer seems to be urgent, so the law-makers pass some half-way measure, but stop short of the sweeping change really needed.

James Wilford Garner, writing in the *Yale Review*, has recently summarized past Federal legislation relating to the public health. As early as 1796, he recalls, a widespread outbreak of yellow fever brought the subject before Congress in a form not substantially different from that it will assume next winter. A bill was promptly introduced authorizing the President to prescribe and enforce quarantine regulations as

concerned vessels arriving from abroad, but Congress would not trust even George Washington with such a power. The vote against this provision was exactly two to one. As passed, the act merely authorized the President to direct revenue officers and commandants of forts to aid in the enforcement of the health and quarantine laws of the States within which they were stationed. In 1799, 1832, and 1866 further legislation was enacted pursuant to the same policy of giving a helping hand to the pitiably inefficient State quarantines.

The seventies were eventful years in respect to quarantine agitation. First, a medical officer authorized by Congress made an exhaustive investigation at the Atlantic and Gulf ports, and reported in favor of a national system. Then the House passed a bill authorizing Federal quarantine regulations independent of those of the States, but the Senate killed it. Some five years later, however, as if to make a circle of contrariness, the Senate passed a bill of its own of similar purport, and the House let that die. Two compromise measures became law, and their enactment was followed by the greatest yellow-fever epidemic in our history.

The National Board of Health was created in 1879, and, by its power of offering pecuniary aid to State boards, it induced general compliance with its recommendations, and, as Mr. Garner says, "an approximate degree of uniformity and efficiency was secured." In 1890, for the first time, the Secretary of the Treasury was authorized to formulate rules and regulations to prevent the spread of plague without regard to the local provisions, but this applied only to interstate quarantine. In 1893, another long step was taken. Under the act of that year the Federal authorities, if they find local regulations inadequate, may make additional ones, and, if the local officers refuse or neglect to enforce them, the President can do so. This plan obviously lacks entirely the quickness of action absolutely necessary if danger is really to be averted. In 1893, the first year of the new law, a cholera ship actually landed at one of our ports before the clumsy machinery could be brought into action. We have also had the spectacle of two sets of quarantine officials at one port, putting every arriving vessel to double expense and delay through the farce of reinspection.

The present system is virtually one of local quarantines, though some of these are maintained by national, some by State, and some by municipal authorities. There is an annual conference of quarantine officials, and even without new legislation the national Government is gradually taking over a larger proportion of the stations. Within the year covered by the last Surgeon-General's report, for instance, the States of Florida, North Carolina, New Jersey, and Maine, and the city of Savannah, had transferred their quarantine stations to the United States Government. There remain eight disinfection and twelve inspection stations maintained by States and cities. To say that some of these must be more efficient than others is only to say what is true of every other group of human institutions under independent management, especially if it be semi-political management. But there are not many human institutions in which even temporary laxity is likely to be followed by such dire consequences. Against the attacks of disease our coast line is no stronger than its weakest point.

THE FINANCIAL OUTLOOK.

It has been remarked that the financial year does not properly begin, like the calendar year, on January 1. That date, indeed, falls in the middle of a season when influences and tendencies already developed are in full swing, and when the forces which dominated markets in December continue to operate throughout the two or three ensuing months. The time when the financial year has its real beginning is the springtime, when the world's harvests for the new season are first in prospect, and when, simultaneously, the world's money markets show their capacity or lack of capacity to meet the demands on them. The influences which thus grow visible become clearly defined in the early autumn, first because the world will then have learned the outcome of its harvests; second, because the marketing of the world's crops intensifies whatever strain on the money markets may previously have existed. It is for this reason that the nature of a financial and industrial situation may usually be detected at this season of the year more clearly than at any other period. The well-known fact that great money panics have usually broken out in May or in November is no mere accident. The pressure had in each case begun a month or two before, and the business community speedily discovered that the money market was unable to provide for outstanding liabilities. But it is equally true that outbursts of financial optimism have usually been associated with similar periods in the year. The reason in that case also is that the test had been applied to the situation with satisfactory results.

The outlook at the present moment is undoubtedly favorable. In the fundamental element of agricultural prosperity, the season has favored this country in an unusual degree. It is conceded that our wheat crop will in all probability exceed that of all previous years but one, and that the corn crop will surpass all precedent. This occurs when the legitimate demand from consumers of such products is at high-water mark, and when, therefore, the American grain-growing communities will receive a still larger instalment of the wealth which of late has flowed every year into their hands.

The wheat farmer seems, indeed, to be assured of unusual good fortune. When last year's crop ran heavily short of recent yields, leaving an insignificant export surplus, it was presently found that the foreign consuming world could get on without help from America. An enormous Russian harvest filled up, in the export trade to consuming states, all of the void left by the shortage in our crop. This year, the indication is that Russia's harvest will decrease from last year's record in almost exactly the same proportion as our own increases; the inference being, if the forecast is correct, that the United States will regain the preëminent place among wheat-exporting nations which it lately seemed to have forfeited. With the cotton crop, the prospect is not in all respects the same; the yield, though estimates vary widely and none finds unqualified acceptance, cannot well exceed the spinning trade's requirements for a normal year, and may run considerably short of them. But, even so, we have the highly important offsetting fact that last year's crop exceeded by two and a quarter million bales even the unprecedented consumption of the period. This surplus, carried over into the new cotton year, and added to the new crop's yield, should leave the supply available for the trade larger than any on record, save for the great crop of 1904. The marketing of the surplus from last year's crop has raised our cotton export in the two past months, at the very end of the cotton year, to a figure $17,000,000 greater than has ever before been reached in the period.

These are ground facts which make for American prosperity; they will at least go very far towards ensuring continuance of the good times of the past half-dozen years. The qualifying factor, in the minds of many conservative observers, has been the extravagant and sometimes reckless use of capital. It is undeniable that the spirit of speculation, which has pervaded many sections of the community, is a constant source of danger—its possibilities having been plainly pointed out by such incidents as the Bank of Milwaukee affair last spring and the Equitable scandal, not to mention the very grave warning from the story of 1903. To a large extent, however, it may be said that our capitalists and promoters have taken to heart those lessons. Demands on capital have been large; during the first half of the present year, actual absorption of capital through issue of new securities ran nearly parallel with 1901. The "listings" on the New York Stock Exchange, however, which are a trustworthy measure of such movements, indicate, first, a far greater ratio of borrowings for productive purposes,

and a far smaller ratio for purposes of amalgamation, watering capital, inflation of values, and stock-jobbing generally. This is a distinction of importance. The simple fact that, whereas, in the first half of 1901, no less than $959,000,000 new stock was thus issued and listed, purely to buy up other stocks and bonds, whereas the similar issues, in the past half-year, foot up only $191,000,000, shows a salutary change.

Belief that the more conservative policy will continue, and that the markets will witness no recurrence of the mania of four years ago, is a ground for hopefulness. The investing public's attitude in the matter is perhaps the surest present safeguard. A public infatuated to the pitch of 1901 would, in the light of all experience, render maintenance of scruples in the banking world a matter of some improbability. But the public has learned its lesson even more thoroughly than the bankers, and the experience is too recent to be speedily forgotten.

The stock market is, in a general way, an index to prosperity or adversity, but a mistake very commonly made by our people is to assume that whatever puts up prices temporarily makes for prosperity, and vice-versa. This is much like supposing that if some one can only push the mercury down in the thermometer, he will bring cold weather. Wild movements on the Stock Exchange, fomented by reckless speculators, become a menace in themselves. It may be said, indeed, that the constant fear that such-and-such an act or policy will "put down stocks," is the narrowest sort of reasoning. It is quite possible that public legislation may depress a given stock or group of stocks, yet operate distinctly in the direction of the community's general welfare and prosperity. These principles should be kept in mind when such questions as those of Trust regulation or tariff revision are proposed, as they may be during the coming winter.

THE PRIVATE-CAR MONOPOLY.

The railway-rate bill to be pressed at the coming session of Congress will not differ materially from that which was under consideration last winter. So, at least, say Representatives Charles E. Townsend of Michigan and John J. Esch of Wisconsin, who held a conference on the subject last week. Their statement is not explicit as to the private-car lines. If these are to be brought under supervision of the Interstate Commerce Commission, either the original Townsend-Esch bill must be amended, or some such supplementary measure as that introduced last January by Representative F. C. Stevens of Minnesota must be passed. The abuses of the private-freight car are sure to be fully discussed, for people are much disturbed by the present situation. One reply of the railways to the complaints of shippers is that the railway itself is helpless: the blame lies with a refrigerator-car line, which controls the traffic in meat, vegetables, and fruit. On September 6, for example, the Southern Railway, the Atlantic Coast Line, and several other companies filed, in answer to the Commission's inquiry, a disclaimer to the effect that the railroads were in no respect responsible for the charges made against the Armour lines. Two days later the Armours put in a denial that they were subject to the Interstate Commerce Commission.

On the abuses of the private lines it is unnecessary to dwell at length. The Commission has within a year gathered under this head much evidence, which has been summarized in the daily press. Further details have been collected and published in the popular magazines. In brief, the Armour car-monopoly handles the cattle and meat of the Middle West, the vegetables and fruit of the South, and of Minnesota, Wisconsin, and Michigan, and the fruit of California and Oregon. The farmers of these vast regions are at the mercy of a single company; they are offered the curt alternative, "Take it or leave it. Submit to our terms or be ruined." They may protest as loudly as they please in regard to the supply of cars, to the methods of handling the product in transit, and to the cost of icing, but they have no redress except such as the monopoly may graciously vouchsafe.

The fact that the rates are extortionate has been established beyond cavil. The Interstate Commerce Commission, in its last annual report, called attention to an "enormous and unreasonable increase in refrigeration charges." Among examples of such increases under Armour control are the following: From $20 to $55 on a car from Michigan to Boston, $10 to $37.50 from Michigan to Dubuque, and, most amazing of all, $7.50 to $45 from Michigan to Duluth. The icing charge on a car of pineapples from Mobile to Cincinnati, under an exclusive contract with the Armour Company, is given by the Commission as $45, while on another road, which furnishes its own cars, the charge from New Orleans to Cincinnati is only $12.50.

The Commission further declares that to favored shippers concessions in refrigeration charges are made which amount practically to a rebate. Of course, the fruit shipper does not care whether he gets his rebate nominally on a charge for icing or for freight. The two together make up the cost of transportation. He must use the refrigerator car, and he must have it iced. Whatever the form of the discount, the effect is exactly the same. The shipper who basks in the good graces of the private-car monopoly enjoys an unfair advantage over his rivals, and really evades with impunity the interstate commerce law, which forbids freight rebates.

That these conditions are an outrage the most strenuous opponent of Government railway regulation admits. By a mere hocus-pocus the railways escape from their duties as common carriers. They make a long-term contract with a private company, which contends that it is not bound by interstate commerce law; and they leave growers and shippers under the heel of an irresponsible monopoly. To the shareholder who lives quietly in New York or Boston, and who takes no interest in railway management, provided the dividends be regular, the Western farmer's hostility to the railway seems wholly unreasonable. "Why," he asks wonderingly, "are the people who raise apples in Michigan, peaches, melons, and strawberries in the South, and oranges and pears in California shrieking so about injustice? Why does the mere process of tilling the soil drive men crazy with hatred of corporations? Why are agricultural regions always the prey of noisy demagogues who advocate national ownership of railways?" These innocent questions we have already answered. The fruit-growers are suffering from gross injustice; they have solid ground on which to base their hatred of corporations; and they will be ready to vote for national ownership if they can see no other sure plan of relief. They very properly laugh at the argument that the railways themselves are the victims of the monopoly. That is too preposterous. The railways deliberately made the compact with the Armours, and they must be held answerable for the outcome.

The political strength of the movement for rate regulation is already formidable. Even railway Senators are now aware that something must be done to quiet popular clamor. To put an end to the abuses of the private-car monopoly would do much to allay discontent; and well-informed observers believe that the railways are getting ready to throw this tub to the whale. If the railways escape with that sacrifice, they may count themselves lucky.

THE SITUATION IN AUSTRIA.

The resignation of Baron Fejervary points to the probability that there will be found a way, at Vienna as well as at Budapest, of reconciling the differences between the two halves of the Austro-Hungarian monarchy. The law of self-preservation has proved the most efficient peacemaker. In Hungary no less than in Cisleithania the situation has become well-nigh intolerable. The Delegations cannot meet, taxes in Hungary cannot be collected, her recruits fail to respond, there are no funds available for common expenditures, and, most important of all, the commercial relations with other countries are

threatened. During this month the treaties with Switzerland and Bulgaria will expire, and there are pending treaties with Belgium, Servia, Russia, and Rumania, which cannot be ratified without the sanction of the Hungarian Diet. The treaty with Germany has been ratified only by the Austrian Reichsrath; that with Italy has not yet been concluded either in Vienna or in Budapest. Hungary has so far remained passive and left it in doubt whether she will allow the Delegation of her Diet to meet that of the Reichsrath for the discussion of foreign relations.

There is every indication that such considerations have been far more potent in causing the retirement of Fejervary's impossible Ministry than difficulties in carrying out his scheme for universal suffrage. The plan of drawing from the Opposition by dangling this bait before the peasantry and the laboring classes was really chimerical. The peasantry of Hungary are much more amenable to local influences than to the blandishments of the Government, and the laboring men, there as elsewhere, are apt to turn to Socialist leaders for counsel. The Christian Socialists alone have watched their opportunity and offered themselves alternately to friend and foe. But the Government has shrunk from the prospect of riding into power in this way. Francis Kossuth, too, has guardedly declined to promise universal suffrage in the name of the united coalition.

There have, in fact, of late been distinct signs of a weakening of national pretensions in Budapest and of a more conciliatory spirit in Vienna. Even in ultra-radical circles in Hungary the practical advantage of a slight knowledge, on the part of the soldier, of some language other than Magyar is conceded; while, at least in the non-military circles of Vienna, it is admitted that in times of peace a judicious re-grouping of troops according to nationalities, giving the Hungarian soldier a Hungarian officer, might save the susceptibilities of the proud Magyar. The outcry evoked in certain quarters by the demand for national flags and emblems for the Hungarian contingent of the common army recalled in its intensity the protest in our own country over the first proposal to restore to the South the Confederate flags, for there are still those in the Austrian capital who speak of the Hungarians as traitors, and there was something of the fear of seeing the "rebels in the saddle" in the repugnance of Cisleithania to granting Hungary an arsenal of her own.

The demands of the Hungarians, with a view to lasting peace between the two halves of the monarchy, were recently discussed in the Berlin *Zukunft*, in a dignified survey of the situation by Count Theodore Batthyányi, a nephew of Count Louis Batthyányi, President of the Hungarian Ministry of 1848-49, who was executed by Haynau. It is not true, Count Batthyányi contends, that the Opposition is either disloyal to the sovereign or unwilling to assume power. It stands ready to take up the reigns of government the moment its strictly constitutional demands are granted. But he admits that Deák's compromise suffered from this inherent defect, that "the Austrian law determining the *Ausgleich* conflicted in some essential particulars with that of Hungary"—in other words, the vagueness of the language is answerable for some of the present misunderstandings. The unwritten English Constitution has no counterpart in the Hapsburg monarchy, and the letter of the so-called fundamental laws of the dual country is not infrequently a doubtful guide in constitutional or parliamentary perplexities. It is little to the purpose, for instance, in discussing the violation of rules of parliamentary procedure, or the propriety of restoring to the Hungarian contingent the national flag, to quote the second article of the Pragmatic Sanction of the year 1720, guaranteeing "the independence, special privileges, and the Constitution of the land," and pledging the King "ever to govern Hungary with the laws created by the Diet or thereafter to be created." Hungary can afford to heed, in minor matters, Goethe's panegyric of our own country:

> "Dich stört nicht im Innern
> Zu lebendiger Zeit
> Unnützes Erinnern
> Und vergeblicher Streit."

Fortunately, Hungarian statesmen have a sense of reality. Andrássy, Apponyi, Zichy, Batthyányi, and others owe much to cosmopolitan and, above all, to German culture, and are not anxious to wound German feeling either in Vienna or in Berlin. They must, too, feel that to denounce as traitors Count Tisza and the 124 members of the Liberal party who still refuse to obey the behests of the leaders of the United Opposition, is to discredit the past of the party of Deák and to throw doubt on Hungarian patriotism itself. And no one is more ready to admit that the present time calls for conciliatory action than Francis Kossuth. He is by no means a scheming Warwick, and no longer the agitator for a purely personal union between Hungary and Austria, but an aspiring politician, with an eye to office and power. If Francis Joseph now turns to him for advice, a solution will be found of those practical problems which must be met if Austria-Hungary is to retain her rank among nations.

THE ECLIPSE IN TRIPOLI.

SYRACUSE, SICILY, August 14, 1905.

The fairest of summer voyages brought the Amherst Eclipse Expedition to Gibraltar on Sunday, the 6th instant. Behind the fine breakwater lay the U. S. F. S. *Minneapolis*, of the Special Service Squadron, under Commander-in-Chief Admiral Chester, then on his way to Valencia and Daroca for the eclipse. Quite as impressive as one remembers it, the old rock looms above, but the picturesque town is dry and barren in August, showing no such wealth of brilliant blossoms in garden and alameda as is characteristic in April and May. Sunday quiet filled the generally gay streets, for English military posts are not attractive to pleasure-loving "natives" of any clime when shops are closed and barter is forbidden. So most of the 9,000 or more Spaniards who must pass over the neutral ground each night before gate-closing time remain for Sundays as well at La Linea. The usual Moors, Moroccans and donkeys were also conspicuously absent. With brief tarrying the expedition passed on to Naples, an excellent point of departure for Tripoli.

Steamers leave there only once a week for the Barbary city; but the two or three intervening days allowed none too much time for transferring telescopes and apparatus cases from our steamer to that of the Navigazione Generale Italiana, and for other matters of expedition business; strong antidotes are needed to counteract the midsummer tendency toward restfulness in the average South Italian. Vesuvius has been active for weeks, and presents at night a magnificent spectacle, as intermittent fountains of flame spring upward to a considerable height from the topmost crater, while a redly glowing track extends far down the mountainside.

With necessary business finally accomplished, we stood on the *Peloro's* deck, telescopes safely stowed below, and sailed out over a turquoise sea, past Pompeii and the lovely Sorrento shore, leaving Point Campanella, and crossing the entrance to the Salernian Gulf, with Amalfi just hidden on its shelf-terrace, and with a glimpse of Stromboli, ever active. At last, beautiful Capri, enshrouded in that radiant Italian atmosphere whose like is seen nowhere else, vanished in the blue haze of well-nigh iridescent distance, and the Straits of Messina lay ahead. Time at the Sicilian city—now modern and rejoicing in successful trade—was chiefly of interest because of the old sun-dial, a diagonal part of the cathedral floor, marking by quaint signs of the zodiac, figures, and lettering, the year, month, day, as, through a tiny hole far above among the great roof beams, one ray of sunlight streams down at high noon upon the prescribed spot.

News was received at the observatory in Catania of still another eclipse expedition. Astronomy here, at the observatory of Catania and Ætna, is almost exclusively confined to research upon the sun, and the institution is one of the most famous solar observatories in existence, Professor Riccò, its director, being the Nestor of living solar specialists. Within recent years, he and his able assistant Mascari have added a department of geophysics. Instruments set up in the ancient underground labryinths for registering seismic disturbances afford facilities unsurpassed in the world.

TRIPOLI, BARBARY, August 30.

The day for which we have prepared so faithfully dawned this morning, like all its predecessors since our arrival, in entire clearness. Even the Arab ovens, which start before sunrise with a great quantity of ill-smelling smoke, were not able to

stain for more than a few moments the intense blue of the sky. But it was singularly hot for this city of fresh breezes and tonic sunlight, and by coffee time it became evident that a mild *gibleh* was in progress, that strange south wind from the desert blowing from hundreds of parched Sahara miles, and several times a year transforming into a dry furnace the dazzling white city. We had known in advance that no nerve-tension as to possible cloud on eclipse day would be manifested, for it is the height of the dry season, which in Tripoli means a succession, for months, of perfectly clear days and nights. But there is always the disquieting possibility—less in summer than earlier or later, however—of a three days' *gibleh*. If it blows violently, a great quantity of desert sand is soon suspended in the atmosphere, and a yellowish veil is drawn over distant palm groves and houses, the sea horizon comes nearer and nearer, ships are blotted out, and, after a time, even the sun himself peers through this odd terrestrial haze, his brightness covered, until it is entirely comfortable to gaze with unshrouded eyes upon his round dimness. Usually, after three days, the wind changes back to the north, bringing refreshing coolness from the blue Mediterranean; the hovering sand settles back into its desert spaces; and once more Tripoli becomes one of the loveliest of climates. Although the thermometer may have risen to 105 degrees or even 110 degrees Fahrenheit, even then it is not depressing heat, but the very intense dryness and purity bring a certain stimulating quality unknown elsewhere.

This morning the eastern sky, at four o'clock, over the white roofs and beyond the minarets, flushed faintly, only enough to enhance the glory of Orion and Sirius, of Jupiter and splendid Venus. Growing constantly yellower, the stars faded into it; and by the time the flocks of goats with their tiny, tinkling bells, the slow camels, the overladen donkeys, began to enliven the plaster cañons of streets far below, the sun arose in penetrating brilliance, all unaware of the great event the new day would bring. But somewhere in sky-depths invisible lurked the moon in waiting. Higher rose the sun; she followed, unseen, but potent. The breeze dropped, and intense heat began. By eleven o'clock the palm groves about the Karamanli tombs were mistily yellow, and the desert shimmered in haze. As yet the suspended sand, carried on the light south wind, had not risen more than two or three degrees above the horizon, and deep blue sky arched the world, absolutely without cloud. Silhouetted against the sea arose the fine battery of meteorological instruments on the roof of the Italian consulate, presided over by Prof. Luigi Palazzo of Rome, who has mounted one of the most perfect and complete sets of instruments for meteorological and physical elements ever installed in an eclipse track.

Not a ripple stirred the palé blue sea, and the heat grew apace. As before, the roof-terrace of the British Consulate-General has been tendered to our expedition for observing purposes, and, no less than when we were here in 1900, has proved an ideal eclipse station. Considerably higher than surrounding houses, only minarets of mosques and the lighthouse dominate; and from its vantage-ground the white city lies spread below, between sea and illimitable sand. Mr. Justin C. W. Alvarez, H. B. M. Consul-General at Tripoli, is in England on leave, but Mr. Alfred Dickson, Vice-Consul and acting Consul-General, has made a most thoughtful host for the expedition, doing everything in his power to enhance not only our personal comfort, but the usefulness of the work. Also Mr. W. F. Riley, Mr. Venables and Mr. Mario Nunes-Vais have been unwearied in their kind exertions for the advancement of our interests in every line; and a list of those in Tripoli, from Mr. Saunders (who arranged for special time from Greenwich by telegraph) to Mufta, the head cavasse or dragoman of the consulate, who have conspired to smooth every difficulty and speed our preparations, would include not only every member of the small English colony here, but many French and Italians, Arabs, Jews and Turks. Among the last is a very picturesque old man, Etim Bey, long an exile from Constantinople, who has spent his Tripolitan years in collecting vast numbers of specimens of every sort of invention. His house, where he lives alone with two servants, near the great Arab bread market, is a veritable museum of watches, clocks, walking canes and hunting crops, guns, muskets, pistols, swords, pictures, lamps, even an automobile, which could by no means navigate the narrow, crowded thoroughfares of Tripoli. But his specialty is cameras, and the collection includes everything which might be used in connection with photography. All his properties have been generously placed at the disposal of our expedition. Genuine interest has been shown in its objects and preparations by the present Governor of Tripolitania, His Excellency Redjid Pasha, who has not only with much appreciation examined the telescopes and their working, but has detailed special officials from the castle on several occasions to further our interests where Turkish authority was especially helpful. Among these gentlemen who have been particularly kind are Bé-Rir Bey, Hassan Bey, Krieger Bey and Feyzullah Bey.

Practically, eclipse preparations were completed yesterday. As the time between our arrival and the thirtieth was necessarily somewhat shorter than we could have wished, Professor Todd planned a less extensive programme than he has frequently carried out. His chief instrument is a 12-inch lens made especially for photographic work, and provided with a whirling occulter which he designed and described in a paper before the Royal Astronomical Society some years ago. It is a modification of the Burckhalter type, and is prepared with reference to reducing the exposure inward toward the sun in accordance with Professor Turner's law of the increase of its light. The plates are mounted in an endless chain of a sort similarly devised and used by Professor Todd in his West African expedition of 1889. One of the automatic instruments devised for the Japan eclipse of 1896, and loaded as it was in Singkep for the Dutch East Indies eclipse of 1901, prepared to take pictures at the rate of about fourteen every ten seconds, and all exactly alike, is set up beside the large tube, the eye-end of all the instruments coming into the dark-room, which becomes thus in itself a sort of huge camera. A pair of lenses of the standard type in searching for intra-Mercurian planets, and also arranged for photographing the outer corona, is mounted with the others. As in 1900, the Arabs had many strange tales about the astronomer and his great preparations for interfering with the sun, and a few were in a state of lively terror as the day approached. But in general they seemed less genuinely alarmed than five years ago, though more were interested.

By noon, the yellow sand haze had risen higher, and the unpleasant possibility of its actually staining the deep blue of the sky at eclipse time, and confusing coronal streamers, began to assume larger proportions. Our equipment of masons and workmen generally has included a large number of nationalities and religions, with never a word of English between them. But seeing my frequent trips to a seaward balcony, and to another commanding the desert, old Challum, the native carpenter, essayed comfort in a mixture of Arabic, struggling Italian, and some unknown tongue combined, apparently to the effect that there would be no *gibleh* by afternoon—that the wind would change; and in evidence conducted me to a corner of the terrace from which a certain bit of reef and a boat or two could be seen, framed by a mosque dome and a palm tree. Pointing triumphantly seaward, he must have showed me the truth of his prophecy, for in a few moments a gentle ripple turned the pale sea dark blue, the flags which had blown discouragingly outward from the south now hung limply for an instant, and then fluttered manfully forth in the opposite direction. In an incredibly short time the north breeze had cleared the air of sand; once more the palms stood forth distinctly, the horizon retreated. *Gibleh* had threatened, had even set one foot toward Tripoli, and then graciously retired for a more convenient season.

Preparations not only for the special photographic work had been made, but arrangements for amateur help in various lines promised much assistance in observing the minor phenomena; and, just before first contact, still another rehearsal of every one concerned was held on the terrace. Plumb-lines to assist the artists in drawing the corona had been set up, and behind them were stationed, with prepared discs, pencils, and a lantern in case totality should be especially dark, Miss Venables, Miss Todd, Miss Harold, Mr. Zolia, Mr. Nahum, Mr. Salvatore, and Mr. Leadbetter. A high disc, planned to shut off the intense brightness of the inner corona, and perhaps serve to bring into prominence whatever long, outer streamers there might be, was mounted on the flagpole; small telescopes for drawing fine detail, shadow-band indicators—each was in its place, with a volunteer observer in attendance. The programme ran through smoothly, and at 1:43 the first contact was announced. Very quickly an appreciable piece of the sun's disc was bitten out, the partial phase well on.

Surrounding terraces were crowded with the inhabitants, all gazing skyward through smoked-glass, instead of at us as before. Here and there a roof showed groups of Italians or Maltese in European dress, but generally these uplifted companies were more picturesque Moslems, and the entire

city seemed to have left streets and courtyards as well as rooms, and to have collected on these charming roofs, so distinctively a feature of Arab communities. Even the minarets were crowded, and every balcony was heavily freighted. As the partial phase proceeded, a subdued excitement became apparent. The crowds increased; a few boys in the street below, carrying trays of yellow loaves on their heads, deposited their burdens to gaze upward. The Franciscan friars gathered on their terrace, a harsh call to prayer sounded from a white-robed muezzin on a near-by minaret; troubled swallows flew back and forth in futile questioning, and a sad light, of subdued, late-twilight color, spread over the dazzling world. Under the old sumac tree in the courtyard below, the usual discs of sunlight filtering through the foliage were showing now in distinct crescents, as leaf interstices acted like tiny pinhole cameras; and the official photographer of the expedition, Mr. Nunas-Vais, succeeded in making a very perfect picture of this pretty sight.

Still duller grew the day, and murmurs began to arise from all the great expanse of roofs, thickly crowded with expectant watchers. Here and there a dome or clustering domes or courtyard foliage emerging broke the even whiteness, now a pale gray. The muezzin began a continuous call. About ten minutes before totality, wavering shadow-bands swept across the white roofs in tiny, parallel lines, and the observers, stationed in their especial position, made careful note of direction, width, speed, and all the points most useful for sometime reading the riddle of these elusive appearances. As the crescent grew narrower, I looked particularly for Bailey's Beads, but saw none Upon some of the photographs, however, taken at this time, they are distinctly visible. Fifteen or twenty seconds before totality the corona appeared, on the side farthest away from the disappearing brightness, spreading gradually around until it almost met the actual sunlight. Another second, and totality was announced, Mr. Yanoupolis of the Greek cruiser *Crete* marking time on an old Arabic bell every fifteen seconds. Eager pencils flew, photographers hurried, spectators applauded, as the soft white corona grew in the purple-gray sky, and cast its pale light over dome and minaret, sea and sand. And inside the big camera dark-room, patient hands kept guard over mechanisms which pursued their steady way unmoved by outer glories, piling up the flexible plate chains, each separate holder contributing its record as the time moved on.

Evenly expanded all around, this corona showed a few longer streamers in extension, and two small scarlet protuberances appeared. The detail in coronal filaments was very beautiful and complex, and much of this shows in the negatives already developed. But the inexorable bell kept up its discouraging tally of the flying moments, and, after three minutes had passed, but four seconds were noted before a tiny speck of true sunlight reappeared, and totality was over. The corona, however, continued to be visible for nearly fifty seconds.

About two hundred photographs were taken by the mechanical arrangements, and they will all soon be examined and compared. Whether any of the devices set to catch the possible intra-Mercurian planet will have succeeded, remains to be seen. It is already an eclipse memorable for crystalline skies, many trained observers, and a corona gratifyingly confirmatory of tentative solar theories as to its predicted form.

MABEL LOOMIS TODD.

SCARRON.—II.

PARIS, September 6, 1905.

Scarron made his peace with the Court and with Mazarin after his marriage with Mlle. d'Aubigné. His young wife was much admired by all his friends. We have but few documents concerning the life of the poet at that time, being reduced to sundry letters of Scarron's own, to the historiettes of Tallemant des Réaux, to Segrais's souvenirs. Mlle. de Scudéry, author of 'Clélie,' so famous in her time, wrote a very flattering portrait of Madame Scarron:

"Lyrianne is tall and of a good figure; . . . she has a very clear and fine complexion; her hair is of a light brown; her nose very well cut, as is also her mouth. She has a noble air, mild, playful, and modest, and, to make her beauty more perfect and more shining, she has the finest eyes in the world. They are black, brilliant and soft, passionate and full of wit; their fire has something which cannot be expressed; a soft melancholy appears in them at times, with the charm which attends it. . . . Her mind seems expressly made for her beauty; it is high-toned, mild, agreeable. . . . She speaks justly and naturally, with grace and without affectation. She knows the world, and a thousand things of which she does not choose to be vain."

This portrait of Madame Scarron is, in my eyes, more interesting than the many which appeared afterwards of Madame de Maintenon. It explains many things—the great charm which drew to her all Scarron's friends, the part which she early took, in a very frivolous society, of a certain reserve that kept everybody at a distance. It explains also the charm which afterwards attracted Louis XIV. towards a person "whose mind seemed so expressly made for her beauty."

Madame de Maintenon said that the eight years she spent with Scarron, and the obscure period which followed his death, had been the happiest time of her life. To have found happiness in the house of poor Scarron seems almost a paradox. But Scarron, with all his faults, was a man of great wit; he was grateful to his wife, he admired her and saw her admired; she was grateful to the man who had given her a home and saved her from absolute poverty. Scarron, in an epistle to Mlle. de Scudéry, calls his wife

"Celle qui par le ciel soulage mon malheur,
Digne d'un autre époux comme d'un sort meilleur."

Though he was always in debt, Scarron lent money to his wife's brother, Charles d'Aubigné, and M. Chardon gives us the exact terms of a legal document in which Charles d'Aubigné recognizes himself Scarron's debtor in the sum of 4,000 livres, which he has borrowed in order to get his "outfit for service in the King's armies." Such an act tells us more about Scarron's sentiments toward his wife than certain letters which he wrote to his friends, and in which he mentions her in rather light terms, that cannot be considered serious. As for Madame Scarron's own sentiments, we may surmise that they were chiefly inspired by gratitude and by pity. We know only two authentic letters written by her during the period of her marriage with Scarron—one to Madame de Villette, the other to Madame de Villarceaux, and these are couched in the guarded manner characteristic of her. It is not likely that she took much pleasure in the feasts which Scarron gave from time to time at his house to his gay friends. One of them, Martin Pinchesne, a nephew of Voiture, took the trouble to describe, in rhyme addressed to Costar, one of these repasts, given on the occasion of a present of six chickens which had been sent to Scarron from Le Maine. It was hardly worth while to reproduce this piece of poetry, and we cannot imagine Madame Scarron finding it to her taste. She probably preferred to the conversations and jokes of Scarron's brother poets the society of Madame de Montchevreuil and Madame de Villarceaux; she knew Madame Fouquet, wife of the famous Superintendent.

"As for her friends," writes M. Chardon, "Marshal d'Albret, the Marquis of Villarceaux, Charleval, Raincy, etc., I will say nothing, and for good reason. Public malignity would view them as lovers. This is what happens at all times to young women, pretty, witty, and gallant, as was Madame Scarron. . . . It may be said now that the case is out of court. . . . As for myself, I am among those who, till proof to the contrary is found, prefer to write simply that she was an honest woman, rather than to see in her a Lady Tartufe."

The life of Madame Scarron consisted of good and evil days. Her society was made up of people of refinement, but she knew what Horace calls "res angusta domi." Scarron once writes to a friend that he cannot go out for want of a decent coat. He sometimes spent weeks in the country in the neighborhood of Paris; he wrote a part of the 'Roman Comique' at Fontenay-aux-Roses, near Paris. His health was getting worse and worse. "I assure, my dear friend," he writes to Marigny, "that if it were permitted me to snuff myself out, I should long ago have taken poison, and perhaps I shall have to come to that." He was trying all sorts of remedies; he wrote to a friend on the 26th of October, 1659: "I have been for a fortnight worse than I ever was, and I have no more hope except in *or potable*." He begged his friend to get him all he could find of the works of Raymond Lulle. A few days after his death his wife wrote to M. de Villette: "The poor man always had chimeras in his head; he ate what was most liquid in hope of the philosopher's stone or of something as well founded." He hoped against hope, and preserved a sort of gaiety to the end. He had the courage to write his "Testament en vers burlesques"—not so burlesque but that this little poem has a touch of melancholy. It is one of his best, and the enumeration of the legacies which he makes to the writers of his time is charming, and testifies to the natural kindness of his heart.

Scarron's marriage with Françoise d'Aubigné lasted eight years. M. Chardon has certainly thrown fresh light on this curious period. When we look at a portrait of Françoise d'Aubigné, in her youth, reproduced in his first volume, we can hardly understand how she could consent to unite her destiny with Scarron. It seems almost evident that she never was anything but a

companion, a nurse, to the unfortunate poet. M. de Boislisle has published in the *Revue des Questions Historiques* the inventory made after Scarron's death at the request of his widow and some of his creditors. There exists also in the archives of the château de Brienne, which belongs to the family of Beaufremont, a *procès-verbal* of the post-mortem affixing of the seals. These documents show that in the modest interior of the Scarrons there existed still a remnant of past comfort. In the inventory we find pieces of tapestry, but there is no mention of the picture and the drawing which Poussin had given Scarron. We do not find in it the portrait of Madame Scarron which Mignard made on his return from Rome, where he had formed the poet's acquaintance, and which was probably finished in 1660. It is to this picture that Scarron alludes in an invitation to dinner sent to Mignard.

"Tu sais bien que le crayon
Qui se gâte à la poussière
N'est encore qu'un rayon
De la future lumière.
Viens, viens donc demain chez moy
Finir cet ouvrage rare."

There is only one picture mentioned, a Mary Magdalen. Of silver not a word. Only a few days before his death Scarron was obliged to give all he had in silver to two of his numerous creditors. The two principal ones, D'Elbène and Marshal d'Albret, behaved like gentlemen, and never entered their claims against the poor poet, who had so often amused and entertained them. Among the books of the library, which contained three hundred and fifty volumes, we notice only the 'Chevalier de la Table Ronde,' an 'Alaric' of Scudéry's, the 'Pucelle' of Chapelain, a French Bible, a Plutarch, the 'Histoire Universelle' of Agrippa d'Aubigné. These last were probably the favorite books of Madame Scarron, who had not forgotten her Protestant origin.

Left at the age of twenty-five, at the height of her beauty, without any resources, Madame Scarron retired immediately to the House of the Hospitalières in the Place Royale, where a relative of Scarron's, the Marshal d'Aumont, was lodged. Queen Anne of Austria, in consideration of her poverty, granted her a pension of 2,000 livres, on the recommendation of Madame de Montausier and Madame de Navailles. Her livelihood was thus assured, and she could live in the society of the Hôtels d'Albret, de Montchevreuil, de Villarceaux, and de Richelieu. She remained on good terms with Scarron's family, and was able to be of some use to certain members of it. Even long afterwards, when she had reached the height of her extraordinary fortune, she never neglected Scarron's old friends.

After this period of her married life, concerning which M. Chardon has given us so many interesting details, there came a new phase. From 1661 to 1669, till she became governess to the children of Louis XIV. and Madame de Montespan—that is to say, for eight years, a period as long as that of her married life—she remains in a sort of obscurity. Nothing, or very little, is known of that time, and it is very desirable that somebody should take as much trouble about it as M. Chardon has done for the period ending in 1661. After 1669, we enter into another phase, during which she became *dame d'atours* of the Queen. A third phase extends from her nomination to this office to the time when she became really Queen of France in 1684. "Twenty-five years," says M. Chardon, "sufficed to elevate her to the greatest fortune of modern times and the most surprising." In 1715, when her second husband died, who had been "le moins amusable des hommes," perhaps she bestowed on him fewer regrets than on the poor Scarron.

Correspondence.

THE WAY OUT OF THE PHILIPPINES.

To the Editor of The Nation:

Sir: You will be greatly relieved to learn that one of your readers has solved the knotty international problem of the Far East in a manner which only his modesty forbids his characterizing as the inspiration of true genius. And yet, like all great things, this solution is of an amazing simplicity. He spares you elaborate arguments in support of the proposal to show America's unbounded admiration for Japan's magnanimity towards her defeated foe by presenting her with the Philippine Islands. Four things will thus be accomplished at one time. We shall do for our old friend, Russia, that which she was unwilling or unable to do for herself, pay an indemnity; we shall give our new friend, Japan, that which she ardently wishes, and which we do not want ourselves; we shall put an end to riotings in Tokyo; and we shall, in an honorable yet glorified way, get rid of the most expensive and useless incubus ever voluntarily assumed by a so-called intelligent people. Some cynics there be who will hint that, in so doing, we shall merely be handing over to another Power the gold brick adroitly foisted on us by Spain; but such aspersions we can well afford to ignore. An Anti-Imperialist.

Boston, September 7, 1905.

THE JAPANESE INDEMNITY.

To the Editor of The Nation:

Sir: The leader in the *Nation* of August 24 pointing out the inadmissibility of Japanese demands for reimbursement cleared the air of what it rightly characterizes as a curious species of cant, by which many minds were obfuscated. Japan's demand was contrary to the interests of peace-loving nations.

I write chiefly to point out the startling reversal of opinion on the point in question which has been brought about in the columns of the Edinburgh *Scotsman*, well known as the organ of Scottish Toryism, which is confessedly more uncompromising than that of England. Having for weeks daily argued for the Japanese claim to an indemnity, and to other things, the *Scotsman* this morning leads off with an article which I enclose, with congratulations to the *Nation* on its new convert from the policy of blood and iron. Having spoken of the current rumors of Japanese discontent at the abandonment of the claim for indemnity, and argued that this discontent was due to the violation of secrecy during the progress of negotiations, the *Scotsman* says:

"It is interesting to note that the New York *Nation*, a weekly organ of opinion which represents the best independent thinking in the States, had an article a week before there was any prospect of Japan's concession, in which it strongly condemned the proposed indemnity."

Then, after citing verbatim the *Nation's* parallel respecting a war in the Philippines, in which Japan should win, the *Scotsman* proceeds to say:

"This is the opinion, not of any irresponsible, sensational newspaper, but of one of the most unprejudiced and ably edited papers in the United States, and one which has been foremost in giving Japan all credit for her successes."

Apart from the wonder there is in seeing a Scottish Tory listen to reason from the *Nation*, and sincerely reconsider an opinion often and strongly expressed, this episode, scarcely less creditable to the *Scotsman* than to the *Nation*, shows what gain may come from the ever-increasing intimacy of intercommunication between Britain and America. Let us hope that English-speaking men the world over will get advantage from it, and be more amenable to sound arguments when they are disembodied of all personal quality by their transit through intervening space.

Yours sincerely, Louis Dyer.

St. Andrews, Scotland, September 7, 1905.

COMMITTEES OF CORRESPONDENCE ONCE MORE.

To the Editor of The Nation:

Sir: Mr. Carl Becker's communication (September 14) concerning early committees of correspondence revives interest in this method of intercolonial communication.

The committee referred to as appointed by the New York Assembly on October 18, 1764, and created to communicate with the sister Colonies, may be the first with that particular object in view. As early as 1759, however (Hening, Vol. 7, 276), an "Act for Appointing an Agent" was passed by the Virginia Assembly. The duty of this Agent, Edward Montague, of the Middle Temple, was to solicit and properly represent the affairs of Virginia in England.

The Act reads as follows:

"That Edward Montague, of the Middle-Temple, esq., be and is hereby appointed an agent of this Colony; to be at all times under the direction of the Honorable William Nelson, Thomas Nelson, Philip Grimes, and Peter Randolph, Esqs., John Robinson, Peyton Randolph, Charles Carter, Richard Bland, Landon Carter, Benjamin Watkins, George Wythe, and Robert Carter Nicholas, Esqs., who are hereby declared to be a *Committee of Correspondence*, to transmit such matters and things to him as shall be committed to their charge by the General Assembly; and to receive from him information and intelligence of his proceedings, as well in such cases as shall be to him intrusted by the said Committee, or the major part of them, as in every other matter and thing that shall come to his knowledge that may either affect or be for the interest of this Colony."

The latter clause of this Act, to the effect that "Every other matter and thing that shall come to his knowledge, that may either affect or be for the interest of this Colony," accounts for considerable correspondence to be found in this Library concerning various matters of interest to the Colonies in general, and which indicates very clearly that this Committee of Correspondence discussed matters, not only

with the special Agent in England, but with the various Colonies, when said Agent's reports justified such action.

In so far as we are able to ascertain from records in this office, this is the first committee of its kind in Virginia, but it is not unlikely that other committees properly designated as "Committees of Correspondence" were created elsewhere prior to 1759.

With the purpose in view of ascertaining definitely the origin of the first legislation on this subject, it is hoped that some student of Colonial legislation will make known the result of his discoveries along this line.—Very respectfully,

JOHN P. KENNEDY, Librarian.

VIRGINIA STATE LIBRARY, RICHMOND,
September 15, 1905.

'TOLD IN THE GARDENS OF ARABY.'

TO THE EDITOR OF THE NATION:

SIR: Since I wrote to you the letter printed in your issue of July 13 (p. 32) I have acquired a copy of the book called 'Told in the Gardens of Araby,' reviewed on June 15 (p. 481), and can testify that what it contains is simply a translation of nine out of fifteen tales published in the Turkish collection called 'The Crystal Palace.' The translation, although not always faithful, shows a tolerably good understanding of the original, but contains also several blunders which I cannot explain. Thus, for instance (p. 62), we find "bamam" instead of *hamam* (bathhouse) half a dozen times, and in the title of the "Story of the Crying Pomegranate and the Laughing Bear" the word bear (*ayí*) ought to be replaced by quince (*ayvá*). Was the translation dictated by an Armenian having a good knowledge of the Turkish language, but an imperfect one of the Arabic script?

Yours very respectfully, O. T.

September 15, 1905.

Notes.

Among the new publications of the Baker & Taylor Co. are 'The Appreciation of Pictures,' by Russell Sturgis, and 'Impressions of Japanese Architecture and the Allied Arts,' by Ralph Adams Cram.

McClure, Phillips & Co.'s autumn announcements include 'Franklin in History,' by William MacDonald; 'The Wives of Henry VIII.,' by Martin Hume; 'A Commercial Traveller in South America,' by Frank Wiborg; 'The Horse in America,' by John Gilmer Speed; 'Portfolio of Bird Portraits,' by Bruce Horsfall, with text by W. E. D. Scott; 'The Mysterious Stranger, and Other Cartoons,' by John F. McCutcheon; 'Told by Uncle Remus,' by Joel Chandler Harris; and 'The Cost of Competition,' by Sidney A. Reeve.

'Armageddon; or, The Reshaping of the Far East,' by B. L. Putnam Weale, will shortly be issued by Macmillan.

T. Y. Crowell & Co. promise 'The Latin Poets,' an anthology in the best English translations, by Nathan Haskell Dole, a companion to his last year's 'Greek Poets'; 'The Best Hundred American Poems,' compiled by John R. Howard; and 'Greatness in Literature,' by Prof. William P. Trent.

Horatio Brown's 'In and Around Venice,' which we reviewed the other day from the English edition, is to be marketed here by Charles Scribner's Sons.

Soon to appear with the imprint of the Arthur H. Clark Co., Cleveland, is the original and complete Italian text of Pigafetta's account of Magellan's Voyage around the World. James A. Robertson will supply a page-for-page translation, with notes, and there will be facsimiles of the original plates and maps.

Messrs. Putnam have brought out a new edition, apparently the first since 1887, of Robert Christy's 'Proverbs, Maxims and Phrases of All Ages.' The two volumes have been compressed into one, very prepossessing, with gilt edges and rounded corners; but whereas originally the paper made the work heavy to handle, now the thin paper causes much vexation in separating leaf from leaf without crumpling or tearing. For this the gilding appears to be responsible. The schematic and other shortcomings of this collection, which we pointed out at the time, still remain.

Uniform with the foregoing is the quondam 'Banquet Book' of Cuyler Reynolds, now prettily reissued as 'Classified Quotations' by the above firm. Here the paper is above reproach, and the collection is a good one; more general, besides, than the needs of the banquet. The volume tapers off into "Popular Terms Explained"—from Absinthe and Apothecaries' Measure to Dessertspoon and Vermouth; "Proper Wines for Certain Courses"; "Calendar of Vintages"; "Popular Beverages," and how to make them, and a sample menu with accompanying toasts. The index is rather meagre, and twice it has referred us to bastard title-pages with mottoes wholly irrelevant to the word sought (ballot, digestion).

The second volume (Carroll-Dyer) of Algernon Graves's sumptuous dictionary, 'The Royal Academy of Arts, 1769-1904' (London: Graves; New York: Macmillan), has all the interest of the first. Readable, one might fairly call it; and if it were indexed by portraits of persons painted, by labelled landscape, and by literary and historic incident and allusion, what a graphic library of humanity in repose and in action, geography, and mental productivity would be unrolled before us! The frontispiece is a portrait of Benjamin West, the Academy's second president; and under Charles Compton is a canvas of 1849 describing West as a precocious boy of seven drawing his sleeping sister. Another great American artist here represented is Copley, whose "Boy attacked by a shark in the harbor of Havana" (1778) was approved by Walpole. Among our recent painters, J. F. Cropsey appears. The preëminent English names are Constable and Chantrey, and there are a few paintings by George Cruikshank, only one (1859) didactic, "The sober man's Sunday and the drunkard's Sunday." Again one notes how art seems to run in families, *e. g.*, Corbould, Daniell, and Dicksee; while four Chalons, all portraitists, and exhibiting collectively from 1792 to 1860, fill fourteen pages, or one-fourteenth of the entire bulk of this section of the dictionary. To be sure, Abraham Cooper (1812-1888) occupies nine pages, but he is protracted by inordinately long descriptive titles, like that of his "Bosworth Field," a full column. The flight of Eliza across the Ohio River on the ice furnished Francis S. Cary a theme in 1853.

The third volume of Luther S. Livingston's compendious 'Auction Prices of Books, 1894-1904' (Dodd, Mead & Co.) carries on the work to Richards. The compiler can note the good demand for his own 'American Prices Current,' his volume seven fetching $16.50. In the English field, Charles Lever shows a steady if moderate-priced request, but nine guineas is the most one gives for John Leech. Lewis and Clark's journals in the English edition of 1815 sold for $45, while Coues's four annotated volumes of 1893 brought only $34. The Longfellow traffic is large, but medium in the average, his high-water mark being $205 for a copy of his Poems on Slavery, with Lowell's signature. Lowell rules higher, and a presentation copy of his Harvard Ode was knocked down at $410. Maria Lowell's Poems went for $210. These pale before Poe, whose 'Murder in the Rue Morgue' was wanted at $1,000, and his 'Tamerlane' at $2,050. Longfellow's copy of the (anti-slavery) 'Liberty Bell' was in 1896 worth $5.50, and was resold five years later for $24. Twelve pages are devoted to Cotton Mather, and eight to Increase. Many newspapers, especially of New York and Pennsylvania, are here recorded; and we will remark that the first two volumes of the *Nation* cost the purchaser $24 in 1901.

Twenty years have elapsed since the children of William Lloyd Garrison published the first half of the standard Life of their father. This revolution of time has also brought the hundredth anniversary of his birth (December 10, 1805), which they now commemorate in a small volume, 'The Words of Garrison,' a centennial selection of characteristic sentiments from his writings, dedicated "to all who hate cruelty, oppression, and war, and believe in the equal rights and perfectibility of mankind" (Boston: Houghton, Mifflin & Co.). The extracts are classified under ten headings, as, Autobiographical, Slavery, Non-Resistance, Perfectionism, Politics, Woman's Rights, etc., and fill some fifty pages. They are an authentic exhibition of the spirit which animated the moral leader of the anti-slavery cause, in contrast with the prevailing Christianity of his time and—we might almost say *à fortiori*—of the present. There follows in the same space a reprint of the biographical sketch prepared for the memorial volume of the City of Boston in 1886 (on occasion of the erection of Garrison's statue). Twenty-five pages more are occupied with an appendix of select portraits and statuary, a select bibliography, and a chronology, valuable for reference. The book is tastefully printed and bound, and has a portrait frontispiece.

As a collection of miscellaneous essays, originally written for the Chicago *Record-Herald*, Mr. W. E. Curtis's 'Modern India' (Revell) compares favorably with similar golden sheafs. But, with much that is statistically accurate, the book unfortunately abounds in printer's and author's errors. A few obvious cases of the former kind occur on pages 144, 145, 150, 156, 287, 446. Not quite so clear is the correction to be made on page 172: "The Maharaja of Jeypore represents the one hundred and twenty-third of his family, which is ants [*sic*] of the hero of a great Sanskrit epic." The founder of Jainism was not "a Buddhist

priest about a thousand years ago," and the Abigranth (*sic*) is not the bible of "a Hindu heresy" and debased Islam (pp. 111, 114, 300). The author is happier in his delineation of modern life, and the casual reader will enjoy the descriptions of town and country, plague and famine, peasant and priest—especially if he has not read too much of the same sort in the many memoirs of previous travellers.

The school edition of pedagogic classics edited by Dr. Theodor Tupetz, an inspector of country schools, and published in Leipzig by G. Freytag, has for its sixth volume 'J. J. Rousseau: Emil, oder Ueber die Erziehung.' It opens with an outline sketch of Rousseau's life quite wanting in causal coherency and in explanation of his intellectual development, in which Mme. de Warens's part is ignored. The right of revolution against an oppressive ruler inculcated in the 'Contrat Social' is naïvely declared "false and dangerous doctrine." The 'Émile' is next taken up and given selectively in translation, with editorial piecing and with footnotes explanatory and critical. The Savoyard Vicar's confession of faith is barely mentioned, and not excerpted, so that the most eloquent part of the book and that which caused it to be burnt alike in Paris and in Geneva, and led to the author's wandering existence amid real and fancied persecution, is withheld from schoolboys who are assumed not to know French and cannot explore the original for themselves. There is a rather good copy of the La Tour portrait for frontispiece.

'Cavalieri Moderni' (Rome: E. Voghera) is the first of a series of novels in which Signora Fanny Zampini Salazar, the able advocate of women's rights, proposes to depict Italian society with all its variety of types. Our authoress is inclined to divide people into two classes, those who hold a high ideal of service to mankind, and those who live merely to satisfy their selfish impulses. In this volume her purpose is to point out the inadequacy of the present state of the law with regard to illegitimate offspring, and all the complications ensuing from the impossibility of divorce. Her pictures of Italian society are extremely realistic, and must on that account interest foreigners more than her own people. Her society ladies, with their love of political talk and their incompetence to control the flirtations of their daughters; her politicians, with their habit of finding out any flaw in the character of an adversary zealous for reform, and using trumped-up accusations to ruin a political career, are very true to what we know of Roman life, as also the dishonest lawyers and the calumnious allegations the women circulate about those of their own sex living without the protection of a husband. As a work of fiction, the book lacks form; it is too diffuse and contains too many episodes. The two principal female figures round which the action centres both die tragically; no doubt the remaining characters are intended to continue through succeeding volumes, as also the hero, the chivalrous doctor who is thoroughly imbued with Mazzinian principles, and whose aims are singularly high, although his conduct is not beyond reproach. Signora Salazar seems chiefly desirous of showing Italian life as it is without concealing its crudities; her aim is to instruct rather than to please, and to point out clearly where reform is needed

We have received Dr. Samuel A. Green's genial Historical Address at the 250th anniversary celebration of the settlement of the town of Groton, Mass., on the 12th of last July. It opens with a tribute to the late George S. Boutwell, Groton's first citizen; passes to the circumstances of the town's incorporation, the effect upon it of the change of boundaries between Massachusetts and New Hampshire, to Groton in Suffolk, England, to the several towns bearing the name in this country and always pronouncing it Graw-ton. Most of these places—there are four in New England—Dr. Green has visited. An appendix is made up of a discussion of the meaning of Groton, and of extracts from the town records, not hitherto printed, pertaining to the bicentennial celebration in 1855; lists of Indian words, etc., etc.

Significant in the *Harvard Graduates' Magazine* for September are the recorded alumni Teachers' Fund of $2,500,000, the Walter Channing Cabot Fund of $50,000 for the same purpose, and the Class of 1880 Fund of $100,000 for general purposes in the discretion of the authorities. These will be sure to breed like benefactions. Among the numerous illustrations are a portrait of Secretary Bonaparte, the new Lowell bust affixed to Massachusetts Hall, and one of the late Prof. George Martin Lane—both, apparently, satisfactory memorials of their eminent subjects.

The twenty-third annual report of the Dante Society (Cambridge, Mass.) is extremely brief, and its most interesting item is the fact that no essays were offered for the Dante Prize last year. There have been similar hiatuses, but the chain 1900, 1901, 1902, 1903 seemed to promise a greater continuity. The "accompanying paper" consists of Mr. W. C. Lane's list of the notably extensive additions to the Dante Collection in the Harvard College Library.

The Société d'Économie Sociale, founded by Frédéric Le Play in 1856, purposes celebrating next year, not only its jubilee, but the centenary of its founder, who was born in 1806. It now offers a prize of a thousand francs for an *éloge* of Le Play, neither purely academic nor in the nature of a profound study. Anonymous memoirs must be in the hands of the Society's secretary at No. 54 Rue de Seine not later than April 30, 1906. The successful one will be published as a book.

The secretary of the Austrian Archæological Institute, Dr. Heberdey, has just made a full report of the researches which have been carried on at Ephesus. According to his account, the diggings have been very successful, having been chiefly directed to laying bare the remnants of the great library building that was discovered a year ago. A wide staircase leads up to a two-story façade, richly ornamented, and three doors open into the library proper. In the middle stands a colossal statue of Athena. The walls and floors are adorned with parti-colored marbles. Beneath the stairs is found a sepulchral vault, finely arched, with relief decorations on all sides. Inscriptions give the leading data in the history of the structure. The father of the founder, Julius Celsus Ptolemæus, who, in 106 A. D., was proconsul of Asia, and in whose honor the library was built, is buried here. The head of his portrait statue was found in good preservation.

It has been officially announced that Prof. Adolf Harnack will, at the beginning of October, become chief librarian of the Royal Library in Berlin. He retains his professorship in the University, but most of his courses will be delivered by a new professor, yet to be called. The *Vossische Zeitung* states that this is a return to the former days, when the control of the Royal Library was in the hands of a savant of international reputation, pointing as examples to the historian Wilken, then to Pertz and later to Lipsius, all of whom were full professors at the University. It is openly stated that this innovation was caused chiefly by the dissatisfaction of the Royal Academy of Science in Berlin with the management of the present librarian, August Wilmanns, who is not a specialist. Harnack has for years been an enthusiastic member of the Academy, and his acceptance of the new position is hailed by the learned world of Germany as the beginning of better things.

The value of negro education has no better evidence than that given by Fourah Bay College at Freetown, Sierra Leone. The first English missionaries to the colony realized the impossibility of evangelizing Africa by European agency, and so in 1827 they established what they termed an African Institution, choosing for its site an old, disused slave-depot. It began with six students, one of whom was the freed slave, Samuel Crowther, Bishop of the Niger, and the first pure-blooded negro admitted to the episcopate of modern Christendom. Its growth was steady, both in the number of pupils and in the character of the teaching. In order to secure the highest standard of scholarship, in 1876 affiliation was made with the University of Durham, and from that time its students have had the Durham examinations, and the successful candidates, a present total of sixty, have received degrees. There are now ordinarily forty students keeping term, drawn mainly from Sierra Leone and Lagos, with a few from the Gold Coast and the West Indies, and are divided into 'Varsity and non-'Varsity men. These latter are the holders of Government scholarships, who are training to become teachers in the elementary schools, and men destined for work as lay missionaries. Of the university students, those holding theological scholarships are in the majority, Fourah Bay being primarily a theological college. The commoners are men studying for the professions, generally law or medicine, and, after completing the arts course, will go to one of the Inns of Court in London or to an English medical school. The number of commoners is steadily increasing, as the local appreciation of a sound education increases and the means of procuring it increases with advancing prosperity. The teaching staff consists of three Europeans and four natives. Cricket is the favorite game of the students.

—Mr. William K. Bixby, of St. Louis, has printed a small edition of some 'Letters from George Washington to Tobias Lear,' and for the first time this correspondence is now available to students. The manuscripts have had a curious history. Passing to a connection of Lear, they were taken by E. W. Stoughton in discharge of a legal fee, and

remained in his possession until, through his widow, they passed to the late John Fiske, of whose heirs Mr. Bixby purchased them. Richard Rush printed extracts from them, and even gave some of the originals to prominent men of his day; it is probable, therefore, that only a part remained for Stoughton, and that the diaries of Lear, which should be of historical interest, have been lost or scattered. The letters now printed extend from 1790 to 1798, and show Washington in a very amiable light. The servant question met him as he became President, for he brought a selection of his slaves from Mount Vernon, and with them came certain problems of habits and expense difficult to solve. Of his housekeeper he entertained suspicions, wondering "how other families on 25 hd. or 3000 dollars should be enabled to entertain more Company at least more frequently than I could do for twenty-five thousand dollars, annually." The necessity of schools for the children dependent upon him was also to be met; and his estimate of what was demanded in their education—"respectability" being the most essential—is not the least interesting point in this correspondence.

—On the expenditure of money Washington was particularly keen. He feared lest a school teacher meant to "avail herself of the occasion to commence a new era" in her rates. Lear was to find out the tradesmen who "stand highest for skill and fair dealing." The permanent seat of government on the Potomac received some attention, and he again records his repugnancy to slaveholding. Some miscellaneous papers follow these letters to Lear, and among them are the instructions from Congress to Washington, in 1775, which have been printed before, two letters from Mrs. Washington, and three from Washington to Joseph Jones. So far as the transcript of these letters is concerned, the editor of this volume, William H. Samson, has done well. In some respects the notes might have been improved, and an index is much needed. The editor could have supplied many of the names where initials were employed. For example, on page 33, it was *Powel* who suffered *Smilie* to make false statements in the *Senate*, and *Fisher* was not candid. We note also, on page 52, that Blodget's name is omitted. Mr. Samson believes that the Buchan box was restored to the Earl after Washington's death; but it was really lost on the way. The references to political matters might have been explained in notes, especially the attacks upon Washington for his extravagance in making his house available—attacks in which Gallatin appears to have been the leader. The portraits and facsimiles are well executed, and the volume is worthy of its subject.

—Since the hundredth anniversary of the Marietta colony, seventeen years ago, it has been a barren year that has borne no centennial celebration in Ohio. The little college town of Granville, however, founded by a colony from Granville, Mass., has taken the occasion of its centennial festival to make a really valuable addition to historical and genealogical literature. Among the traditional tales of the village is the story that Alfred Avery, a lad of the first company of settlers, went to the field with his father, in Granville, Mass., to plant corn. As his father was dropping the seed, a glance over his shoulder revealed the boy's eyes brimming with tears. An inquiry for the reason brought the plaintive and significant answer, "I can't find dirt enough to cover the corn." Granville, Mass., and Granby, Conn., just across the line, were teeming with large families of quick-witted "Yankees," and the new State of Ohio had dirt enough to cover the corn. Evidently here is an item on the side of the economic interpreters of history. Granby took the lead, forming the "Scioto Company," and founding in 1803 the town of Worthington, whose disappointed hopes of forming the State capital are not assuaged even by the prospect of an early embrace by the outreaching arms of Columbus, the young upstart which carried off the coveted honor. The Granville emigrants followed two years later, forming the "Licking Land Company," sending out Timothy Rose, Levi Buttles, and Job Case early in the year to locate and purchase lands, organizing in May among the intended emigrants a Congregational church (a hymn of twenty-five stanzas was composed and rendered for this occasion), and arriving on the site of the new town early in November, after forty-four days of actual travel; a complete rest being rigorously observed on each Sabbath. Ox carts and horses were the means of conveyance. The little village thus formed early became an educational centre, and never developed any manufacturing industries to draw in a miscellaneous population. It has thus preserved to an unusual degree the impress of its founders, which adds greatly to its historical importance, especially to students of the influence of the older New England upon the life of the Middle West. The material selected for publication deals quite fully with the early religious, educational, and fraternal life of the town, and includes also several interesting biographical chapters. An autobiographical sketch of the services and sufferings of William Gavit (originally of Westerly, R. I.,) in the Revolution is the piece of chief value in this division. The publication takes the form of an extra number of the *Old Northwest Genealogical Quarterly*, issued in Columbus. It comprises two hundred pages of text, with about one hundred inset illustrations, from maps, old prints, drawings, and photographs.

—In his preface to 'Mirabeau and the French Revolution' (Lippincott), Mr. Charles F. Warwick tells us that his original design was to cast his material into the form of lectures. Though this purpose was abandoned, the book, with its copious use of anecdote and its discursiveness of style, retains some trace of the author's first conception. So far as substance is concerned, Mr. Warwick belongs to the myriad of those who, having been fascinated by the French Revolution, resolve to write about it in a popular and effective way. Fortunately, he has a wider range of reading than is possessed by many of his English and American congeners, but, apart from a certain number of verdicts upon individual characters, his text contains little that is distinctive. On the other hand, it is of much higher quality than most of the illustrations which accompany it. Why such lurid and melodramatic pictures should be used to interpret an historical work, we cannot understand. One is of course on the safest ground when he draws his illustrations from contemporary sources, but there are doubtless valid grounds for an exception to this practice where the artist has made a study of the period and has a sure grasp of leading types. In the present case we see no reason why author and publisher should have admitted the cut on page xi., "The Taxgatherer," "Mirabeau and Marie Antoinette," and "Preparing the Field of Mars for the Festival of the Federation." Were the bulk of the book on a plane with these illustrations we should not single out the latter for special comment; but as many casual readers suffer their impressions to be affected by pictures, we are doing Mr. Warwick bare justice when we say that his volume on Mirabeau should not be judged by the contribution of his illustrator. Moreover, his own style is better than could be inferred from the first sentence, which runs as follows: "The most interesting and fascinating period in the history of modern times is that in France extending from the reign of Louis XIV. to the battle of Waterloo." On page 88 Mirabeau calls Mr. Thomas Watson's 'Story of France' "charming"; but, despite such admiration as is implied by this term, his own use of language is less exaggerated than Mr. Watson's, and his canons of criticism seem to us on the whole to be higher. The book undeniably is amateurish, but Mr. Warwick is saved, by both a genuine love of his subject and a knowledge of leading works on the early Revolution, from writing as most amateurs do when they begin at 1789.

—A recent publication of the Société Nouvelle de Librairie et d'Édition is the monograph of M. A. François entitled 'La Grammaire du Purisme et l'Académie Française au XVIIIe Siècle.' The first chapters describe the part played by the immortal Forty, individually and in a body, in the struggle for the preservation and purification of the French language in the days of Fénelon and Voltaire, their timidity, their idle debates as to what great project best suited their dignity, their complete inability to work together at any project. A dictionary they could and did produce; they loved to meet three times a week and dispute the precise meaning of disconnected words. But they wasted at least twenty years in debating whether they should compose a grammar to supplement the famous Dictionary. Meanwhile the French nation waited with pathetic confidence that its great Academy could not go wrong if only it would condescend to produce a Poetic and a Rhetoric whose canons should replace those of Aristotle and Quintilian. But forty purists were not likely to agree, and all their discussion ended in the publication, after many years, of a few commentaries on the French classics of the seventeenth century. The preoccupation of all the grammarians and commentators of the eighteenth century was to stop the degeneration of the French language, to preserve the standard set by a few good authors, chosen mainly from among the poets. Racine was the model; he could nod at times, like Homer, but no writer had so few solecisms. M. François gives an interesting account, interesting at least to specialists in the history of the French tongue, of the wrangles of the purists over usage, the endless conflict between the party which defended the indivi-

dual taste of a writer and the party which would sanction no expression foreign to the rules of logical grammar. The eighteenth century is the century of the *odium grammaticum*. The chief industry of the French purists was the production of grammatical commentaries, especially on the dramatic poets. They at least encouraged the circulation of the French classics, and the enormous number of reprints of such writers as Boileau and Racine from the presses of Holland and Geneva was mainly due to their critical labors. The Academy as a whole fell into the background, but in the list of works, grammars, and commentaries given by M. François in an appendix one observes that the majority are by Academicians. The monograph contains a résumé of many famous discussions on the differences of prose and poetical style, on what constitutes usage, etc. We conclude with an extract to illustrate how the Immortals in the first quarter of the eighteenth century dealt with the problem of preserving the French language. They decided to discuss the phrase *si j'étois que de vous, je ferais telle chose*. Their president settled the question by an anecdote. He had once overheard the Duc de Créquy say to the Maréchal de Clérambault, "Monsieur le Maréchal, si j'étois que de vous, je m'irais pendre tout à l'heure." "Hé bien," replied the Maréchal, "soyez que de moi." "Le petit conte fut applaudi," says the report of the Academy, "et puis on décida que dans le discours familier on peut dire *si j'étois que de vous*."

AUSTRALIAN ABORIGINES.—I.

The Native Tribes of South-East Australia. By A. W. Howitt, D.Sc., Honorary Fellow Anthropological Institute of Great Britain and Ireland. Macmillan Co. 1904. Pp. xix, 819.

The Northern Tribes of Central Australia. By Baldwin Spencer, M.A., F.R.S., sometime Fellow of Lincoln College, Oxford, Professor of Biology in the University of Melbourne, and F. J. Gillen, Special Magistrate and Sub-protector of Aborigines, South Australia. Macmillan Co. 1904. Pp. xxxv, 784.

L'Origine des Pouvoirs Magiques dans les Sociétés Australiennes. Par M. Mauss, maître de conférences pour l'histoire des religions des peuples non civilisés. (École Pratique des Hautes Études. Section des Sciences Religieuses.) Paris: Imprimerie Nationale. 1905. Pp. 55.

For the anthropologist and the student of primitive man, the Australian blacks are as interesting and as important as are the Australian whites for the investigator of modern social and political institutions. On the one hand, we are told that the Anglo-Saxon race in the island-continent is blazing the future paths for all mankind, and, on the other, that it was in that part of the world that appeared, in the dim past, the first creature deserving the name of man, the ancestor of all human races now existing, or having at any time before existed. At the present moment the scientific air is full of debate concerning the recent discoveries of traces of "fossil" man in Australia and the theories of the evolution of the first human beings in the characteristic environment of the great Indo-Pacific wilderness put forth by Schoetensack, Klaatsch, etc. Thus the aborigines may have been the Alpha, as the Aryan immigrants may be the Omega, of our race. There was a time, however, when the white man believed in killing off as soon as possible the black people who occupied the land before him—a policy resulting in the utter extermination of the native Tasmanians, who, according to Mr. Howitt and others, were the real autochthones of Australia. Fortunately this hunting of men came to an end, and now some of the ablest investigators of the day are studying the scattered tribes of aborigines who remain, with a zeal and a thoroughness comparable only to the labors of the experts of our own Bureau of American Ethnology, who have accumulated so much valuable and lasting knowledge concerning the history and the achievements of the first Americans.

The materials for Mr. Howitt's book were, in great part, collected and recorded before 1889, since when "the native tribes have more or less died, and in the older settlements of South-East Australia the tribal remnants have now almost lost the knowledge of the beliefs and customs of their fathers" (a new factor in their extinction has also been added in opium, introduced among them by the Chinese coolies and their employers). The data obtained by the author, often in conjunction with his colleague in other studies of the Australian natives, Mr. Fison, during forty years of varied experience, have, however, been revised and the discussions amplified, so that 'The Native Tribes of South-East Australia' may be taken as a summary of his investigations and conclusions reached after mature consideration and comparison with the works and theories of other ethnologists. After an introductory chapter on the origin of the aborigines of Tasmania and Australia, Mr. Howitt considers successively tribal and social organization, relationship, terms, marriage rules, tribal government, medicine-men and magic, beliefs and burial practices, initiation ceremonies (eastern and western types), messengers and message-sticks, barter and trade centres, gesture language, various customs. An appendix (pp. 779-806) gives the English texts of some legends of Central Australian tribes.

That Australia is an environment *sui generis* has long been recognized by the anthropologist. In a way it is an ethnic *cul de sac*, like the continent of America—the New Guinea approach in the one case might be compared with the Bering Straits approach in the other; and one is as justified in rejecting the theory of the development of Australian institutions and culture by the advent of Malay or other sub-Asiatic peoples as one is in refusing to attribute the civilizations of primitive America to Chinese, Japanese, or other Mongolian immigrants. In the languages of Australia, too, there is no more a serious Malay element than there is a Mongolian one in the tongues of the American Indians. The facts in both environments point to the evolution of culture through indigenous stimuli and influences native to the soil. Such a productive evolutionary factor may very well be found, as the author suggests, in the more or less intentional changes brought about by the "elders," or "great men," and the old men and women, who are the sources of authority, the teachers and the philosophers of the land. Mr. Howitt even goes further, and sees in "commands" received by medicine-men in dreams, from so-called supernatural beings, or otherwise, the possible origins of social reforms and readjustments. Such a "command" or "idea" would be announced by the recipient to his fellow-shamans, and, "if they received it favorably, the next step might be to announce it to the assembled headmen at one of the ceremonial gatherings as a supernatural command, and this would be accepted as true without question by the tribes-people." This "dream-origin" theory receives support from kindred phenomena among the American Indians, although there, perhaps, the effects relate more to the individual than to society as a whole; but the transfer would not be beyond the mentality of the Australians, who have a certain "social sense" useful for survival purposes. In Australia, as in America, the theory of indigenous modification would account for the differences in culture, institutions, mythological ideas, etc., existing among various tribes. Favorable circumstances, suggestible conditions among the members of several tribes, the great personal influence (as with our own race) of the "reformer" himself or his associate shamans (the "being in the air" also is not entirely confined to the civilized races of to-day, nor the things that make possible the sudden spread of fads and fashions), severally or in combination, worked to extend the sphere of activity of the innovation.

There is much to be said in favor of this theory of the transformation of primitive society through the genial actions of its "great men." Even the general rule that "all Australian tribes are divided into two moieties, which intermarry, but each of which is forbidden to marry within itself," is thought to have arisen in the manner just noted. Of course, there are objections to such a theory, and, as Andrew Lang observes, *c'est le premier pas qui coûte*. Mr. Howitt, in discussing the supernatural beings of the Australian natives, including the famous "All-Father" (the *Baiame* of the Kamilaroi and his congeners among other tribes), who is neither God, nor "Great Spirit," nor "Good Spirit," but a supernatural being with no trace of a divine nature, an ideal headman dominated "father," comparable, and, again, not comparable, with the *Atius Tirawa* of the Pawnee Indians, as revealed to us by Miss Fletcher and Dr. Dorsey, suggests how easy it might have been for the aborigines, under favorable conditions, to develop an actual religion based on the worship of a being like *Baiame*. The material presented in the books of Mr. Howitt and Messrs. Spencer and Gillen impresses the reader also with the reasonableness of another suggestion of the author, viz., how easily, after the change to a recognized religion, the medicine-men would have become priests. But many possible changes have not at all taken place, for the Australian natives did not even evolve ancestor-worship, which so many authorities have considered the root of primitive religion. Some steps assumed are, evidently, easier in theory than in actual progress.

It is worth noting that the greatest development of the "All-Father" idea occurs in the southeast, where also is to be found the most marked progress away from primitive

social organization, etc. Indeed, the evidence of such advancement increases from north to south. Mr. Howitt agrees with Messrs. Spencer and Gillen in holding that, while totemism, combined with exogamy, is at the root of the social organization, "the relation between totemism and exogamy is merely a secondary feature, the primary function of the former having probably been in existence before the latter became established." The Intichiuma ceremonies are thought to represent a very early form of totemistic beliefs (this is by no means absolutely certain, however), but the author considers that present data do not permit dogmatism as to their origin. There is yet no safe hypothesis as to the provenience of totemic names. The suggestion is made that the idea of relationship with animals and plants may have had a dream-origin with savage peoples. The low state of culture of the Dieri, as compared with certain other tribes who inhabited the southeast (particularly the coast lands), leads Mr. Howitt to argue that better climatic conditions and a more abundant and constant supply of both animal and plant food may have caused some of the latter to abandon more or less "the magical food-producing ceremonies." Thus, in many ways the tribes of the Lake Eyre district in South Australia would represent a much more primitive social and psychical condition than those of the southeastern end of the island. This would fit in with some of the assumptions of the Schoetensack theory of the origin of man in Australia.

The variation in primitive Australian social systems may be further seen by comparing some of the tribes having very complicated marriage and totemic systems with the Kurnai, who "had no class systems," and "although there are survivals of totems in this tribe, they do not affect marriage." The comparison made (p. 294) between the position of the bride among the early Anglo-Saxons and the Australian natives is interesting; likewise the hint that, at a still earlier stage, the bride-price may very well have been another woman. An ingenious use of polygamy as a means of building up influence by presentation of wives to those who are too poor to obtain them themselves, is recorded on page 266. A curious instance of the manner in which the culture of an intruding race affects that of the aborigines is cited (p. 423) by Mr. Howitt: In one of the native songs (improvised) occurs the word *winbelow*, which, at first blush, seems aboriginal enough, but is in reality nothing but the English, "the wind blows." The distance travelled by some of these songs is remarkable. Another example of white influence is represented in the Kurnai song inviting a friend to come to "a cool shady place with a bottle." These songs are of not a little psychological and sociological value, but (both old and new) they are said to be fast dying out. With the Australians in general the sky-country is another and better earth. The sun is a woman, as with the ancient Teutons. Sleep and dreams are the bond between the living and the absent, alive or dead. The white man was first conceived of as a ghost—members of the tribe returning in the flesh. In connection with his description of message-sticks, Mr. Howitt states (p. 698) that the system of counting in vogue enables the natives to run up to thirty, thus modifying the common statement that "the Australian aborigines are unable to count beyond four, or, at the most, five." Infanticide is practised among many Australian tribes for a variety of reasons: lack of food, rapid succession of children, weakness, or disease, difficulty of carrying about, etc. Cannibalism is also diverse in origin and practice: with the Dieri, a part of the burial ceremonial; a means of getting rid of superfluous infants; also, of acquiring the power and virtues of dead enemies, etc. "Flesh-hunger" as a cause of anthrophagy is rare here as in most other parts of the globe. Some absurd things credited to the Australians by "bush yarns" and careless observers are dismissed by Mr. Howitt with the remark: "The Australian aborigines do not recognize any divinity, good or evil, nor do they offer any kind of sacrifice, as far as my knowledge goes."

A SPANISH SCHOLAR.

Homenaje á D. Francisco Codera en su jubilación del profesorado: Estudios de erudición oriental. Con una introducción de Eduardo Saavedra. Saragossa, 1904. Pp. xxxviii, 658.

The mere fact that a professor of Arabic has retired from his chair may seen a small matter to our bumptious Western world, in which the university teacher who cannot show an immediate connection between his work and the material aids of life meets with small courtesy of attention. Let the chair and the professor be in Spain (supposedly—by the man in the street—last of the European countries and a bad last), and this bulky volume will be a mysterious problem.

In reality it is no problem, but stands for several excellent facts—that the Spanish people is not at all moribund, that it has resources of vitality and ideals of scholarship and culture which might be sought vainly in many of our colleges and universities; that this professor has made his mark so deeply and well that he has founded a school of pupils; that these rise up now to do him honor; that even Western students and institutions might learn from the austère frugality of his life, the patient finish and endurance of his labors, the breadth of his interests and the ingenuity of his methods.

Codera was born in 1836 of a family of well-to-do farmers at Fonz, a village of Aragon, some thirty miles northwest of Lérida. There and at Barbastro, a larger town in the neighborhood, he had his school education of the usual scholastic type of the time and place. Then, evidently as a promising youth, he was turned towards the priesthood and studied, at a seminary in Lérida, philosophy, which seems to have included physics, taught, however, from a Latin manual a half-century old. In 1855 he passed to the University of Saragossa and there went through a four-year course in theology. He had matriculated for a fifth year when a change long working in him finally came to the surface, and turned him from the priesthood for ever. It is characteristic of the balance and seriousness of Codera's mind that this was no upheaval of doubt; he is still a devout Catholic. It was, to all appearance, his generations of canny Aragonian farming ancestors beginning to tell. When he was sent to school at Barbastro, he was boarded with a carpenter, and there, for three years, found that his academic tasks left him much time on his hands. He took refuge in the workshop, not to lounge and talk; he learned carpentry thoroughly. At Lérida he went on to work by himself at algebra, geometry, and plane designing. He supplemented also the fifty-year old Latin manual of physics by a more modern text-book which he bought for himself. The physical sciences had now captured him; so Saragossa attracted him, where he hoped to be able to combine a theological course with one in the faculty of sciences. Of that he had only two years, for in 1858, just after he had been appointed to instruct in physics and geography, the faculty of sciences was suppressed. Then, theology alone not being enough for him, he combined with it a course in humane letters for two years. In the third, he found that the class hours of theology and letters would by no means agree, and was stopped at last in his effort to enrich, by this process of doubling, the theological curriculum. In all this it is very plain that he would have been kept by the Church if the system of education for priests had not been dry and one-sided to a degree. So theology finally went by the board, and he combined with letters a year of law. Yet it is to be remembered that in this case he could easily salve his conscience by regarding law—and especially canon law—as a necessary part of a theological training.

A year of ill-health not unnaturally followed these combinations and permutations. He devoted it to modern languages. His last years of university study were spent in philosophy, letters, and law at Madrid. Then he was called to the chair of Latin and Greek in his old seminary at Lérida, and his teaching career began. From there he passed to become professor extraordinarius (*catedrático supernumerario*) of Greek, Hebrew and Arabic, at Granada, then to the ordinarius chair of Greek there and at Saragossa, and finally in 1874 to the chair of Arabic at Madrid, where his life-work really began. The record of these changes is significant in one way and another for the man, his studies, and his environment. Few fields of learning have suffered so much as has Arabic from those who climb up some other way instead of entering by the strait way of early and dry discipline. Codera picked up his Arabic by himself through his Hebrew, with the assistance of the excellent but woefully antiquated Erpenius, and only in his last years as a student in Madrid had he the advantage of definite training. There he was "made" by Pascual de Gayangos, *clarum et venerable nomen*, and by that making and his own character escaped the snares of the amateur. In return, he has created the present school of Spanish Arabists, to whom we have evidently to look for the leading back, so sorely needed, of these studies from grammars and lexicons and words to history, philosophy, theology and all the essence of life. Not for nothing did Codera come of a race of farmers with eyes and thoughts on the hardest realities. And a farmer and student of mechanics and natural science he has remained through it all. When he was editing his texts and setting up the types with his own hands, he was also inventing

ploughs and harrows suited to the conditions of his native soil, and teaching the alternation of crops and the use of phosphates, the sinking of wells, and the introduction of new plants. Similarly with his type-setting and the machine he invented to take impressions of coins; when a thing was to be done, he did it himself. His intense practicalness and self-helpfulness must make us revise our traditional estimate of the stately but unhandy Spaniard.

And all this time, Spain was in storm and stress around him. In his first four years fell the end of the Carlist rising; a couple of months after he was born, the regent Christina was compelled to accept the Constitution of 1812. Thereafter it is a record of a succession of revolutions, attempted and successful. His student life was passed in the unsavory times of Isabella II., his early activity as a university teacher in the anarchy and civil war which followed; the final flight of Don Carlos was less than two years after he began work at Madrid. The external history of a country is not all; behind drums and tramplings and constitutions and politicians, the life of the people goes on. It was in that life behind that he had part. For him, Spain was served best by the man who did with all his might what his hand found to do, who raised better and better crops, or taught his little circle silently what work meant, and what true culture, knowledge, rectitude, impartiality were.

The bibliography of Codera's writings covers nearly ten pages, but his patience and method are better evinced in the plan he has sketched for the writing of the history of Muslim Spain. For that, he declares with right, we are not yet nearly ready—shall be ready only after fifteen or twenty well-employed years. Very many texts are still to be published, and to be studied; with every new text, so far, have come changes and corrections. To exhaust these, his method is that of the card-catalogue. He has himself made more than 30,000 slips in biography, geography, bibliography, events, customs; and reckons at 200,000 the minimum necessary to serve as a basis for the complete history.

In this volume itself the outstanding fact is that it is so largely Spanish in origin, and that so marked a proportion of the papers are by direct pupils of the master to whom it is dedicated. It is unfortunate but true that the intercourse between the Spanish school and Arabists elsewhere is not as complete as between the speakers of English, French, and German, the three required languages. The difficulty is linguistic, and Spanish has not yet won its place. Here only five tongues are represented. Twenty-six papers are in Spanish, one by a German; eight in French, three by a Dutchman, a Dane, an Egyptian; two in Italian; one in English by an American; one in Portuguese. Among them are many of value and interest even for others than Spaniards or Arabists. Prof. José Alemany touches a fertile subject for all students of mediæval Europe in describing the bands of Christian free-lances who served Muslim Sultans in North Africa. In a long paper he traces their histories, and brings out the fact of the broad spirit of toleration shown by these sultans and the spirit of harmony which existed in some cases between them and Christian nations—all this in striking contrast to Eastern Islam. English readers will remember the adventures of Chaucer's Knight. To students of history another paper of interest is that of Prof. Rafael Altamira on the sociological study of civilization, its nature and forms, which Ibn Khaldun, the Arabic fourteenth-century historian, has given in his 'Prolegomena.' Similarly, a short paper by Professor de Goeje on the Greek fire. The influence of Christian art on the Moors of Granada is treated by Professor Gómez-Mareno with learning and detail. In philosophy two papers stand out, one by Prof. Asin y Palacios, a searching investigation, in sixty pages, of the relation between the views of Averroes, Thomas Aquinas and the Latin Averroists, especially Siger of Brabant; the other, by Professor Mehren, on Avicenna's attitude towards astrology. On literature there are also two papers which deserve notice. One, by Menéndez y Pelayo, perhaps the most broadly famous name among all the contributors, is on the story of "La Doncella Teodor" as it is in the 'Arabian Nights' (there she is Tawaddud), in a Spanish "Volksbuch," and in a comedy by Lope de Vega. Lope makes diverting enough use of the learned damsel and the show she makes of her acquirements, but if she could only have fallen into the contemporary hands of Shakspere and been examined solemnly like Malvolio by one of his clowns! The other is more puzzling and raises even wider questions. It is the tale (*rcontamiento*) of Almicded and Almayesa, two Arab lovers, supposed contemporaries of the Prophet, who live amid Spanish scenery after the fashion of Spanish romances of chivalry, and whose adventures are recounted in Aragonese, though written in the Arabic character. The editor, S. Mariano de Pano, thinks that this form of the story belongs to the sixteenth century, but the very curious mixture in it of an evidently genuine tale of a Muslim champion with chivalric trappings of a knight-errant and his love cannot but raise questions as to earlier Arabic influence on the Spanish romances as a whole; a far more possible thing than the often alleged influence on the Spanish ballads.

The other papers have all their own value, but are more for the Arabist and historian than for the scholar at large. The volume as a whole is a most significant tribute to the inspiration of a master and to the spirit of the new Spain.

The Principles of Economics: A Fragment of a Treatise on the Industrial Mechanism of Society (with other papers). By W. Stanley Jevons. Edited by Henry Higgs. The Macmillan Co. 1905.

Since the untimely death of Stanley Jevons in 1882, several volumes of his literary remains have been given to the public. Economic science, particularly in Great Britain, could so poorly afford to lose him that there was abundant justification for bringing out such collected papers as were contained in the 'Methods of Social Reform' (1883) and 'Investigations in Currency and Finance' (1884). His 'Letters and Journal' (1886), also, possessed more than an ephemeral or merely personal interest, and seemed to bring to a fitting close the series of posthumous publications. It appears, however, that Jevons's manuscripts contained further material in the shape of an unfinished treatise, 'Principles of Economics,' which is now brought out under the competent editorial direction of Mr. Henry Higgs.

In fact, the 'Principles' was intended by Jevons to be his *magnum opus*, "the completion of a thirty or thirty-five years' work." He proposed to pay particular attention to the subject of consumption, but had planned an elaborate book which would have included all the topics handled by the ordinary treatise. The most significant feature of the projected work is the entire disappearance of the mathematical apparatus so prominent in the earlier 'Theory of Political Economy.' One who recalls how earnestly Jevons argued in the 'Theory' that "Economics, if it is to be a science at all, must be a mathematical science," and that "we cannot have a true theory of Economics" without the aid of the calculus, will wonder not a little at the absence of our old friends (or enemies) Δx and Δy. The explanation seems to be, as Mr. Higgs remarks, that Jevons, like Cournot before him, observing that even such economists as Cairnes had been unable to read the 'Theory,' felt obliged 'to follow up his mathematical treatise by a volume written in plain language for the general reader."

Unfortunately, the new treatise was left in very unfinished condition. Of the seventy-two chapters which Jevons had outlined, only twenty were so far completed that the most pious editorial labors could put them into form suitable for publication; and, even of these, not a few are painfully fragmentary. The opening chapters of the 'Principles' were intended to deal with the subjects of consumption and value. A dozen or more chapters upon production and several upon distribution were to follow; and, finally, there were to be a large number dealing with miscellaneous topics, such as money, banking, insurance, foreign trade, taxation, socialism, and the like. The proposed scheme is decidedly peculiar throughout, evidencing rather dislike for the traditional divisions of economic treatises than ability to improve upon them. Naturally enough, the first chapters in order of arrangement had approached completion more nearly than the later, and the result is that the materials selected for publication belong to the first half of the book and deal with the subjects of consumption, value, and production.

As Mr. Higgs is obliged to concede, it may be doubted "whether the fragment now printed contained anything absolutely new at the time it was written," although the author's point of view was sometimes novel. The work contains some interesting discussions of definitions, as of value, supply and demand, labor, and the like. Then there are frequent criticisms of Smith, Ricardo, Mill, Cairnes, and other celebrities, which sometimes are worth while. On page 55, for instance, Jevons takes advantage of the opportunity to reply to the objections which Cairnes had brought against the final-utility theory of value. Moreover, he deals to a much larger extent than was possible in the 'Theory of Political Economy' with the general literature of the science, exhibiting the considerable knowledge he was known to possess of the earlier French and English writers. There is enough here to whet one's appetite for

more, and to indicate that the author would have wrought out a treatise of the first rank had his life been spared; but it cannot be said that the fragments now published offer anything of great value. We have here not an unfinished torso, but hardly more than a few *disjecta membra*.

The most interesting chapter is probably that dealing with the "Classification of Trades." Jevons tells us that his own economic studies really began with an attempt in 1856 and 1857 to analyze the trade statistics which Dr. Farr had collected in 1851. Students of occupation statistics will find some useful hints here, and it is much to be regretted that the author did not push this part of his work to completion. Another suggestive chapter is that devoted to insurance, in which the friendly societies and the mutual-benefit work of the trade unions are handled with great insight. Interesting, too, is the chapter entitled "Mill on Capital," in which the celebrated "fundamental propositions" are handled somewhat roughly. Jevons's originality and freshness of treatment are everywhere in evidence, yet economic science would not have been appreciably poorer if the unfinished manuscript had never found editor or publisher.

Besides the 'Principles of Economics,' the present volume contains four essays which had been published before the author's death. Two of these, which treat of "The Future of Political Economy" and "Richard Cantillon," appeared in the *Fortnightly* and the *Contemporary*, and are tolerably familiar to American students, although the English editor informs us that they are "not now to be obtained without great difficulty." The others are less known and deserve a moment's consideration. One of them, written in 1869, deals with the "Pressure of Taxation," and contains an able argument for the repeal of the "shilling duty" on corn. The second, upon Lowe's proposed match tax, is a valuable discussion of general principles of taxation in their application to a particular problem. In both cases, Jevons is seen at his best, and it is fortunate that the papers are now made accessible to American students of taxation.

In conclusion it should be said that Mr. Higgs has performed his editorial labors in an admirable manner. Besides an introduction which says just enough, and does not offend a reasonably intelligent and well-informed reader, he contributes numerous helpful footnotes to the text of the "Principles," in which he endeavors to give page references to all the works consulted by Jevons in his very extensive reading. Withal, he labors under no illusions as to the value of the fragmentary treatise he is giving to the world. Among nineteenth-century economists Jevons will always occupy a high place; but the present volume, while increasing our regret that his life work was unfinished, cannot add much to his reputation.

The Eagle's History of Poughkeepsie from the Earliest Settlements (1683-1905). By Edmund Platt. Poughkeepsie, N. Y.: Platt & Platt. 1905. 4to, pp. 328.

The compiler's preface, and his discussion of the origin and meaning of the Indian place-name, Poughkeepsie, evince qualities of independent research, industry, and English style, which take this work out of the ordinary category of newspaper town histories. Not that it has not some things in common with these, in its miscellany and in such celebration of local business and its prominent conductors as borders on advertisement. One can learn much even by glancing through these pages, and the portions relating to the Revolutionary era and the period ushering in the panic of 1837 are novel and valuable. Division into chapters is marked in two cases by panics, not without reason, since that of 1837 was followed by the building of the Hudson River Railroad, and that of 1873 by the construction of the great bridge over the Hudson. There had been a Female Seminary in 1834; in 1865 Vassar College was opened. These are the landmarks in the city's history.

Her greatest personage, after Gov. Clinton, might be thought Egbert Benson, though he was a native of New York. From 1777, when Poughkeepsie was the State Capital, he was State Attorney, received into his office there as law student the future Chancellor Kent, and was first on the list of those who availed themselves (November, 1790), of an act passed February 22, 1788 (birthday of George Washington, the future abolitionist), to manumit slaves. This list is given in full by Mr. Platt. His presumable ancestor, Judge Zephaniah Platt, stood third on the list, and his application for a certificate began: "Agreeably to the Republican Spirit of the constitution of our country." At Poughkeepsie were passed New York's acts for the gradual emancipation of slavery (March 29, 1799; April 8, 1801). Dutchess County's representative in Congress, James Tallmadge, jr., offered the anti-slavery amendment to the enabling act for the admission of Missouri, which precipitated the great debate of 1819-20, and immediately (February 16) was forced to meet threats of personal violence and of disunion, which he did with spirit and fire:

"Sir," he declared, "if a dissolution of the Union must take place, let it be so! If civil war, which gentlemen so threaten, must come, let it come! . . . I know the will of my constituents, and, regardless of consequences, I will avow it; as their representative I will proclaim their hatred of slavery; as their representative here I will hold my stand until this floor, with the constitution of my country which supports it, shall sink beneath me."

Two frigates were built at Poughkeepsie during the Revolution, but never accomplished anything. In the thirties, the town had its whaling company. It is to-day the scene of college boat races. Of late, education has made it more famous than any other character; and to the now extinct brewing industry of Matthew Vassar it owes the first female college in the country meriting the name.

Among the numerous illustrations are some of Benson J. Lossing's woodcuts, a pleasant reminder of the Bewick school.

The Cities of Umbria. By Edward Hutton. With 20 illustrations in color by A. Pisa, and 12 other illustrations. London: Methuen & Co. 1905. Pp. xvi., 303.

In his 'The Road in Tuscany,' Mr. Hewlett asserts that "the moment travelling by road ceased, the writing of good books of travel ceased also"; and therefore he urges his reader to shun the railway, "with its intolerable apparatus of iron, smoke, and noise," and to take a carriage. Mr. Hutton's counsel is one of even greater perfection, for his is Jean-Jacques Rousseau's way: he has travelled Umbria afoot, with his knapsack on his back, now wet to the skin by a sudden shower, and going to bed at a wayside inn while the landlord dries his clothes, now sleeping in a barn amidst the hay, now begging a lift from the driver of a country wine-cart, and ever fleeing from "that mighty army of martyrs who are led about Italy by Baedeker."

It is, however, only in their dislike of the tourist and the railway that Mr. Hewlett and Mr. Hutton are akin. Mr. Hewlett always prefers "a road to a church, and a man to a masterpiece, a singer to his song." "Æsthetic, archæology, ecclesiology, hagiology," must mean nothing to his client, and he bids him "let *technique* and all such frippery be far from him." The proper study of mankind is man, and the modern man is but a development of the mediæval. Mr. Hutton, on the other hand, hates everything which is modern. "This is an age of business men, an age of grocers and clerks, and I have yet to learn that such have given us anything worth having." London and New York are "contented in the desperate mediocrity with that part of life which, since they never see the sun, is scarcely worth having at all." Umbria, it is true, is "a country still blessedly poor," and the Umbrian peasant is "still noble"; but, even so, he interests our author little. The hills, the olive trees, the cool streams, the sun-satiate air—God's world, not man's—is what he fain would see. He lives in the past, with St. Francis and St. Clare and the great painters who eternized and glorified them. Umbria for him is *Umbria Mystica*. A Roman of the Romans, he denounces the "barbarism" of the Reformation, and bewails the falling off of Northern Europe from the ancient faith:

"Rome," he cries, "led me to the embrace of Christ and showed me the beauty of the world. What were my England whom she found naked and a child, without her, and all the splendid years, the dreams, the victories? The kings of the world have knelt to do her reverence, and the peoples have flocked to kiss her stones. As a beautiful and splendid empress she has scorned the byeways of life, her progress has ever been along the fair imperial way. She has turned from Life and Pleasure and Beauty neither for the cursing of peasants nor for the brutal threats of the Teutonic barbarian. When our hand was in hers how happy were we—how fair our country, how merry our people; and now that we have parted from her for the moment, with what distraction do we regard one another. One by one the fair and beautiful things have fallen away, the merry days no longer come, and Christ, once so gentle and so fair, is not any more divine, but from very far off demands a sober and sombre world, bereft alike of beauty and of pleasure, since the way is so difficult, our enthusiasm so narrow."

That is the keynote of the book, and it is easy for such a writer to accept the miracle of Bolsena and the stigmatization of St. Francis. Of the latter he says that it is "as certain as any other fact of history, and far better attested than most." Quite naturally, therefore, he falls foul of "that Protestant Frenchman who has made his fame out of this saint of the Catholic

Church"; and, although he admits that St. Francis accused the Church of "a kind of compromise, not with evil, perhaps, but with indifference," and that she "destroyed" both him and Joachim di Flore, because "the victory of either meant not only her own destruction, but the loss of order, of certain success," yet he none the less complains of M. Sabatier for converting St. Francis "into a kind of divine schismatic, an amiable Martin Luther—at least in his intention—accusing the Church (rather by his conduct, it would seem, than by his teaching) of the betrayal of mankind into a kind of slavery from which he, the little poor man, would set it free." Yet surely the difference is mainly one of words. Even granting that Mr. Hutton's version of M. Sabatier's position is a fair one (he does not profess to quote him verbatim), it would almost seem that the facts stated by a Protestant only need to be restated by a Romanist, in a slightly different form, to sanctify them and to make them true.

To understand Italy a man should be neither Roman nor Protestant, but pagan; and Mr. Hutton's limitations are the greater if, as we think we may infer from the terms in which he speaks of the Italian Government on page 22, his Romanism is political as well as religious. Thus his book might well have been a failure had he written of any other region save Umbria; but since Umbria is the home of mysticism, it is good that a mystic should write of it, and although Mr. Hutton regards painting as a part of religion or, at least, as an expression of religious feeling, he is none the less a competent and discerning critic, as accurate as he is suggestive. His book is destined to prove an invaluable companion for the tourist he so heartily scorns.

In dealing with a volume devoted to descriptions of scenery, to painting, to hagiology and to mysticism, it seems almost irrelevant to allude to a question which has but little connection with the main object of the book; but it may, perhaps, be permissible to point out that, *pace* Professor Bellucci and "The Journal of the Royal Institute of British Architects," it is by no means so certain, as Mr. Hutton appears to think, that the reconstruction of the stairway on the northern side of the Palazzo Pubblico of Perugia is really a restoration "to the original design." In the opinion of the present writer, the weight of documentary evidence is against that view. This, however, is a very minor matter, and we shall probably wait many a long day for a better book on Umbrian painters and Umbrian saints. Mr. Hutton's work is indeed a pleasant contrast to the rubbish which is so often accepted by publishers, and which apparently passes current with the public. A word of praise must be given to the illustrations, which are an admirable instance of the advance that has been made in the reproduction of color work during the past decade.

Socrates. By Rev. J. T. Forbes. (The World Epoch-Makers.) Scribners. 1905.

This moderate-sized volume is based on original sources and on some of the best recent authorities. While designed, of course, for popular use, it follows the scholarly plan of abundant references in footnotes to sources and author. The introductory chapters, which sketch the political, social, and religious ideals of the period, are purely for the general reader, to orient him and provide an *aperçu* of pre-Socratic thought and philosophy. The great difficulty in painting a correct picture of Socrates is to make allowance for the coloring of Plato and of Xenophon, and to disentangle his personality from that of his biographers; and this puzzle is all but insoluble. Grote thought that it was a tolerably safe procedure to appeal from the idealizing tendency of Plato to the matter-of-fact narrative of Xenophon. But it is now clearly seen that Xenophon is, in his matter-of-fact way, as much of a romancer as Plato, and that the Xenophontean Socrates is, in many passages, simply Xenophon himself discoursing commonplaces characteristic of the somewhat *borné* farmer, and horseman, and military adventurer. The Socrates who proses tediously about gratitude to parents, and about the military art as practised by Greeks and Persians, is certainly not that lofty and astonishing personality which administered an electric shock to the conscience of the youthful Alcibiades. So that the Platonic Socrates, with all the glamour of his power and irony and subtilty, is often likely to be truer than the tamer character outlined by Xenophon.

Mr. Forbes is aware of these perplexities and states them by way of warning, and then proceeds to use the Memorabilia more freely, perhaps, than the work deserves. His discussion of the Daimon or Genius of Socrates—always an alluring topic—is too diffuse, as also of the doctrine that vice springs from ignorance and virtue from knowledge. Both these dissertations savor a little of the pulpit with its *longueurs*. So does the sentence, "The remarkable thing [in the case of Socrates] is not the failure to reach dogmatic certainty (unattainable before Christ)." The fact is, that with Socrates to know what was right was to do it; there was something personal and individual in the origin of his theory of virtue. The Athenians of his time also needed, above all, clear notions of what was right and what was wrong, as is illustrated very neatly by the hazy groping of Euthyphro. With them, too, the appeal to pure reason would go farther than with a modern "camp-meeting." For the camp-meeting and for all of us a morality, steadied by reasoned convictions, and moulded by habit to a harmonious automatism, almost, would be safer than the cry of the emotions and an appeal to transcendental maxims. That was, in great measure, the method of Socrates.

However, Mr. Forbes has the primary qualification of a biographer—a sympathetic admiration of his subject. While his work is conscientious and sufficiently thorough, it is not always interesting, nor do the discussions leave a clean and clear impression. The reader who has finished it may clarify his mind by referring to the luminous and masterly chapters of Gomperz on the same subject.

The Law of Interstate Commerce and its Federal Regulation. By Frederick N. Judson. Chicago: T. H. Flood & Co. 1905.

Mr. Judson's name has been so much before the public recently in connection with an investigation carried on under and brought to an end by Executive authority, that it is unnecessary to remind our readers who he is. He writes with authority on a subject of great and growing importance. The purpose of his book is to present in a compact form the law of interstate commerce as declared by the courts, as enacted by the Legislature, and as administered by the Commerce Commission. It embodies the rules and decisions of the Commission—a body of administrative law which has some value as bearing on the "transportation problem"—but the more important part of the treatise is occupied with the consideration of the very difficult fundamental principles of law, constitutional and municipal, underlying our system. It is not at all a clear or easily comprehensible body of law, as every lawyer knows who has followed the current of decision from the great opinion of Marshall in *Gibbons v. Ogden*, down to the *Trans-Missouri* and *Northern Securities* cases; but, with the expansion of the powers of Congress, and the more and more emphatic demonstration of the fact that interstate commerce is by its very nature readily brought within the exclusive grasp, or, at any rate, supervision, of Federal authority, it may be simplified as time goes on.

Mr. Judson has a good power of statement, and his volume is a valuable addition to the literature of the subject.

THE NATION, 206 Broadway, New York

NEW BOOKS PUBLISHED BY
J. B. LIPPINCOTT COMPANY, Philadelphia

French Men of Letters

These volumes will aim to do for French literature what John Morley's "English Men of Letters" series has done so well for English literature. Each volume of the series will comprise an exhaustive biographical and critical study of its subject, by the writer best fitted for the task of presentation.

Edited by ALEXANDER JESSUP, Litt.D. 12mo, Cloth, $1.50 net per volume. Postage extra

NOW READY

Volume I., "Montaigne," by Edward Dowden, Professor of English literature in Trinity College, Dublin, author of the volume on "Southey" in the "English Men of Letters" series, but equally well known for his works dealing with French literature. As Balzac was the first great master of the modern French realistic novel, so was Montaigne the initiator of the modern essay, and a study of his life and writings should appeal with especial force to English readers.

IN PREPARATION

Volume II., "Honoré de Balzac," by Ferdinand Brunetière. M. Brunetière is commonly recognized as the ablest living critic of French literature, and, in the opinion of many, as the greatest critic France has produced.

Other volumes by leading critics will follow. Each volume will contain a frontispiece portrait of its subject, and an adequate index.

The Canterbury Pilgrimages

Standard Edition

An edition of the famous chronicle of the greatest of the Pilgrims, which especially commends itself by its clear printing, convenient size, and lavish and trustworthy illustration.

By H. SNOWDEN WARD Illustrated. 8vo. Cloth, $1.75, net

Primitive Art in Egypt

The materials for this book have been drawn from the publications of two English societies—The Egyptian Exploration Fund and the Egyptian Research Account. The facts stated are therefore authoritative, and the ground covered as thorough as the foremost archæologists up to this time have been able to cover it. The work is a translation from the revised and augmented original edition by A. S. Griffith, and the author is the keeper of the Egyptian indexes of the Royal Museum, as well as a lecturer at the University of Liege. The book contains 208 illustrations, for the most part being direct reproductions from photographs, and is handsomely printed and bound.

By JEAN CAPART Illustrated. Cloth. 8vo. Decorative cover. $5.00, net

Chats on Violins

Under this title are grouped a series of pleasant chats telling the early history of the violin, and also dealing with all the better known forms of the violin. All the great makers from Gaspar di Salo, Maggine, Amati, to Stradivarius are described.

By OLGA RAGSTER Fully Illustrated. Crown 8vo. Cloth, gilt, $1.25, net

Letters to a Debutante

These capital little chapters on topics which appeal most definitely to a young woman of to-day are written by one whose experience socially makes what she has to say of double value.

By LADY JEPHSON 12mo. Cloth, $1.25, net

The Life of Mary, Queen of Scots

A special feature of this book is the large number of excellent reproductions from old prints, woodcuts of Mary, Queen of Scots, of figures, and of famous buildings and neighborhoods of the day.

By HILDA T. SKAE Illustrated. 12mo. Cloth, $1.25, net

Edinburgh

By ROBERT LOUIS STEVENSON Illustrated. 16mo. Lambskin, $1.00, net

Oxford

By ANDREW LANG New Edition. Illustrated. Decorated Cloth, $1.50, net

Natural History in Zoological Gardens

An account of one hundred and seventeen animals, with shorter reference to some others, the great majority of which are certain to be represented in most zoological gardens.

By FRANK E. BEDDARD Illustrated. 12mo. Cloth, $1.75, net

"A Delightful XIIIth Century Allegory"

The Lady Poverty

Sacrum Commercium Beati Francisci cum Domina Paupertate. [Circa A. D. 1227.]
Translated by MONTGOMERY CARMICHAEL.
209 pages; cloth, gilt. $1.75 postpaid,
TENNANT & WARD, 287 Fourth Ave., New York

Mather's Caesar Episodes from the Gallic and Civil Wars

Price, $1.25

This volume furnishes some of the most interesting and instructive portions of Caesar's writings which have hitherto been little read in schools. The sections on the Gallic War are equivalent in amount to the first four books. From the Civil War about two-thirds as much is taken, including Curio's disastrous African campaign and the struggle between Caesar and Pompey. The introduction contains the lives of Caesar and Pompey, a brief treatment of Caesar's Army, and a list of books useful in the study of Caesar. The book is abundantly supplied with illustrations, maps, and plans.

The University of Chicago Press

JUST PUBLISHED

Russia and Its Crisis

By PAUL MILYOUKOV

Formerly Professor of History in the Universities of Moscow and Sofia.

The most authoritative and accurate account of Russian past development and present conditions available in English. The author is a representative of the liberal party known as the "Intellectuals," and his activity in the cause of freedom has already earned him calumny, imprisonment and exile.

The Chicago Evening Post says: "It is invaluable to the reader, who would have an intelligent standpoint for his observation of the course of events in Russia, . . . and is one of the most valuable contributions to the reputable literature of the subject."

602 pp.; 8vo, cloth; net, $3.00; postpaid, $3.20.

Christian Belief Interpreted by Christian Experience

By CHARLES CUTHBERT HALL

President of Union Theological Seminary, New York.

This interesting volume contains the "Barrows Lectures" delivered by President Hall in the leading cities of India and Japan, in connection with the lectureship founded by Mrs. Caroline E. Haskell.

In these days when the momentous events in the Far East have quickened an interest in all things Oriental, this thoughtful and earnest work should be welcomed by everyone who desires to go below the surface for an explanation of the message from the mysterious East for which all are waiting.

300 pp.; 8vo, cloth; net, $1.50; postpaid, $1.66.

OTHER IMPORTANT BOOKS

The Trend in Higher Education

By WILLIAM R. HARPER

President of the University of Chicago.

In this volume President Harper has collected and unified his more important addresses and contributions on the general topic of college and university education. The problems in modern education have engaged all of President Harper's attention during his administration of the University of Chicago, and this fact adds weight to the theories advanced and the solutions advocated. The book should be carefully read by all educators.

The Dial, of Chicago, says: "Dr. Harper takes a vigorous and business-like attitude, modern but not radical, and his general conclusions are likely to be more widely accepted by the University men of the country than those of any other writer in recent years. The strongest chapters are, 'Waste in Higher Education,' which should be sent to every board of regents or trustees in the country; 'How Shall the Theological Curriculum Be Modified,' and 'The Situation of the Small College.'"

402 pp.; 12mo, cloth; net, $1.50; postpaid, $1.66.

The Place of Industries in Elementary Education

By KATHERINE ELIZABETH DOPP

Lecturer in Education in the University of Chicago.

A new edition with illustrations.

This book, recognizing the close relation between the stages of racial development and the definite periods of child-growth, advocates a much larger place in our educational system for the industries—whose development constitutes a chief characteristic of racial progress—than these have hitherto occupied.

An entirely new chapter, consisting of seventy-two pages of text, has been added, which outlines a course in Colonial History, based upon the growth of Plymouth Colony. The index has also been reconstructed and classifies all the additional material.

The value of the book has been further enhanced by the addition of sixteen full-page illustrations. These are particularly appropriate because in every case they show actual results.

The new material emphasizes the practical side of the work.

278 pp.; cloth, $1.00 net; postpaid, $1.11.

RECENT PUBLICATIONS

Cuba and the Intervention

By ALBERT G. ROBINSON. ("A. G. R.") Large crown 8vo. 370 pages. $1.80 *net*. By mail, $1.92.

"Mr. ROBINSON has undoubtedly written the most truthful book on our Cuban intervention that has yet appeared."
—*Springfield Republican.*

"A book which is destined long to endure among the most valuable materials for a comprehension of Cuba's history at a critical conjuncture. . . . The author was an eye-witness of the events that he describes, and he brought to his task a mind qualified by education and experience for the work of observation. . . ." —*New York Sun.*

The United States and Porto Rico

With Special Reference to the Problems Arising out of Our Contact with the Spanish-American Civilization.

By LEO S. ROWE, Ph.D., Professor of Political Science in the University of Pennsylvania, President of the American Academy of Political and Social Science, Member of the Commission to Revise and Compile the Laws of Porto Rico (1900-1901), Chairman of the Porto Rican Commission (1901-1902). Crown 8vo. Pp. 280. $1.30 *net*. By mail, $1.40.

". . . furnishes a remarkable illustration of the adaptability of the American character, and the story has a vital interest. . . . The questions arising from the establishment of civil rule in Porto Rico and the American relation to this island are presented in a most interesting, able and informing manner. . . . The chapter on the people of Porto Rico is interesting and full of valuable information."
—*Public Ledger*, Philadelphia.

Tragic Drama in Aeschylus, Sophocles, and Shakespeare

An Essay. By LEWIS CAMPBELL, M.A., LL.D., D.Litt., Honorary Fellow of Balliol College, Oxford, Emeritus Professor of Greek in the University of St. Andrews. Crown 8vo. pp. xvi+280, price $2.00 *net*. By mail, $2.14.

The purpose of this volume is to invite attention to some essential points of correspondence between the great masterpieces of Athens and of Elizabethan England. These resemblances are apt to be obscured by the differences of origin and of surroundings which inevitably separate from one another the productions of peoples so remote in place and time, but in so far as the analogy is real, it is the more remarkable because of the diversity.

CONTENTS: PART I. Introductory.—The Tragic Fable—Tragic Action.—Tragic Persons; Characterization.—Tragic Ideas.—Tragic Construction.—Tragic Diction.—PART II. Æschylus.—Sophocles.—The Growth of Seriousness in Shakespeare.—'Hamlet.'—'Macbeth.'—'Othello.'—'King Lear.'—'Cymbeline.'—'Winter's Tale,' and 'Tempest.'—INDEX.

Strength and Diet

A Practical Treatise with Special Regard to the Life of Nations. By the Hon. R. RUSSELL. 8vo. 654 pages. $4.40 *net*.

The Author of this book remarks in his Preface, "so far as I know . . . no book has hitherto been published dealing comprehensively with the actual diet of races, nations, communities and persons, and with health and strength in relation to these. . . . Tests of the strength of various races on a systematic plan are wanting, I . . . can only hope that this volume will go some way towards supplying the deficiency."

Handbook of Homeric Study

By HENRY BROWNE, S.J., M.A., New College, Oxford; Fellow of the Royal University of Ireland; Professor of Greek at University College, Dublin. With 22 Plates. Crown 8vo. $2.00 *net*.

CHAPTER I. The Homeric Poems. CHAPTER II. The Homeric Bards. CHAPTER III. Historical Outlines of the Homeric Controversy. CHAPTER IV. Homeric Life. CHAPTER V. Who Were the Homeric People? CHAPTER VI. The Epic Art of Homer.

LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 28, 1905.

The Week.

The Scandinavians not only have set the world a good example in settling their differences peacefully, but have given a lift to the general cause of arbitration. One article of the treaty for the separation of Norway and Sweden provides for the submission of future disputes to the Hague Court. There is the usual reservation of matters affecting "the independence, integrity, or vital interests of either"; but another clause sets forth that the question whether any controversy *does* affect "vital interests" shall itself be left to arbitration. This is a far-sighted and humane plan of making international deadlocks over trifles almost impossible.

While our Government is preparing, by putting the coastwise shipping laws into effect next January, to raise freight rates upon our Philippine trade, news comes of a rate war between the inter-island transportation companies and the foreign lines running to Hongkong. The latter have just put into effect such low rates to and from Iloilo, Cebu, and Zamboanga that it will be economy for these ports to trade with Hongkong rather than Manila. The situation is said to be regarded at Washington as one of the most serious since our acquisition of the Philippines. Naturally, this menace to the carefully nurtured trade within the archipelago is almost as exasperating a spectacle as if New York, Philadelphia, and Boston were suddenly to cease the interchange of commodities and to trade only with Liverpool. Our "gateway to the Orient" seems to be working like one of those patent doors which merely let the person ahead get halfway upstairs before they admit the next at all. The case comes into the greater prominence because, while we refused to develop the trade of the islands with us by tariff concessions, and are putting an additional obstacle in the form of shipping laws, we were going to build railroads and also to bring the separate islands into closer touch. So if the foreigner interferes with this, what will be left?

Congressman Herbert Parsons returns from Manila delighted to find that the "principle of the Philippines for the Filipinos" pervades the whole insular government. He also discovered that "all the Filipino political parties are now in favor of independence." Yet they can't have it, for, "to a practical-minded people like us," all their political talk is "academic." So it seems that the "principle" is to be allowed to work only when convenient. We must "educate the rising generation," Mr. Parsons tells us, by the sight of a good American government, before we can listen to a suggestion of independence. But he is not so sure that the government we are giving them is good. "I must confess that while everything was being well done, a great deal of money was being spent—more, probably, than the islands could afford." Thus we are to educate the rising generation in extravagance and bankruptcy. This shows us that the lot of the Filipino is harder than we thought. He has not only to submit to our enforced rule, but he has to rack his brains to try to explain our logical contradictions.

President Amador and the Isthmian Canal Commission, it is reported, are endeavoring to attract Spanish workmen from the famine-stricken districts of their country. The theory sounds like a good one. That men will only change their home and employment in order to improve their condition is axiomatic. Efforts to induce the class of laborers wanted at Panama to give up other jobs in this country have not been wholly successful. Very well, hunt out those places on the face of the earth which are even worse off than Panama. There are almost always famines and pestilences to be found somewhere; only the other day Calabria was devastated by earthquakes, and here and there a revolution is raising its horrid head. Some Russians, we believe, have already come to the Isthmus to escape something worse. So the dirt may be made to fly by the exertions of honest workingmen who have jumped out of a dozen transatlantic frying pans into the Panama fire. We may be a little colder than of yore in our welcome at New York or San Francisco to the poor immigrant, but two thousand miles to the south we shall continue to maintain a refuge for the downtrodden and oppressed and unfortunate from all lands. The canal may yet reach the proud distinction of coming to be regarded as an international charity-woodyard.

It is apparently the craven fear of being little which moves the republic of Panama to seek to annex Costa Rica The jokes about the Panamitos may have gone home. But what is the motive of Costa Rica? Is it not to slip quietly under the feathers of the eagle? Perhaps the Costa Ricans have not been deceived by all the *opéra bouffe* of our "recognition" of Panama, and our punctilious treatment of that tiny and feeble entity as if it were entitled to sovereign honors. They may be political realists who look hard at the substance of things, and so may have convinced themselves that a great American annexation movement is afoot—"from Hudson's Bay to the Isthmus"—with the inference that they will do well to get in early.

Cubans take their politics more tragically than we do, and it is not so portentous an event as our daily press sought to make it out, that the preliminaries of a Cuban Presidential election have led to violence and murder. The blood is hot in Cuba, but it is absurd to talk of what occurred at Cienfuegos being a premonition of revolution, or proving that the Government is not able to protect property and life. Least of all is it a case for jumping at the duty of the United States to intervene. We reserved the right to do so, under the Platt amendment which we forced upon Cuba, "for the maintenance of a government adequate for the protection of life, property, and individual liberty." Those are vague terms, but it would be a malign interpretation which should stretch them to cover the crimes in Cienfuegos on Friday. From all the evidence at hand, the authorities had the situation in full control, and nobody's life was in danger except that of brawlers. If political murders are a proof of the destruction of government, our own was destroyed long ago—ask ex-Gov. Black about the Troy politician-murderer whom he prosecuted. No doubt, the unhappy occurrence in Cuba will be used for political advantage in the canvass, just as it would be here.

Stand-pattism has its by-products in the shape of suggestions for raising more money for the Government without touching the tariff. There is scarcely one of the special war taxes of 1898 that some statesman has not seriously advocated reimposing this year. Even the chewing-gum tax has its champions again. Representative Tawney, who was one of the "insurgents" of three years ago, but now regards it as "possible to avoid any legislation of an extensive character during this fiscal year," brings up alcoholic proprietary medicines for sacrifice. Commissioner Yerkes has really anticipated him in making these concoctions a source of revenue, for his recent decision classing them as liquors will, if sustained, bring in a large sum annually. But there is one obstacle to putting a bill through Congress. If we are to trust the published testimonials, our national lawmakers have been among the most constant users of the

sovereign remedies in question. One manufacturer of these, if memory serves, recently published a broadside endorsement from fourteen M.C.'s and ex-M.C.'s who had "used it with beneficial effect." It is on record that one member, ex-Congressman Powers of Vermont, gave testimonials to three different medicines, all of which were freely used in advertising. The patent-medicine Trust, if there is one, has not a Senator of its own, but it has surely toned up enough official constitutions to demand a few favors in return.

Senator Dolliver evidently strove to put the case mildly when he said, in a speech to the Iowa editors a few days ago concerning the demand for tariff revision: "It will require a good deal of persuasion to induce Congress to fix a maximum schedule at the point of protection, and give over to the President the right, within limits, to reduce it by wholesale or retail in favor of countries commercially friendly to us." It will also require a good deal of "persuasion" to induce Congress to fix a minimum schedule and give the President the right to raise it as a frade club against our commercial enemies. Without departing from the text of Senator Dolliver's speech, it would not be hard to prove that something more than persuasion will be required to bring about any action whatever in regard to the tariff. The President is kept fully informed of the danger of "business disturbances that follow tariff legislation," as well as the "political disturbances which might cost his Administration its majority in the House of Representatives." The Senator was not indulging in generalities when he added: "These are all matters which the President is bound to weigh in the relations which he holds to the party throughout the country." Tariff revision would imperil the harvests; reciprocity is a bubble blown by Mr. Kasson and Mr. Foss; but, for a real issue, says Senator Dolliver, watch the progress of the railway rate-regulation fight in the Senate next winter.

"It seems to me," said District Attorney Morrison in Chicago on Thursday, "that the Government is in a fair way of breaking off the entire rebate evil in this country." What, without more laws? Has it been all a mistake, then, to mix up the rebate question with the project to give the Interstate Commerce Commission, or some other body, the power to decree railroad rates? So it would seem. Under existing law, we see representatives of a powerful corporation indicted, brought into court, compelled to plead guilty, and to pay fines of $25,000. No Esch-Townsend bill was necessary, no extra session of Congress, but just a plain enforcement of the statutes now on the books. We note, also, that it was not an impersonal corporation that was indicted and fined—not the indefinite Packing Company, but its officials by name, the said Weil, Cusey, Skipworth, and Todd. This is a clear violation of the legal precedent laid down by Roosevelt, J., in the case of Paul Morton.

This success in punishing the takers of rebates should help to clear the Congressional—and even a more illustrious—mind. Read the arguments made in the House, last session, in favor of conferring the rate-making power on the Interstate Commerce or some other commission, examine the newspaper articles on the same subject, and you will find the practice of giving secret rebates adduced as the one conclusive reason for the new law. It was not shown how the two things were connected. No answer was forthcoming when it was asked why there might not be rebates from rates fixed by the Government, as well as from those posted by the railroads themselves. It was enough to cry out upon the enormous injustice of rebates, and whoop the bill through. That ought not to be possible again. We have now discovered that the law we have is adequate to the work of striking at the giving or taking of railroad rebates. It is a crime, of course, always difficult of detection, but so it would be under the proposed new law as well as the old. The point is that the old is effective when rigorously executed. Hereafter, let the arguments for Government rate-making stand on their own bottom.

It is Senator against Senator on the question of forest reserves. At the moment when Heyburn of Idaho, a self-appointed critic of the Government's policy, issued his latest attack on the reserve system as applied to his State, Burkett of Nebraska was describing with enthusiasm the Administration's experiments in the Dismal River region north of the Platte. Mr. Heyburn bases his opposition to the Idaho reserve on the ground that the Government has allowed the Northern Pacific Railroad to abandon some 668,000 acres of land in the Cœur d'Alène, Priest River, and Shoshone reserves, and thereby set up a claim for an equal area of richer land. But the lieu-land law was repealed last March, and no scrip was issued when these reserves were established. Again, Senator Heyburn says bluntly, ignoring the conclusions of forestry experts, that it has not been proved that forests conserve rainfall. But the Senator from Nebraska, just back from an inspection of the 90,000 acres of sandhill land set apart in 1902 for experimental tree planting, says that the project should be encouraged. So far, the cost has not exceeded $5,000 a year, and already some 750,000 trees have been planted, over 35 per cent. of which are in a thrifty condition. Next spring a million young Western yellow and jack pines will be ready to transplant from the reserve nursery, and twice that number in 1907. Idaho's problem is to preserve her still abundant forests. Nebraska's is to redeem her wastes, largely created by the men who stripped the State of timber for railroad construction and fence building. Senator Heyburn should visit Senator Burkett's Dismal River constituency.

It was thought last winter, when the California Legislature voted to re-cede to the National Government the grant of 1864, embracing the Yosemite Valley and the Mariposa grove of big trees, that the care and development of that splendid park in the Sierras had been assured. But now it appears that Congress did not specifically accept the recession, though it included in the sundry civil appropriation bill a clause providing $25,000 for the care of the park. The cattle and sheep men who have for years fought for the privilege of grazing in the Yosemite reservation, declare that neither Federal nor State authority extends over it, and are preparing to take their case to the Supreme Court. Meanwhile, a commission made up of Major Chittenden of the United States Engineer Corps, who made Yellowstone Park what it is, Mr. Marshall, topographer of the United States Geological Survey, and an official of the general Land Office, have made a thorough investigation of the Yosemite region and recommend: First, that the name be changed to the Yosemite National Park; second, that all existing legislation pertaining to the park be repealed; third, that a new code of laws, similar to that in force in the Yellowstone, be enacted; fourth, that $100,000 be appropriated to acquire all private holdings within the reservation; and, fifth, that a road into the valley be built up the Merced cañon to make it more easily accessible. It is to be hoped that Congress will at least take steps to define its attitude toward the Yosemite so clearly that even a "sheep-raiser with a political pull" may not err therein.

The striking fact about the Baltimore primaries last week was that, in every one of the most important contests, the candidates supported by the Rasin organization were decisively defeated. That the organization thus "rebuked" is in favor of the Poe-Gorman negro suffrage amendment, while Gov. Warfield, an opponent of that measure, backed the successful candidates, is a fact that may mean much or little. It is common for those interested to see in the defeat of a particular organization the rejection of every policy for which it stands. Certainly, of the two anti-organization candidates for Senate nom-

inations in Baltimore, one made his canvass largely on his personal record, and the other had drawn up an elaborate platform which dealt chiefly with public utilities and made no mention whatever of the amendment. In a few of the fights, however, this seems to have been made a direct issue. One successful candidate for ward executive said that he attributed his election to his opposition to the "Poe law." "The descendants of foreign-born residents," he says, "men who are American in everything except the possession of a grandfather, as demanded by that law, are against it."

Four months after Mayor Weaver of Philadelphia vetoed the shameful resolution of the City Councils to lease the gas works for seventy-five years to a political corporation, the whole convention of the City Party marches in a body to greet him. This at least shows that the Quaker City's enthusiasm for reform is of a more lasting character than cynical comments in the early stages of the fight would have had it. As the city was slow beyond all others in being roused against its despoilers, there is now hope that its wrath will not abate until lasting results are achieved. The "ripper" bill, which Gov. Pennypacker signed, on the engaging theory that the people had a virtual referendum on the law, since they might, if they chose, elect legislators opposed to it before it went into effect, must be repealed and a personal registration law that will keep clean the now purged registration lists must be enacted; and this means two years of watchfulness and effort. Political reversals have been rapid in Philadelphia. The City Party, which last year was a negligible factor in the local election, is now taking the lead in the fight, and its ticket has been endorsed in its entirety by the Democrats. Weaver, long regarded as a perfectly complaisant figurehead for the machine, is now the militant apostle of the most sweeping reform, and a complete convert from the notion of "reform within the party" to which the Union League still clings. A third of a year at white heat is a rare political experience for any American city.

What some of his political opponents call a "play to the galleries" was made by Gov. Hanly in his statement concerning his removal of David E. Sherrick, auditor of Indiana, from office. At this distance its theatrical tone seems to have been quite lost, and the explanation looks suspiciously like the blunt assertion of a man who is too honest to make compromises with the devil. When the Governor learned that Sherrick had hopelessly involved himself and imperilled the State funds, he demanded the auditor's resignation. "The next morning," says Gov. Hanly, "his resignation did not come, but some of his friends did, and informed me that the money could be raised only on condition that the defalcation be kept secret and that he be retained in office." This was the test that the Governor could not stand. Instead of taking the view that "Dave" was a good fellow and should be given a chance to "make good" through his friends who were profiting by keeping him in office, Gov. Hanly decided that he could make no such bargain as that. Acceptance of the money to cover Sherrick's loss on those terms, says the Governor, "would have made me, as Governor of the State, a party to a contract of such a character as would have warranted my own impeachment and removal from office." Plain as the case is and straightforward as Gov. Hanly's statement is, there exists, as the Indianapolis *News* intimates, an overt depreciation of the Governor's action, with a covert attack on his motives. Apparently, Gov. Hanly does not understand the freemasonry of Indiana "practical" politics.

The testimony of George W. Perkins at the insurance investigation on Thursday makes one or two points pretty clear. The first is, that the New York Life has been engaged in "window dressing" for the annual report. When the company, on December 31, 1903, sold to J. P. Morgan & Co. $800,000 in International Mercantile bonds, and on January 2 bought them back again, the transaction was really fictitious. J. P. Morgan & Co. charged the New York Life $266.67, interest for two days at 6 per cent. This was practically nothing but a short-time loan, with the bonds as security. On December 31, 1903, the company sold $935,000 in New Orleans Terminal bonds—another poor investment—to W. S. Fanshawe, but later the company lent Mr. Fanshawe $935,000, taking the bonds as security; and this loan stood until Mr. Fanshawe sold the bonds. Whatever be the technical excuses offered, the object of these two "sales" was not to let policyholders know exactly the condition of the company's investments. These, we grant, are relatively small items; but the principle involved is a large one. Mr. Perkins further testified that the purchases of the New York Life from J. P. Morgan & Co. for the period during which he has been connected with both concerns amounted to $38,804,918.51; and Mr. Perkins's share of the profits, $10,412.57, has been returned to the insurance company. This is all very well as far as it goes. No one can deny, however, that the backing of such a large buyer has meant to J. P. Morgan & Co., and thus to Mr. Perkins personally, more than the mere sale of $38,804,918.51 in securities. The profits from the moral support of the New York Life can never be exactly calculated. This is the reason why the position of Mr. Perkins as a high officer of the insurance company, and as a partner of the banking house, has provoked so much suspicion and deserved censure.

Don't cry over spilt campaign funds, is reported to be the final wisdom evolved in the conferences at Oyster Bay on the subject of money illegally taken from life-insurance companies and given to the Republican party. "There is no way of returning funds that have been spent." If this decision is intended merely to reassure "campaign quartettes," or the laborious composers of campaign "songs," or the spellbinders who saved the country at so much a night, no one will object. They earned their cash at the cost of fearful discomfort to themselves and others, and should not be asked to disgorge. But how about the gentlemen who took the money for disbursement, knowing that the contribution was both immoral and illegal? Are they delivered from all qualms, and released from all obligations, simply because the funds are "spent"? That would be an odd defence in law for an embezzler, if he had an estate or a bond to be sued upon. Surely, the Republican party is not ready to confess that it cannot raise among its millionaire friends enough money to pay off the sums wrongfully taken for its benefit from widows and orphans. If the last campaign fund is exhausted, restitution ought at least to be made a first lien upon the next one.

The Franchise Bureau, established by Comptroller Grout as an adjunct to his Department, may prove efficient in helping to conserve the city's interests. Hitherto, applications for franchises have been granted or refused without systematic examination of their merits. Now, for the first time in the city's history, there is a bureau whose exclusive duty it is to inquire into conditions relating to public franchises. Its value has already been shown in the case of the Union Railway Company. This company is seeking to obtain a series of twenty-two extensions in the Bronx. Yet its application was found by the Bureau of Franchises to contemplate seizing every valuable street in the fast-growing Bronx. Should the company obtain these rights, it could proceed to build such lines only as it now deemed profitable; the rights for the remaining routes it could hold in abeyance indefinitely. This, the report showed, had been its invariable practice. With this comprehensive report in hand, Comptroller Grout has been able to proceed intelligently in forming his conclusions as to the specific restrictions which should accompany the grant of the franchise.

SENATOR FORAKER'S CHALLENGE.

The Republican campaign in Ohio starts off with loud cries of alarm from the leaders. Vice-President Fairbanks was imported to implore the patriotic voters not to "strike down" the Republican ticket, and Senator Foraker pointed out that it would take a great deal of "explanation" to account for Ohio's not going Republican this year by the "usual majority." So one would say, after the 255,000 plurality for Roosevelt last year. Of course, the apprehensive orators do not fail to allege that a Democratic victory in Ohio would be a terrible blow to President Roosevelt. This is an old trick. Lodge is trying it on in Massachusetts. You will hear a village boss asseverate gravely that if his candidate for constable is defeated, the President will feel discouraged by the fearful and unmerited rebuke. We all know these pretty ways of the politicians. Yet it does seem as if the Ohio gentry were rather overdoing their hysteria. To talk so anxiously about the possibility of being beaten in that State is a queer way to hearten the faithful.

That there is a bad snarl in the Republican politics of Ohio, is generally admitted. Gov. Herrick is unpopular, and has provoked a powerful revolt within his party. His open alliance with Boss Cox of Cincinnati—one of the lowest of his species—and his dependence upon the Dick machine, which is an enginery nicely planned to turn out a large product of little men, have hurt more than helped him; and it is certain that he will be badly cut at the polls. No one supposes, however, that he can be actually defeated. Senator Foraker may be suspected of taking a malicious pleasure in exaggerating the party peril. He had been roughly pushed one side by the Herrick-Cox-Dick alliance, and only as a desperate resort was he besought to come and stump the State. So his professed alarm may be only the artifice of the physician, magnifying the danger of the disease which he is called in to cure.

It is not, however, the Senator's utterances about Ohio politics which will attract wide attention, but his deliberate challenge of President Roosevelt on two capital national issues. His speech is tantamount to serving notice on the President that, if he persists in advocating tariff reduction, or urging reciprocity treaties, the Senatorial Old Guard will fight him; and also that Mr. Roosevelt's plan of railway rate-regulation cannot be enacted into law except over the dead bodies of Foraker and his allies in the Senate. This is a political event of the highest significance. Senator Foraker carries great weight in the Senate. In his case, seniority does not yet spell senility. He can speak and organize as well as vote. Moreover, he is one of the unavowed Presidential candidates. His deliberate defiance of his own President, then, in the gravest matters of party policy, is a sign of the political weather which no observer can afford to neglect.

Needless to say, on the tariff Senator Foraker represents the crassest stand-pattism. Touch not a hair of yon gray fraud, he cries. With commendable frankness, he admits that the present tariff was simply log-rolled into shape by special interests, which will allow no change in one schedule without threatening to pull the whole edifice tumbling. At least, he can mean nothing else by saying that "some duties can, no doubt, be changed now with benefit," but that "when we touch the tariff we touch the business of the whole country." Pull out one brick, that is, and down comes the whole wall. And this tariff Bourbonism is matched by what Senator Foraker says about reciprocity treaties. The President, he thinks, will not negotiate any; but if he does, "I am sure the Senate would not ratify them unless it was found that they did not seriously injure *any* important American industry." In plain language, each powerful protected interest enjoys the right of veto upon both Congress and the President.

Equally explicit is the Ohio Senator in his antagonism to the President on the subject of railway regulation. While in favor of certain extensions of the law against discrimination and rebates, he is flatly opposed to Mr. Roosevelt's plan of conferring the power to make freight rates upon the Interstate Commerce Commission, or some other body created by Congress. This scheme, Senator Foraker artfully remarks, is one stolen from the Democrats, and is actually endorsed in the Democratic platform of Ohio this year; naturally, as a stout Republican, the Senator is against it. He does not say what people are to think of that Republican in the White House who is for it.

We may be certain that Senator Foraker's speech will have been read, pondered and inwardly digested at Oyster Bay. The President need no longer doubt that he has a fight on his hands within his party. The situation which was faintly defined at Washington last winter, will be more clear-cut in the next session. A group of powerful leaders will deny Mr. Roosevelt's right or ability to make the party organization register his personal policy. They will demand to be consulted deferentially. If that is refused them, they will set about thwarting the President's wishes. Then we shall see whether he can be as masterful when not a candidate for re-election, and without a party organization dancing obediently when he pipes to it, as he was when every politician knew that to "get in behind" him was to place money on the winning horse. The President found a difference last year. He was driven to retreat on his tariff proposals; his railway legislation was beaten; his San Domingo treaty rejected. What will the coming winter bring forth? Senator Foraker by himself might be despised. If the President meant to run amuck among corporations, he could even be glad of the opposition of a Senator whose corporate relations lay him open to the suspicion that he is not wholly impartial. But Foraker does not stand alone; neither can the President desire to read so prominent a Republican out of the party. It is a case for clear convictions, so far as the tariff challenge is concerned, and a resolute standing by them, rather than petty tactics; while in the railway question, what the President has to do is, not to outmanœuvre Senator Foraker and his fellows, but to refute their arguments. This last is the real difficulty.

CORPORATION ABSOLUTISM.

President McCall of the New York Life Insurance Company gave last week the frankest expression we have yet had to an idea which has evidently been getting a firm hold upon many of his associates in the management of great corporations. This is, that they are of necessity absolute monarchs in the kingdom of business. The motto of each of them is, *Sic volo, sic jubeo.* Mr. McCall freely shouldered all responsibility. Did he pay $50,000 to the Republican campaign fund on his own motion? He did. Without consulting the finance committee? Certainly. Did he order hundreds of thousands disbursed on his personal word? At any time. Was it at his direction that more than $200,000 was left in the hands of "Judge" Hamilton without an accounting, and under misleading entries in the books? It was. Did he think that such enormous and unregulated responsibilities ought to be put upon the president of a great life-insurance company? Yes, they are an inherent part of his executive function. If he is not free to do whatever he will with the funds of the company, he is not a real president.

This fair epitome of Mr. McCall's testimony touches on the really great question involved. Mere personalities and recriminations drop out of sight by comparison. It is the theory of the benevolent tyrant in the great finance with which we are squarely confronted. If a company is only big enough, has the adequate number of millions, and impinges upon the interests of the community in endless ways, then its president is entitled to do whatever seems right in his own eyes. In doubtful cases, his fiat creates propriety. If a method which he adopts seems irregular and threatens loss, it is enough for him to say magnificently, "I ordered it done, I accept the responsibility, I guarantee

that the company will lose nothing by it." How excellent it is to have a financial giant's strength!

Unfortunately, this fallacy of bigness, this blunder of thinking that the reasons which apply to administering hundreds of dollars necessarily fail when it is a question of millions of dollars, overlooks two things. One is the law. The other is morals. For the law knows nothing of this absolutist management of large corporations. Lawful method, strict liability, the personal responsibility of directors and officials—these are the watchwords of our statutes and judicial decisions in the premises. We suppose it to be beyond doubt that, under existing law, President McCall could be compelled to pay back every dollar given by the New York Life to politicians. Nor is the Penal Code silent about some of the transactions which he and Mr. Perkins have admitted. Directors and officials of a life-insurance company are practically in the position of an executor of an estate. Suppose that the latter decided that the interests of the heirs would be imperilled by the success of one political party, and should contribute $1,000 to the other—would he not have a fine time getting his accounts passed by the courts? Even an autocratic life-insurance president seems to feel the bookkeeping difficulty, since he has not yet been able to discover under what "account" the political payments were entered.

But the moral maze into which we are led by the theory that the magnate can do no wrong, is more bewildering than the legal. Where shall one stop? If it is right to give $50,000 illegally to protect policyholders, it is right to give $1,000,000. If $50,000 was the assessment of the New York Life in 1896, it might easily have been asked to pay $100,000 in 1904. We are really astonished at the moderation of Treasurer Bliss in demanding only $50,000 when the assets of the company (and, of course, the number of its insured in danger) had so greatly increased! Mr. Perkins testified that the assets may soon amount to $1,000,000,000. What will the proportionate share of the politicians be then? We may be sure that they will be prepared to submit affidavits that the other fellows will ruin the business of the company unless $200,000 or so is paid to beat them. There is, in fact, simply no end to the absurdities and perplexities and moral perils into which you run, once you allow that fiduciary funds can be used in any way that seems good to their administrators.

We understand perfectly that the gentlemen who have felt themselves chartered to use corporation funds as they saw fit, indignantly disclaim bad motives. Indeed, they seem almost as much oppressed by the sense of their own rectitude as by their conscious wisdom, power, and success. But, granting their purity of intent and their unrivalled sagacity, they yet must be made to see, with the rest of us more fallible mortals, that business methods should be such as to endure the test even when weak and bad men are in control. We often see the same confusion of ideas in politics. Reformers are sometimes so convinced of their own goodness that they resort to devices which they would be the first to cry out against if employed by a Tammany politician. We have got to make our business methods correct even if some business men are supernatural in wisdom and angelic in character. When the law prohibits doing a certain thing, it is no defence to say that it was a good man who violated the statute, with the best intentions in the world.

It is clear that the corrupt entanglement of corporations with politics must be taken sharply in hand by the American people. Mr. Perkins has lighted a fire of which the blaze is seen all over the country. It is not a case for bickerings between pot and kettle. The Democrats, as Judge Parker admitted from the first, have been as ready to sin as the Republicans; latterly, it has been the opportunity rather than the willingness that has failed them. They have had the appetite, but not the food. The whole miserable business, however, must be ended. By State or Federal statute, or both, it must be made unlawful for corporations to make, or for party agents to solicit from them, campaign subscriptions; so that the future corporation absolutist who uses company funds for party purposes may, if he chooses, thank God that he did it, but will have to utter his devout thanks in jail. Meanwhile, personally, things cannot go on as if nothing had happened. Young Mr. Hyde became an impossible burden to the Equitable; President Alexander had to resign—but is that to be the end? Are not other resignations and dismissals imperatively called for? Example is the only thing that really counts in business and public affairs, and this insurance investigation will not have wrought its perfect work until an example has been made of trustees not fit to be trusted; until directors who are both buyer and seller have to elect a single rôle; until presidents who are a law unto themselves are compelled to exercise their talents in some other capacity. As Mr. Cleveland puts it, with his refreshing, heavy-footed honesty, we must "compel in the direction and management of life-insurance companies . . . honesty and alertness in discharging fiduciary obligations."

SHOULD LIFE INSURANCE BE CHEAPER?

In the course of the successive exposures of corrupt or unbusiness-like methods in American life insurance, since the Equitable scandal broke last spring, one question has failed to receive the attention which it merits. The train of evil consequences arising from the huge masses of capital accumulated in the form of surpluses has been clearly demonstrated. The formidable danger in the future, if these funds are to double and treble themselves as they have done in the past decade or two, has appealed to every one—not least of all to intelligent insurance managers themselves. Some of them have privately confessed their misgivings about the financial Minotaur which the existing system was letting loose on the community. Much has been said also of the mischievous influence of some special contrivances of insurance, such as the deferred-dividend policies, which made inevitable the excessively rapid heaping-up of money which must be invested. In all this, however, there has been surprisingly little discussion of the question whether the rates prevalent for the insuring of lives in this country are not too high. In any other sort of corporation, the admitted existence of an unwieldy and demoralizing surplus would lead to immediate adoption of one of two policies—increase of dividends or lowering of the charge for service. It is the second of these questions which ought to appeal most directly to policyholders.

Are our life-insurance premium rates too high? English critics, basing their judgment on their own system, answer, Yes. But the question is one of facts and figures rather than of general principles, and it is the examination of the subject from this point of view which gives timeliness to an article by Mr. Allan H. Willett, of the Department of Economics of Brown University, in the September *Political Science Quarterly*. He examines in great detail the statements of twenty-four American life-insurance companies, comprising all the most powerful concerns, and reaches this conclusion:

"The average experience of twenty-four companies shows a saving on mortality of over 20 per cent., and an excess of interest earnings of nearly or quite one per cent., and a generous profit from lapsed and surrendered policies, while the loading is just sufficient to cover the cost of carrying on the business. The gain-and-loss exhibit indicates that, but for the depreciation of securities during the year 1903, the insurance operations of that year would have brought into the companies a profit of more than $40,000,000, to be returned to the policyholders or added to the surplus. With no improvement in the methods and practices of insurance companies, a reduction of 20 per cent. or 25 per cent. in premium rates is possible for a company managed with average care and efficiency, and is in every way desirable.

"But to bring insurance rates down to the present cost-level is only half enough. The cost itself ought to be lowered. It is demonstrable that some of the practices of insurance companies tend to increase their mortality loss, that a higher net rate of interest could be secured on their investments, and that the cost of administration is often extravagantly high. Improvements in any of those particulars would materially lower the cost of insurance, and make possible a further reduction

in premium rates, resulting in a wider utilization of the benefits of insurance by people of small or moderate income."

The first point on which this conclusion is based is the variation of actual mortality from the assumed average mortality of the tables in use by the companies. The reports of the twenty-four companies for 1903 show the total indemnities which the companies, in accordance with their mortality tables, were theoretically prepared to pay in the period for death losses. They also show what was actually paid, and the sum thus disbursed is less by $20,315,698 than the amount marked out by the official tables. The premium income for the period having been $318,328,592, a profit of 6½ per cent. on the entire receipts from that source appears to have resulted from the difference. But this is not all, for the average of mortality loss is abnormally raised by the results of a very few companies. Nineteen out of the twenty-four companies show actual mortality bearing a ratio of 80 per cent. or less to the assumption of the tables; ten of them work out below 70 per cent. Mr. Willett argues from this that the average of the tables is excessive, under proper admission of risks, to the extent of 20 to 30 per cent.

The reserves of the companies are calculated, in their reports, on the basis of interest earnings of 3 to 3½ per cent. But the average of actual interest earnings of the twenty-four companies in 1903 was 4.3 per cent.; therefore a profit of 1 per cent. over the assumed requirement is shown to exist in this direction. Again, the important question of lapsed policies arises for investigation. The full reserve required against the policies lapsed in 1903, by all these companies, was $40,446,983; the "surrender values" paid were $31,903,657; difference, carried to surplus, $8,543,326, or 2¾ per cent. of the total premium income.

In taking up the question of expense of administration and procuring business, a difficult field is entered, because the estimates of the necessary ratio of such outlay to gross income is an arbitrary matter. Yet even so, and with the very liberal allowance made by the larger companies for their agents' expenses, nine out of the twenty-four companies report a ratio of expense in acquiring business to the year's income from such business smaller than was deemed necessary. Obviously, the discussion touches here on the larger question as to needless extravagance in soliciting business —a question of great significance when the double conclusion is adopted that accumulation of excessive surpluses is an evil, and that the offer of insurance is made, not for the satisfying of a company's ambition, but for the benefit of the insured.

It will be no unfair conclusion from these figures that the cost of insurance to the American policyholder is too high. It is far from the purpose of conservative reformers in this matter to insist on any such sweeping cut as should in any degree imperil the soundness of life insurance, prudently and properly conducted. But when it is capable of proof that the cost of insurance is far higher than the needs of such administration, and that the consequence of this overcharge is the very surplus whose piling-up is the cause of the recent insurance-company scandals, the hour surely ought to have arrived for reconsideration of the whole matter.

THE LAST OF CHOLERA PANICS.

"King Cholera," a medical authority has written, "is, in truth, a lazy and voluptuous potentate; unless he is carried by quick steamers, he will not travel far without a rest, and when he reaches his destination, he declines either to advance or show his power unless he is nourished and pampered." The discovery that Asiatic cholera is really one of the easiest of infectious diseases to control, has changed completely the public attitude towards it. There is cholera at present in Germany, but her busy trade and exchange of passengers with this country continue undisturbed. Our public-health authorities exhibit not the slightest alarm, and it is taken everywhere for granted that the disease will not reach our shores.

With the mystery of cholera, the hysterical fear of it has largely disappeared, but certainly no scourge ever contained more elements to inspire consternation and horror than did this disease at its first invasions of Europe. Coming out of the East without warning, its progress along the high-roads, though always slow, seemed to be well-nigh irresistible; States and cities waited with a sort of fatalism for the news of its arrival, or made a frenzied but unavailing fight against it. The mortality that would follow its introduction at such gatherings as the Nizhni-Novgorod fair, the Hindu ceremonies at the sacred pool at Hurdwar, or the Mohammedan pilgrimages to Mecca, was beyond description fearful. Again, the apparent caprice in the spread of the disease, which would spring up in streets far from the supposed centres of infection and attack persons who had neither seen nor come near a cholera sufferer, added an element of terror. Kipling tells of the cholera outbreak in camp that marked out a regular figure eight among the tents and then passed away. No wonder the legend grew up that the Wandering Jew himself was the bearer of this pestilence.

It was in 1832 that the cholera, which had entered Russia in 1829 and swept over Europe in the next two years, was first conveyed to America. The brig *Carricks* sailed in April from the affected port of Dublin with 173 immigrants aboard. By the time she reached Quebec on June 3, forty-two of these passengers had died. The rest were landed on Grosse Isle, but were allowed free intercourse with the city, and on June 8 cholera broke out in Quebec. Fifteen cases were officially reported on that day. The epidemic reached New York on June 23, Philadelphia on July 5, Detroit on July 6, and so over the entire country. There could be no better illustration of the results of modern sanitary methods than the figures of this outbreak on fresh territory. There were a thousand deaths in Quebec in a fornight, and 3,512 in New York city in the year. Yet now, after cholera has been present in Germany at various points for nearly a month, the total death roll has reached only 80 and the number of cases 236.

The next invasion of cholera was in 1848, when it reached New Orleans and Staten Island almost simultaneously, but did not enter New York city until the next year, when it caused deaths to the number of 5,071. A recrudescence of the disease occurred in Europe after the Crimean war, and was again brought here in 1854. But meanwhile discoveries were being made regarding the cause of the cholera and its methods of transmission. It is curious that in the very year, 1854, when Dr. Snow of London was studying the famous case in which he traced 143 cases of cholera to a polluted public well, the London College of Physicians had reported, "It is not probable that, in the case of cholera, the influence of water will ever be shown to consist in its serving as a vehicle for the poison generated in the bodies of those who had suffered from the disease." A fungus theory had been propounded in 1838. "Cholera cells" were pictured in the *Lancet* in 1849, and in 1852 the name "cholerine," afterwards famous as a euphemism for cases of cholera inconvenient to acknowledge, was proposed for the zymotic principle of cholera. Quarantine methods were being better understood, too. At the port of New York in 1855 and 1856, cholera ships arrived in the harbor without the infection reaching the mainland. In March, 1866, however, the *England* from Mersey arrived at Halifax, having had 92 cholera deaths on the way. The crew and passengers were isolated, but the pilots, who declared they had not even been aboard the ship, came down with the cholera, and it again began to spread. It was in New York by May. Its rapid spread in that year was attributed largely to the dispatch of troops to the South and West. In 1873 cholera entered at New Orleans, probably by coolie vessels from India. There were a few cases in the United States again in 1886. In 1884 Robert Koch announced his discovery of the specific germ.

Then came that extraordinary exhibition, the scare of 1892. The country was preparing for a world's fair, at which

hosts of foreigners were expected, and the cholera was active over a good part of Europe. Hamburg and its suburbs had, up to October, 18,757 cases and 7,839 deaths. The liner *Moravia* from that port arrived on August 31, with twenty-two steerage passengers dead from what the ship's surgeon put down as "cholerine." The *Normannia* and the *Rugia* followed with similar conditions aboard, and eight deaths occurred in the harbor. President Harrison had ordered a quarantine of twenty days, and, after a most trying imprisonment on board the same vessels with the sick, quarters in tents and temporary buildings were found for the well passengers on Sandy Hook and Fire Island. Meanwhile, a yellow press—an adjunct which the disease on its previous visit had not enjoyed—had excited the whole country over the imminent peril. The rest of the country looked at New York as if its population were already decimated by the disease and a step on its streets were hazardous. As a matter of fact, a dozen or so of "doubtful" cases, with two deaths, were all that appeared on shore. It may be noted that in most of the vessels bringing infection to America, the disease broke out during the voyage. The dispatches reported the other day that steerage passengers from Hamburg are now being held for quarantine before embarkation, thus greatly reducing the chance of this happening.

Asiatic cholera is not regarded as a contagious disease. A person takes it only by swallowing the germ, which, though readily carried on clothing, bedding, carpets, or articles used by the sick, is short-lived, being killed quickly by drying, sunlight, or the ordinary disinfectants. The only vehicle for its rapid or wide transmission is water. Overland it cannot progress at a stage any farther than a person can travel between his receiving the infection and his entire collapse. This period is from three to five days, and it makes quarantine precautions extremely simple. The appalling rapidity of its progress has been one of the peculiar terrors of this disease. It is "a disease of hours, not days." The pulse disappears, the face shrinks, the voice grows strange and husky, the skin becomes bluish, and the sweat cold, but, after six to twenty-four hours, if the sufferer still lives, the temperature rises, the pulse returns, he sleeps. There is no specific. The treatment consists in keeping up the heart action, and trying to carry the patient past the crisis. The death-rate has varied in past epidemics from 15 to 90 per cent. It is not, however, the ability to cure, but the ability to prevent, which has made the cholera no longer "worse than forty fights."

WAR CHIEFS IN PEACE.

The recent death of Rain-in-the-Face in South Dakota removes one of the few remaining Sioux leaders who were associated with Sitting Bull in the historic campaign that culminated in the massacre of the Little Big Horn in 1876. When Geronimo, the old Apache, who is spending his last days as a paroled prisoner in Oklahoma, is gone, it will be possible to close up the account between the frontiersman and "untamed" Indian. The chiefs who are left have long ago "come in," and even the memories of Custer and Crook and Miles are dim in their minds. Quanah Parker the Comanche, Red Cloud the Sioux, Poosh-e-to-nek of the Sacs and Foxes, Chief Godfroy of the Miamis, and others great in their day as warriers, are feeble echoes merely of their old selves. Chief White Calf of the Blackfeet died early in 1903, and Chief Joseph, the great Nez Percés leader, died on the Washington reservation last year. Sitting Bull, who was killed in 1890, is almost as historic as Red Jacket. The fact that Rain-in-the-Face in his later years wore the uniform of the Indian police, and that Geronimo turned many an honest penny last summer at the St. Louis Fair selling beadwork and pictures of himself with his autograph, illustrates the dramatic anti-climaxes that must be recorded in writing the history of the last of the "war chiefs."

The complaint that history is too much taken up with wars and conquests is as valid concerning the American Indians as it is of the Macedonians or the Goths. Rain-in-the-Face will be longest remembered because of the unverified report that he personally killed Gen. Custer and cut his heart out. But he has lived quietly on the Standing Rock reservation since he returned from Canada and surrendered to Gen. Miles in 1881; and these twenty-four years of submission to agency rule, with his service in the Indian police, must be considered in making up his record. In the same way, Comanche history will deal with the clashes between that tribe and the early settlers of Texas rather than with the long rule of Quanah Parker, who has inspired among his people a zeal for education and industry in the manner of the late Bishop Whipple.

This old man, now past sixty, distinctly remembers the time he first saw a wagon and picked up a limited knowledge of English from the pack-train men who drifted into the Southwest when the Indians still held it securely. In his lifetime he has developed from the typical plains leader described by Catlin to the earnest advocate of the white man's civilization. The Washington correspondent of the *Evening Post*, writing of Parker early in 1904, told of his popularity at Fort Sill and with the cattlemen who leased the reservation pastures. As a mark of their esteem, the cattlemen built a house for the chief. One of them, proposing to help furnish the house, asked what special article the old man most wanted. Parker said that a big roll-top desk would please him, and explained: "You see, I open desk, an' sit down in my chair an' put my feet up on desk an' I light my seegar, an' I hol' my newspaper up in front o' me—like this. Then white man come in, an' he knock at my door, an' he say, 'Quanah, I wan' talk to you a minute.' An' I turn roun' in my chair, an' I puff a lot o' smoke in his face, an' I say, 'Go 'way! I busy t'day.' "

Tecumseh, with his fine speeches and his dream of an all-powerful federation of Indians that should sweep the white invaders into the sea, is succeeded by old Gabriel Godfroy, head of the remnant of the Miamis left in the Wabash valley in Indiana. His fight has been to save the homes of his tribesmen from being sold to pay taxes. Early this year Godfroy, seventy-three years old and broken in health, appeared before the Circuit Court of Miami County to urge the claim of his people to exemption from taxation. His plea was in striking contrast to the speech preserved in the school readers and credited to his predecessor. "When this case was commenced years ago," he said, "I was a rich man. I owned a fine farm and was worth $50,000. Now I am so poor that my credit is not good for a dollar. Politics ruined me. Because I voted, the Commissioners thought I should pay taxes. I never wanted to vote, because I thought I had no right at the polls. My people should have remained away. But we were urged, first by one party and then the other. My friends elected me road supervisor. I did not want the office, but I took it." The "piping times of peace" are all very well for the home builders on the border, and even the young Carlisle and Hampton graduates endure the industrial struggle passably. But for the trained warriors to submit to the dull routine of reservation life without sinking into hopeless degeneracy is an achievement more difficult than it seems to the man bred to civilization.

As Quanah Parker represents the reformed "blanket Indian," striving to pass from the prairie to the schoolroom without friction, Pleasant Porter, chief of the Creek tribe, may stand for the political evolution of the Indian leader who has never been a warrior. With the others of the Five Tribes, the Creeks long ago "buried the hatchet" and retired to live peacefully as a little isolated nation in the Indian Territory. Had that been possible, a chief's lot would have been in direct contrast to that of Gilbert's policeman. But with the pressing in of the whites and the coming of the "Dawes Commission," Chief Porter had new problems to solve. Questions of land allotments, town-site locations, the provision for a school system, the leasing and selling privileges to be given white settlers and merchants, and the tribe's atti-

tude toward Statehood—these are some of the more serious matters that this Creek Indian, scarcely more than once removed from the leaders who fought Gen. Jackson, has had to consider. It was Porter who called the separate Statehood convention which met at Muskogee recently and proposed to make a State independent of Oklahoma and call it Sequoyah, in honor of the "Cherokee Cadmus," an Indian who had perfected a syllabic alphabet and taught his people to read before Mrs. Trollope arrived in Cincinnati. The peace chief is less picturesque than the war chief of the Rain-in-the-Face type, but he has managed the business of adaptation surprisingly well, on the whole.

APPETITE WAITING ON DIGESTION.

The era of food experiments which began approximately with the twentieth century is surely as much entitled to a place in the chronicles as famine years or "bumper" crops. Dr. Wiley, with his "poison squad," Professor Atwater with his man in a glass case, and Professor Chittenden with his fellow-instructors, athletes, and soldiers of the regular army as subjects for diet experiments, are typical figures of this important period. Professor Chittenden, who outlines his conclusions in the October *Century*, makes a most simple and satisfying argument against not only the general practices in eating and drinking—every one knows that these are abominations in the sight of the scientist—but even against the dietary standards commonly accepted by the experts. These, he says, are based primarily on what people of certain habits of life *do* eat, and not what they *should* eat. The sensation of hunger, and the liking for particular articles of food, he goes on, are entirely untrustworthy as guides, for they are merely acquired habits, and any one, by constant application, can acquire a new set of hungers and appetites. The real index of the body's needs is the supply of food required for "the maintenance of body-weight, nitrogen equilibrium, health, strength, vigor, and endurance—and, in the period of adolescence, to supply material for the growth and development of the tissues of the body."

When, with quantities of food only about half those prescribed in the standard dietary, subjects of various ages and habits of life were able to do their work with increased ease, one winning an intercollegiate championship, and many actually gaining weight during the period of the experiment, it seems at least to shift the burden of proof to the other side. The quantities of food taken are, as the writer acknowledges, "absurdly" small, judged by inherited standards. Contrast, for instance, with the ordinary training table, with its abundant rare beef, this dinner, the heaviest meal of the day for the athletes under observation:

"Bacon, one and one-half ounces; potato croquette, two and one-half ounces; macaroni, two and one-fourth ounces; bread, one ounce; butter, one-fourth ounce; water ice, four and one-half ounces; one cup of coffee, with two ounces of cream and three-fourths of an ounce of sugar."

Professor Chittenden does not hold a brief for any of the numerous systems of hygienic diet—the meat and coffee and fried foods on his bills of fare show that. But his recommendation "leans somewhat toward vegetarianism," for the simple reason that if one eats meat to any extent it is next to impossible to escape eating too much, as the proper amount is here established.

Research of this sort certainly ought to be of interest to any person of intelligence. The announcement of a way of life equally beneficial at once to the constitution and the pocket-book is an event of the first importance. But the world puts all manner of obstacles in the way of him who would reform his diet. Restaurants are conducted on the theory that man is an animal whose food is naturally in the ratio of a platter of meat to one potato and a small side dish of some other vegetable. The "portion" as customarily served contains more nitrogen than Professor Chittenden would allow for an entire day. It demands uncommon resolution to keep on paying for food and leaving two-thirds of it uneaten. We fancy that this is one of the reasons why the people who do actually make over their victuals and drink, usually go over to one of the "fad" systems. It is very much harder to cut down the allowance of the old familiar viands than to take up a brand-new set. Better take a dinner of herbs outright, many think, than toy with a piece of beef the size of a postage stamp. So, we have the two-and-seventy jarring sects of emancipated eaters, vegetarians, fruitarians, eaters of raw food, eaters of vegetables that grow wild only. These cults have their own restaurants, where they are removed entirely from the lure of the flesh-pots.

Has there ever been a case, we wonder, in which a convert to any of these doctrines has not reported great improvement from the change? The gross eater of beefsteaks becomes a vegetarian. He never felt so well in his life, he has gained fourteen pounds, and can lift double the weight he could in his unregenerate days. He joins the straiter sects, cuts out eggs and milk. Again he undergoes that amazing physical regeneration that has been so rapturously described. Next, perhaps, he is taken in hand by a missionary of "sun-kissed food." He eliminates everything that does not grow in the full sunshine. Talk with him, and he makes it clear that potatoes and turnips were just as bad for him as pork and mutton had been. There must be a limit somewhere to the improvement to be effected by this process of exclusion.

Whether the world at present needs any further demonstration that it eats too much may well be doubted. The trouble is that the acknowledged fact influences people's daily lives little more than the philosopher's demonstration that matter does not exist. If the American people, even the educated part of it alone, were to give more than intellectual assent to such expositions as Professor Chittenden's, the Beef Trust would go to the wall in a week, half the retail butchers would be spreading mortar with their cleavers, and the corner grocers digging trenches with their sugar scoops. The up-to-date cook-book prints the number of calories and grammes of proteid at the head of each recipe; but the cook or housewife who takes the trouble to add them up is a source of wonder and amusement to her friends. On grounds of expediency it might be advisable to suppress all further discoveries about food until those already made have begun to sink in. Modern man has many weaknesses, but his intrepidity in the face of the danger of over-eating compels admiration.

WALKING IN SWITZERLAND.

ON THE RHINE, August 7, 1905.

The subject of Switzerland and its mountains is so well worn that I should have deemed it impossible to say anything interesting about it had I not, by an eighth visit, added so much to my conception of it that I feel as if I had never before understood it. There are with us large numbers of professional men, especially of students and professors, who might forget their home world in a form of activity which is at the same time most restful and most invigorating; and it is for them alone that I venture on a few suggestions. The main object in visiting the regions I have just left is to enjoy a closer contact with nature than can be reached in the hurly-burly of life. The tourist who profits most by a visit thither is he who can see the sentimental and fanciful—perhaps I might say the idealistic—side of Alpine scenery, and it is he whom I have in mind as I write, whether he has already been in the country or not.

The valuable lesson I have learned on my eighth visit is that it is the pedestrian alone who can, in fancy, hold talk with the snow peaks; recall the history they have witnessed; hear their stories of Hannibal, Cæsar, and Napoleon, and listen to the tread of armies which, two thousand years ago, dragged their impedimenta over roads traces of which are still visible. He alone feels the grandeur of precipice piled on precipice, as if nature in playful mood had torn up the mountains from their foundations and tossed them upon each other in one imposing pile. For him only do falling waters play in infinite variety; the torrent, the cascade, and the rivulet—ministering to his entertainment by taking all the forms that the mind can conceive.

To one who would love to study Alpine scenery in such a spirit as this, and see in

the snow peaks something more than the embodiment of all that is cold and impassive, I would say, Walk if you can. It is even better to be alone without a human companion to disturb the current of your fancy, unless you are with a spirit so kindred that the two feel as one. If you really cannot walk, the patient mule may serve as a passable substitute; at least he is better than the mail coach, as the latter is better than the railway. At this moment the opening of the Simplon tunnel is being celebrated with the idea that the tourist will now pass a mile under ground some of the most beautiful scenery that Switzerland can offer, or satisfy himself by a glance at it from the window of a railway carriage. Every real lover of the mountains will be sorry if there are not many who wish to enjoy them in some other way than this.

In the course of my recent perambulations I met a Swiss gentleman who inquired why Americans came to Switzerland, and whether we had not plenty of mountains at home. As an American I was proud to say that, so far as impressive grandeur is concerned, Switzerland has nothing to show that equals Niagara, the cañons of the Colorado, the Yosemite Valley, or the Yellowstone Park. Even its glaciers are surpassed by those of Canada and Alaska. But we must admit that the associations with thousands of years of history and a hundred years of modern adventure are mostly wanting. And then, on the practical side, for a resident of the Atlantic Seaboard at least, the Alps are easier to see and walk among than any of the American sights I have mentioned, except Niagara. Only on some of the lonelier passes need the Alpine pedestrian ever go more than one or two hours without meat, shelter, or lodging, as required. In almost every hamlet, at the beginning of every mountain ascent, will be found a hut or châlet with a peasant Amphitryon dispensing at least bread, milk, tea, and beer, and, probably, sips of yet more spirituous constitution, suggesting to the temperance reformer that he has here an unoccupied field for his propaganda. The well-devised postal system of the little republic, organized in the interest of the people alone, removes one of the greatest difficulties the pedestrian tourist encounters among us—that of providing for his luggage. By railway, mail-coach, or horse it penetrates the remotest fastnesses, and carries with it anything that the means of conveyance admits, at a fixed and uniform rate. The walker will, of course, do wisely to carry on his back the essentials of a night's stay, but he can send everything else ahead of him by post.

A few hints on the subject of expense may be useful, especially in view of the widespread impression that living in Switzerland is much cheaper than at home. If asked whether such is the case, I should reply that this depends very largely on the traveller himself. The facilities for economizing are greater than at home, and so are the temptations to expenditure. But, live as cheaply as you will, the time when an American family could come to Switzerland and save the cost of its passage across the Atlantic in the cheapness of a summer's board—if it ever was, which I doubt—is now archaic. To go more closely into the question, it is hardly necessary to say that the American summer hotel or farm house, where you take your choice of the best your host has to offer you at a fixed daily rate, is unknown in Europe. The mountain hotel of the Alps is managed on much the same plan as the hotels of London or Paris. And the guest of a Swiss hotel who will enjoy the liberal fare of a White Mountain resort must pay more for it than he would in the White Mountains. A comparison can best be made when the guest goes "en pension," for which a stay ranging from five to eight days is necessary. This means, besides lodging and its accessories, the Continental breakfast of coffee and rolls, with lunch and dinner at the table d'hôte, where you partake only of the dishes offered. For this the cost does not differ materially from that of board at home. Corresponding to the range from one dollar a day at a New Hampshire farmer's boarding-house to four or five dollars at the fashionable White Mountain hotels, you have the range from five francs a day in Alpine valleys to twenty francs at the palatial hotels of the Engadine.

The pedestrian cannot go *en pension*, nor will he often find palatial hotels on his route. At those he does find he may live about as economically as he chooses. He may ask for the cheapest room at the "pension" or hotel, confine his supply of proteid food to the amount which Professor Chittenden has shown to be most conducive to health and vigor, and accept the conclusions of twentieth-century physiological chemistry by subsisting during his walks on the not unpalatable combination of bread, milk, chocolate and sugar, with advantage both to his pocket and health.

I may conclude with a word for the smaller and cheaper hotels, which abound everywhere. They are not surrounded by that atmosphere of vulgarity which makes the appellation "second-class" so distasteful to American ears. They are clean and well kept. A feature which the lonely and perhaps homesick traveller will most appreciate is the glad-to-see-you welcome with which he is received. What can we do for the Herrschaft? What will he have to eat? What will he drink?—are the questions asked in word or in manner. The guest who transplants himself from one of these modest inns to the ambitious hotels owned by companies may be disposed to sum up what he has gained by the change. The green-aproned "Kellner" is replaced by the uniformed porter, the plainly dressed waitress by the white-necktied waiter, the unadorned table service by one of beauty, and surroundings suggesting primitive life by those of civilization; but the meals and the bed are substantially the same. If the former are better cooked, only an expert could appreciate the difference. It may be added that the old practice of putting on the traveller's bill items by guesswork is much less common in the small hotels than in the large ones. Finally, the tipping system is now much less of a nuisance than formerly, and the line of attendants who sped the parting guest is seen no longer. S. N.

Notes.

Little, Brown & Co., Boston, announce 'Sea Power in its Relations to the War of 1812,' by Capt. A. T. Mahan; 'The Brothers' War,' a study of the causes of the Rebellion, by John C. Reed; 'The Fight for Canada,' by William Wood; 'The True Story of Paul Revere,' by Charles F. Gettemy; 'The Indian Dispossessed,' by Seth K. Humphrey; 'In and Out of the Old Missions of California,' by George Wharton James; 'The Florence of Landor,' by Lilian Whiting; 'Two in Italy,' by Maud Howe; 'Il Libro d'Oro,' miracle stories and sacred legends from the Italian, translated by Mrs. Francis Alexander; 'American Railroad Rates,' by Judge Walter C. Noyes; 'The Constitutional Law of England,' by E. W. Ridges; and a 'Memoir of Colonel Henry Lee,' by John T. Morse, jr.

Fox, Duffield & Co. have nearly ready the 'Letters of Henrik Ibsen,' and 'Man and the Earth: An Economic Forecast,' by Prof. N. S. Shaler.

A. Wessels Co. will issue an illustrated art book, 'The Hundred Best Pictures,' European and American, with descriptive text.

The Macmillan Co. will shortly bring out a new work by Sir Norman Lockyer, who has taken for his subject the orientation of Stonehenge and other stone circles (in Brittany, Devon, etc.), all or some of which he believes to have been sun or star temples. The results of his investigations will have a special bearing on the early history of the British Islands. Thus, his view of the orientation of Stonehenge, to wit, that its main avenue or some part of it was disposed so as to look towards the rising sun on the summer solstice or longest day, would seem to suggest a time-reckoning other than the May-November or farmer's year presupposed by the folklore and institutions of the Celts, with the consequent conclusion that this Druidical monument, so-called (for which, by the way, Sir Norman Lockyer gives a date not later than 1700 B. C.), was the work not of a Celtic people but of a pre-Celtic, non-Aryan race, the builders of the long barrows; in other words, that the Druids were not Celts at all.

We have been much mystified by the little volume, 'The Only True Mother Goose Melodies,' bearing the imprint of Lee & Shepard, Boston (no date), and copyrighted in August, 1905, by Lothrop, Lee & Shepard Co. This, then, should not be its first appearance. Dr. E. E. Hale furnishes an elusive introduction highly complimentary to the editor, Mrs. Butler; but there is no editing of any kind, nor does Mrs. Butler's name occur elsewhere. The title-page states that this is "an exact reproduction of the text and illustrations of the original edition published and copyrighted in Boston in the year 1833 by Munroe & Francis." But the facsimiled title-page bears only the date of copyright (1833), not of publication, and is totally different from that of the 1833 edition facsimiled in the late W. H. Whitmore's monograph on 'The Original Mother Goose's Melody' (Albany, 1889). The pagination is also different, as appears from comparisons in the same monograph. From the present reissue and its pretensions one might infer that by "original" edition of 1833 was meant first edition from the Boston house. There was however, an earlier, between 1824 and 1827. Dr. Hale further muddles matters by applying to the present so-called 1833 issue what

Whitmore says regarding the engravers of the cuts in the *princeps* of 1824-27—a complete misfit. The cuts in the volume before us are its most interesting feature. Two are signed in initials by Abel Bowen, a Boston engraver (1790-1850), and one by Avery, a much later craftsman. Bowen founded in 1834 the Boston Bewick Co., for general engraving, and eight or ten at least of the present series are copies from Thomas Bewick's 'Birds' or 'Quadrupeds,' or suggest a Bewickian provenance.

Among recent legal publications we have received a privately printed monograph by Paul Jones on 'The Commercial Power of Congress,' under the commerce clause of the Constitution. It is a volume of nearly two hundred and fifty pages, and contains an examination of the general principles of constitutional interpretation laid down by the Supreme Court, and of the evolution of the constitutional power of Congress to regulate commerce. It is carefully done, but lacks a table of cases.

The new dress of the Smithsonian *Miscellaneous Contributions* is very handsome. In the current number Dr. Theodore Gill has one of his charmingly written compilations (with contributions from his own unrivalled fish-lore) about the tarpon and lady-fish and their relatives. The spawn of the lady-fish grow to the length of 3 to 3½ inches, and then become shorter and more compact until they measure but about 2 inches, when they start anew, and, this time without turning back, attain a length of two or three feet. Mr. Ales Hrdlicka gives in twenty pages tables based on original observations comparing the weight of the brains of many mammals, birds, and fishes with the weight of the whole body; but it is singular that he should have failed to remark (as some known analogies might have suggested) that the weight of the body was not an informative term of comparison for the brain-weight. He might have given for each species of mammals a constant which, multiplied by the cube-root of the weight of the body, would give a weight for the brain from which, in a half of the individual cases, the divergence would be less than 6 per cent., and which would, therefore, have made his tables highly instructive, while at present they are most confusing.

The Chemical Society of London has had the happy idea of issuing a small annual volume (D. Van Nostrand Co.), reporting the cream of the discoveries made in their science throughout the world. Ten contributors have divided the work, have made their selections with judgment, and have given the results accurately. The chief fault we have noticed is one that besets all such year-books, namely, that where novel conceptions are introduced, they are not always sufficiently explained. Thus, in describing Abegg's important theory of valency, the reporter fails to make clear to us just what is meant by a "contravalency." In yearly reports of the progress of different branches of science, this fault is usually attributable to insufficient study of novel ideas on the part of reporters. The new annual will be particularly welcome to non-chemists who may desire to keep up their acquaintance with the science. More space than we can afford would be required for a list of all the chemical discoveries of 1904 that would interest most of our readers. We will just mention that nicotine and camphor have been virtually made from their elements, and that genuine rubies have been artificially produced.

The new numbers of the Annals of Harvard College Observatory furnish interesting information about the ninth and tenth satellites of Saturn, the discoveries of which, like that of the eighth, are achievements of that establishment. To see either of these last two may fairly be compared to seeing a ball an inch in diameter at a distance of three thousand miles. At the Yerkes Observatory one of them was twice caught sight of by a highly skilled observer who knew just where to look. Otherwise, they are revealed only by photography. We know, however, that one of them always presents the same face to Saturn. They are not mere curiosities. The perturbations of one of them, which are undergoing elaborate examination, are expected to supply astronomers with a much desired fact.

The British Academy have just brought out a paper, entitled "Celtæ and Galli," by Professor Rhŷs of Oxford. This is not the first contribution they have had from him; it was, if we are not mistaken, with his "Studies in Early Irish History" that they opened their proceedings. The present pamphlet, as its name suggests, has to do with the tribes of ancient Gaul. The subject is approached from the linguistic side, the greater space being given up to the interpretation of monuments. Of these the most important are (*a*) the bronze fragments of a five-years' calendar found at Coligny near Lyons, and supposed to date from the first century A.D., and (*b*) two inscriptions on a lead tablet found at Rom, in what was once the territory of the Pictones. Professor Rhŷs finds that the language in which they are written, though Celtic, is not Gaulish, but akin to the earliest known specimens of Irish. In fact, using Irish as the key to this forgotten idiom, he is able to make out to his own satisfaction the sense of all the sentences in the calendar, and of most of those on the tablet. The latter, being in the nature of prayers and curses, are harder to interpret than the former, which perplex mainly through their incompleteness. In any case, after allowing for possible errors, Professor Rhŷs's paper probably marks a considerable advance in our knowledge of the early Celts and their languages. The papers of the Academy, by the way, have not yet been collected in a volume. They may be bought singly from the Clarendon Press or their agent, Mr. Frowde.

The interest in the discussion of the education problem in South Africa continued to the close of the meeting of the British Association. Sir Richard Jebb, by request, repeated his presidential address at Johannesburg to a large and enthusiastic audience. Referring to the special needs of the Transvaal, he said that the nucleus of a university would probably come into operation almost immediately by the establishment of four faculties, namely, engineering and mining, law, agriculture, and education. The elements of three of these faculties were already in existence, and those of the faculty of agriculture would be promptly constituted.

The persistent discouragement of the women contingent by the Prussian universities shows its effects in the statistics of these institutions. Several years ago the general enrolment of women at the German universities reached the maximum of about 1,400, Berlin leading with something like 600. In the semester just closing there were only 960 women as "Hörerinnen," and 78 matriculated, all told. This does not include Bonn, which publishes no separate report of its female attendance. The range is from 3 in Münster to 369 in Berlin. Women can matriculate only in the three universities of Bavaria, the two of Baden, and the one of Würtemberg; yet the bulk flock to the Prussian institutions, where they are not allowed the privilege granted to men. The inference is that women students as a rule are not candidates for academic degrees or honors, but wish only to attain an education in certain lines, and seek the best that is offered in those lines.

The *National Geographic Magazine* for September contains an article on the commercial relations of the West and the Orient from the earliest historic times to the present, by O. P. Austin, chief of the Bureau of Statistics. It is replete with interesting facts and figures, and is illustrated by pictures, maps, and diagrams. A comparison of Sweden and Norway as regards resources, industries, and commerce is timely, and adduces the well-known fact that Norway's merchant marine is fourth in size among the merchant marines of the world. A short account of contemplated improvements in Panama for the exploitation of its resources includes a project for a model town with a complete system of waterworks, electric lights, sewage, and drainage. Plans for these works are open to competition.

The Paris *Journal* draws attention to the peculiar status of the Nobel prizes since the separation of Norway and Sweden. It declares that, if Nobel were yet living, he would see realized the fears he entertained when he made his foundation. Although he was himself a Swede, he nevertheless wanted that the peace prize should be awarded not by his compatriots, but by the Norwegian Storthing, in order that "these two hostile brothers" might come to a better understanding. It is a question now what the executors of his testament will do. Will they respect the last will of the donor and yield to the Norwegian Parliament the right to award this prize, or will they disregard this wish and claim the right for the Swedish Storthing? This question is now being vigorously discussed in interested circles.

Striking evidence of the density of population in some parts of China is given by recent surveys for the railroad now being constructed between Shanghai and Nanking. Along the Soochow section of fifty-two miles 549 centres of rural population exist within a quarter of a mile on either side. It is expected that this section will be open for traffic in March, 1906, and to Wusieh, the great silk district, in June.

—Among the contents of the October *Century*, Gen. Porter's full account of the discovery and identification of the body of John Paul Jones easily takes first place. The evidences of identity were too numerous to be recounted here, and it is sufficient to say that they are so varied, so strong in detail, and so harmonious and overwhelming in the aggregate, that there is no hold left for any reasonable doubt. Among other things, the marks of the pneumonia from

which his left lung suffered severely in 1789 (Buell, vol. ii., pp. 235 and 267), and of the kidney trouble from which he died, were both plainly demonstrable in the long-delayed post-mortem examination conducted by eminent anthropological and medical experts. There will be some difference of opinion as to the propriety of Miss Katharine A. Carl's description of life with the Empress Dowager in the imperial palaces of Peking. It is needless to say that Miss Carl's opportunity to paint the portrait of the Empress, involving admission to the inner life of her court for nearly a year, could never have been secured had there been the slightest suspicion that the artist thus favored would give any account of that life to the press. Miss Carl admits that her action will be an offence to her Chinese friends for which she can never hope to atone, but alleges in justification the propriety of correcting false reports which sensational newspapers have put in circulation without her consent or knowledge. Her paper, the first of a series, is extremely interesting, but readers who have a sensitive conscience in such matters will peruse it with something of the feeling of self-condemnation which they would suffer in peering into the intimacies of some sumptuous private residence through connivance with an unfaithful servant. From the forthcoming memoirs of Dr. Thomas W. Evans we have the first published account of the escape of the Empress Eugénie from Paris to England, during the troublesome days of early September, 1870. The Empress and her attendant, Mme. Lebreton, were accompanied to the coast by Dr. Evans and Dr. Edward A. Crane. Sir John M. Burgoyne, who took the party, with the exception of Dr. Crane, from Deauville to the Isle of Wight in his private yacht, adds an account of the passage, which proved to be dangerously stormy, but which the Empress endured with admirable courage and good spirit.

—All readers of *Outing* are acquainted with the frequent contributions of Edwyn Sandys on various phases of experience with rod or gun. A goodly number of these sketches, together with others not heretofore printed, have been issued from the press of the Macmillan Co. in book form, under the title of 'Sporting Sketches.' As a purveyor of outdoor life to those who are obliged to take their share of it largely from the printed page, Mr. Sandys stands between the genuinely literary sportsman, such as Henry Van Dyke, and the mere spinner of wildly improbable yarns—a type well represented by the volume entitled 'Fergy the Guide,' noticed in these columns some months ago. There is a swagger in his style that seems unduly artificial now and then, and the pocket flask comes forth so frequently as to suggest the callow youth who finds himself tipsy for the first time and is inclined to show himself proud of the achievement. Still, many of his descriptions are remarkably true to life, and they are permeated by a healthful sense of humor. The book might well have spared any description of the "sport" of shooting such a songster as the bobolink, but the passage ends with a condemnation perhaps severe enough to counteract any possible harm. Mr. Sandys distinctly prefers angling to shooting, on the humane ground that the devotee of the gun is apt to be too exclusively absorbed in the mere act of killing, while the angler is more open to accessory sources of satisfaction. But the fly enthusiast would hardly admit him as an angler: "It is not all of fishing to cast flies, nor is it all of sound sense to go without fish when you want 'em simply because the poetic way to take trout happens to be by means of a bunco bug, fashioned out of barbed wire and millinery, and bearing only a questionable resemblance to any honest insect." His chapter on the Mascalonge confines that fish within unduly narrow geographic limits. It is taken occasionally almost anywhere in the drainage basin of the Ohio. Dr. Jordan has in his collection the head of a fine specimen caught near Louisville, Kentucky, and the writer has seen a similar trophy from the Monongahela in West Virginia.

—"Et les morts ne reviennent pas!" exclaimed Berlioz after having seen and heard Bellini's "Romeo and Juliet." It is true, and can be proved. Were there ghosts who could return, Shakspere would be a familiar sight, reproach in his sad eyes, as he confronted the short-story writers who, with growing frequency, take his name hopelessly in vain. It is distressing to find Mr. Quiller-Couch at it in his 'Shakespeare's Christmas, and Other Stories' (Longmans, Green & Co.). Nor is there great relief in the abundant presence of Shakspere's father and the Burbages. Better, yet unsatisfactory, are the remaining stories in his volume, mainly of military adventure. The King's army versus the Parliamentary forces in 1644, Sir John Moore retreating upon Corunna, Wellington in Portugal, are showy names for labels; but the bush is mightier than the wine. Research and perfection of writing will not give a story wings. In fact, this favorite writer has put on what human personality constantly longs for—a new adjective, and has become, for the moment and with exceptions, dull. We rate among the exceptions the two capital Cornish stories of "Ye Sexes, Give Ear!" and "Frenchman's Creek," which have all the crispness and humor of the original "Q." May their tribe increase!

—'The Trend in Higher Education' is the title of a volume of essays, addresses, and papers by President William Rainey Harper (The University of Chicago Press). Many of them are published for the first time. They discuss from what the author would perhaps call the Western point of view the chief university problems of the day, generally in a spirit marked by great moderation. Some of the subjects are "The University and Democracy," "University Training for a Business Woman," "Shall College Athletics Be Endowed?" "Latin vs. Science," "Coeducation," "Alleged Luxury among College Students," and "The Length of the College Course." Summed up, it would be extremely difficult to say exactly what the author believes to be the nature of the "trend" which he discusses. This is partly due to the great number of subjects discussed, for, as the "Higher Education" has broadened, its field has widened so as to cover *omne scibile*. The "trend" is, of course, democratic, and scientific, and eclectic, and coeducational, and modern, and utilitarian; but when we go into details, we find ourselves lost in their immensity. On many subjects there are two sides, and here the author balances rather skilfully between them. The questions of Latin, luxury, and university training for a business career may be cited as examples. On the whole, the book is that of a man of learning of no very pronounced views, who may be called an educational opportunist. He would have the university a true university, and a modern university, and a university which repels no good sort or condition of man; but he would rather have details of administration and study determined by the circumstances of the particular foundation and the terms on which it is acquired. This balance and moderation saves the author from many pitfalls, and at the same time makes it difficult to criticise in any very specific way his attitude towards the "trend."

—Mr. George Washington Moon, who describes himself as "an old man between eighty and ninety, 'a man of war from my youth,'" will be remembered by some readers, no longer young, as the author of an attack on Dean Alford, called 'The Dean's English,' conspicuous chiefly for an innate certainty on all subjects. Age has not withered him, and he has now entered on the field of art criticism, with all his old asperity, cock-sureness, and cheerful ignorance. In 'The £30,000 Portrait in the National Gallery' (Brighton, Eng.: Francombe's Library), he has set out to prove that this canvas is neither a painting by Titian nor a portrait of Ariosto, and he is at least half right, for the portrait is almost certainly not Ariosto's and only doubtfully by Titian; but surely no one ever made a lamer argument for a sustainable thesis. Apparently, Mr. Moon has never heard that Titian's early work was profoundly influenced by Giorgione's and is almost indistinguishable from it; and his method is to quote the vaguest generalities of criticism about Titian's mature style—such as that it was marked by "nobleness," "senatorial dignity," "grandeur and importance," and the like—to find the imputed characteristics, in his own opinion, lacking in the portrait under consideration, and to conclude triumphantly, with heavy underscoring, "*Unquestionably, it was not painted by Titian: for it lacks the acknowledged characteristics of his work.*" The author's ineptitude is best shown, perhaps, in his holding the artist responsible for the costume, which is simply that of the time, and which, he says, "looks like a woman's low-neck dressing-gown, having, round the top of it, a muslin frill!" "Why!" he proceeds, "those American millionaires and their friends have been playing a practical joke upon us by cajoling the National Gallery authorities into becoming the possessors of what they credulously thought to be a portrait of Ariosto by Titian; whereas in reality it is neither a painting by Titian, nor is it a portrait of Ariosto; but is a grotesque combination of the comical and the serious; and represents a little crouching dwarf, with a disproportionately large, and misshapen head;—in fact, a droll personification of 'Humpty Dumpty, Sitting on the Wall!'" Such is his delightful description of an admirable sixteenth-century portrait, which, if it is *not* by Titian, can scarcely be by any one else than Giorgione.

—But the true significance of Mr. Moon's

pamphlet (it is scarcely more), like that of a lady's letter, is in the postscript, in which, having satisfactorily established his position as a connoisseur, he describes several pictures in his own possession, prudently refraining from guaranteeing their authenticity, but roundly asserting them to be by Raphael, Titian, and others, and naming the prices at which he is willing to dispose of them. His "Titian" he asserts to be a portrait of Cardinal Bembo, when secretary to Leo X., but he does not produce the other portraits on which he bases this identification. As to the attribution, "the two principal living experts—men whose names are synonyms for honor and ability," differ about it, one considering it to be the work of a seventeenth-century Italian, the others thinking it by an eighteenth-century German. It follows, of course, that it must be by Titian. The "Raphael" is reproduced, incautiously, and we fear that three pages of elegant extracts about the divine sweetness of the great Umbrian's style will not reassure the doubters. One of Mr. Moon's pictures, by a hitherto unknown artist, should have a value of curiosity—we refer to a "Venice—Sunset; a Fisher," by J. M. W. Turner, P.R.A. As it is said to have been exhibited "the year in which he was elected president," it should be cheap at 5,000 guineas. For the benefit of future historians of the Royal Academy it may be stated that that year was 1845. Mr. Moon's crowning proof of critical acumen, however, is his discovery that, in his "Titian," "not only do the eyes follow you, when you move to the right or the left; but the whole head seems to turn and follow you. . . . This," he says, "is the perfection of portrait painting; and Titian was the greatest master of the art." The conclusion is obvious. The painter of this portrait could not produce, on a flat surface, a head that you can walk around and see from various points of view—neither could Titian—therefore! The reader rubs his eyes and wonders in what age he is living.

THE HISTORICAL SAGAS OF ICELAND.

Origines Islandicæ: A Collection of the more important Sagas and other native writings relating to the Settlement and Early History of Iceland. Edited and translated by Gudbrand Vigfússon and F. York Powell. In 2 vols. Oxford: Clarendon Press; New York: H. Frowde. 1905.

The old literature of Iceland is among the most striking literatures that the world has ever seen. The population of the island has never been more than about seventy thousand, and the people have always had to resist a climate of grim severity, with few of the comforts and none of the luxuries of life. But both in prose and in poetry they have produced much work of the highest merit, work with a character entirely its own, hardly more unlike the literature of the primitive Greeks, or primitive Arabs, or primitive Celts, than it is to the literature of the earlier Middle Ages among their Teutonic kinsfolk in Germany. With the poetry of the Icelanders, the two volumes that lie before us have nothing to do. It was collected in a book by the same authors as those to whom we owe these volumes, a book published some twenty years ago under the title of 'Corpus Poeticum Boreale.' What we have now is only prose writings, and only a selection from a much larger mass of such prose writings as have a certain historical interest, because they contain matter which throws light on the annals of Iceland and (to a less degree) on the annals of other parts of northwestern Europe during the tenth and three following centuries. The selection is to some extent arbitrary, because no two persons would quite agree as to which writings were entitled to be called historical, nor as to which were so easily accessible in print elsewhere that it was needless to include them in the present collection. However, even those who may not adopt the view these editors have taken, will be too grateful to them for what they have here given us to quarrel with them over any questions of insertion or omission.

The principal contents of the two volumes —we need not enumerate everything contained—are as follows:

(1.) *Landnámabok*—the Book of the Land-Taking, whereof more anon. This work, the foundation of the chronicles of the island, is followed by several genealogies, extracted from the Story of Njal and various other sagas, and placed here in order to illustrate and complete the family records of Landnáma. Icelandic history has the genealogies for its skeleton.

(2.) *Islendingabok* (Libellus Islandorum) a collection of notes made in the eleventh or twelfth century, chiefly by Ari the Wise, a learned Icelander, relating to the old law and customs of the Norsemen settled in Iceland, followed by other scattered matter bearing on the same subject, taken from other ancient sources.

(3.) Tales and Legends relating to the conversion and early church history of Iceland, including the Lives of sundry ancient bishops, together with miscellaneous matters, partly tales, partly bits of ecclesiastical law.

(4.) Sagas relating to the history of Iceland during the first two centuries (roughly from A. D. 900 to A. D. 1100), divided into four sections, which treat of the South, the West, the North, and the East Quarters respectively. Among these there are some well-known tales already translated into English, such as the Eyrbyggja Saga, the story of Gisli, and the story of Viga Glum, with others less familiar and hitherto untranslated, such as the vivacious and dramatic Saga of Hrafnkel Freysgodi (Priest of Frey).

(5.) Sagas relating to the exploring voyages of Icelanders, including the two which describe the first discovery of America, the story of Erik the Red and the story of Thorfinn Karlsemne.

All or nearly all of this matter has, we think, been printed before in Iceland or in Denmark, but much of it is now accessible only in books that have became scarce, and in texts far from accurate. It is therefore a great service to the student of the old Northern history and language to have so many tales brought together in this convenient form, and to have a text which has been carefully revised. Those who read Icelandic are still unfortunately so few that the addition of an English translation of most of the contents of the volumes is a great boon, while even the scholar who knows the language may be grateful for the help an almost literal translation gives in making out passages which are often of some difficulty.

How much is due to each of the two editors is not stated in the preface. Both, alas! have left us. Gudbrand Vigfússon died some years ago, and York Powell, Regius Professor of Modern History at Oxford, passed away in the spring of last year. Apparently the revision of the text, and the valuable prefatory notes to each saga dealing with its text and the date of its origin, are due to Vigfússon, while the translation has been done by both working together, as they worked in the preparation of the 'Corpus Poeticum Boreale.' Vigfússon was a scholar of eminent learning and extraordinary care and assiduity, who knew the literature of his native isle as few men in modern times have done. York Powell, with far less mastery of the Icelandic sources, had great literary talent and a wonderfully wide range of knowledge. It was hard to find any historical subject about which he was not almost as well informed as those who had made a special study of it. Unfortunately, he was not businesslike in his literary habits, and has left us far less than his gifts and attainments would have enabled him to leave had he been more methodical, and had he been willing to read less that he might produce more. Thus the book is in several respects unfinished, for it has not received that revision which it needed all the more because Gudbrand Vigfússon died before giving to it the final touches which only he could give. Nevertheless, deeply as we must regret the loss of these two distinguished men before completing their work, the book as it stands is one of great value, and will doubtless find a place on the shelves of every university library and of every scholar of the old Northern literature.

Before we pass to the sagas themselves, a word may be said about the translation. It is clear, direct, and simple, slightly archaic, as is right, but not so quaintly archaic as the later translations from the Icelandic which we owe to the late William Morris and his coadjutor, Mr. Eirikr Magnússon. The proper names are, however, treated in a puzzling way, being sometimes given in their old (though not their oldest) Icelandic form, and sometimes, where they have (as usually) a meaning, rendered into Old English equivalents. It would have been better to give them always in Icelandic, explaining the meaning in a footnote. Every now and then old-fashioned English words are used which need a glossary to explain. How many of us know what is meant by a "cog" or by an "oyce"?

The Icelandic saga is a remarkable and indeed almost unique form of literature. It is in prose, though fragments of verse are found here and there imbedded in it, being the verses of old poets or composed by the persons themselves to whom the story relates. The prose is plain, simple, concise, nervous, unsurpassable for clearness and directness. No better narratives are to be found in any language. The style and manner are most like those of parts of the Old Testament, such as the story of Joseph in the book of Genesis, or the stories of Deborah, Gideon, and Samson in the book of Judges. Herodotus tells a story equally

well, but he tells it with a more obviously artistic touch; for though there is an art in many of the sagas, it escapes notice, owing to the perfect ease with which the narrative flows on, and to a simplicity that would be bare and hard were it not so fresh, were not the incidents so true to human nature, were not the language the necessary and inevitable language in which to convey the incidents. The narrator never interposes comments or reflections, nor do we find anything to enlighten us as to who the narrator was. We seem to listen to his voice as he repeats his tale to a listening circle in the hall of an Icelandic house in the long nights of an Arctic winter. Much of each tale consists of talk passing between the actors; and the talk is always short, crisp, and vigorous, ringing clear like the stroke of a sword on a shield. Often intensely dramatic, it gains in its effect from the very absence of any comment, even such comment as the chorus makes in a Greek tragedy. All that happens seems to be the natural result of character, and of that conjunction of circumstances which makes Fate. Though Fate is rarely mentioned, one often feels its overmastering power just as in a Greek tragedy.

Most of these sagas grew up in the eleventh century, and lived on the lips of the story-tellers for two or perhaps three generations before they were written down. Many have doubtless perished, and some have been preserved in only one manuscript. The most remarkable, as an historical document, though not so interesting as a piece of literature, is the one with which this collection begins, the 'Book of the Land-Taking.' It enumerates the various chiefs who settled in Iceland from A. D. 874 onwards, coming mostly from Norway, but a few from the Norse colonies in Ireland and the Shetland Isles. Each settler's genealogy is given, sometimes running back two or three or even four generations, and his children and more remote offspring down to the date of the compilation of the book. The place where he settled is mentioned, and details are often added as to his adventures or his character, and the fortunes of his descendants. Thus the book constitutes a sort of biographical dictionary and politico-geographical sketch of Iceland to which there is no parallel in the early literature of any other European country. It reminds one a little of the catalogue of heroes and ships in the second book of the Iliad, but is a great deal fuller and more minute; and it also reminds one of Domesday book, though more occupied with genealogies and less with land. Curious anecdotes are interspersed, throwing much light upon the customs and life of the Icelanders; so the book, though almost as full of proper names as the genealogical chapters of Nehemiah and Ezra, is much more entertaining. As is observed in the preface to these volumes: "No other work is so thoroughly representative [as is Landnámabok] of that unwearied interest in personal and local details which was characteristic of Icelanders in the past, and is by no means extinct at the present day." The book, in its oldest form, was compiled by Ari hinn Frodi (the Wise), a learned Icelander who, born in A. D. 1067, lived till 1148. It was revised by two hands in the thirteenth century, and has come down to us with a good many additions later than Ari's time, though these additions are in most cases so old as to be of nearly equal value to the older parts. It is the foundation of all we know about the beginnings of Iceland, and its genealogies serve to connect the other sagas.

We must pass over the tales which relate to the Christianization of the isle (A. D. 1000), and the doings of the early bishops, to come to the sagas in the second volume, most of which are rather biographical than historical, though enshrining some historical and legal facts, and illustrating the life and manners of the people in a way which gives them historical value. Among these, none is more interesting to American readers than the saga of Eirikr Raude (Erik the Red). Erik was, according to Landnámabok (p. 72 of this edition), the son of Thorvald, the son of Àsvald, the son of Ulf, the son of Yxna-Thori (all chiefs in Norway), and came with his father to Iceland, whence he sailed to Greenland, and became the first settler and principal chief there in or about A. D. 984. While he was living there, there came to Greenland an Icelander named Bearne, who, in sailing from Iceland to Greenland, had been driven far to the south, and seen lands unknown before. The news of this discovery roused the adventurous spirit of Leif, son of Erik the Red, who presently fitted out a ship with a crew of thirty-five men, and sailed from Greenland to look for the new lands. First he came to a land where there was no grass, but great sheets of shale ran up from the shore to glaciers above. Next, after sailing further, they came to another land which was very low, and where were woods behind a beach of white sand. Then, putting out to sea again, they ran before a northeast wind for two days, and came to islands lying off a grass-covered coast, and ran into a shallow bay, where a river entered, and their ship was left upon the shoals by the receding tide. Here they spent the winter, building themselves booths and stringing their hammocks in them. They caught salmon, as many as they wanted, and they said that there was no frost in the winter, and the herbs hardly withered. A German, who was in their company, found vines, so the land was called Vinland.

Another saga, called after another Icelander named Thorfinn Karlsemne, gives an account of this voyage of Leif's differing in some points, and adds a narrative of a later voyage made by Karlsemne himself southward from Greenland, along the same coast, in which a number of further details about Vinland are given, including stories of trafficking and of fighting with the natives of the land, who are called Skraelings, and the physical characteristics of whom point rather to Esquimaux than to North American Indians such as one would expect to find in regions where the climate was mild enough for wild vines and wild wheat to grow, and where the sun in midwinter rose at the time of day-meal (8 A. M.), and set at the time of afternoon-meal (4 P. M.). This is one among many difficulties attaching to the narratives of these two sagas, as we have them. But that Icelanders did find new lands far to the south of Greenland, and did get down to a temperate climate, seems to admit of no doubt. We need not be tempted to identify the bay where Leif landed with Newport or the Charles River. The indications are vague, as might be expected in a story that has passed through many mouths. But, vague as they are, and marvellous as are some of the incidents narrated, there is obviously a substratum of fact, and the things related about Vinland and the Skraelings have every appearance of belonging to that substratum. There is little that one can call romantic or fantastic about them. References to these discoveries occur now and then in other Icelandic tales, and we are told that a bishop of Greenland set off to refind the then lost lands about A. D. 1121, and that in 1347 a vessel went as far as one of the more northerly points touched at by Leif. Thereafter the curtain (first raised by Bearne) falls, not to rise till after Christopher Columbus.

Apart from these stray lights upon history and geography, these sagas present a wonderfully fresh and vital picture of Old Northern life and character. The customs and beliefs of the people, their legal usages, which occupied a great part of the thinking and doing of the Norsemen, their family relations, including the duty of avenging a kinsman's death, and their superstitions, often extremely curious, are all set forth with bold lines and in strong colors. As the sagas were written down in Christian times, there is less left of the old mythology than one could desire, yet more than we find of the old Celtic mythology in the primitive Irish writings. One remarkable difference between the early Norse and the early Celtic literature must not be omitted. There is much less feeling for nature among these Teutons than one finds among the Celts. Man occupies them entirely, and nature is not referred to even so far as to give any sort of background or any sense of atmosphere. On the other hand, the delineation of character is incomparably more sharp and telling than it is in the Celtic tales or poems, and the narrative incomparably more spirited. In this respect it is only the Greeks who can be deemed to have equalled or surpassed the Icelanders, equalled them in vigor and dramatic quality, surpassed them in largeness of conception and in finished grace of execution. The epics of early India, the epics of mediæval Persia and the early Middle Ages in Europe, the ballad poetry of Europe a little later, even the lyric poetry of early Arabia, are all far less interesting, and present far less striking pictures of human life than do these products of nameless sagamen and poets in the snowy North.

The Native Tribes of South-East Australia. By A. W. Howitt, D.Sc., Honorary Fellow Anthropological Institute of Great Britain and Ireland. Macmillan Co. 1904. Pp. xix, 819.

The Northern Tribes of Central Australia. By Baldwin Spencer, M.A., F.R.S., sometime Fellow of Lincoln College, Oxford, Professor of Biology in the University of Melbourne, and F. J. Gillen, Special Magistrate and Sub-protector of Aborigines, South Australia. Macmillan Co. 1904. Pp. xxxv, 784.

L'Origine des Pouvoirs Magiques dans les Sociétés Australiennes. Par M. Mauss, maître de conférences pour l'histoire des

religions des peuples non civilisés. (École Pratique des Hautes Études. Section des Sciences Religieuses.) Paris: Imprimerie Nationale. 1905. Pp. 55.

'The Northern Tribes of Central Australia' is a worthy successor to the authors' previous work on the native tribes of Central Australia, which added so much to our knowledge of primitive man in the island-continent. After a general ethnographic introduction, the following topics are discussed: physical features, social organization, marriage ceremonies, totems and sacred ceremonies connected therewith, the *churinga* and allied objects, *intichiuma* ceremonies, eating the totemic animal or plant, initiation ceremonies, fire ceremony of the Warramunga, traditions relating to totemic ancestors, magic, medicine men (their power and making), superior beings, burial and mourning customs, the avenging party, welcoming dance, names and naming, various customs (knocking out teeth, giving blood, hair, childbirth, food-restrictions, nose-boring, inheritance, fire-making), myths (sun, moon, stars, comets, rainbow, whirlwind), weapons and implements, clothing and ornament, decorative art. Pages 745-766 are occupied by a glossary of native terms used, and pages 767-773 by a list of totem names (mammals, birds, reptiles, amphibia, fish, insects, mollusks, plants, material objects, natural phenomena, human beings). In an inserted table are given the chief physical measurements of 23 adult males, 17 adult females, 7 girls, and 5 boys. The numerous illustrations, as is also the case with those in Mr. Howitt's book, are excellent and are as instructive as the text itself.

This work endeavors to fill the gap in our knowledge of the tribes inhabiting the wide extent of territory between the Macdonnell Ranges and the Gulf of Carpentaria. The intimate nature of some of the information published arises from the fact that one of the authors spent nearly twenty years among the Arunta tribe, while "both are regarded as fully initiated members of the same tribe." Possibilities of observation and photography were open to them that were utterly beyond the reach of other investigators. Among the chief general results of their inquiries the authors find that, in so far as important beliefs and customs are concerned, there is no radical difference between tribes which count descent in the male line and others which count it in the female line. The belief that the members of the totemic group are responsible for the increase of the animal or plant which gives its name to the group, is more widespread than was formerly known. Universal in the area in question is the belief that every living member of the tribe is the reincarnation of a spirit ancestor (the method of determining the totem of the individual varies in different tribes, from the simple ideas of the Arunta and Kaitish to the complicated notions of the Urabunna). Moreover, these tribes, which believe that "the child is the direct result of the entrance into the mother of an ancestral spirit individual," have, the authors assure us, "no idea of procreation as being directly associated with sexual intercourse, and firmly believe that children can be born without this taking place." It is astonishing that a people of the capacity of the Australian blacks, as shown by some of their other ideas and accomplishments, should entertain so naïve a view of a fundamental human attribute. With a change of environment, the Australian mind might have developed some brilliant parthenogenetic lore, doctrines of virgin-birth, and the like. But the Gnanji, "a wild and savage-looking people," who form a sort of buffer between the coast and inland tribes, have a quite definite belief that "a woman has no *moidna* or spirit part," and, consequently, while many spirit female children exist, "they never undergo reincarnation." Where girl infants come from is not made clear by the native ideas.

Another interesting fact brought out in this book is that, while among the tribes considered there exists "a most remarkable agreement (often, indeed, extending to details) in regard to some of the most important customs and beliefs," there exists also, side by side with these resemblances and identities, "equally marked divergence in regard to speech" (p. 15). The Arunta and the Kaitish, *e. g.*, on perfectly good terms with each other, possessing "customs, organization, and beliefs almost identical," have mutually unintelligible languages. Here, again, we meet a phenomenon well known in primitive America; indeed, the problem of the relation of all the Australian tongues to one another and to a common stock raises the questions familiar to students of American Indian languages. As to the peopling of Australia, the authors hold to the theory of two immigrations by the far north of the island—the original one, of which the Tasmanians (who reached what is now that island when land-connections still existed) were the modern representatives, and a second one (ancestors of the present Australian blacks) the participators in which were of a somewhat higher stage of culture than the first. These proto-Australians spread over the land from the north in three directions: coastwise (east), riverwise (southwest), and towards the centre. After the second migration the waterways separating Australia from lands on the north operated to prevent any further immigrations on a large scale, and Messrs. Spencer and Gillen are quite right in scouting the idea of any sensible Malay influence, and in declaring that, "if there be one thing which, more than any other, is strikingly true in regard to the present inhabitants of the continent, it is that, except to a very slight extent on the north-east, they have been uninfluenced by outside peoples." The course of such changes in totemic customs, etc., as can be detected has been from north to south, following the original line of migration, which is also further indicated by the fact that "such things as *corrobborees*, which are handed on from tribe to tribe, always pass from north to south, and never vice-versa."

Our authors emphasize the importance of the informal discussions (there is nothing like a definite "meeting" in our sense of the term, with set dates and regular speeches) which take place during the performance of the principal ceremonies. Here matters of tribal interest are discussed, and "it is undoubtedly by means of the meetings and consultations of leading men such as these that changes in regard to customs can be introduced." It is thus that the natural conservatism of some savage peoples can be overcome and reforms made possible. On these points our authors are in agreement with Mr. Howitt. There is something of truth, then, in the traditions that ascribe to certain special men or women the invention of this implement or weapon, of that custom or institution. The position of women and of the aged among the tribes studied by Messrs. Spencer and Gillen is by no means so desperate as has been charged against the Australian natives by many writers. Apart from certain revolting ceremonies which are a matter of ancient tribal custom, "the natives, on the whole, are decidedly kind to one another," and there is "no such thing as allowing an old and infirm person to starve." The stories of brutal treatment of wives and of continual and cruel inter-tribal warfare are very much exaggerated. The so-called "wife-captures" are very often only prearranged elopements, and "the members of contiguous tribes, where they are in contact, live for the most part in a state of mutual friendship." The initiation ceremonies (the rite common to all the ancestors was probably that of knocking out a tooth) bring about in the life of the men a duality of experiences and activities—"a peaceful monotony" of the ordinary existence common to men and women, "broken every now and then by the excitement of a fight"; and, on the other hand, "matters of a sacred or secret nature," concealed more or less from the women, which, with increasing age, "occupy by far the greater part of his thoughts," while his mind's eye contemplates return to the spirit home and subsequent reincarnation. Up to the age of fourteen, however, the young Australian is "perfectly free" to wander, to play, to work, to watch, to imitate where permissible, at will. When he is made a man, he puts off childish things.

The prevalence of individual marriage in Australia is greater than is commonly supposed, and most of the sexual irregularities occur in connection with ancient ceremonies, representing, some authorities think, the reluctance of the primitive group to permit to any one man the monopoly of any one woman. The interesting Intichiuma ceremonies, which (except "rain-making") had been known only from the Central Australian tribes with male descent, are found by Messrs. Spencer and Gillen to "exist well developed in the case of tribes which count descent in the female line, and in which also there are no true class names, but only names for the moities." The Warramunga, with whom the present work is concerned, have some peculiar and suggestive totemic ceremonies relating to a mythic ancestor, the *wollunqua*, a great snake, who is said to be still living in the Thapauerlu waterhole in the Murchison range. In the *nathagura*, or fire ceremony, of the Warramunga the women take part. Of the medicine men we are told (p. 479) that, "with the exception of the Anula tribe, on the Gulf coast, the function . . . is to withdraw, and not to impart, evil magic." The form of magic most widespread is that associated with pointing-sticks and bones. Among the twenty tribes inhabiting the central and north central portions of Australia, there is, apparently, no equivalent of the beings called *Baime* or *Daramulun* (all-fathers, supreme beings) reported from the tribes of

the east and southeast, although, in the initiation ceremonies among all the central tribes, the women and children are made to believe that the sound of the bull-roarer is the voice of a great spirit coming to take away the youth. To the set of customs and beliefs relating to these beings our authors prefer to apply the term "sacred" or "secret," rather than "religious." Regarding such "moral precepts" as exist among these tribes, they do not think they are supposed to have the sanction of a "superior being," but probably "have originated in the first instance in association with the purely selfish idea of the older men to keep all the best things for themselves."

The myths and traditions relating to the celestial bodies are comparatively small in number among these tribes; and the stars, except the very bright ones, seem much neglected. With respect to the rainbow, the Kaitish and the Anula entertain opposite opinions, the former believing that it follows, the latter that it precedes, the rain. Another instance of foreign influence is to be found in the fate of stone implements, the making of which "threatens to become rapidly a thing of the past over practically the greater part of the central area." This is due to the introduction of iron tomahawks, hoop iron, wire, etc. Their stone implements range from very rude specimens, like those of the old Tasmanians, to chipped ones "as well made as those found in European barrows." Of spears no fewer than eleven main types are described. The "true central" tribes do not manufacture fish-hooks, but capture fish by driving them onto the land out of the shallow water-holes. They are likewise ignorant of boats, there being no water to occasion their use; but, as the authors point out (p. 666), there is a striking likeness in form between the *pitchis* (or wooden bowls) and boats. In the matter of decorative art, Messrs. Spencer and Gillen are of opinion that "the Central Australian savage has been but very little influenced by his natural surroundings." His delight is in the production of wavy lines, circles, and spirals; that of the West Australian is in squares and zigzag lines. The origin of these geometrical designs is not known, and they have now purely conventional meanings. The ground-drawings, which are a prominent feature of some of the totemic ceremonies, are perhaps the most interesting specimens of Australian aboriginal decorative art. The idea entertained by some writers that the modern Australian blacks are a people who have "fallen from the high estate" of their ancestors is not tenable in view of the facts disclosed in this volume. The authors well say that the "elaborate ritual," about which so much has been said, "is without doubt elaborate, but, at the same time, it is eminently crude and savage in all essential details," and "though the ceremonies are very numerous, each one is, in reality, simple and often crude, it being only their number which causes them to appear highly developed." This truth many observers have never seen.

Professor Mauss's little monograph on Australian magic is one of many essays which might be based upon the books just reviewed. He claims to have read practically all the literature of the subject, and his references are certainly numerous enough. He treats the matter under these heads: the magic power, birth, revelation, initiation by other magicians (traditional revelation), the relation between initiation by revelation and initiation by magic traditions, the preservation and the disappearance of magic powers. The initiation ceremonies, etc., have the result of producing in the medicine man and his adepts "a state of collective belief" by virtue of which he becomes at one and the same time the explorer and the slave of the social consensus, the "public opinion" of the tribe. He is half-sincere, for his early ecstasies are not altogether feigned, and the perfect credulity of his disciples convinces him not infrequently of the reality of their experiences. The Australian medicine man has at least that "half-sincerity" possessed by the professional magicians of all lands. He is in a position to fill out his personality, and this is what primitive society demands of him; he acquires, as it were, a "new soul," which permits him to have particular and intimate relations with nature and man, alive and dead and waiting to be born. He is what he is, does what he does, is treated as he is, because society intends and urges him to be such. He is, in fact, a being of the greatest sociological value.

These two books, full of new and important data, and this little essay, seeking to reach a generalization upon one particular topic, are among the most recent and most valuable contributions to the literature of the Australian aborigines. In reading them one is impressed more than ever with the fact of the essential unity of the human mind and the psychic nearness of all peoples to ourselves, whether the distance that separates us from them be one of space, time, race, or culture.

MORE BIRD BOOKS.

The Home Life of Wild Birds: A New Method of the Study and Photography of Birds. By Francis Hobart Herrick. Revised edition, with 160 original illustrations from nature by the Author. G. P. Putnam's Sons. 1905. 8vo, pp. xvi, 255.

Photography for "The Sportsman Naturalist." By L. W. Brownell. Macmillan Co. 8vo, pp. xviii, 311.

Bird Life and Bird Lore. By R. Bosworth Smith, late Fellow of Trinity College, Oxford, and formerly Assistant Master of Harrow School. With illustrations. E. P. Dutton & Co. 1905. 8vo, pp. xx, 434.

The first edition of Mr. Herrick's 'Home Life of Wild Birds' was printed in 1901, and contained the most remarkable series of original photographs that had appeared in any one volume, as well as interesting and valuable notes upon the home life and habits of birds. A new method was announced, which consisted in what the author termed "the control of the nesting-site"—that is, the removal of the nesting-bough with its nest, and its transportation to some convenient place where satisfactory illumination of the subjects could be obtained and affairs at the nest could be viewed and photographed by the observer, who was concealed in a small tent placed close to the nest. Many grave doubts were entertained by critics as to the advisability of such radical measures, and great loss of bird life was predicted if it were employed, but the author now informs us that, during the past five years, only four broods out of fifty-nine have come to grief, and two of these owing to interference by hay-makers. This is a most remarkable record—our own observations show a much greater percentage of losses in undisturbed nests; in fact, the difference is so great that it would seem advisable to recommend the method for the protection it affords—that is, provided the observer employs all the precautions prescribed by the author. Professor Herrick tells us that the only depredation he fears is the irresponsible or malicious small boy, but the dangers from this evil are minimized by the almost constant attendance of the observer.

The present issue is in octavo form and has been largely rewritten and entirely reset. The first three chapters have been materially changed; chapter xi, on "Nest-Building," is entirely new, as are also in large measure those which follow, on "The Development and Care of the Young" and on "Life and Instinct." Forty-eight new illustrations have been added, and twenty-nine of the one hundred and forty-one that appeared in the first edition have been dropped.

Mr. Brownell's volume is one of the second series of the "American Sportsman's Library." The title is somewhat misleading; the contents would be better represented if the word "Sportsman" were deleted, since they not only deal with game photography (unless all is game that comes to the sportsman's camera), but portray various phases of animal and plant life. It is essentially a book for the novice, and it begins at the beginning, the stage to which most camera users return after a campaign of snapshots, and from which the second better directed and more useful sally is made. In this second effort the camera is usually employed in a certain definite direction to some particular end. In the early chapters, Mr. Brownell calls attention to the great need of good figures from life of almost all our game, and appeals to the sportsman to supply these as trophies of his art by combining with the gun the use of a camera. The camera, lenses, shutters, and the necessary apparatus for a field-worker, together with the appointments of the dark-room, are well treated in the next three chapters, which contain valuable suggestions to the beginner, and will undoubtedly save him not only many discouraging experiences, but a large amount of cash. The author might have been a little more positive in his statements on these topics, for, after his explicit instructions based on experience, it would hardly seem necessary that "the beginner should experiment for himself until he finds that which he considers best adapted to his use." These general instructions are followed by chapters on photographing mammals, birds, birds' nests and young, insects, fish, reptiles, flowers, trees, fungi, animals at the zoölogical gardens, and lastly a chapter on photographing in camp and woods. There is scarcely a field which has not received some consideration.

There is little doubt that much can and should be done in this line. Hunting with a camera offers the nearest substitute for hunting with the gun; the only disappointing part is the uncertainty of the result of your shot. Your game goes on, and all you have is the hope that your film

contains the image. While we agree in general with Mr. Brownell that photographs should represent the organism in the native free and living state, we also believe it next to impossible to get good, clearly defined pictures of many animals in this manner; and even if this were possible by the exercise of endless patience, we venture to ask how long it would have taken to secure the illustrations for such a work as Holland's 'Butterfly Book,' from life. The volume speaks of work done, of almost countless plates exposed, and many good results obtained. It is illustrated with eighty-four half-tone cuts, almost all after photographs by the author, selected to show the various phases discussed.

In 'Bird Life and Bird Lore' we have a popular treatise by a lifelong observer of English birds, who has the happy faculty of combining his personal observations with those of his predecessors and conferees into a series of pleasing and instructive sketches. For example, in his account of the raven, which embraces three of the ten chapters, we find a description of the fowl, his status in poetry, history, hagiology, and folklore, together with the author's observations, covering a period of fifty years. Throughout the book there is an earnest plea for the protection of birds, more particularly the much-abused Raptores, which appear to have been as ill treated abroad as in our own country in the past. The chapter on owls should convince the most skeptical reader that there is more good than evil in these birds of the night. "The Old Thatched Rectory and its Birds" (Stafford), "The Old Manor House and its Surroundings," and "Bird Life at Bingham's Melcombe" (Dorset), describe these picturesque places, their traditions and inhabitants, human and avian, and the relations they bear to each other. The Rectory was the home of the author's youth, while his later years were spent at Bingham's Melcombe. "A Day on the Norfolk Mere" narrates the events of an outing on the breeding-grounds of the water-fowl, while "The Wild Duck" discusses the mallard, its habits and present status as a game bird, and mallard hunting. Another essay deals with the magpie, which has received the same careful consideration bestowed upon the raven. The book is illustrated with seventeen half-tone reproductions of drawings and photographs of birds, bird-haunts, the Rectory, and Bingham's Melcombe, and concludes with an elaborate and complete index.

THE CIVIL WAR REVIEWED.

The War between the Union and the Confederacy, and its Lost Opportunities. By William C. Oates. The Neale Publishing Company. 1905.

The New Zealander's contemporary, or predecessor, will find in Gov. Oates's autobiographical history an unconscious but excellent delineation of the Southern American who made the civil war possible, and he will follow the mind of one type of Confederate soldier through those four years. It is quite enough for the political side of the volume to say that, a theoretical secessionist, the author maintains that the withdrawal of States from the Union would not have destroyed it, and consequently Lincoln's Gettysburg address was made "on the erroneous hypothesis that the life of the nation was at stake." "The assumption that the Confederates sought the destruction of the Union was preposterous" (pp. 36-37).

It would have been better had the author not discussed the general operations of the war, for where he treats of battles or campaigns in which he did not participate the work has no reason for being. It is not worth while seriously to notice statements of which this is an example:

"The United States soon [after the destruction of the *Congress* and the *Cumberland*] brought around the *Monitor* ironclad to attack the *Virginia*, which it did only at long range, . . . apparently afraid to advance on the *Virginia*. . . . The dread of the *Virginia* and the Confederate batteries on the Potomac caused Gen. McClellan to transport his troops to Fortress Monroe and the Peninsula via Annapolis [and thence] by transport" (p. 109).

The personal interest in this loosely written volume lies in the naïve account of the Fifteenth Alabama, raised in the southeastern part of the State, as it gradually "found itself" through the rough experience of the field and became a formidable agent of war. Doubtless it is a fair type of many other such organizations, agglomerations of unsophisticated units. A captain, whose name is given, made his first march in Virginia "at the head of his company with a great umbrella stretched over him." But he "was large and corpulent, a lawyer by profession, unused to the sun, fifty-two years old, and therefore excusable." This "therefore" is a clue to many of the oddities of those days. When Capt. Oates's company visited the field of the First Manassas, the crushed fennel and pennyroyal still emitted a pungent odor which some of the men attributed to the "dead Yankees, supposing that they had a different smell from other dead men"! Attacked, as all rural troops invariably are, by measles, Gen. Oates (he became a general in the Spanish war) sagaciously points out that the mortality from this, and he might truly add from all other camp diseases, is deplorably increased by the mistaken but invariable policy of new troops, when left to themselves, of maintaining regimental, instead of competent, hospitals. Country levies simply must pass through epidemics, frequently devastating epidemics, of those infectious diseases of which townbred regiments represent the survivors, and they cannot be properly cared for by and among their untrained comrades.

Rambling and careless in style, frequently in error as to events, sometimes grotesque in opinions and occasionally prejudiced against individuals (Longstreet being a conspicuous victim), the author so clearly intends to describe facts as he saw them that we draw attention to one experience, more important than a mere passing incident. It illustrates how easily the great currents of war may be diverted. Such examples occur in every campaign, in most great battles, nor is it just to attribute them all to neglect at headquarters. No commander is omniscient. It is only the very great general or the superior army that sometimes can shut the door once opened to disaster. It is familiar history that, on the second day of Gettysburg, Warren saved the Union left, probably the Union line, by hurrying in the very nick of time Hazlett's battery and Vincent's brigade, torn by his own initiative from another command, to the unoccupied crest of Little Round Top. On that day Lee had directed Longstreet to attack the Union left by the Emmittsburg road, and, without peremptorily fixing the hour, had desired this to be in the morning. For reasons satisfactory to himself, Longstreet delayed until the afternoon, by which time Law's brigade had arrived from toward Chambersburg. When Hood's division advanced, the Fifteenth Alabama was on the extreme right, which carried it beyond the Union left. Oates's original orders required him to pass up the valley between the Round Tops and to move by his left upon Little Round Top, the immediate key to the Union flank. But pressing back some intervening skirmishers, he was tolled to Great Round Top, still further to the Union left and 120 feet higher. Halting there, he entreated a staff officer of Law to authorize him to remain. Wisely this officer, who had been sent to learn why Oates had halted, iterated the order, and the course to Little Round Top was resumed. That delay cost the Confederates its possession. The time consumed by resting and by pleading for permission to hold that hill had been utilized by Warren, and, ten minutes before the assailants swarmed up the lesser height, Vincent and Hazlett were guarding its summit.

The delay, trifling in point of time, was the turning-point of the battle for that part of the field, and perhaps for the whole field; and although Col. Oates did not seem to appreciate it then, and perhaps does not realize it now, his allowing himself to be led off by the skirmishers and then dallying upon the Pisgah of Great Round Top appears to have sacrificed for Lee the second day of the battle. It is useless to say that Longstreet should have struck early in the morning, or that he should have taken the responsibility of modifying the letter of Lee's order as to the Emmittsburg road. When he did strike, there was time for the troops under Oates's immediate command to occupy the empty crown of Little Round Top, with the probability of effective support by Hood. Nor is it a sufficient answer that Great Round Top, where Oates was, commanded Little Round Top, where he was not. It was higher, but its apex was a thousand yards away, and out of effective infantry fire with the arms of '63. He might have made a Gibraltar of it, as he claimed; but, like Gibraltar, its significance was defensive. It had no aggressive value except for artillery fire, and two could play at that game. This was simply a matter of ten minutes, but of ten absolutely necessary minutes, minutes of fate.

Waning enthusiasm early in the war, straggling at all times, and wholesale desertion later, civil incompetence, and frequent military inefficiency are again and again reiterated as leading to the general failure. Among our author's ingenuous accounts of interior military life there is no mention of prayer meetings, which are conspicuous in Gordon's Reminiscences; but that both officers and men should be drunk on opportunity (pp. 165, 198) seemed a matter of course. Col. Oates is quite sure that, notwithstanding the Richmond press, the Virginians did not do all the fighting; he believes that the men from the Cotton States were the military superiors of those

from the Border States; and he feels certain that Hood's division, stronger by 2,500 than Pickett's, two of whose best brigades were absent, would have carried and held Pickett's objective at Gettysburg. There is constant and sharp criticism of Longstreet, upon whom so much post-bellum Confederate fire converged, and for Davis as a leader Gov. Oates has unconcealed contempt, although regarding him as "a noble man, true to the cause and the people he represented."

From this heterogeneous mass of anecdote, plain fact, and general argument, we select but one more example. It is the circumstantial account (p. 236) of a young wounded Union general's suicide within the Confederate lines at Gettysburg, as detailed "then and there" by the Alabama officer who demanded his surrender, Col. Oates himself not being fifty paces away. The report, which is not new, has always been denied by Union writers, but this record is very straightforward.

Gen. Oates attributes the failure of the Rebellion (as we prefer to call it) to a series of causes, some independent, some chainlike, as follows: Confederate independence was threefold more difficult to accomplish than had been apprehended. That is to say, the war was blithesomely begun without its cost being counted, and adequate means were never at hand. Firing upon Sumter was a mistake, because it consolidated the North, which otherwise would not have inaugurated a war of coercion (notwithstanding other forts and places were held by the insurgents in arms). An established credit in Europe at the very beginning, based upon cotton, would have furnished a gold basis for carrying on the contest. This reckons without the blockade. Negro soldiers under white officers, with their freedom guaranteed, should have met the Emancipation Proclamation in 1863. Of this later. The absence of a geographical barrier, which is a truth of nature, for

> "Man breaks not the medal when God cuts the die."

To live in peace with the United States separated by an artificial boundary would have been difficult, but not impossible—with no Fugitive Slave law! The "Lost Opportunities," chiefly tactical, we have no space to discuss.

Among his conclusions Gov. Oates recognizes an internal danger, a "troublesome and poisonous serpent," in the Confederate Constitution. As that Constitution, adopted almost solidly from the United States Constitution, made no provision to the contrary, according to Confederate doctrine Confederate success would have carried with it the right of a State to withdraw at will from the Confederacy. That would never do: "too fickle a standard for the basis of a great and stable Government." Gov. Oates would "have had the germ of dissolution forever blasted" by a requirement that the consent of the majority, or of two-thirds, of the States should be necessary for the withdrawal of one. But he admits that it is now settled "that the Union cannot be dissolved and that the States cannot be destroyed." The germ has been blasted.

The relation of slavery to the Confederate cause, and particularly the expediency of using negro troops in defence of the Confederacy, are now merely academic questions, along with that of the righteousness of the Confederacy itself. But they were so important in their day that it is well worth learning what this earnest fighting man, and we may suppose thousands of others, thought about it. Condensed, his statements are: The men in the ranks fought for home rule, local self-government, separate national independence, with slavery as an incident. No one is likely to believe that that rank and file reasoned out such conditions when they were enlisted—or conscripted. They simply followed their leaders. The motive of those leaders, the agitators and advocates of secession, he says was the perpetuation of slavery as a means of wealth. But even before 1863 the soldiers were beginning to talk of its being a rich man's war and a poor man's fight; and had the maintenance of slavery been officially proclaimed as the object for which alone the war was waged, the author asserts that the men-at-arms, two-thirds of whom never owned a slave, would have disbanded themselves and have gone home in ten days. Capt. Oates was very close to the men in the ranks, and he distinctly knew their sentiments. But he does not add that "the Congress of Bourbon incapables," as he styles the Confederate legislators, succeeded in impressing the soldiers with one set of principles while they sedulously cultivated another. As early as February, 1863, Capt. Oates thought out a plan by which the negro who was honorably discharged after Confederate enlistment should be forever free and receive eighty acres of land, while gradual emancipation should be provided for his wife and children. This was regarded by "the legislative dotards," as he pleasantly calls them, "as the vagaries of a young man's enthusiasm." When ruin stared them in the face, and after all the military leaders, in some form or other, had advocated arming the blacks, the Richmond Congress, in an act approved March 13, 1865, four weeks before Appomattox, authorized the employment of negro troops whose relation to slavery should be changed only by their owners' consent and the operation of State laws. That was the domestic institution and State rights sure enough! "A negro who did not have sense enough, under that law, to have deserted to the enemy at the first opportunity would have been too much of an idiot to have made a soldier" is a verbatim extract which shows both the author's sentiments and his style. We may safely leave the subject with Gov. Oates's mature judgment: "The institution of slavery had probably existed as long as it was of any utility as a civilizer of the African race, and as long as it was of any real benefit to the white race." "After slavery was practically dead, the Confederacy clung to the putrid body and expired with it." "But the utility of such Government [established by the combatant help of its slaves] remains in the obscurity of speculation."

A copious appendix is occupied with regimental history, charged with curious information as to the peculiarities of the men. It also reflects the writer, honest and artless. One example must be quoted: At Chickamauga "I slapped him on the shoulder and said to him, 'Tommie, my boy, give it to them.' He turned up his beautiful blue eyes, which were slightly crossed, his young face all begrimed with powder, and smilingly said, 'That is what I am doing, Colonel.'" One minute later "little Tommie was lying there, his brains shot out and he entirely dead."

We have given so much space to this book, which in one sense is worthless and in another is of the highest importance as a revelation of men, because, after four full years of fighting, the author was in the Alabama Legislature for two years, a member of two State Constitutional conventions, for fourteen years a Representative in Congress, Governor of Alabama, and a brigadier-general in the Spanish war. He certainly should be a typical Alabamian, so that even at this expense the operation of his mind is worth understanding. Full of errors in proper names, not to be depended upon for facts at second hand, sometimes mistaken in judgment, this is a document that real historians will absorb in their study of the men who, reckless of life and full of provincial patriotism, sacrificed so much in an unavailing effort to maintain that a part is better, if not greater, than the whole.

Protection in France. By H. O. Meredith. London: P. S. King. 1904.

The Progress of the German Working Classes in the Last Quarter of a Century. By W. J. Ashley. Longmans, Green & Co. 1904.

Current discussions of the fiscal controversy in Great Britain cover an ever-widening range of mooted questions, as the volumes now before us plainly indicate. First it was the real or imagined needs of the British Empire about which the Chamberlainites were concerned; then the necessity of retaliating upon protectionist countries supplied a text for the agitators; again it was the alleged decay of English industries under the malign influence of "dumping" that alarmed all patriotic souls; and now it is the experience of other countries that must be considered in order to gain real insight into the needs of the hour; hence these studies by Messrs. Meredith and Ashley.

'Protection in France' is one of a series of books upon "Protection in All Countries" to which Mr. W. H. Dawson has already contributed a very good volume upon Germany and Mr. A. Maurice Low a very bad volume upon the United States. Mr. Meredith begins by sketching the history of French commercial policy during the nineteenth century, pointing out that the period of severe restriction from 1792 to 1852 corresponds with the "setback towards extreme protection" which resulted in England from the Napoleonic wars; that the liberal policy under the Second Empire followed shortly the reforms of Huskisson, Peel, and Gladstone; and that the reaction toward higher duties which produced the French tariff of 1881 has its English counterpart in the agitation of the "fair traders" during the eighties and the "tariff reformers" of the present day. Had he been writing for German readers, he could have pointed out similar resemblances between successive stages of English and German tariff history.

In explaining the changes of French policy, Mr. Meredith finds it convenient to draw a distinction between what he calls "scientific" and "mercantilistic" protec-

tionism. The "scientific" protectionists, he says, recognize the general disadvantages of interfering with the natural course of trade, but believe that the particular circumstances of a backward country, like Germany prior to 1860, or a new country, like the United States, justify a temporary departure from the commercial policy that is best for such a country as Great Britain. The "mercantilistic" protectionists, on the other hand, still cling to the unintelligent superstitions of the seventeenth century concerning the balance of trade, the possibility of selling without buying, and the like. French protectionism of the last fifty years has been almost exclusively of the mercantilistic type, as exemplified by Thiers, Quertier, and Méline. Opposed to it there has been, of course, the small body of able free traders; but "scientific" protectionism has never made great headway in France.

In a most interesting manner Mr. Meredith then interprets the development of French tariff policy since 1850. Under the Second Empire the Government favored liberal policies, but the mercantile protectionists "were influential in the country, and had working majorities in both houses." Accordingly, while inclining toward the free traders, the Government sought to defend the policy of tariff reduction by arguments not inconsistent with the theories of mercantile protectionism. This it did by arguing that protective duties should not exceed the difference between the domestic and the foreign costs of production, and showing that, judged by this standard, existing duties were too high. Upon this theory the "conventional tariff" of 1861 was based, and in it the Government of the Second Empire never wavered. The result was, however, that the French tariff was liberalized upon protectionist principles, the free traders acepting a half loaf as better than no bread; so that the people of the country were never educated in the doctrines of free trade. It was natural, too, that when, after 1873, agricultural and other imports began to flow into the country in increasing volume, the protectionists should accept this as proof that, even upon the theory of the existing tariffs, duties were too low. Therefore, mercantile protectionism speedily gained the ascendency, and only a few resolute free traders have been found to lift their voices in opposition. From 1880 to 1892 the application of seventeenth-century notions to nineteenth-century policies became increasingly strict, until in M. Méline, the French McKinley, mercantile protectionism found its stoutest and most unenlightened advocate.

The effects of the tariffs of 1881 and 1892 Mr. Meredith has no difficulty in proving unfortunate. Neither agriculture nor manufactures, neither the laborer nor his employer, has prospered as it was confidently predicted that he would do, while a general "slackening in the growth of the trade of France" has been increasingly in evidence. The present tariff is as full of anomalies and crass absurdities as the McKinley or Dingley acts with which Americans are so sadly familiar. Mr. Meredith's general conclusion is that the intelligent student must condemn the existing system, whether he be inclined to hope for much or little from "scientific" protectionism. From any standpoint, except that of seventeenth-century mercantilism, the work of M. Méline is a dismal failure.

Professor Ashley's study of the German working classes is written, of course, from the standpoint of one who would wish to be considered a "scientific" protectionist. Its purpose is to show that "Germany has actually witnessed a great advance in the well-being of the masses of her people during the last quarter of a century—a period in which she has also been pursuing a policy of protection." The reason for the book's appearance seems to be that some of Mr. Chamberlain's unpatriotic opponents have argued that the condition of Germany should deter Great Britain from adopting a similar commercial policy. In order to demonstrate that the "advocates of tariff inaction" are mistaken in their references to Germany, Professor Ashley examines at considerable length the available evidence concerning the condition of the German people during the past generation. The agricultural classes, the workpeople in manufactures, the growth of savings banks, the progress of coöperative stores, statistics of meat consumption, facts concerning emigration, housing conditions, and many similar topics, are passed in review, the usual outcome being that a considerable improvement seems to be apparent. Finally, a chapter is devoted to the crisis of 1901—which some misguided souls had accepted as proof that protection does not give complete immunity from fluctuations in industry—and it is argued that the affair was not much of a depression anyhow, and that the country speedily recovered from it.

But the most significant feature of the book is not the facts presented, but the use which Professor Ashley makes of them. To a Méline or a McKinley, the progress of Germany during the last thirty-five years, be it small or great, would be proof positive that the whole movement was due to high protection, even though a high tariff was not adopted until 1879. But Professor Ashley has a scientific reputation to lose, and is, moreover, writing for an audience taught by men like Cobden and Bright, so that he does not play fast and loose with all rules of logic—and dictates of common sense. Therefore, he says: "It should, however, be perfectly clear that it is no part of my present contention that German progress in general material prosperity has been the result of protection; it will be quite sufficient for my present purpose if I can produce a realization of the fact that protection has not been inconsistent with—has, if you like, not prevented—a great advance." If the school of Smith and Ricardo and Cobden had done nothing more than produce an intellectual environment in which a militant protectionist finds it expedient to move thus circumspectly, it would be abundantly justified by its works. It is worth while to reflect upon the fact that in no other country—and not in England before the day of Cobden—has there ever existed such an intelligent body of economic opinion, which even a Protectionist must respect; and one may well wonder how long such conditions would survive a definitive triumph of Chamberlainism over Cobdenism. Professor Ashley, of course, was born in an age of enlightenment, and is not likely to relapse into seventeenth-century darkness. But how about a subsequent generation, knowing nothing of Smith, Ricardo, and Cobden? The Manchester School seems, after all, to have spread popular enlightenment upon the most difficult of economic questions. Can we expect as much from the Birmingham School of which Mr. Chamberlain is the political Boanerges, and Professor Ashley the leading "scientific" protagonist?

Chatham. By Frederic Harrison. The Macmillan Co. 1905.

A good deal of misunderstanding exists concerning the position which English Liberals, not of Lord Rosebery's school, hold with regard to colonies and Imperialism. Mr. Morley, for example, during his recent visit to this continent, took pains more than once to disclaim before Canadian audiences the idea that he was a Little Englander. On one occasion, at least, he boldly defied any one to produce from his "overabundant" speeches and writings any passage that voiced a wish to get rid of the colonies. Sir Henry Campbell-Bannerman and his followers, though the fact is far from being generally recognized, do not hold the position adopted by Lord Sherbrooke a generation ago. We make this preliminary statement because some readers might hold Mr. Harrison to be precluded by his political views from writing a sympathetic and adequate book on Chatham. But in point of fact no one who has dealt of late with the career of the Great Commoner has shown a deeper admiration of his nobler and more positive qualities. Cromwell urged the artist to paint him as he was, and Mr. Harrison looks upon Chatham as being a man lofty enough to have the full truth said about him.

The standard of measurement is given on the first page of the volume:

"In eight centuries," says Mr. Harrison, "our country has known but four great creative statesmen: men who, to use the words of a well-known historian, have been 'founders or creators of a new order of things.' William the Conqueror made all England an organic nation. Edward I. conceived and founded Great Britain. Cromwell made the United Kingdom and founded our Sea Power. Chatham made the Colonial System, and was the founder of the Empire. For good and for evil, through heroism and through spoliation, with all its fast and far-reaching consequences—industrial, economic, social, and moral—the foundation of the Empire was the work of Chatham. He changed the course of England's history—nay, the course of modern history."

From this passage it will be seen that Mr. Harrison rates Pitt's achievement as highly as ever it has been estimated by his most fervent admirers of the imperialist type. Furthermore, he is at some pains to repel or mitigate the criticisms which had been directed against the statesman's foibles and tricks of manner, including what Macaulay has to say about the crutch and the flannels.

Where there is such full recognition at the outset of Chatham's remarkable rôle in the modern development of England, one is led to conjecture what Mr. Harrison will have to say regarding the faults of temper and the other traits that marred the effectiveness of a genius otherwise so potent. As every one knows, Pitt ceased, from the moment when he entered the House of Lords, to hold a party together or direct the course of the national policy. Likewise, every one realizes, to a certain extent, how hampered he was by physical infirmities.

We doubt, however, whether it is universally known that, besides suffering agonies from hereditary gout, the whole working of his mind was conditioned by the effect it had upon him. Lord Edmund Fitzmaurice, when writing his 'Life of Shelburne,' asked Sir Andrew Clarke for an opinion rogarding Chatham's malady and its mental consequences. The statement which he received from the great doctor runs as follows: "Suppressed gout disordered the whole nervous system, and drove him into a state of mental depression, varying with excitement and equivalent to insanity. But there was no specific brain disease." Mr. Harrison's whole judgment of Chatham's later acts hinges upon the belief that he not only overestimated his powers as a party leader after he had entered the peerage, but could not command his faculties for any considerable length of time. Many of his contemporaries thought he was simply acting a part. This view Mr. Harrison repudiates with energy. "The fortunes," he says, "of England were delivered over to the perverse ambition of a dogged King, to the mischievous counsels of a distracted ministry, whilst the greatest brain and the finest soul of the age lay as it were in some mysterious trance."

Mr. Harrison (and this seems to us the gist of his book) looks upon Chatham as a just and humane imperialist, who might, but for the perversity of fate, have been expected to hold in check the baser impulses that were encouraged by England's successes in the Seven Years' War. Having the reputation of a great war minister, he is wrongly supposed to have loved war for itself. But though in his youth a cornet of the Blues, he never saw active service, and it would be impossible to prove that he had any lust of military glory. When he became prime minister, the fortunes of his country were in a desperate state, and it was his duty to retrieve the situation. He also saw what possibilities of colonial expansion lay before a maritime and self-governing people like the English. Had he been unhampered by colleagues, he would never have signed a peace with France until she had lost all of her colonial possessions and been forced to recognize in Prussia a Power of the first rank. Mr. Harrison doubts whether such overtopping success would in the long run have been a good thing for England; but, for Pitt's conduct of the Seven Years' War, he has no essential condemnation. He points out that the loss of life during the struggle was slight in comparison with the issues at stake, and exonerates Chatham from all charge of having had that craving for military fame which marks Alexander and Napoleon. "His wars were singularly sparing of blood, suffering, and ruin, to the victors as to the conquered. They have resulted in permanent conquests and settlements unexampled in modern history."

Although Chatham had wrought his life's work prior to 1762, and after that date suffered a considerable loss of reputation, we doubt whether Mr. Harrison would rate him so highly were it not for those traits which received illustration during the years when he was out of office. Shackled to a certain extent by his chivalrous regard for George III., he could never as a minister have been a party to the follies of the Stamp Act or have approached the Americans in any other spirit save that of fairness and generosity. A single vigorous phrase sums up his whole position in the matter. The Americans, he said, were the sons of England, and not her bastards. The word "conciliation" is one of the commonest terms which has come down to us from the great debates that culminated in 1775. But such conciliation as was desired by Chatham and Burke did not have its roots in any narrow motives of policy or desire for momentary advantage. For the élite of English statesmen and thinkers, the Americans were full partners in the imperial concern. Dr. Johnson may at first sight seem an exception, but his prejudice against the Americans was based, ostensibly at least, upon the fact that, while vociferously talking the language of freedom, they did nothing to emancipate the slaves. In the case of Chatham there was no wavering or inconsistency, and Mr. Harrison gives him credit for having done his best to check the excesses of the imperial movement which he had stimulated by winning the victories of the Seven Years' War.

Pitt's affectations and overbearing ways are not left out of sight in this study, nor is there any disposition on Mr. Harrison's part to disregard any of the shortcomings that rendered him a difficult colleague; but there remain after this candid and searching inquiry the same nobility of soul, scorn of petty self-seeking, breadth of outlook, and sublimity of purpose which made Pitt in his own day the idol of the whole English world.

Picturesque English Cottages and their Doorway Gardens. By P. H. Ditchfield, M.A., F.S.A., F.R.H.S. With a prefatory note by Ralph Adams Cram. Philadelphia: The John C. Winston Co. 1905. Pp. 112, 140 ills.

Of late many excellent books upon the minor domestic buildings of rural England have found their way from the press. Most of these are devoted to the buildings of a single county or to those of a group of counties in which similar influences have given rise to buildings that have a common likeness. Thus, Mr. Ralph Nevill has made an excellent book about 'Old Cottage and Domestic Architecture in Southwest Surrey'; Mr. W. Galsworthy Davie has photographed the old cottages of Kent and Sussex, and Mr. E. Guy Dawber has written a most valuable account of their planning and construction and the changes which their design underwent in successive generations. The same authors have performed a similar work for 'The Old Cottages, Farm Houses and Other Stone Buildings of the Cotswold District.' Mr. James Parkinson has photographed the minor half-timber buildings of Shropshire, Herefordshire, and Cheshire, and Mr. E. A. Ould has furnished the book with an introducion that worthily supplements its pictures.

To these must now be added Mr. Ditchfield's 'Picturesque English Cottages,' less technical than the others, equally well illustrated, and covering the field more broadly. For more reasons than one, it is well that serious study is being given to these simple but beautiful buildings. Changes are going on rapidly in England, and old cottages are constantly disappearing under the pressure of an increasing population. Even though the intrusion of modern buildings into English villages may not be causing a very rapid destruction of the beautiful cottages that form such an attractive feature of English rural scenery, yet the process is steady and unarrestable. Apart from this, however, it is most satisfactory to have at hand illustrations of a wealth of examples and well-written accounts of the construction and local peculiarities of a class of buildings from which we, if we could rightly interpret them, should learn much that might add to the reasonableness and beauty of our own houses. For, after all, reasonableness and beauty are the two predominating qualities of English cottages. Reasonable they always are, suited to the needs of the people who built them and made of the materials of their own district, thus having the inevitable charm of a well-marked local character. Incontestably beautiful they are, whether in the half-timber work of the well-wooded southern counties or of the Welsh border, or in the warm-toned brickwork of East Anglia, or in the fine oölitic stone that extends in a broad band from Somerset to Yorkshire and gives the distinguishing characteristics to the cottages of the Cotswold district, so different in all ways, save in their reasonableness and beauty, from those of the south and west.

Spontaneous they are, too, and not striven for with evident effort, as is all but the best of our work to-day. The way of their building was traditional, handed down from father to son, yet free from monotony and filled with the individuality of time and place. It is this spontaneousness, this inevitable quality resultant from an unaffected solution of a simple problem with the materials nearest at hand, that gives them that intimate alliance with their surroundings, that tieing in with the landscape, which not even the dullest can fail to note in them. The best of them, those of the sixteenth and seventeenth centuries, were built at a time when what flickering spark was left from the Gothic art of the Middle Ages had in cities been smothered by the advancing tide of the Renaissance, while in villages and throughout the country the tradition of that great art was preserved, not in its mere form, but far more vitally in its spirit. Those were the days when, in the country at least, and away from the sophisticating influence of the "new learning," men built instinctively with truth and beauty. That instinct is utterly lost. If to-day we find a simple beautiful house, it is because some one with a sense keener than his fellows for making a thing of beauty, some one trained for years in his art and craft, has given his best thought to the work, and has been, for once, favored by circumstances less antagonistic to the making of a work of beauty than have usually beset him. But the common country builders who made the English cottages, untrained as they were in all that goes to what we deem the making of an architect, reached simple beauty with a certainty and directness that failed as seldom as our effort to reach it succeeds.

It is, therefore, because of the high value to us of the instinctive art of these old buildings that we welcome Mr. Ditchfield's book. Its many illustrations are chosen with care, to show the variety of design prevailing in different parts of Eng-

land and in different centuries. The text, covering as it does such subjects as methods of construction, influence of material, the evolution of the cottage, foreign influence upon it, the cottage garden and its flowers, is entertaining, and by no means too technical for the uninstructed reader. Were it not for its binding, the book would be wholly without blemish. As it is, the man who clothed so excellent a work in so tasteless, so utterly inappropriate a cover, should tender his humblest apologies to its outraged author.

AN ILLUSTRATED RECORD IN FOUR VOLUMES BY

Richard Garnett, C.B., LL.D., *and* **Edmund Gosse,** M.A., LL.D.

Volume I. **From the Beginnings to the Age of Henry VIII.** By RICHARD GARNETT, C.B., LL.D.

Volume II. **From the Age of Henry VIII. to the Age of Milton.** By RICHARD GARNETT, C.B., LL.D., and EDMUND GOSSE, M.A., LL.D.

Volume III. **From the Age of Milton to the Age of Johnson.** By EDMUND GOSSE, M.A., LL.D.

Volume IV. **From the Age of Johnson to the Age of Tennyson.** By EDMUND GOSSE, M.A., LL.D.

The ripest achievement of two recognized authorities, one a foremost scholar, the other one of the most distinguished critics of the day.

In its scrupulous exactness the work does not lose sight of the fascinating human side of its subject. It tells not only who the writer was and what he wrote, but what he looked like, where he lived, who were his teachers, who his pupils, what his handwriting was and how he appeared in caricature to his contemporaries.

The illustrations are a supremely important feature of the work. One critic remarks: "To turn these pages is like visiting a museum of old manuscripts and paintings, and it is needless to say what a powerful instrument this is in making the subject vivid and raising the interest." It is almost impossible to find a page without some document of great interest or value.

The appeal of this work must not be misunderstood. It is not confined to any class or section. It is impossible for any one to open it and not find something to hold him interested as few story books can.

"By far the most attractive history of English literature that has ever been published."—*Journal of Education.*

"Never before was a popular history of literature so carefully planned or so satisfactorily completed."
—*The Review of Reviews.*

Illustrated with Colour Plates, Photogravures, Wood-engravings, and many Lithographic Facsimiles; also a large number of the best accredited Portraits of English Authors, Autographs, Title-pages, Caricatures, etc., etc.

Four Volumes, Imperial 8vo. Price of Set in Cloth, $20 net

PHILIPPINE ISLANDS
By
FRED W. ATKINSON,
First General Superintendent of Education in the Philippines.
DESCRIPTIVE, NOT CONTROVERSIAL.
Cloth, 8vo, 189 illustrations.
5 maps, 426 pages. Price $3.00 net.
GINN & COMPANY, BOSTON

F. W. CHRISTERN
(DYRSEN & PFEIFFER, Successors),
16 West 33d St., opposite the "Waldorf," New York. Importers of Foreign Books, Agents for the leading Paris Publishers, Tauchnitz's British authors. Teubner's Greek and Latin Classics. Catalogue of stock mailed on demand. New books received from Paris and Leipzig as soon as issued.

LIBRARY RESEARCH
Topics of all kinds and in any language looked up in the Boston and Harvard libraries for scholars, writers, and others. Abstracts, copies, translations, and bibliographies made. Proof-reading and revision of manuscript. Highest university and library references. MISS M. H. BUCKINGHAM,
96 Chestnut Street, Boston, Mass.

Jordan's Elementary Latin Writing
$1.00
This book is planned for the second, third, and fourth years' work in secondary schools, and aims to teach the student to write good Latin prose. The volume presents the important rules of syntax and a series of 100 graded English Exercises to be rendered into Latin. The first part of the book contains a brief summary of the general rules of syntax, arranged by topics in the order of their presentation in Latin grammars. The second part is devoted entirely to general exercises, which furnish more advanced and connected work than that previously encountered. An English-Latin vocabulary completes the book.

"THE FOUR-TRACK SERIES"

This is the title of a series of books of travel and education issued by the Passenger Department of the

NEW YORK CENTRAL LINES

These small books are filled with information regarding the best modes of travel and the education that can best be obtained by travel.

They relate specifically to the great resorts of America—to trips to the islands of the sea and around the world.

They also contain numerous illustrations and new and accurate maps of the country described.

A copy of the 52 page Illustrated Catalogue of the "Four-Track Series" will be sent free, upon receipt of postage stamp, by George H. Daniels, General Passenger Agent, New York Central & Hudson River Railroad, Grand Central Station, New York.

LIBRARY SERVICE

We aim to serve librarians with the greatest efficiency. We have

(1.) Competent and thoroughly equipped book men.
(2.) The largest miscellaneous book stock in New York City.
(3.) A valuable line of order lists —as follows—

A. Monthly Bulletin of the Latest and Best Selling Books.
B. Standard Library Catalogue.
C. Clearance Catalogue.

ALEXANDER WILSON

Any one possessing, or knowing of, any data in manuscript, or otherwise, relating to Alexander Wilson, the Scotch-American ornithologist and poet, will please communicate with me.

JAMES S. WILSON, Merwick, Princeton, N. J.

The American Journal of Sociology

EDITED BY ALBION W. SMALL
ESTABLISHED IN 1895

The Only Magazine Published in English Devoted Exclusively to the Field of Sociology

It is of special interest to professional men. The contributors include the best known sociologists in Europe and America, who keep its readers fully abreast of the times upon all debatable social relations—political, economical, educational, and religious—as well as upon those problems of social amelioration which are popularly and erroneously supposed to constitute the sole scope of sociology.

AN UNUSUAL OFFER

In the interests of our patrons arrangements have been made for many combinations of this journal with books and other periodicals. The book list includes such works as Small's General Sociology **Howard's Matrimonial Institutions, Ross' Social Control and Foundations of Sociology,** etc., with material savings in comparison with prices through other channels. The following is an example of the opportunities which we are offering for a list of periodicals covering a wide range:

American Journal of Sociology
Review of Reviews
Cosmopolitan
Woman's Home Companion
} **One Year, $3.75**
(Regular price, $7.00)

OPEN TO NEW AND RENEWAL SUBSCRIPTIONS

This is only one of the many combinations we can make. Write for particulars regarding others.

tells the story of a contented town, certain peculiar citizens and two fortunate lovers.

Illustrated. Cloth, $1.50. Ready next week

THE MACMILLAN COMPANY, Publishers, 64-66 Fifth Ave., N.Y.

The Nation.

NEW YORK, THURSDAY, OCTOBER 5, 1905.

The Week.

While the terms of the Anglo-Japanese treaty had been pretty fully disclosed, in one way and another, their official publication entire last week revealed the fact that the alliance is more sweeping than had been supposed. It covers not merely "Eastern Asia and India," but the whole world. Article 2 provides that if either Japan or Great Britain becomes involved in war "in defence of its territorial rights or special interests," the other "will at once come to the assistance of its ally." This is as broad as words could make it. If England goes to war with Germany, she can call the Japanese to arms. If Japan drifts into hostilities with France, the British *entente* with that country will at once be abandoned for war. Now nothing is clearer than that the nation having the greatest number of points of contact with the rest of the world will chiefly have the call on its ally. In other words, Japan is far more likely than England to be drawn into hostilities as a result of this agreement, which is an aggravated example of the (organized) sympathetic strike. Its two bases are hostility to Russia, which is really far stronger in England than in Japan—as much, one might say, as Sebastopol is further in the background than Mukden; and the calculation of world control by the union of two irresistible sea powers. Here again it is manifest that the charge for keeping up her navy will be proportionately much heavier on Japan than on England. We cannot think this for the good of Japan or of mankind. The treaty explicitly safeguards the integrity of China and equal opportunities to all nations for trade. By so much it is surely wise and humane.

Lord Lansdowne published his Japanned *Pax Britannica* with a well-assumed air of giving universal satisfaction, even to Russia and Germany; but the news from Berlin and St. Petersburg shows that a league for war may always be met by another, if it does not actually provoke it. The German press is exasperated, the Russians are both amazed and angry, and it is plain that a rival combination of Powers will be formed if possible. Meantime, in an announcement that an Anglo-Japanese shipping corporation has been formed, with a capital of $25,000,000, to control the carrying trade of the Orient, we have a hint of the commercial interests that have all the while lain behind the war. It has been steamers against railroads—the English and Japanese investment in shipping versus Russian investment in the Trans-Siberian. The battle has gone for the ships, thus far; but if they for long cripple the railroad in its natural business, it will be the first time in the history of modern industrialism that such a thing has been done.

Militarism always finds new reasons for crying give, and the fact that the Anglo-Japanese alliance is so confidently said to guarantee the peace of the world—especially in the Orient—will nowhere diminish the demand for armaments and money to pay for them. We have already had a fair test of this, so far as England and India are concerned. The defence of the Indian frontier against a possible Russian attack has been the reason given for the military burdens laid upon Indian taxpayers without their being consulted. Yet when, during the discussion of the last Indian budget in the Commons, Premier Balfour was asked if the extinction of the Russian navy and the practical paralysis of the Russian army did not justify a reduction in the credits asked for military purposes, he was distinctly cold to the suggestion. That was a matter for the army experts, and he had heard nothing from them. It was better to go upon the old assumptions. So the Government has, in fact, done, even straining things to the breaking-point in giving Gen. Kitchener a free hand to make ready for an army that will never come. Similarly to-day the jubilations over the stroke of diplomacy which has allied Japan and England, and placed either beyond the possibility of attack, will not lead to the abatement of a single military demand. Only leave it to the experts, and nations never are, but always to be, safe.

One result of the Taft party's trip to the Philippines is that nobody speaks any longer of the Filipino desire for continued American rule. It clears the air to get rid of the notion that the islanders would not let us withdraw our beneficent sway even if we wanted to; but, on the other hand, the new doctrine leads us up a logical blind alley. The younger men of education, says the Secretary, are the ones who have been advocating immediate independence. How is this to be met? By educating more young men. So the hope of contented quiet in the archipelago is virtually given up for "at least a generation." Mr. Taft's frankness in the discussion of insular problems has always been praiseworthy. The high expense of government there which impressed other members of the party and is invariably commented upon by students of colonial problems, is, he says, gradually being reduced, which is good news, though the saving be small. "Filipinos," moreover, "are being introduced very rapidly to the places of Americans," presumably at smaller salaries, which is one way of saving. These things, of course, had no connection with the Congressional excursion. Whether that has accomplished real good must depend on Congressional action next winter. The Philippine Government, poor as it is, was made to pay the travelling expenses of the sightseers, as is the good old precedent for countries that own colonies. Yet if the members of the party act as liberally as they talk in their home-coming interviews, it may have been a good investment.

We hope that the dignity and sovereignty of the mighty Republic of Panama will be duly safeguarded in the plan to make her pay Colombia $1,000,000. The negotiations are on foot in Washington, not in Colón. This of itself looks like a slight, yet the Panamans do not appear to be haughtily sensitive on that point. Having sold their country to the United States, we presume that they think it proper that all further money transactions affecting its status should be conducted by or near the real owner. But what is the $1,000,000 to be paid for? Surely, the plea that Colombia "needs the money" is not a sufficient reason. There is talk about Panama being bound to meet her share of Colombia's foreign debt, incurred before the glorious movement for the independence of Panama, carried through by bribed soldiers; but we have seen this alleged obligation completely disposed of by able American journalists, on grounds of morals, international law, and the indefeasible right of the stronger. To say that it will be wise of the Panamans to pay Colombia rather than contest the legality of her claims, seems to us unworthy of a republic which has an army whose commanding general cannot be bought for less than $8,000. It is high time that there were an indignant cry on the Isthmus: "Millions for bribery, but not a cent for our just debts."

Secretary Shaw made another of his triumphant defences of protection at Richmond on Monday night. He showed that the tariff cannot be revised, because it is such a consummate product of logrolling. Its graft being distributed to every one politically powerful enough to demand a portion, "all interests are protected"; consequently, nobody with sufficient influence to elect delegates or control Congressmen makes any objection—the silly and unorganized consumers and taxpayers being, of course, worth

the attention of no politician who knows his business. Moreover, if any one in the greedy combination takes it into his head to protest against another's undue share of the spoils, he is silenced by being reminded that one brick out of the tariff arch makes the whole thing tumble, and that his own plunder will be taken away if he insists upon that of others being abandoned or lessened. This, we submit, is a fair account of Secretary Shaw's victorious illustration. He said that he had heard an ex-Governor of Florida speak about reforming "the iniquitous tariff," and had shut him up by asking if he wished to begin by repealing the duties on citrus fruits. That is, if as many as possible are let in on the ground floor of a profitable iniquity, it becomes a great national virtue and blessing.

"Deliver us from another period of low prices," exclaimed Secretary Shaw just about a year ago. We supposed that to be pretty sound Republican doctrine, and we are amazed to see the thoughtless, almost flippant way in which his colleague, Mr. Wilson, announces that the coming winter will see lower prices for agricultural products. He ought to make the admission with bowed head. Are not wheat, corn, beef, pork, butter, eggs, and poultry the very things his beloved farmers produce? And this expression, "the relief of the householder"—what does that mean? What does the householder want of relief? As the Bureau of Labor, half a mile from Secretary Wilson's office, showed last year beyond all cavil, the householder is making money considerably faster than he can spend it. Anyhow, why think of him at all in his capacity as a consumer? Party orators have often explained that every one but the loafer is a producer. He makes harvesting machinery, or clothing, or canned goods, or nails, or pine boards, or wire fencing, and gets even by selling these back to the farmer at excessive prices. "I don't know much about the tariff," Secretary Wilson once declared, "but I am a protectionist." His latest interview tends to contradict both statements.

The Government hires its men for all departments through a single agency. Why should it not buy its supplies in the same way? That is the simple argument for the plan now being considered by the President, for establishing a single Government purchasing depot here in New York. The Keep Commission has discovered that the various branches of the Government have paid all manner of different prices for identical supplies, according to the volume of their purchases. It is an obvious economy to secure carload rates for the bureau that has hitherto been buying by the hundredweight. It is explained in advance of the submission of the new plan to Congress, that most of the Government supplies are already bought from New York houses. Congressional logic might see in this, to be sure, an argument for passing the good things around rather than for consolidation. The location of warehouses and departmental purchasing depots has not in the past been entirely independent of political influences. This objection has been partly anticipated by the suggestion that it is easy for any Western house to establish a New York branch, and, of course, the reformed system would not remove any of the existing safeguards. Should the scheme eventually be put in practice, one result that can be safely predicted is the establishment of a cordon of "constructive" New York offices for distant firms around that of the Government purchasing agent.

The conviction of Representative Williamson of Oregon for complicity in land frauds adds another to the list of notable victims of the reawakened conscience of the officials in charge of public lands. When Senator Mitchell fell before the Government prosecutor several months ago, it was seen that the matter had passed the point where knowing the judge or being "solid" with the jury was worth more than a backing in law. Testifying in this third trial —the previous trials having resulted in a disagreement—Dr. Gesner, one of the three defendants, said that he had merely tried to protect his range. He had gone to Biggs—Marion R. Biggs, another defendant, and formerly a United States land commissioner—for advice. The advice was that, while he could not buy outright the claims surrounding his range, he could loan money on them and take mortgages therefor. Of course, this was a mere technical evasion, as was shown by a witness's testimony to the effect that Dr. Gesner "was looking for 100 men to take timber claims for him," and that the witness had visited a shearing camp "where he had met a crowd waiting to see Gesner." The trial brought out once more facts that have been known all over the West concerning the reckless misuse of public lands. It showed, too, how hard it is even now to convince a jury that "stealing from the Government," whether of land, timber, or mineral, is a punishable offence. Whatever comes of the appeal already taken in Senator Mitchell's case and undoubtedly contemplated in the case of Williamson, Gesner, and Biggs, the Interior Department has scored a moral victory that will be exceedingly valuable as a deterrent.

Gov. Higgins is confronted by an open scandal in the Charities Department. Fiscal Supervisor Bender is resisting, with all the wiles of conscious guilt, the attempt of the State Civil Service Commission to bring him to book for violating the law. It was charged that Bender collected campaign assessments from his subordinates. He was to have had a hearing on September 14, when he was suddenly seized with Constitutional scruples about the power of the Commission to investigate him. The matter was accordingly referred to the Attorney-General for an opinion. He gave it in due time, completely upholding the right of the Commission to "continue the investigation pending." But did Bender acquiesce? Not he. He slipped off to Hudson and got a restraining order, returnable October 7. His obvious intention is to fight the thing all the way through up to the Court of Appeals, until his misdeeds shall have been forgotten or he himself shall be safely out of office. But what is the Governor going to say to this extraordinary performance? Will he allow a subordinate, charged with violations of the statute, to twist and squirm and double like a criminal, and to take advantage of every legal technicality to stave off an honest answer to the question whether he is a knave in office? This matter transcends mere niceties of legal interpretation. Without waiting for the courts of last resort to decide whether the Commission has the power to compel Bender, the Governor can instantly order him to answer.

Sober second thoughts on the subject of endorsing Jerome are evidently at work in the heads of party leaders on both sides. At first, they were chuckling over having so neatly disposed of the man who had defied the bosses. He could get on without them, could he? Well, he would see. But just now the question which is alarming them is, "Can we get on without him?" What they clearly perceive is that he is the only man before the people who awakens a particle of enthusiasm. Voters are flocking to sign his petition. Already more than 20,000 names have been attached to it, of rich and poor, high and low, Republicans, Democrats, Mugwumps. Is not such a political phenomenon deserving of attention even from party autocrats? What are they going to say to their own minor candidates who are imploring them to put Jerome on the ticket so that they may have some chance of floating through on his popularity? His impending flood of votes is not to be despised from the point of view of the most cold-blooded politics. And no one, we imagine, is any longer deluded by the cry that one party cannot endorse Jerome without a pledge from him that he will reject the support of the other.

Mr. Wheeler H. Peckham's death, long known to his friends (and to himself)

to be imminent, removes one of a type that has undeniably grown rarer in recent years, but that we can ill spare. He might, in fact, have stood as the representative of that class of Americans whom Mr. Bryce, on his recent visit to this country, regretted to find smaller than when he first knew us. We mean the eminent lawyers who were also eminent in public spirit; who applied their special knowledge to the great problems of our political life, and were ever ready to lead their fellow-citizens in any crisis of reform. Mr. Peckham was such a man. Never was he wanting when pernicious doctrines or scoundrelly politicians were to be attacked. His unbending integrity and plainness of speech brought him the high tribute of the enmity of men like David B. Hill, and cost him the Supreme Court justiceship to which Mr. Cleveland nominated him; but it may well be that, in private station, he did the State more service than he could have rendered on the bench. To have a man ever at hand whose life and speech were a rebuke to all things base, and a whip to rogues, was a true measure of Mr. Peckham's value as a citizen.

No one, except perhaps President John A. McCall of the New York Life, will be surprised to learn that "Judge" Andrew Hamilton is employed as legislative agent by all three of the big insurance companies. Mr. Hamilton, as the investigators discovered, now has $235,000 of the money of the New York Life. For this he has rendered no accounting, but President McCall is sure the fund has been or will be properly expended—say, in purchases of real estate for the company or in "legal expenses." On Friday the committee of the Legislature found out that the Equitable and the Mutual have such implicit confidence in Mr. Hamilton's integrity and discretion as a persuader of lawmakers that they, too, have entrusted him with large sums for disbursement without accounting. Whenever a legislature takes up the insurance laws, Hamilton is on hand to guide the members in the right path. As Alfred W. Mayne, associate auditor of the Equitable, euphemistically put it, the business of a legislative agent is to look out that "nothing inimical to the policyholders' interest is passed." Mr. Mayne, like President McCall, was indignant at the intimation that such an agent might exert improper influence. The legislative agent of an insurance company, as we gather from the testimony, always wins his laurels by moral suasion. We would, however, point out to the guileless managers of big insurance companies that the existence of their alert and well-provisioned lobby might be a temptation to venal legislators. A few of the representatives who meet at Albany, Trenton, or Harrisburg might imagine that if they introduced "strike" bills often enough and refused to be convinced by pure logic, the arguments would become more tangible. This we suggest as a mere possibility. Hamilton, vouched for by all three companies, would firmly resist every demand for a bribe; but paragons of virtue like Hamilton cannot live forever.

On December 28, 1896, Gov. Charles A. Culberson, now United States Senator from Texas, wrote to Mr. McCall for a sworn statement, telling, among other things, "the amount, if any, paid by or on behalf of the company for political purposes during the last campaign." Mr. McCall did not commit perjury. The unpleasant questions were turned over to subordinates. One of the affidavits returned to Gov. Culberson reads as follows:

> "Theo. M. Banta, cashier of the New York Life Insurance Company, being duly sworn, deposes and says, that all payments, except such as are made at the branch offices, pass through his department, and that to the best of his information, knowledge, and belief no moneys were, directly or indirectly, paid by the company to the Republican campaign fund during the Presidential election [1896]."

Hugh S. Thompson, comptroller of the company, and John C. Whitney, auditor, made similar depositions. Mr. McCall had not, in 1896, experienced a change of view on the subject of campaign contributions, for he gave away policyholders' money in 1900 and 1904. His want of boldness and frankness is therefore amazing, not to say painful. Instead of shuffling and allowing his cashier, comptroller, and auditor to deceive the Governor of Texas, he should have admitted proudly that he gave $50,000 to defeat Bryan.

President McCall now notifies his agents by circular that never again will the company contribute "to any political organization for any purpose whatever"; and, in order to avoid mistakes, he will ask the trustees to pass a resolution. Policyholders will find it a little hard to reconcile this announcement with President McCall's hearty defence of his gifts to the Republican National Committee; a few days ago he was fully convinced of the wisdom of his course. To be sure, he explains his present attitude by saying that "the gold standard has been irrevocably adopted. Therefore the question of similar contributions cannot arise again during this or any subsequent administration of the New York Life." But it may easily happen in the exigencies of politics that issues as vital to the policyholders as the gold standard itself may come to the arbitrament of the ballot-box. In that case Mr. McCall (or his successor) would, according to his avowed theory of trusteeship, be compelled to wring his hands helplessly while the country was being ruined. We are inclined, therefore, to believe that in his heart of hearts Mr. McCall now regards his unostentatious and vicarious generosity to the Republicans as a mistake.

Mr. Jacob H. Schiff, in his testimony before the legislative committee of inquiry, admitted that directors are often, in a very real sense, dummies. A director, he said, is practically powerless, of little use except to comply with the law's requirements. The executive officers attend to the business of the corporation and occasionally appeal to the directors for advice. In fine, directors do not direct. In this statement he pointed out one of the great weaknesses in the management, not only of insurance companies, but of other vast corporations. The law provides for directors on the theory that they will act as a check upon executive officers and safeguard the property. The agents who are soliciting insurance or asking you to invest in the stock of some railway or industrial organization, point to the list of directors: "Look at these men, of the highest skill in finance and solidity of character. You cannot possibly make a mistake in casting in your lot with them." But, according to recent revelations, this roll of respectabilities who give standing to a company and inspire faith in it throughout the country, is a mere catalogue of names. That such a system is wrong, no one will now dispute. Mr. Schiff spoke of his own bitter experience in this whole matter; but he and his fellow-directors are not the chief sufferers.

Herr von Lindequist, who has taken over from General Trotha the administration of German Southwest Africa, has a new plan for the pacification of that colony, which he naturally hopes will prove "rapid." It is in so far sensible that it departs in a measure from the blood-and-iron policy of his predecessor. Von Lindequist means to treat different classes of the insurgent natives differently. Those who have conducted warfare honorably, like Chief Morenga and his followers in the south, will be approached with proposals for a peace satisfactory, it is hoped, to both sides. Even the Hereros will be asked to surrender, instead of being hunted down relentlessly; a free pardon being offered to all except a specified few who have been guilty of atrocious massacres. Those who accept amnesty will be given land within a reservation, and promised considerate treatment. All told, this indicates a marked change in the spirit of the military dream. It has been brought about largely by public opinion in Germany, which has been increasingly uneasy over the great and apparently fruitless expenditure and loss of life in the attempt to put down the rebellion.

SECRETARY SHAW'S RETIREMENT.

The announcement last week by Secretary Shaw that he is to relinquish the Treasury on February 1, was not unexpected. When the President, last March, requested the members of his Cabinet to retain office during the ensuing year, it was well understood that this marked the term of service for several of them. Mr. Shaw has never been one of the inner circle in Cabinet politics, and is, indeed, an associate with whom very intimate political relations on the part of the President could hardly have been expected. Brought into the Administration by Mr. Roosevelt, in February, 1902, with the alleged purpose of removing from the field a possibly dangerous competitor for the next Presidential nomination, his selection was dictated by political expediency. There can have been no special bond of sympathy between the two men in political theories or ideals. In particular, Secretary Shaw's public deliverances regarding the tariff question must have been irritating to the President, and at times perhaps embarrassing. They reflected an obstinate element of Bourbonism intrenched in the Cabinet, whence their official utterance, important because proceeding from the finance minister of the nation, gave material for the bitterest opponents of Mr. Roosevelt's personally liberal tariff policies. The reason why the Secretary under such circumstances retained his office even as long as he has done, was partly the political argument, but doubtless also the further fact that Mr. Roosevelt has never taken great interest in Treasury affairs, and was probably glad to have them off his mind.

With Mr. Shaw's economic theories, we have, as our readers are aware, no sympathy whatever. In the matter of the tariff, they are hopelessly out of touch, not only with intelligent modern thought, but with the growing convictions both of the Eastern business communities and of the prosperous West. It is fair to say, however, that these economic vagaries have played no essential part in his administration of the Treasury. They have not even been incorporated, as have the theories of many preceding secretaries, in his annual reports, which have received much praise, usually well-deserved, for their business-like discussion of practical matters of the moment in Treasury finance. These matters have not been such formidable questions of public credit and the money standard as confronted Secretary Carlisle and Secretary Manning; they were mainly questions arising from the country's great prosperity during Mr. Shaw's term of office, with the consequent strong demand for currency facilities. Protection of the Government's own credit currency by an adequate reserve, and positive declaration for the gold standard in our money, were obtained from Congress while Secretary Gage occupied the Treasury Department, two years before Mr. Shaw succeeded him. The battles won by the sound-money public officers in those earlier days did not need to be fought over.

In so far, however, as Secretary Shaw has had occasion to touch upon these questions—as in his argument for a pledge of redemption of silver certificates in gold at the holders' option—he has taken a sound position and has adhered to it. His reports contain some strong paragraphs on the other question which remains for future settlement, of our unscientific system of national bank circulation. Unlike his attitude on the tariff question, the position taken by Mr. Shaw on the question of bank currency was that of advanced financial thinkers who refuse to be fettered either by outgrown expedients or by the inertia which shrinks from any change. His report of 1902 contains a thorough and well-grouped array of facts to show why the present bank-circulation plan works awkwardly at all times, and cannot in the nature of things be permanent.

In administering his office, Secretary Shaw has in the main been fortunate. We use this word because the practical problems besetting an American finance minister, especially in his relations with the money market, are very different in times of financial stress from those which arise in an era of prosperity. The present Administration has not had to steer the public finances through the perilous seas of 1894 or 1885. A Secretary of the Treasury who at such times sustains public credit and public confidence, often in the face of violent opposition from a Congressional majority, and as often with only ambiguous statutes to rely upon, has a great political achievement to his credit. A different test of administrative efficiency arises in times of high prosperity and abundant revenues, when the Treasury's absorption of currency, under our clumsy law, becomes a disturbing influence. This was what harassed Secretary Fairchild in 1888, when "public deposits in bank" and "the public surplus" became actual issues in a Presidential contest.

Secretary Shaw has had the same difficulties to encounter, and it was in an effort to deal with them that he made the most serious official blunder of his career. When, through the reckless performances of a gang of Wall Street speculators, the autumn money market of 1902 had been thrown into confusion, and credit institutions which were themselves to blame for the situation appealed to Washington for relief, Mr. Shaw resorted to two actions of plain inexpediency and illegality. Contrary to the law's requirements, he released the banks from the duty of keeping reserves against Government deposits. Similarly overstepping all previous interpretations of the law, he authorized, by his simple fiat, banks with public deposits in their hands to substitute other security for the Government bonds previously required. The first of these provisions the banks themselves refused to utilize; the second has been in the main withdrawn by the Secretary himself.

In other directions, Mr. Shaw's Treasury management has been plain sailing. It is pleasant to be able, after the series of disgraceful disclosures in other departments of the present Cabinet, to say that taint of that sort has not touched the Treasury. When one recalls the part played by the Treasury in other Administration scandals, this means much. To Secretary Shaw is also due a recognition of the fact that he has mitigated, so far as obsolete theories and mediæval laws made possible, the barbarities of the attack on personal baggage by the custom house. We sincerely trust that his successor, possibly not hampered by sympathy with the theories out of which these persecutions logically grow, will carry the good work further.

A PROPAGANDA OF SOCIALISM.

A new society has been formed to propagate the doctrines of collectivism, particularly in American colleges. Its list of members includes some names well known in literature and philanthropy. They are the names of native Americans, not of naturalized citizens, who have gathered about them some two hundred souls zealous for the realization of their ideal. It is not necessary to take such persons too seriously. Were their plan to be adopted, they would probably be among the first to chafe under the new conditions of life and government. They belong to that class of reformers of whom Voltaire said: "Ils défendent les ragoûts dont ils ne mangent pas."

It is rather remarkable that educated Americans should be sanguine as to the success of Socialism here. In Europe there is indeed a tendency to regard the United States as the Mecca, if not the home, of the Socialist; but most Americans know better. Socialism is exotic here; and here less than anywhere else should its missionaries be successful. As understood on the Continent of Europe, and as expounded by European writers, it exaggerates the idea of equality, but opposes more or less consciously the idea of liberty. Fortunately, the organization of society and of the state is the effect, not the cause, of national sentiment; and individual liberty is conserved not so much by a particular form of government as by harmony between the popular will and the statute law. In so far as popular sentiment in the United States is native, and in the best sense patriotic, it is hostile to the despotic spirit of the proposed collectivism.

This may explain why the Socialistic

orators who before every election are vociferous in East Side halls and on street corners, are so often men (and women, too) who know almost as little about the language as they do about the political institutions of this nation. The Socialism which comes as an emigrant from France, Germany, and Russia, seeking hospitality and asylum, finds a welcome chiefly from those who have confounded the idea of equality with that of liberty. The hope of the Socialist in this country is not to gain proselytes among those who are American by birth and tradition, but among the masses of those who, having come here as immigrants, are not yet rid of their hereditary misconception of freedom. In European, especially in Latin, countries the idea of equality has usually been uppermost in the minds of revolutionists, while the sentiment in favor of liberty has been comparatively feeble. Even in the French Revolution, as certain French writers admit, there was no triumph of individualism in the Anglo-Saxon meaning of the term. The revolution was an attack upon corporations and groups, with the idea of reducing all individuals to a uniform type, under a strongly centralized government. The result was that, after the overthrow of the old régime, the French found that they had discarded church, family, caste, and corporation, only to be at the mercy of a money aristocracy which, as Le Bon says, was "ephemeral but formidable, ruling over a dust of individuals without defence or solidarity."

But the programme of the Socialist is even more threatening than the rise of a plutocracy. If its ideal is to be realized, there must be a dictatorship as absolute as that of an Oriental despot. The intelligent Socialist must care very little for individual liberty, and, considering the economic conditions to which he looks hopefully forward, he must care even less for the arts and sciences. It is difficult to see upon what utilitarian principle such a future should be preferred even to the sad abuses of our present civilization. In the Socialist Utopia, the workmen will have the State as their taskmaster—not the State as an abstraction, but in the person of an overseer who will drive them as if they were slaves or criminals. With the loss of personal initiative, there will come also a loss of comfort and repose. The well-meaning enthusiasts who would thus gain equality at the price of liberty, may enjoy the prospect of eating this ragout; but it requires little knowledge of human nature to be convinced that even the most oppressed worker in a factory, or delver at the bottom of a mine, would soon long to regain his previous condition of servitude, if only he might be his own master.

There is an atheistic Socialism, and there is a Socialism grafted upon the teachings of the New Testament in the hope that where logic failed to convince, conscience might lead. This form of collectivism has not made much progless among men of science, but it has become a favorite theory of those who are called "workers"—by which name are designated those who for religious or moral reasons are engaged in philanthropic pursuits. Christian Socialism, which plays some part in the politics of European nations, particularly of Austria, has obtained some vogue in our theological seminaries and university settlements, and has led to a vague idea that the church of the future will be identical with the community. Bebel, the German Socialist, has declared that the Pope, better than any one else, sees clearly the storm which is gathering on the horizon; and Bourdeau has suggested that the papacy might become a formidable rival of revolutionary Socialism, if it were to place itself at the head of a universal democracy and wear a Phrygian cap beneath the tiara. This is even more extravagant than the dreams of "benevolent feudalism."

It is not probable that Socialism of any kind will make many converts among our younger university men, even those who have tasted the joys of collectivism under an athletic director at the training-table. With its contraband literature and its visions of the future, Socialism has been singularly attractive to students in some of the foreign universities; but this may have been as a species of amusement, just as college sporting men of a former generation delighted to transgress the statute which forbade the keeping of "a gun, dog, horse, or any other explosive weapon."

THE NEGRO IN THE NORTH.

"I do not believe the masses of colored people are yet fitted to survive and prosper in the great Northern cities to which so many of them are crowding," is Booker Washington's conclusion, expressed in the number of *Charities* especially devoted to a study of "The Negro in the Cities of the North." But it is not altogether borne out by the dozen or more papers contributed by students of various phases of the problem. In Chicago the negro population is estimated at 35,000; in Boston and its suburbs at 26,000; in Philadelphia at over 60,000; and in New York the total is now nearer 70,000 than the 60,000 shown by the census of 1900. Border cities like St. Louis, Baltimore, and Washington (where in 1900 the largest single group, 86,702, was found) are also vitally interested in the social and industrial status of their negro citizens. While the studies published by *Charities* do not pretend to be exhaustive, they nevertheless indicate that the city negro is not the incubus that fanatics like the Rev. Thomas Dixon, jr., would have us believe he is. The success of the race in making a place for itself in the industrial life of Boston and Chicago is beyond dispute. Of course, conditions are still unsatisfactory. Miss Kellor's observations on the agencies North and South that "assist" negroes in finding employment in New York and Philadelphia are sufficient to prove that.

It does not, we admit, necessarily signify a satisfactory economic state to show that 88 per cent. of the negro males over ten years of age in the eleven largest cities of the North are engaged in gainful occupations, in comparison with the 83 per cent. of all males of the same age, but it suffices to dispose of the charge that as a race they are idlers. More hopeful is the knowledge that they are entering lines of work from which they have heretofore been barred. Thus, the building trades' strike in Chicago in 1900 opened up to negroes a grade of employment that had been regarded by the labor union in control as "white man's work" exclusively. The stockyards strike in 1904 resulted in the permanent employment of a considerble number of colored workers whose efficiency has been amply proved. Mr. R. R. Wright, Jr., of the University of Chicago tells of a typical case: "Several years ago a negro 'boner' came from Kansas City, where he had followed his trade as a union man. He was not admitted to the union in Chicago, where 'boning' was considered a 'white man's job'; and members of the union, though outwardly friendly to the negro, privately advised one another to 'knock' him if he aspired to anything except a 'negro's job.' But, during the strike, negroes got the opportunity to develop proficiency as 'boners.' Now it is no longer considered a 'white man's job,' and the negroes who work at it are being urged to join the union." In the teamsters' strike this spring the negro strike-breakers were conspicuous for their courage, though they were not so numerous as the unions would have us believe. Approximately 800 of them were used, while some 5,000 whites were engaged for the same purpose by the Employers' Association. Mr. Wright reports that about eighty negroes now hold places as drivers obtained during the strike, and that they are doing satisfactory work.

John Daniels of the South End House, Boston, says of the industrial condition of negro men in that city: "There is not an abnormal amount of premeditated and long-continued idleness among the Boston negroes, but there is a good deal of temporary lack of employment." This is explained by the fact that as yet many of the race must depend upon "odd jobs," or work of inferior grades. Mr. Daniels estimates that there are nearly 10,000 colored wage-earners in Boston. Of these, something like 3,200 are servants, waiters, janitors, laborers, store porters,

hostlers, messengers, and stewards. In the next higher rank of employment, which includes barbers, clerks, stenographers, teamsters, and skilled workmen, Mr. Daniels found 875 negroes, or 20 per cent. of their working men. In the group described as commercial and industrial proprietors—merchants, retail and wholesale, boarding and lodging-house proprietors, boot and shoe makers, undertakers, livery-stable keepers, and hucksters—there are listed 134 negroes; and 131 negroes in the professions help to show that the race is forging ahead in Boston.

Politically, the negro in the Northern city is still in a bondage almost as complete as that under which Tammany's supporters live, and which, before the recent upheaval, Boss Durham's Republican organization imposed upon Philadelphia. But conditions are improving. In an excellent article on "The Black Vote of Philadelphia," Prof. W. E. Burghardt Du Bois of Atlanta University points out that a negro business man, Walter P. Hall, is a member of the Committee of Seventy which is backing Mayor Weaver in the fight for a clean city. One member of the Common Council of the city is a negro, though Durham has promised the "gang" that he shall be the last one. But Durham may change his mind about that, as the ward leader is likely to do who declared that the organization's majority was so safe that it could afford to ignore the 25,000 negro voters, and who told a patronage-seeking delegation to "go to hell," for he didn't need their votes. On the whole, Professor Du Bois does not find that the negro voter is more venal or unintelligent than the white possessor of the suffrage who has contributed to the upbuilding of the corrupt "oligarchy of ward politicians and business men using public office for private gain."

The gravest charge against the Northern city negro is that he is a demoralizing influence. He is alleged to be a social as well as industrial nomad, with a common-law wife in every city and a passion for gambling that makes it impossible to maintain a home. Yet, as Fannie B. Williams, of the Frederick Douglass Centre, Chicago, and Miss Griffin of this city point out in two excellent studies, the negro church is developing institutional work in the cities at a most encouraging rate. Thus, St. Mark's Church, in West Fifty-third Street, besides helping to support three missions, is planning a home for aged negroes, and its Epworth League proposes to maintain a home for respectable young women, where they can live decently and at a low cost. Its Lyceum and various church clubs are popular and flourishing. Miss Ovington of the Greenwich House testifies that the average negro woman in this city respects the marriage obligation, and comes nearer to maintaining a clean, attractive home than do the majority of East Siders. Socially, therefore, as well as politically and economically, the city negro in the North is lifting himself up to a standard of citizenship that will bear inspection. Mr. Washington may be right in advising his people against leaving the South, but they seem to endure the change surprisingly well.

THE FAILURE OF FUSION.

The event has now shown what all along was reasonably clear—that a genuine and hearty union of the various anti-Tammany elements is impossible. The chief reason stares one in the face. How can two (much less three) walk together except they be agreed? There was no real agreement, as to either men, principles or methods, among the parties to the succession of fruitless Fusion conferences. There was visible an attitude of mutual and settled distrust—and distrust with good reason. Anybody who could credit the Republican machine, as now controlled, with an unselfish desire to promote good government in this city, would be a simpleton; anybody who could see in the Hearst League promise of aught but mercenary plotting and disgraceful political methods, would be a lunatic. Those two organizations could confer with the Citizens Union, but that they could ever honestly coöperate with it in an effort to make the government of New York city non-partisan and pure, was from the first unthinkable. It is just as well that the pretence of blending contradictions is finally abandoned.

We should also freely admit that the compelling power of high personal character has been lacking. Of Mr. Cutting, every New Yorker ought to speak with gratitude and respect. He is the personification of single-eyed devotion to the public good. If he has made mistakes in tactics, that only shows that he is fallible like the rest of us; if he has shown himself exigent, that merely indicates that he knew the men with whom he had to deal; but throughout, as all are convinced, he has thought first of the city and last (or, rather, not at all) of himself. But, leaving him out, what hope was there of any good coming from the other participants in the conferences? In other days, we have seen our most distinguished citizens come forward—Committees of Seventy, and so on. But this year our fate was placed in the hands of Halpin and Ihmsen! Who is Halpin? A machinist of the machinists, the willing and contented servant of Odell, a man who might inspire confidence in an applicant for the job of cleaning the spittoons in the City Hall, but who is absolutely unknown and without influence as respects the citizenship at large. And for Hearst to imagine that putting forward one of his own employees, the advance agent of his dollar-branded campaign to secure the Presidential nomination last year, could possibly awaken anything but fear and disgust, simply demonstrates that unscrupulous politicians do not even know their own trade.

Another deficiency in the line of character appeared in the dearth of suitable candidates for the Mayoralty. Dr. Parkhurst, on his return, comments upon our barrenness in men of proved ability, courage, and honesty, to whom we can turn in a great civic emergency. We have all been struck by it in this municipal campaign. Casting about for a mighty name, we have had offered us only the unknown or the mediocre. It is a painful revelation of the blight with which tyrannical party machines and the boss system have smitten our public service, for there can be no doubt that we have the raw material of great public servants in abundance. All of us, with Dr. Parkhurst, can turn in our minds to men who, by natural capacity, by strong personality, and by public spirit, would be admirably fitted for high office; but they are banished from our politics. Bosses like only little and cringing men about them. They make the road to political dignities lie through such intolerable personal indignities that self-respecting men are driven to other pursuits.

Let it be also frankly confessed that there has been no burning issue presented this year of a sort to fuse refractory elements of opposition to Tammany. In other campaigns—in 1884, 1894, 1901—there has been some glaring display of Tammany criminality or ruffianism for public indignation to fasten upon; this year that was wanting. In its absence, the attempt was made, foolishly, we think, to get up an artificial issue on a vague cry for municipal ownership. Tammany looked on all the time with an amused smile, confident that it could make off with that issue bodily if there proved to be anything in it. Meanwhile, the opportunity was neglected to drive home the one great truth on which an anti-Tammany campaign must always be based—the truth, namely, that Murphy, like the leaders before him, is at the head of an organization which exists only by making plunder of the city's offices, and personal gain out of the public business. That essential nature of the beast is not really concealed by the amiable Mayor who consents to stand in front of it. When two men like Murphy and McCarren effusively patch up their differences, honest folk do well to be on their guard. It is as ominous as the reconciliation of Herod and Pilate.

If Mayor McClellan were the man his paulo-post-future eulogists allege, he would put his foot down now on this business. What is the obvious situation? Murphy, having so fine a blooded mastiff at the head of his ticket, is openly pre-

paring to string "yellow dogs" all the way down it. He thinks McClellan will pull them all through. Particularly disturbing is the plain intention of the Tammany boss to degrade the judiciary. He would refuse renomination to deserving judges in order to put his tools or favorites upon the bench. Murphy appears also to have struck hands with Odell to defeat Jerome—though there can be no doubt that the great majority of the honest residents of this county desire him as District Attorney. Indeed, we are assured that Mayor McClellan himself is anxious that Tammany should make no opposition to Mr. Jerome. Well, then, what is the strong and resolute Mayor going to do about it? It is unquestionable that he can have his way if he insists upon it. Were he to demand clean associates on the ticket with himself, from top to bottom, especially the keeping of Tammany's dirty hand off the judiciary, and to make his own candidacy conditional upon that, it is clear that he could dominate the situation. He can do what Grover Cleveland did in Buffalo—say flatly that he must not be nominated for Mayor unless the candidates for other offices are made acceptable. Here is the great test of Mr. McClellan. We do not ask that he indulge in posturing. It may not be necessary for him to lift up his voice—the thing may be done quietly perhaps; but the city is entitled to demand of the Mayor, at this juncture, that, privately or publicly, he intervene to protect it from the disgrace and danger which Murphy and McCarren are plotting.

We think it high time that the members of the bar considered measures to protect the judiciary in this municipal campaign. There is opportunity for work in either political camp. Murphy should be given to understand that his plan to put creatures of his own in place of Judge Ingraham and Judge Gildersleeve will not be tolerated. Then, if Gov. Higgins could be got hold of by decent Republicans and held firmly while appointing a successor to the late Judge Van Brunt, we might get the making of a stirring campaign in behalf of an able and upright judiciary as well as a capable, honest, and fearless District Attorney. The two causes might fitly be joined, so that we could the more surely look for justice both from the bench and from the chief prosecuting officer.

THE ROOT OF ALL GOOD.

Our blood boiled when we read that a country clergyman had had the effrontery to offer at a religious meeting here in New York a resolution declaring that "no talent for high finance, no useful service to the community, no benefaction to the Church or to objects of philanthropy, can excuse or atone for dereliction in trust, contempt for the rights of others, or disregard of the rules of common honesty." Bishop Potter, who was presiding, very properly frowned, and passed over the matter in a paternal manner. If he and the Episcopal Church do not make stand against this reckless abuse of our best citizens and most devout worshippers, no one will; and the tongue of slander will run on unchecked. Just because a few officers and directors of insurance companies have been "caught with the goods on," there is a wild howl about a frantic and unscrupulous scramble for gain. A day or two ago the Rev. Dr. Charles H. Parkhurst joined the chorus; William Allen White has an article about it in the October *Atlantic;* President Nicholas Murray Butler has been solemnly warning his boys at Columbia; and at a little social gathering in Cleveland, John D. Rockefeller has been lamenting that more of his dear friends do not choose the higher things of life in preference to filthy money. Of these four men only one is qualified to testify as an expert. Dr. Parkhurst is a minister, and of course wholly ignorant of business; Mr. White is a Kansas editor, who probably has not to-day a paltry half-million of unencumbered property; and Dr. Butler is nothing but a college president, pegging along on $10,000 or so a year. Mr. Rockefeller ought to know whether it is worth while to get rich. Whatever he may say when speaking for publication, his real feelings are expressed by his actual choice of good things.

The intimation that he has not chosen wisely should be resented by every loyal New Yorker. What are we here for, if not for money? Is Wall Street a health resort? Is Broadway a golf links? Are the roofs of our sky-scrapers breezy mountain tops? Are the corridors of the Waldorf-Astoria the echoing aisles of a primeval forest? Does Manhattan Island lift its fronded palms in air? Dr. Butler is no backwoods deacon that he should chatter about reputations melting like snow before the sun of publicity. Apparently, he alludes to such men as James W. Alexander, James Hazen Hyde, and Chauncey Mitchell Depew; but they are not making any complaint. They got what they wanted, and they are not crying because they have lost what they didn't need. Your professional thief must reckon upon spending at least a quarter of his time behind prison bars, at hard labor, with poor food. But all three of the men we have mentioned made off with more than the most skilful cracksman could hope for; they are at large, with comfortable houses and well-cooked dinners; and one of them is a member of the United States Senate. They are not beggarly school teachers and preachers whose stock in trade is reputation; they are not butlers or coachmen on fifty dollars a month that they must have letters from their last employers. They are high financiers; and if you don't admire them, you can do the other thing.

The people who work in the money mill have taken the job with their eyes open. Walk through Wall Street and look at them. Listen to their talk at the bars and in the restaurants of the financial district. They are not fools, as Dr. Butler and Mr. White would have us believe. They are getting the objects that are worth having in this troubled and transitory life. They acquire power. When a man has piled up enough millions he can make existence a burden for his enemies on the Stock Exchange. John W. Gates and James R. Keene are as happy every day as a bulldog killing a cat; but Dr. Parkhurst doesn't enjoy a thrill like that once a decade. If you have enough money, you can always see your name and your picture in the papers. Your slightest cold in the head throws the yellow journals into hysterics of red and green ink. Your wife and children run a gantlet of photographers while daylight lasts. Your house is pointed out to the people who are seeing New York. The wages you pay your servants, the price of your cigars and of the underclothing of your whole family, the food you eat, and your last divorce suit are matters of public discussion. It's much better than being President or even a popular actress.

After all, however, these are only intellectual pleasures. It is to the real man, the physical, that money caters as nothing else can. We do not observe that Dr. Butler and other anæmic moralists are living very high. They cannot afford private cars, private yachts, and automobiles. They have to work so hard that they cannot indulge in ten-course dinners, nervous prostration, and other things which the wealthy and well-bred now reckon among the bare necessities. William Allen White is not opening champagne every night at the club; his purse couldn't stand that pace for a single month. Let us free our minds, then, from hypocrisy. Everybody can't be rich. Society could not exist without its submerged tenth of bootblacks, college professors, car conductors, artists, street-sweepers, musicians, and small tradesmen. But these are occupations for the dull and unambitious. Any one who has red blood in his veins will get out and hustle for the stuff that will procure him the choicest viands, the richest wines, and the most refined society.

IN SOUTHERN SWEDEN.

MALMÖ, September 13, 1905.

If one had been expecting signs of political disturbance on entering Sweden at this juncture of affairs, he would have been disappointed. For neither as he paused in Norway nor as he mingled with the people in Sweden would he see anything that seemed to be different from an ordinary state of affairs. Indeed, the more intelligent

Swedes with whom we have conversed have no hesitation in expressing their sympathy with Norway and their dissatisfaction with the failure of the King to notice her grievances. It seems but fair that the part of the nation which carries on nine-tenths of all the foreign trade, should have a due share of the consular appointments and of the honors and emoluments of the government. But here at Malmö the united flag still floats over the pleasure park.

As this visit to Sweden, however, is in the interest of glacial geology, I cannot forbear speaking of some most interesting phenomena which have recently come to light and must prove of great interest to the general reading public. Of course, one expected to find abundant indications here of the great ice movement which radiated from Northern Scandinavia, but the extent of those indications all around the North Sea and the Baltic is such as to surprise even the hardened glacialist. Before coming to Denmark and Sweden I had picked up Norwegian pebbles from the glacial till which borders the moorland of Yorkshire on the east coast of England. Indeed, Norwegian boulders are abundant in Eastern England as far south and as far inland as Cambridge, showing that the whole North Sea was at that time but an expansion of Scandinavian ice. Denmark, also, is entirely covered with Scandinavian drift. Zealand, at any rate, is scarcely anything else than a congeries of terminal moraines with intervening bogs and kettle-holes, the one filled with peat and the other with water. Boulders innumerable are everywhere apparent in fields and fences and in the solid walls of barns and houses. An American could easily imagine himself in southern Michigan or in Wisconsin or Minnesota.

Here in Skåne, which forms the very southern part of Sweden, we have a similar contour of land surface, with its rich agricultural possibilities. But the story of its formation recently brought to light is more marvellous still. To a considerable extent it is found that the farmers of Skåne are living upon the richness of Finland, as those in Ohio are upon that of Canada. It appears that the centre of the ice movement in Scandinavia was farther east than was first supposed, so that the same movement which carried boulders to southeastern Russia carried them also southwestward down the whole length of the Baltic Sea, where, meeting with less resistance on the west than upon the south, a portion of the ice turned northwest toward the more open North Sea. Thus the whole of southern Skåne became covered with a congeries of terminal moraines whose material was in part brought from Finland and in part pushed up from the bottom and shores of the Baltic Sea.

Under the guidance of Dr. N. O. Holst of the Swedish Geological Survey, who is now at work mapping the region, I was permitted to see probably the most remarkable results of glacial action that have ever been brought to light. For some time the Salem Natural History Society of Massachusetts fancied that Ship Rock in Peabody, which they carefully preserved, was the largest of American boulders. But the late Mr. David A. Wells challenged the claim, and called attention to a still larger one in Norwich, Conn., while Prof. W. O. Crosby, entering the lists, maintained that one which he had discovered in Madison, N. H., should claim preëminence. To cap all, however, Prof. Edward Orton came in with a report, which, to most who have not seen it for themselves, may seem a regular "fish story." This was, that in southwestern Ohio he had found a mass of Clinton limestone covering three-quarters of an acre, and twenty-feet thick, which had been transported bodily for many miles and laid gently to rest between two glacial deposits.

Now here in southern Sweden, a few miles east of Malmö, is a story which eclipses all that has gone before. For many years commercial companies have been quarrying chalk along a belt three miles long and 1,000 feet wide. Upon the surface this appears simply as a swell in the glacial deposits from 100 to 150 feet in height, the chalk being everywhere covered with several feet of boulder-bearing clay. The earlier geologists were greatly puzzled by the position of these chalk beds, since they belonged to an older formation than those which ordinarily occur in southern Sweden, and should, therefore, have been under them. But here the order was certainly reversed, and the older formations appeared above the younger. The riddle is now solved by the discovery that this whole mass, three miles long and one-fifth of a mile wide, and from 100 to 200 feet in thickness, has been torn from the shores or the bed of the Baltic and transported bodily to its present position, thirty or forty miles inland. For, in most places, glacial till is found to underlie it and separate it from the newer rocks which form the substratum of the peninsula. It should be said, however, that the chalk everywhere shows indications of immense pressure and disturbance. The upper portions have been sheared off and often mingled with bands of boulder clay, while most of the abundant flint nodules have been shattered and arranged in lines or belts showing the direction of the line of movement. The chalk is also broken up into small cubes. Still, for the most part, the immense mass remains compact, and has moved as a solid body. For many decades to come, the rich manufacturers and farmers of Skåne will continue to profit from this vast mass of foreign treasure which has been so conveniently brought within their reach.

From what we have observed in Sweden, it would seem that the poorer the land the greater the wealth of the families in children. In much of the stony region through which we have recently passed, families of eight and ten children seem to be the rule rather than the exception; one is, therefore, not surprised to find the tide of emigration to America upon the increase. Already a new Sweden is growing up in our Northwestern States, and the United States has two-fifths as many Swedes as remain in the mother country; there being 2,000,000 in America to 5,000,000 in Sweden. Among the glacial lakelets of Wisconsin, Minnesota, and Dakota they find conditions closely resembling those which they are leaving behind. With their thrifty habits and high moral character they cannot fail to become a valuable element of our population. But the farseeing philanthropist is led to ask with concern what is to happen when there are no more glacial fields to conquer, and the overcrowded populations of these stony farms can find no further outlet for emigration.

G. Frederick Wright.

MARSHAL BERTHIER.

Paris, September 20, 1905.

A time will come when, in the popular imagination which always transforms history into legends, Napoleon and his marshals will appear somewhat like Charlemagne and his *preux*. There were never so many books written on the Napoleonic period as in our time. Is it because France consoles herself in a certain measure for her great defeats in the war of 1870 by remembrance of the heroic period of the wars of the Revolution and of the Empire? or because the history of Napoleon is the most dramatic history of modern times? Hitherto the marshals who helped him in the organization and command of his armies have been left more or less in the background. I have before me an elaborate work on 'Marshal Berthier, Prince of Wagram and of Neuchâtel,' by Gen. Derrécagaix. The first volume extends from 1753 to 1804, the second covers the later years of the marshal.

Berthier's name is known chiefly to military men as that of a great organizer. He was Napoleon's general chief of staff, a function which became more and more important as the armies became more and more numerous.

"His talents," says the author of the work we mention, "have not had the reputation which they deserved; and posterity, in attributing to him simply the part of satellite to the brilliant star which he accompanied, thought it rendered him sufficient justice. . . . After the Empire, the friends of the Emperor and the marshals formed in his school fell into the habit of minimizing Berthier and of attributing to him the sole merit of having known how to transmit the orders of Napoleon. His enemies went further: they denied him any sort of worth, and sometimes added that the genius of the great man alone had made his reputation. The Prince Major-General having died suddenly, on foreign soil, at the moment when the Emperor disappeared in his turn, exiled in a distant island, the detractors had free scope and wrote history at the dictate of their dislikes or their whims. Marshal Berthier's memory suffered cruelly by this."

Napoleon never separated from Berthier during his numerous campaigns. It is true that he himself made his plans, but Berthier helped him in their execution. In the campaign of 1815, which ended at Waterloo, Berthier was not with him, but was replaced by Soult; and Napoleon said afterwards, in talking of his defeat: "If I had had Berthier, I should not have had any misfortune." The papers of Napoleon's chief of staff were destroyed by order of the Emperor when he returned to Paris in 1815. In 1855, the commission charged with publishing Napoleon's correspondence (an immense work and a most important historical document) received many papers signed by Berthier; all that could be found had been collected by Berthier's grandson, Prince Alexander of Wagram, at Grosbois. These papers were catalogued and classified with care by M. Albert Dufourcq. In 1870, Grosbois, the country place of the Berthiers, was occupied for a while by the Prussians, but the collections were respected, and Gen. Derrécagaix has been able to use for his work the archives of the place, which was given by Napoleon to his companion in arms. He has also used largely the national archives, as well as the archives of the Ministry of War and of the Foreign Office.

Louis Alexandre Berthier was born at

Versailles on the 20th of November, 1753. His father was a colonel, who had fought under Marshal de Belle-Isle, but who ended his career in the topographical service. Alexandre entered the army; his father had brought him up for the topographical service, but he preferred an active life, and asked to join the army of Rochambeau. He left France in June, 1780, and, after stopping some time in Martinique, arrived in the revolted colonies on the 30th of September, 1780. He distinguished himself on various occasions; saw the capitulation of Yorktown; and afterward had to take part in an expedition against the West Indies and Jamaica. His first campaign lasted three years; he returned to France in 1783 with the staff of Viomènil, of which he was a member. He took part in a mission which was sent to Prussia, under the orders of the Marquis de Custine, to study the military organization of that country; and it is a curious incident of the life of the future major-general of the *grande armée* of 1806 that he should, twenty years before, have had to study on the spot the elements of strength and of weakness in the future adversaries of Napoleon. On his return he was attached definitely to the general staff of the army.

When the Revolution broke out, Berthier was already thirty-six years old; Napoleon, Lannes, Soult, Ney, were only twenty years old, Davout nineteen, Murat eighteen, Bernadotte twenty-five, Mortier and Bessières twenty-one. The services which Berthier had already rendered exposed him to some dangers. Lafayette had given him a high command in the National Guard, and Berthier protected against the mob of Versailles the departure of the King's aunts for Italy. For this he was denounced as a friend of the royal family; he lost his command, and retired for some time to Précy-sur-Oise, where he lived as a private citizen.

At the beginning of 1795, on the recommendation of Marie Joseph Chénier, brother of the great poet, he obtained a post in the Army of the Alps, with Kellermann; he then organized completely the service of the general staff. He urged the Minister of War, Gen. Clarke, to allow the Army of the Alps to take the offensive, to cross the Alps and take possession of Piedmont. When Bonaparte's views were formed on the campaign of 1796, he designated Berthier as his chief of staff, and from that moment the destiny of Berthier was bound up with that of Napoleon. After the day of Fructidor, Bonaparte had become all-powerful in military matters, and was the true Council of the Government. The choice he made of Berthier was not due to any personal recommendations, but was inspired solely by the study Bonaparte had made of his reports and his plans. They met each other at Nice, and prepared together the first campaign in Italy, which began with the famous proclamation of Bonaparte in which, addressing the army, ill-fed and ill-clothed, he offered to it the rich plains of Lombardy. We cannot go into the details of the campaigns of 1796 and 1797 in Italy, of the expedition against Rome, of the expedition to Egypt, of the second campaign in Italy of 1800. In all these, Berthier played his part as major-general of the staff.

Berthier was with Bonaparte on the famous day of the eighteenth Brumaire, and two days afterwards he was named Minister of War. As such he was able to reorganize all the services of the army. He left this post only when Napoleon entered on the campaign of 1800, to resume his functions of major-general. After the battle of Marengo he was sent by the First Consul as Ambassador Extraordinary to Madrid, in order to enter into negotiations on the subject of the conventions to be made with the Duke of Parma and the cession of Louisiana to France. The secret object of his mission was to incite Spain to make war on Portugal, England's ally. On his return he was appointed for the second time Minister of War, directed the movements of the French armies, and corresponded with Moreau, who commanded the Army of the Rhine, with Augereau, with Brune, Macdonald, Bernadotte, and Menou. The victories of the French armies were followed by the peace of Lunéville, and afterwards by the peace of Amiens. When Napoleon assumed the title of Emperor, one of his first acts was to name twelve marshals. At the head of the list figured Berthier. Soon afterwards he was named *grand veneur*, one of the great officers of the new court, and also Senator. Napoleon was well aware of the important part which he had taken, from 1800 to 1805, in the formation of the great imperial army which was soon to triumph over all the European armies.

"The extraordinary brilliancy," writes General Derrécagaix, "of the personality of Napoleon has often hindered his contemporaries and posterity from judging his colaborers as they deserve. The habit has been formed of making no account of his Minister of War, of believing that the First Consul and afterwards the Emperor in effect filled these functions, and that Berthier was a mere intermediary. But things did not so take place. The part of Bonaparte, First Consul, was that of a dictator-generalissimo, of a capacity, of an ardor, an audacity and a creative fecundity quite incomparable. Berthier's part consisted in embodying the ideas, the projects, the will of the hero, chief of the State and of the army."

To follow Berthier in the campaigns of the *grande armée* would be to write the history of the Empire. After the second Austrian campaign, Napoleon made him Prince of Wagram. The campaign of France in 1814 ended with the capitulation of Paris. Berthier was with the Emperor at Fontainebleau. Napoleon asked him to go with him to the island of Elba. Berthier did not accept this offer; he was married to a Bavarian princess, he had children. He ought, after the great favors conferred on him, to have retired into private life, and he had the weakness to accept from Louis XVIII. the command, and the empty title of captain, of the King's bodyguard. Upon the return of Napoleon from Elba, Berthier accompanied the King to Belgium, but did not remain with him, and went to Bamberg, whither his wife and children had retired. He remained there during the Hundred Days. The Emperor hoped that Berthier would come back to him, and said that he would forgive him on condition that he would reappear in his uniform of *garde du corps*. At Bamberg, Berthier asked for passports in order to go back with his family to his French estates of Grosbois and Chambord; but the Allied Powers objected to his return to France, for fear lest he should again serve Napoleon as major-general. The Princess alone received passports for herself and her children.

In the month of May, 1815, numerous Russian troops traversed Bamberg. On the 1st of June, Berthier went to his children's room in the third story of the Residenz, and from a window looked on the fine troop of Russian cuirassiers in the street. He mounted a chair so as to see better, and, losing his balance, fell from a height of 29 metres to the street, and died almost immediately. Was it an accident? was it suicide? The legend will have it that Berthier, on seeing the Russian troops, full of remorse for his conduct after the abdication of Napoleon, committed suicide. Such is not the opinion of General Derrécagaix, and he gives strong arguments for the other alternative. *Adhuc sub judice res est.*

Correspondence.

THE GERMAN 'WHO'S WHO.'

To the Editor of The Nation:

Sir: In your comment (No. 2098) on 'Wer Ist's?' you criticise the selection of American names, and say "there is in the preface, however, no hint of the criterion employed." I think your inference is inaccurate. The work is essentially "ein deutsches Zeitgenossenlexikon" (p. vii.), and of foreigners "infolge ihrer deutsche Interessen berührende Tätigkeit" (p. viii.). That is, the labors of eminent foreigners must in some way, directly or indirectly, have touched German interests.

Being the first volume, it undoubtedly has many omissions, but it was not intended to include "Who's Who" of the world, not even of America. O. K.

Ottawa, September 25, 1905.

[We will leave our correspondent to compare in 'Who's Who in America' the names we discussed in 'Wer Ist 's?' and discover if he can, in most of them, the peculiar "activity touching German interests" which warranted their inclusion —and the corresponding omissions pointed out.—Ed. Nation.]

LINCOLN'S WRITINGS.

To the Editor of The Nation:

Sir: Will you kindly tell me if the Writings of Abraham Lincoln advertised in the *Nation* by the Francis D. Tandy Co. is in any way connected with the work that G. P. Putnam's Sons are obtaining subscriptions for? It seems strange that the two works should come out together—if there are two. Will you please put me straight about the matter?—Yours, E. H. L.

October 2, 1905.

[So far as we can inform ourselves, there will be a very considerable difference in the contents of the two series, though they will have, of course, much that is common property and not copyrightable. The Messrs. Putnam's edition forms part of the "Writings of the Fathers of the Republic" upon which they have been engaged for the past

twenty-five years, as their Washington, Franklin, Hamilton, etc., testify. Both publishers promise new matter—if not always Lincoln's own, at least relating to him, such as, in the case of Messrs. Putnam, Mr. Schurz's critical estimate of him, a memorial address by Mr Choate, and a special introduction from President Roosevelt's pen. The coincidence of publication is purely fortuitous.—Ed. Nation.]

Notes.

A collection of the letters of the late Lafcadio Hearn has been undertaken by Houghton, Mifflin & Co. It will be edited, with a biographical outline, by Mr. Ferris Greenslet of the *Atlantic Monthly*, with the collaboration of Mrs. Hearn and of Basil Hall Chamberlain, the literary executor. It is requested that persons having letters of Hearn's will kindly communicate with the editor at No. 4 Park Street, Boston.

The Johns Hopkins Press will issue immediately a new and thoroughly revised edition of Prof. William K. Brooks's book on the 'American Oyster'; also, a new metrical translation, with an introduction and explanatory note, by Prof. Paul Haupt, of the Book of Ecclesiastes.

James Pott & Co. will bring out 'The Reign of Gilt,' by David Graham Phillips; 'The Woman of To-morrow,' by Helen M. Winslow; 'Women of Wit and Beauty of the Time of George IV.,' by John Fyvie; 'Milton and the Cavaliers,' by F. S. Boas; 'Makers of Modern History,' by the Hon. Edward Cadogan; and 'The Aspects of Balzac,' by W. H. Helm.

'One Thousand and One Modern Anecdotes,' by Alfred H. Miles, will shortly be published by Thomas Whittaker.

Macmillan Co. have in press 'Alcestis, and Other Poems,' by Sarah King Wiley; 'The City, and Other Poems,' by Arthur Upson; and W. B. Yeats's Poems and Plays in two volumes.

Among the forthcoming publications of John Lane Co. will be a book entitled 'Jane Austen's Sailor Brothers,' by J. H. Hutback and Edith C. Hutback, grandson and great-granddaughter of the elder brother, Sir Francis Austen. Though the navy was much in Jane's thoughts—'Persuasion' and 'Mansfield Park' make this clear—it is a patent fact that her works give no idea of the stirring times in which she lived, whereas the adventures of her brothers take the reader through the Napoleonic wars, our war of 1812, and so down to the second Burmese war in 1852. Sir Francis Austen left complete log-books of every ship on which he served. It is from these, from letters of Jane's—several of them published here for the first time—and of other members of the family, with frequent reference to Capt. Mahan's works, that the book has been compiled. It will have numerous illustrations, including an original sketch of the novelist by her sister Cassandra.

From the Clarendon Press announcements we select 'Shakspere's Poems and Pericles,' or his extra-First-Folio works, reproduced in collotype facsimile after the original edition in each case, with introductions by Sidney Lee, the whole in five volumes of a thousand copies each; 'Poems and Extracts Chosen by William Wordsworth,' for an album, in 1819, with facsimiles, with introduction by Prof. H. Littledale; 'Wordsworth's Literary Criticism in Prose,' with an introduction by Nowell C. Smith; 'Wordsworth's Guide to the Lakes,' with an introduction by E. de Sélincourt; 'Chronicles of London,' edited by C. L. Kingsford; the third volume of Beazley's 'Dawn of Modern Geography'; and 'Critical Essays of the Seventeenth Century,' by J. E. Spingarn, in three volumes.

We have been favored by the Chicago Library Club with a copy of its modest publication, 'Libraries of the City of Chicago, with an Historical Sketch of the Chicago Library Club.' It consists, besides the sketch, of a list of libraries—as complete as was practicable—followed, in the case of several of the larger ones, by more detailed statements as to their origin, buildings, special collections, etc. Portraits of John Crerar and Walter Loomis Newberry, and views of several buildings and interiors, enhance the value of this conspectus. The very first on the list, the Altrua Art Library, supported by the Altrua Circle, has an exceptional interest, being open for reference and circulation of its books and photographs to all self-supporting girls and women. Notable in the Newberry Library is the index to its genealogical collection, in 700 type-written volumes; in the Ryerson Library of the Art Institute, its unrivalled collection of Braun carbon prints; in the Historical Society's Library, the Madison and Wilkinson papers, etc.

The sixth volume of Dr. Thwaites's noble edition of the Original Journals of Lewis and Clark (Dodd, Mead & Co.) is occupied with scientific data—geography, ethnology, zoölogy, botany, mineralogy, meteorology, astronomy, etc. The section relating to the Indians, a fine example of editing in the presentation of tabulated matter, is generally readable, and the remainder according to the reader's taste. The chief illustration is a facsimile of the first page of Floyd's Journal. A seventh volume and the atlas are yet to come.

To the Dent-Putnam "Classiques Français" have been added Octave Feuillet's 'Le Roman d'un Jeune Homme Pauvre' and Benjamin Constant's 'Adolphe,' introduced respectively by Augustin Filon and Paul Bourget, and each provided with a portrait. These are truly pretty books without and within, fitted for the hand and the pocket; and the proof-reading, if not quite impeccable, is sufficiently accurate for any one not a novice in French.

Newnes's Pocket Classics (Scribner) grow with 'Songs and Lyrics from the Dramatists' and 'The Poems of Gray and Collins,' and 'The Imitation of Christ.' These little volumes in limp covers with gilded ornamentation are externally the more attractive; but the presswork is clear, especially in the à Kempis.

Slightly larger than the foregoing but similarly bound is the new output of R. L. Stevenson's 'Edinburgh' (Lippincott). Here the print is both large and more even in tint.

Early in the present year we characterized Thomas Hutchinson's "Oxford Edition" of the Poetical Works of Shelley (Clarendon Press; New York: H. Frowde). It now comes to us again in two forms, one 12mo on heavy paper, the other from the same plates but with smaller margins, and printed on the Oxford India paper which effects such marvels of compression. The latter volume is, in fact, just half the size of the other, and is a rather more presentable book, with scarcely any deduction to be made for legibility.

As Mr. Hutchinson's chief concern was with his text, so has been Mr. Paul E. More's in preparing the Cambridge Edition of Byron's Complete Poetical Works (Houghton, Mifflin & Co.). For this purpose, publication has been held back for several years in order to profit by Murray's seven-volume edition. Like Mr. Hutchinson, again, Mr. More has had to strive with his author's erratic punctuation. Byron's own notes have been sparingly supplemented in view of the size of the volume, which now takes its place in a standard series of great convenience and fair, unpretentious appearance.

The Memoir of Tennyson by his son, having run its prosperous course in two volumes, has now been reissued by Macmillan in one—say, rather, bound in one, as the pagination has not been harmonized. It is, no doubt, sufficiently heavy to hold, but there is a gain in the combination apart from the more popular price. The presswork is unexceptionable, and the entire get-up is free from any suggestion of cheapening.

From the same firm we have the second reprint of Mr. Charles Dexter Allen's 'American Book-Plates,' a work of permanent value for guidance and reference, and freely illustrated with examples. Its heraldic shortcoming we pointed out ten years ago. We will recall to mind the section on early American wood engravers, in which, as the descriptions are summary, we should have been glad to have a list of authorities, such as the monographs on Paul Revere, Abel Bowen, and John Anderson, the earliest American engraver on wood. Of Anderson we read that at the age of twelve (or in 1787) he made his first plate—of copper pennies rolled thin—being a head of John Paul Jones.

'Pictures of Life and Character, by John Leech' (Putnams), mainly from *Punch*, raises the question how far these cartoons represent the England of to-day, and to what extent they now contribute to the gayety of the artist's countrymen. They have historic value, no doubt, for manners and customs, for dress, etc. In some the humor of the drawing suffices; in many the legend is necessary for the smile. Mr. Henry James is cited in praise of Leech for his treatment of the horse: "He understood the animal, and drew him as if he knew how to ride as well as to draw." But Muybridge, and the snapshot as we daily see it applied to racing and leaping, have proved Leech to have been bound by the conventionality of his day regarding the horse in action. One wonders if his drawings in this particular would, with the enlightenment we now have, have been bedevilled like those of our horse artists striving to depict what they never see, but constrained by the knowledge furnished by the camera.

Dr. Arthur Mahler and his collaborators, Carlos Blacker and W. A. Slater, have produced a useful little book in 'Paintings of the Louvre—Italian and Spanish' (Double-

day, Page & Co.). In it they have tried to give some account of every picture of the Italian or Spanish school actually exhibited in the galleries of the Louvre, together with a running historical and critical commentary; and this task they have performed with commendable accuracy and sufficient knowledge, so that the book, as embodying the latest results of research, is to be relied on. The criticism is unoriginal and often extremely commonplace, and there is nothing inspiring or entertaining between the covers of the volume, but there is a great deal of information, and the traveller who wishes to know what he is really looking at will find it a valuable supplement to the official catalogue. It is well arranged, the English is smooth, and the illustrations are numerous and, considering the scale, well executed. The worst fault of the book is the color of the cover —a really terrible blue.

The latest of the "Menpes books" is devoted to 'Brittany' (London: Adam & Charles Black; New York: Macmillan). Mr. Mortimer Menpes has made a specialty of travelling with a water-color box and a literary daughter, and the results of these travels appear each year in good time for the holiday trade. Text and illustrations have a common facility and a common lack of seriousness which is welcome, or the reverse, according to one's point of view. Is it a fear of the hackneyed or a prudent regard for his own limitations that leads the artist to avoid all notable picturesqueness and all celebrated scenes? Certain it is that the wonder grows how an artist can travel so far and see so little that might not be seen anywhere else. Here is what he brings back from Mont St. Michel: a baby in a cradle, an old woman with a bowl of soup, a young woman at breakfast, a man in a kitchen, and a girl doing nothing in particular in no particular place. There are caps and sabots and a very little furniture to mark the province, but of one of the most wonderful places in the world there is no hint. If the work were first-rate, one might be satisfied with it as art though quarrelling with it as illustration, but it is only a very mild second-rate, at best.

David W. Hoyt, Providence, R. I., concludes with part xi. the second volume of his 'Old Families of Salisbury and Amesbury, Mass., with some Related Families of adjoining towns and of York County, Maine.' It winds up the Morrill Family, and adds Mussey, Peasley, Pike, Stanyard and Stevens, Wells, Whitridge and Whittier, with others, plus additions, a general index, one of places, and one of surnames. The work is here ended, for want of pecuniary support, and this is much to be regretted in view of the author's diligence, scientific method, and devotion. The typography is elegant.

The well-known Danish philologist, Prof. Ludv. F. A. Wimmer, has just published the third volume of his 'Danish Runic Monuments,' completing the text with description and interpretation of all the Danish runic inscriptions. The fourth volume, which will contain a vocabulary, is still in preparation. Denmark is particularly rich in runic monuments, especially those written in the elder alphabet. Professor Wimmer has for a generation or more been one of the recognized great authorities in the field of runic research, and his standard work on this topic, 'Die Runenschrift,' which in its German garb appeared in 1887, now being somewhat out of date, the appearance of the introduction to this present work (to form part of the first volume) will be eagerly looked forward to.

The annual volume of Transactions and Proceedings of the American Philological Association is marked by a vigorous plea for reform in the method of publication. Dr. Charles P. G. Scott, the protestant, easily demonstrates the inconvenience of grouping in a single volume a mass of papers so miscellaneous that it is a mere chance if any given reader is interested in any three successive titles. He desires that all important papers be published separately, in pamphlet form, each to have its own title-page bearing the subject, the name of the author, a fixed formula showing the relation of the paper to the Association, and the imprint of the publishing company, in the order indicated. Each member of the Association could then collect and arrange in scientific order the papers in which he might be interested, while outsiders would be able to purchase any paper desired without the necessity of paying for a mass of material not only of no use to them, but seriously in their way. It is just possible that the tomb-like character of the present method of publication may be partly responsible for the fact that many of the best papers presented at the meetings of the Association cannot be secured for publication in the Transactions at all.

The most noteworthy article in the *Geographical Journal* for September is the account of several journeys in Asiatic Turkey by Col. Massy, a member of the British consular service. He appears not only to have travelled with absolute safety, but to have been hospitably treated wherever he went. This is the more remarkable as he passed through extensive regions in Kurdistan where there exists no sign of government, the chief of each tribe being a law to himself. On one occasion he was witness to an intertribal fight over the ownership of a few sheep, in which several Kurds were killed. By his explorations in the Taurus, near the Cilician Gates, he throws some light upon the much-discussed question as to the route Cyrus took over the mountains. He is an enthusiastic supporter of the Baghdad railway scheme and its extension to the Persian Gulf. A vast region, which now, from lack of profitable transport, is only a nomad-traversed grazing country, will, with the advent of the railway and irrigation, become one of the finest cotton and grain-producing parts of the world. Other subjects treated are the Nile flood and its variations, with tables of observations taken at various points, and the highlands of Chili in North China, from the record of a journey made to promote British interests in that part of the empire.

The French Government is having a new edition of the Koran prepared in Algiers, the main stress being laid upon the thoroughly scientific preparation of the text. The *Frankfurter Zeitung* states that this work has been undertaken at the request of the Orientalist Congress which convened some months ago in Algiers, in which also a large number of Moslem savants took an interested part.

First of the 1906 calendars to arrive is "Spemann's Kunst-Kalender" (New York: Lemcke & Buechner), a pad in form as in the three preceding issues. As usual, too, the art is of all ages, well chosen and well printed, often in color, and each plate is described. Architecture has a place beside sculpture, drawing, and painting. Repin's barefooted portrait of Tolstoy standing; Legros's medallions of Charles Darwin and Carlyle; Savinsky's portrait of Maeterlinck, occur here, and there are several American examples. The same New York firm sends us the tenth issue of "Meyer's Historisch-Geographischer Kalender," companionable with the foregoing in size and appearance, but cultivating another field in the usual way. Notable American personages are not wanting among the portraits. What we do miss is any reflection of the great Russo-Japanese duel. The Japanese scenes are all of peace. Both calendars are indexed for the illustrations.

—The editor of *Scribner's* must be credited, in the current number, with a unique achievement in securing an account of the Presidential field-sports direct from the pen of the President himself, and so fresh that the blood of the bears slain could even yet presumably be traced on the Colorado hillsides. "How We Defeated the Russians," from the pen of the Mikado, is about the only conceivable way in which this could be surpassed. Perhaps, when it is all over, the President's natural disposition to take the people into his confidence will draw from his full inkhorn a candid description of some of his battles within the walls of the White House, in comparison with which his encounters with the bears and bobcats of Colorado are but child's-play. The Bancroft letters and diaries, in this issue, come down to Mr. Bancroft's return to America, during the summer of 1822. His gratitude to President Kirkland, through whose interest his travel and study abroad had been made possible, was unbounded. "I owe to you," he writes soon after his return, "my intellectual existence, my hopes and my happiness. If I can enter with fine prospects the paths of usefulness and honor, I am indebted for this advantage to you." Russell Sturgis contributes a few paragraphs on the decoration of the Sorbonne, lamenting the fact that the foremost decorative painter of modern times should have been compelled to devote his time to thinking out dreamy schemes of personification and metaphor, though the result gives one "a certain sense of surprising achievement in a direction not wholly admirable and not involving much original thought."

—Mr. Nevinson's third paper in *Harper's* simply adds emphasis to his already well-established thesis that the various legal forms for the supposed regulation of native contract labor in Africa are but the flimsiest kind of cover for genuine human slavery. Just what is to be done about it in an age that no longer feels any enthusiasm for the doctrine of an inalienable human right to life, liberty and the pursuit of happiness, remains to be seen. Mr. Nevinson apparently feels that his task ends simply with demolishing the hypocrisy which would cover the facts under a dis-

guise of fine language. Another instalment from Prof. John Bassett Moore's forthcoming book on American Diplomacy is noticeable chiefly for its clear assertion and illustration of the much forgotten fact that the United States was one of the most potent influences for the political betterment of the entire civilized world from the very start. The experiment of 1898, even under the most favorable interpretation, merely marks a change of method, the results of which have yet to demonstrate their validity. Hamilton W. Mabie pays a brief but very warm tribute to the free kindergarten as a force for the mental and moral uplifting and the Americanization of the masses of children of foreign parentage in the poorer districts of New York city. One may heartily accept all that he says, and still reserve one's opinion as to possible fundamental defects in the kindergarten theory when applied to the education of children unhampered by similar disadvantages.

—Certain phases of the present social and political situation stand out most prominently among the contents of the *Atlantic*. William Allen White pleads for "the Golden Rule" in the life of the masses as the needful ameliorating factor. "Until men cease to wrong one another in small private transactions, they cannot in justice demand as rights the suppression by their Government of similar large public transactions." The logical outcome of this reasoning would remit the whole matter from the courts of law to the field of moral regeneration, yet Mr. White pleads in one portion of his paper for legislative intervention to establish and maintain rates of wages for labor sufficiently high to enable the laboring classes to grow mentally and morally up to the stature necessary for good citizenship. Mr. White seems not to have reasoned the matter out thoroughly enough to appreciate the hard fact that an arbitrary general raising of wages by Government decree is impossible by any other method than the Government assumption of all industries, in order that prices to consumers may be kept at least equal to cost of production, or the deficit made up by some form of taxation. William Z. Ripley supports the President's plans for Government regulation of freight rates, emphasizing at the close of his argument the alleged necessity for such regulation as the only practicable means of forestalling the more radical measure of Government ownership. To many, however, rate regulation by Government order seems rather an entering wedge, likely to open the way to still more forcible assaults in the interest of public ownership. Colonel Higginson writes of "the cowardice of culture," which is always fearful of evil to come from the possession of power by the many. There has been no time in our independent history, he thinks, when it would not have been a calamity rather than a blessing to have been ruled by our highly educated men alone.

—A tenth volume has been added to the great Index Catalogue of the Library of the Surgeon-General's Office at Washington. It opens with the letter M—anonymous authors' initial, sometimes revealed—and closes with Mnikhovski. *Medicine*, as might have been expected, outranks in bulk all other titles, and fills 280 pages, or as nearly as may be 30 per cent. of the total. Here, as under *Materia Medica*, the recent acquisitions include not a few works published in the sixteenth century; and four such are to be found also under *Magic*. *Man*, *Massage*, *Mastoid*, *Measles*, *Meat*, *Meningitis*, *Milk* (43 pages), and *Marriage* too are very full, and under the last head we find in 1673 a pre-Darwinian vindication of the union of cousins-german. Malthusianism appears to have lost none of its interest, judging from the nineteenth and twentieth-century works here catalogued. An admirable utility of this index, as well as of the collection, is seen in the case of Sir Morell Mackenzie's treatise on 'The Hygiene of the Vocal Organs,' of which the English edition is immediately followed by a display of versions in German, Swedish, Spanish, Dutch, and French. This is a chapter of literary history. For a *cause célèbre* we are indebted to Mrs. Maybrick. Lombroso furnishes the psychopathology of Alessandro Manzoni, and McKinley's case is technically treated in a large number of instances, preceded by a memorial discourse. Among unexpected constituents we notice Richard Madden's 'History of Irish Periodical Literature,' together with sale catalogues of his library and his art relics; and J. C. Merrill's 'Notes on the Ornithology of Southern Texas,' and his posthumous library catalogue. It is noteworthy that, letter for letter, this second series of the Catalogue is one volume ahead of the first.

—Our Minister to Switzerland, Dr. David Jayne Hill, takes diplomacy very seriously. He purposes tracing its history, in six volumes, from the time of the Roman fecials to the present. The attempt is ambitious, but, to judge from the first volume, 'A History of Diplomacy in the International Development of Europe' (Longmans, Green & Co.), hardly likely to prove successful. A history of international law, or of international relations, affords a promising subject, but that of diplomacy, closely defined as it is here, has a fatal weakness. Mr. Hill says in his preface: "A history of diplomacy properly includes not only an account of the progress of international intercourse, but an exposition of the motives by which it has been inspired and the results which it has accomplished." Now to the present reviewer this appears to be the precise contrary of the truth, for it is the history of international intercourse that includes the history of diplomacy, and not the less that includes the greater, as Mr. Hill would have us think. The greatest statesmen—Bismarck, Cromwell, Cavour—have overridden diplomacy rather than been diplomats. Politics in its highest aspects transcends diplomacy, and the historian who selects the lesser field for specialized treatment is thereby reduced to the least pregnant issues. It is perhaps unfair to conclude against Mr. Hill at this stage, and he should be given grace until he reaches, in a subsequent volume, the year 1648, his real starting-point. For the present it will suffice to say that in his first volume, coming down to the year 1250, he merely restates, and not with the hand of a practised mediævalist, a great deal that was in no need of such repetition.

—Mr. W. Morton Fullerton's 'Terres Françaises' (Paris: Armand Colin) is a study in the topology of provincial France. Like M. Bérard, who coined this useful word, Mr. Fullerton is more interested in discussing why a town or an abbey or a castle is here or there than in describing it; that can be left to the mere topographer. His volume contains an account of three tours made in Burgundy, Franche-Comté, and the Narbonnaise. The topologist is really only the intelligent historian under a new name, and so Mr. Fullerton, as he travelled leisurely through the French provinces, saw under the provincial town, of a dulness proportionate to its distance from Paris, the Gallic *oppidum*, and thought more of Hannibal and Vercingetorix than of Bismarck. Bibracte, the Acropolis of the Ædui, the modern Mont Beuvray, roused in him more enthusiasm than any cathedral or abbey in these rather dreary little towns, whose whole interest often seems to centre in their church. The French, he thinks, would do well to devote to their own origins and the local history of their provinces some of the attention that they lavish on Greek excavations. Here is an American making a pilgrimage, with all the sensations of a pilgrim, to the Æduan remains, while the average Frenchman knows more about the discoveries of the French School at Delphi than of the site of the first national assembly of the Gauls at Mont Beuvray. "Une telle montagne, au delà du Rhin, aurait été il y a longtemps consacrée par un discours dithyrambique de l'Empereur, acclamant, aux applaudissements de toutes les tribus germaines, le palladium de la race." With a dithyrambic Emperor, anything may happen, but we doubt whether the French are more indifferent than other nations as to their origins. It is America that furnishes all the reverential historical pilgrims of our day. At the birthplace or the home of every famous man, at the site of every great event, you will find as part of the scenery a well-informed American deploring the ignorance and indifference of the direct heirs of those traditions. Mr. Fullerton dreams of some French Cecil Rhodes who, with what we may call an inverse ambition, shall send the youth of Paris into the provinces to learn how France has become a nation. His meditations on the past of provincial France are interesting enough, and should be in the hands of all who take the same road. But even the French public which he has chosen to address can hardly know its provincial geography as thoroughly as he assumes. In a future edition, therefore, let him provide a map.

TWO SOUTHERNERS ON THEIR PROBLEMS.

The Color Line: A Brief in Behalf of the Unborn. By William Benjamin Smith. McClure, Phillips & Co. 1905.

The Negro: The Southerner's Problem. By Thomas Nelson Page. Charles Scribner's Sons. 1904.

A few years ago a lack of positive and systematic information about, or discussion of, the negro problem made it one of great difficulty to all investigators. During and after the Reconstruction period, there was a crop of books like those of Andrews, Chamberlain, and Pike, which, with many allowances for prepossessions, were at least

mémoires pour servir. Then there was a long interlude without any searching or thoughtful works; now the difficulty is to see the forest for the trees. Half a dozen volumes have recently appeared, illustrating all the points of view, from the old-fashioned "Cursed be Canaan" to the bitter and heartrending cry of the most highly sensitive negro.

Of these various works, two of the most recent are Mr. Page's and Professor Smith's, which may well be considered together because they represent the great truth that equally honest and candid Southern men may stand in different attitudes towards their negro brethren. Professor Smith, who is by profession a mathematician, and who inclines throughout his book to make use of statistical arguments, returns to a good old-fashioned plea which was more in vogue about the time he was born than it is to-day. His fundamental postulate is that the negro is racially inferior to the white man; that he is not simply inferior in degree, but in kind, and that the inferiority is absolutely not to be overcome. This method is really the most logical of the numerous lines of argument in behalf of slavery, for it sweeps away altogether the uncomfortable theory of the natural equality of men, to a large degree disposes of the arguments from Christianity, and goes far to minimize the inherent cruelty and despotism of slavery. If provable, it is an argument that not only justifies slavery, but now justifies any degree of political and social dependence which the white man thinks suitable and which does not run counter to the Constitution of the United States or the statutes against peonage. To support his argument, Professor Smith holds that the negro has made no progress in Africa; that in no time that we can foresee would he become the equal of the white man; that he contributes nothing to American civilization. He appeals to the theory of heredity as opposed to the influence of environment.

This course of argument is much disturbed by such phenomena as Du Bois and Washington, for whom the only explanation that fits the theory is that their gifts are those of white men; and this goes straight back into that paradox which paralyzed the pro-slavery argument, viz., that if a mulatto is white man enough to be great, he is no longer negro enough to be ignored. Professor Smith's main argument, however, is not derived from the intellectual powers or promise of any members of the negro race, so much as from an assumed physical and anatomical inferiority. At almost wearisome length he goes into the question of weight, stature, chest-girth, respiration, power of vision, etc., and to such physical characteristics as the length of the arm, projection of jaw, and cranial sutures. The positive evidence to which he refers is made up of a small number from the records of instances, and no scientific man would commit himself to the doctrine that the thesis could ever be proved or disproved from such narrow bases. The same may be said of Professor Smith's elaborate arguments that the negro is dying out because his birth-rate is diminishing; and, if the death-rate does not also diminish, the balance will eventually be against him. Considering that every decade shows an increase of millions in the negro race, the process of extermination seems not yet to have begun; and considering that, in almost every State and city in the Union, the last ten years (or even five years) of reliable statistics show a reduced rate of increase, it would seem that Professor Smith has simply struck one end of a general, and not a racial, phenomenon. In the present state of vital statistics, the farthest point apparently that can be reached on this subject is the generalization made by Professor Wilcox that the negro birth-rate is decreasing. It would not necessarily prove that he was less than a man if his total number were also decreasing.

All this discussion about the inferiority of the negro, however, is a means to an end with Professor Smith. He is attempting to show the awfulness of amalgamation, and, like most Southern writers upon that subject, he assures you on the one side that the negro is so far below the white that amalgamation is an unthinkable evil, and at the same time in many pages warns his countrymen that amalgamation is a positive danger. If there be a danger, it is because the white people of the South do not feel an innate superiority to the negro race—if the white race are permeated with race consciousness, there is no danger of amalgamation; yet Professor Smith says, "We must insist that the South in this tremendous battle for the race is fighting not for herself only, but for her sister North as well." At the same time Professor Smith insists that by illicit relations with a negro woman a white man "does not impair in any wise the dignity or integrity of his race; he may sin against himself and others, and even against his God; but not against the germ-plasma of his kind." From these arguments Professor Smith, of course, easily advances to the proposition that the reception of Booker Washington by the President of the United States was "an open proclamation from the housetops of society that the South is radically wrong, that no racial distinctions are valued in social life; . . . the unescapable result would be the mongrelization of the South."

The ultimate logic of Professor Smith's book is that since the negro is by nature so far below the level of the white man that he can never rise near it, the South is in danger of racial submersion, unless the Northern people will assist it by turning a cold shoulder socially upon all negroes, of renown or otherwise. The somewhat difficult crossing of the stream between the bases and the outcome of this argument is as skilfully performed by Professor Smith as circumstances will allow.

Thomas Nelson Page has given pleasure to thousands of his countrymen by his previous writings, and he brings to the problem a very different frame of mind: he has nothing to say of heels and shinbones, and much to urge of common interests between the two races. The chapters of his book are made up of articles written at different times for different periodicals, and with different objects in view; so that there is more or less reduplication and some lack of harmony between the different parts of the work; and, as a whole, it leaves upon the mind an impression of the great difficulty of the whole negro question, and of the lack of any positive programme or even happy suggestion for its solution. So far from setting the negroes apart as a race somewhere midway between beasts and men, Mr. Page regards it as unfortunate that the negroes themselves "have long regarded their race as a special species, to be considered from quite a special standpoint, judged by different standards"; and throughout he judges the progress of the negro substantially by a white man's standard. Nevertheless, he insists, as many Southern men do, that "Wherever the negroes and the Southern whites are let alone and are not affected by outside influences, they for the most part live in harmony"; and though he does not deny the right of Northern people to discuss the question, he plainly thinks their influence rather mischievous than otherwise; and he dwells more than most Southerners upon the natural good feeling between the races, especially after the end of the civil war. To his mind the main reason for the disturbance of that kindly relation was the bestowal of suffrage on the negroes, which he holds to have been entirely revengeful: "For this they took eight millions of the Caucasian race, a people which in their devotion and their self-sacrifice, in their transcendent vigor of intellect, their intrepid valor in the field, and their fortitude in defeat, had just elevated their race in the eyes of mankind, and placed them under the dominion of their former slaves." He recognizes the malign influence on the Northern mind of the vagrant laws of 1865; but he cannot forget, and no Southerner can, the disorder and profligacy of the Reconstruction governments. Nevertheless, so far from excluding the negro from the human race, he commends the present suffrage laws in the Southern States because they "will tend to break up the dense solidarity of the negroes, and will give the best among them . . . an opportunity to rise and range themselves in a class where they will be freed from the burden of the ignorant mass which weighs them down, and may form a better class to which the others may aspire." So far from holding the race incapable of improvement, he declares "that the negro has not behaved unnaturally; he has, indeed, in the main behaved well"; and elsewhere, "Unquestionably a certain proportion of the negro race has risen notably since the era of emancipation." Yet he is dissatisfied with the degree of progress, and doubts the estimate of the holdings of property by negroes—a doubt which must be shared by any one who carefully looks into the statistics. In other words, Mr. Page thinks that the upper stratum of negroes has improved a good deal, while the lower stratum may not have improved sensibly.

Of the "demonstrable inferiority of the negro race to the white race," Mr. Page is perfectly sure, and he thinks that the cases of high mental development can all be traced to the influence of whites; indeed, he goes so far as to say that "slavery, whatever its demerits, was not in its time the unmitigated evil it is fancied to have been. Its time has passed. No power could compel the South to have it back. But to the negro it was salvation." He is equally ready to say in regard to Secession that "the true and ultimate cause of the action of the South was her firm and unwavering adherence to the principle of self-government and her jealous devotion to her inalienable rights." Of the smaller

capacity of the negro to take advantage of his opportunities as shown in the West Indies, in Liberia, and in the Northern States, Mr. Page makes much, and it would be hard to gainsay the force of his arguments. In one respect, however, Mr. Page thinks he sees positive deterioration, namely, in the loss of skilled trades, which he believes they enjoyed in slavery. There were undoubtedly slave carpenters and mechanics, and a few engineers, but all the evidence now obtainable seems to show that, except for blacksmiths and a few like plantation necessities, there were almost no skilled negro mechanics outside the towns in slavery times.

Professor Smith has no remedies to propose for the negro question except to keep the negro down; Mr. Page has several suggestions, few of which he is able to follow out to any practical application. Although he admits that the education of the negroes has been a disappointment to the South, he puts himself squarely upon the ground that "the alleged danger of the educated negro becoming a greater menace to the white than the uneducated is a bugaboo which will not stand the test of light. That this might be true if the white is allowed to remain uneducated, may readily be admitted," and he claims credit for the South for expenditures for negro education. Nevertheless, he ventures to hint that "a crusade against the South based on her attitude towards the negroes . . . might sweep away the last remnant of good feeling that remains, and with it every dollar raised by taxation on the property of the whites to educate the blacks." That is, although negro education is helping to solve the problem, the South may cut it off if its feelings are too much disturbed.

In three different places Mr. Page takes pains to point out the absolute impossibility of the deportation of the negro—a remedy which is still often put forward by Southern writers. Any remedy, Mr. Page says, must be "one that will commend itself to the body of the intelligent whites at the South." The question must be taken out of politics. Any solution must recognize the different classes of negroes, and the negroes themselves must give up their feeling of solidarity. Both races must be raised simultaneously. The North must keep out of the attempt to help the South solve the problem. All these generalities do not bring us any nearer to the solution of the problem. In fact, the only positive suggestion in Mr. Page's book, other than that of continuing education, is "for a reasonably limited number of representative Southern men to meet in conference a reasonable number of those colored men in the South who are more familiar with the actual conditions there, and thus are representative of the most enlightened and experienced portion of that race."

Mr. Page's book is honest, kindly, and, barring a few extravagances, moderate; but the reviewer lays it down in the same disappointed frame of mind as the English squire who tried to get drunk on port, and, after the fourth bottle, remarked, "But I don't seem to get no forrarder."

BABYLONIAN EVIL SPIRITS AND INCANTATIONS.

The Devils and Evil Spirits of Babylonia: Being Babylonian and Assyrian Incantations against the Demons, Ghouls, Vampires, Hobgoblins, Ghosts and Kindred Evil Spirits which Attack Mankind. Translated from the original Cuneiform texts, with transliterations, vocabulary, notes, etc., by R. Campbell Thompson, M.A. Vol. II. "Fever Sickness" and "Headache," etc. London: Luzac & Co. 1904. Pp. liv., 179.

The first volume of Mr. Thompson's 'Devils and Evil Spirits' (reviewed in these columns nearly two years ago) dealt with evil spirit texts as such. The present volume contains the texts of charms for the cure of *Aš̆akku*, which Mr. Thompson translates tentatively 'fever,' and 'headache,' a series of miscellaneous texts of charms for driving out various diseases, a group of texts called *Luḫ-ka*, translated tentatively 'cleansing the mouth,' and supposed to be intended for use in restoring purity to those who have broken the ceremonial laws and thus incurred the punishment of disease, and a little group of texts describing certain supernatural beings whom Mr. Thompson supposes to be akin to the Arabic jinn. While the distinction between disease tablets and evil-spirit tablets is not well defined and the charms and incantations in both cases are substantially the same, it being supposed that every disease is caused by demoniac possession, nevertheless the distinction made in the titles of the two volumes is justified from the texts themselves. Compare, for instance, the differentiation of fever and disease from demoniacal possession in this incantation from the fever series (p. 29):

"Fever unto the man, against his head, hath drawn nigh,
Disease unto the man, against his life, hath drawn nigh,
An evil Spirit against his neck hath drawn nigh,
An evil Demon against his breast hath drawn nigh,
An evil Ghost against his belly hath drawn nigh,
An evil Devil against his hand hath drawn nigh,
An evil God against his foot hath drawn nigh,
These seven together have seized upon him,
His body like a consuming fire they devour(?)"

The texts in this volume were originally written in Sumerian, but almost all of them are furnished with a Semitic-Assyrian interlinear translation. With a few exceptions they came from the library of Ashurbanipal at Nineveh, but various references to Ea and Eridu show that they were originally derived from Eridu. The principle of sympathetic magic is on the whole somewhat more pronounced in the tablets of this volume than in those published in Volume I. The sucking pig and virgin kid play an important part in the remedies. The pig or kid is to be killed, cut up, and placed upon the sick man. The heart of the pig, which has been placed upon the sick man's heart, is to be held by him, and the pig's heart is to be as his heart, the blood as his blood, the flesh as his flesh, and the pig is to be in his stead. The virgin kid is dealt with in the same way. Each was placed upon the sick man with a repetition of "the incantation of the deep of Eridu." Another method of sympathetic magic represented in these tablets is the preparation of a figure of the sick man in clay or some similar substance, which figure is then placed upon his loins and the evil spirit charmed into it. The pig or kid or image in which the spirit of disease is thus induced is then destroyed or cast away.

In his introduction Mr. Thompson calls attention to the New Testament miracle of exorcising the evil spirits into the herd of swine, which are then destroyed in the Sea of Galilee, and suggests a parallelism of ideas between this miracle and the charm of the sucking pig. This may seem somewhat forced, but it is a fact that New Testament ideas and even expressions with regard to possession by demons are at times parallel to the expressions and ideas contained in these Sumerian magical texts. As pointed out in the introduction to the first volume, Sumerian magic, which was a well-developed system at the time when the Babylonian-Semites entered the land, not only was adopted by them but also affected the whole of Hither Asia, and passed over thence into Europe. This does not mean that other peoples did not have somewhat similar conceptions of disease as occasioned by evil spirits and the like, but that the formulated and developed system of the Sumerians was so much in advance of their crude and undeveloped thought that it was in general adopted by them, so that Sumerian magic may be said to be the parent of the magical systems of Syria and the West.

This little fragment (p. 27) of an incantation, by which a demon is to be driven back to the desert, accords with a common conception which we meet in the New Testament, the Old Testament, and generally in Oriental folklore, of the place of abode of evil spirits:

"O evil Spirit! To thy desert!
O evil Demon! To thy desert!
O evil Ghost! To thy desert!
O evil Devil! To thy desert!"

The incantations are regularly cast in poetic form, and sometimes the description of the disease and its working is highly dramatic and impressive (p. 11):

"The evil Fever hath come like a deluge, and
Girt with dread brilliance it filleth the broad earth,
Enveloped in terror it casteth fear abroad;
It roameth through the street, it is let loose in the road;
It standeth beside a man, yet none can see it,
It sitteth beside a man, yet none can [see it].
When it entereth the house its appearance is unknown,
When it goeth forth from the house it is not perceived."

In his introduction Mr. Thompson calls attention to the great importance of the *name* in this system of magic, and in fact in magical systems in general. The name of the disease and of the demon which caused the disease must be pronounced, and also the name of a good spirit or deity strong enough to overcome the evil spirit which has possessed the patient. External appliances and charms are not of themselves effective, but only in connection with the proper use of the *name*. It is for this reason that he who applies the incantation must commence with some statement showing that he acts in the name of a god. In the Eridu tablets, Ea and his son Marduk are the names of power, and the common introductory formula, usually indicated by a few catchwords only, relates how Marduk saw the sick man and went to Ea, etc. The evil spirit is likewise sometimes identified by a story, as in the legend of the worm that causes toothache by feeding on the gums, which is meant to show

that the person making the incantation knows the cause of the disease. Often a considerable number of names of evil spirits or kinds of evil spirits are used, so that the right one may surely be mentioned, it being impossible in many cases to determine precisely the cause of the evil. Mr. Thompson points out that this idea of the compelling power over demons of the holy name was taken up into Jewish and Christian magic, so that the exorcisms of the mediæval monks were the same in principle as the charms and incantations of the old Sumerians. He might have pointed out more distinctly how early this commenced in Christian practice, as shown by the emphasis laid by the writer of the Acts of the Apostles on the fact that demons were conjured and disease healed by the name of Jesus.

Mr. Thompson points out further that there was something of the nature of taboo (he prefers to write it *tapu*) among the Sumerians and their Semitic successors. The breach of ceremonial laws, of which the sinner might not himself be conscious, brought upon him calamity in the form of disease, and to remove this calamity atonement must be made to appease the offended gods or spirits. The word used for atonement is *kuppuru*, the equivalent of the Hebrew *kipper*, which latter word Mr. Thompson thinks was taken over by the Jews from the Babylonians at the time of the Captivity. He mentions some forms of atonement for taboo in the Hebrew Levitical law (p. li.):

"A woman after childbirth (Lev. xii., 2 ff.).
"A person touching anything unclean (Lev. v., 2 ff.).
"A man or woman with an issue, or similar uncleanness (Lev. xv., 2 ff.).
"A Nazarite defiled by touching a dead body (Numb. vi.).
"Leprosy, and the house wherein leprosy breaks out" (Numb. xiv., 18, 53)";

but he fails to cite or apparently to appreciate the much more strikingly parallel Hebrew laws of atonement for unknown trespass contained in the fourth, fifth, and sixth chapters of Leviticus. The theory of those laws is that if any calamity, sickness, disease, or the like come upon a man, it is due to some breach of law, ceremonial or moral (to make a modern distinction), witting or unwitting; and the disease or calamity was removed only by atonement. The general principle underlying these laws is identical with that represented in the incantations dealing with the *mamit* or ban which has fallen upon a man (p. 119):

"Ban! Ban! Barrier that none can pass,
Barrier of the gods that none may break,
Barrier of heaven and earth that none can change,
Which no god may annul,
Nor god nor man can loose,
A snare without escape, set for evil,
A net whence none can issue forth, spread for evil."

The nature of the transgressions which cause the evil in both the Sumerian and the Jewish codes is well set forth in the following (pp. 137 f.):

"While he walked in the street,
. . . while he walked in the street,
While he made his way through the broad places,
While he walked along the streets and ways,
He trod in some libation that had been poured forth, or
He put his foot in some unclean water,
Or cast his eye on the water of unswashen hands,
Or came in contact with a woman of unclean hands,
Or glanced at a maid with unwashed hands,
Or his hand touched a bewitched woman,
Or he came in contact with a man of unclean hands,
Or saw one with unwashen hands,
Or his hand touched one of unclean body."

Mr. Thompson's suggestion that the Jewish law of atonement was derived from Babylonia at the time of the Captivity is, we believe, incorrect. While the original connection of the two is clear, the differences in detail are too great to admit of this direct derivation. The relation of the two is rather the same as that of the Babylonian and Hebrew stories of the Flood, secondary, not primary.

The close of the incantation of the ban, quoted above, is interesting as illustrating the use of the magical bowl. After the introduction, already cited, this incantation seeks to cover the ground of the particular affliction for which the remedy is to be applied, whether caused by evil spirit, evil demon, evil ghost, etc.—may he be caught in the snare of Ea, closed in a dwelling from which he cannot get out, and the like—ending with this definite statement (p. 125): "With a bason without opening may they cover it." Now this is precisely the method of exorcism or banning of evil spirits practised by the Jews in Babylonia, as shown by recent excavations. Great numbers of bowls have been found inscribed within with incantations, generally in Jewish script, against evil spirits, and sometimes with demon figures. These bowls were placed on the floors of the houses, mouth down, for the purpose of imprisoning the evil spirit, who otherwise would have injured the occupants.

Most curious is the little series of tablets to which Mr. Thompson refers in his preface as containing descriptions of a number of supernatural beings. The first contains a precise description of a little clay figure of a woman, naked from the waist up, suckling a babe on her left breast, of which great numbers have been found in Babylonian explorations. After describing the little figure accurately, the tablet closes with the words: "Her name is Nin-tu, a form of the Goddess Mah" (p. 149). This is the mother goddess to whom, Mr. Thompson suggests, barren women made votive offerings in the hope of receiving offspring. The other descriptions are not so readily identifiable, and the purpose of the whole series is by no means plain. Possibly figures of all these demons were offered as votives for certain purposes. That charm tablets were themselves offered as votives to the gods is shown by the inscription on the reverse of one such charm, which recites that it was presented as a votive offering to Nabu; whether to secure his interference, or because this incantation used in his name had wrought a cure, is not clear.

We notice occasional unnecessary repetitions: precisely the same account of the use of the young pig, virgin kid, etc., is given in both volumes, and the extremely interesting and curious legend of the worm a translation of which was given in the introduction of the first volume, appears with text, translation, and photographic plate at the close of the second volume. The texts are printed on one page in Roman transliteration, and on the opposite page appears the translation. There are a few footnotes, one of which informs us that a certain tablet was written in the 129th year of the Seleucidan era, that is, 183 B. C. (p. 63). Evidently these incantations continued to be used in the original Sumerian tongue centuries after it had become a dead language, the language itself having a mystical value like Latin in the Middle Ages. The Semitic interlinear translations indicate a scientific and scholarly interest of the learned class in the actual meaning of the words of the charm. That the original sense had in some cases been lost when they were made is clear from the imperfections of the translations.

The second volume closes with a brief vocabulary of selected words from the texts, the translation of which is still in a somewhat tentative condition. The work is a welcome and valuable addition to our knowledge of the evil spirit lore of Babylonia, which was an integral and perhaps the most essential part of its practical religious system.

History of Ancient Pottery, Greek, Etruscan and Roman. By H. B. Walters, M.A., F.S.A. Based on the work of Samuel Birch. In two volumes. Charles Scribner's Sons. 1905. Pp. xxxvi., 504; xiv., 588.

The preface of this book relates very briefly the steps in the study of ancient pottery which have made possible so extensive and so elaborate a work. Samuel Birch, of the British Museum, published long ago his invaluable and very original work. There was nothing like it—there never has been anything like it. It was republished in a much enlarged edition in 1873, just in time to help us in America when we were compelled to receive and study in haste the extraordinary collections brought from Cyprus. That was the last edition of Birch's book; and he, a very old man, did not try to carry it to later editions or to incorporate with it, in other forms, any record of the remarkable advances made from year to year in the knowledge of the subject. Neither did any other writer take up his task. There are, of course, huge and costly books devoted to the illustration of Greek vases, and the Germans have taken the lead in this, as in so many kindred subjects. The catalogues of certain museums are of vast importance in the study, and contain a deal of very closely packed though unclassified information. The English enthusiasts for purity in art have studied the figure-drawing and painting on the vases, in minute detail. No part of all this production has tended to replace in any way the epoch-making work of Samuel Birch, so that now, when it becomes possible to publish a new edition, it is found that, even after certain branches of the subject have been separated from it—left for future treatment—the book is enlarged to nearly twice the size of even the latest edition of Birch's volume. This work has been done by Henry B. Walters, an assistant keeper of Greek and Roman antiquities in the British Museum, a university prizeman, and the author of special catalogues and (as stated in 'Who's Who') of a so-called 'Little Book on Greek Art,' which has not come our way.

Now what are the deletions? What is it that has been omitted from the programme as arranged by Birch? It is all that is not Greek nor Greco-Italian. Egyp-

tian pottery, ancient Oriental pottery such as that from Mesopotamia and Syria, and the "pottery of the Celts and of Northern Europe," have been left out of the new work. We have, then, in the two volumes, seventeen chapters devoted to Greek vases and their decoration, and one chapter devoted to "Etruscan and South Italian pottery"; five chapters on Roman pottery, by which is meant the pottery of Italy under the Roman rule; and, finally, brief mention of earthenware found in Britain, Gaul, and Germany, but evidently of the Roman Imperial epoch.

There are thus three times as many pages devoted to Greco-Roman ceramic ware as were found necessary in even an exhaustive treatise of thirty years ago. This comes of a really prodigious advance in the amount of accumulated knowledge and in the variety and thoroughness of the philosophical examination of the subject. The preface to this book states the case in these words: "For the historical account of vase-painting in Birch's second edition one chapter of forty pages sufficed; it now extends to six chapters." A similar increase in the space occupied is found in the matter of the pictorial subjects with which the vases are adorned. Nothing remains nearly as it was thirty years ago except Part I., occupying the first five chapters of the first volume, and dealing with the technical part of the subject. Even there, however, the chapter concerned with the sites and circumstances of discovery is very largely new, as indeed it had to be. Even where nothing was to be added as to the place of discovery, there is still much to say about the conditions of discovery and the conditions of preservation—the shapes and distributions of the tombs in which vases were found, and more especially the conditions and the nature of terra-cotta statuary and members of architectural compositions.

With the enlargement of the text, there has come a great increase in the number of illustrations. There are now 69 plates, and many are in color—that is to say, in the red and black made necessary for the proper showing off of painted vases. The rest are half-tone pictures, exhibiting chiefly the forms of vases, though the painted figures and ornaments are still intelligible in their black-and-white reproduction. There are, moreover, 250 text illustrations, giving forms and patterns more roughly but still with an approximation to accuracy. Some of them are the wood-cuts of the former editions; others are rough and slight photographic renderings, well enough adapted to explain the text.

We have spoken hitherto as if painted vases formed the chief subject of the book. Of course, they take up the greatest number of pages; and indeed it is disappointing to find that very little more space is given to the statuettes found at Tanagra, in Sicily and in Syria, than was given in the old book of thirty years ago. On the other hand, the discussion of Roman and Roman-provincial statuettes and reliefs of terra-cotta is most interesting, and appears to be very complete. The reader is reminded of the great interest which has been shown of late years in the study of those reliefs in stucco which adorn the walls and stone vaults of buildings discovered or explored in recent times in Rome and in the neighborhood of the city. The terra-cotta reliefs mentioned in this book are often of kindred artistic interest. Thus, the two reliefs shown in Plate LXI., representing the one the dance of the Curetes around the infant Zeus, according to the Cretan legend, and the other a similar story of divine infancy, "Dionysos in the Liknon-Cradle" (that is to say, in the winnowing basket associated with his worship), and attended by a faun and a menad, are interesting quite beyond the ordinary range of fragments of late classical art because the material, the low relief, and the scale of the work all agree so perfectly with the daring, the even extravagant character of the design. So, in Plate LXII., are given reliefs of the youthful Theseus lifting the rock, and a group of priestesses with their sacred utensils, in which sculptures a somewhat graver and more restrained method of design has been used with equal freshness and vigor of modelling. The conclusions drawn by intelligent archæologists during the last ten years with reference to the semi-independent nature of Augustan-Roman art—an art Greek only in its ultimate origin, and separated in the details of its conception by a whole world of time and conditions from Greek art of the central age—are borne out by these plates and by the discussion, fifty pages long, which accompanies them. The chapter on Roman lamps which follows is, although of less interest to the art student, of great importance to the investigator of ancient sociology.

Still, however, Greek vases are the central theme. The supreme importance of this subject in modern opinion is exemplified by the bibliography, of which Part II. is devoted to vases alone and excludes, of course, references to periodicals. This Part II. is of twelve and a half pages, and contains therefore nearly 300 titles; and it need hardly be suggested that these are all works of accepted authority, the slighter and more popular manuals being neglected. The fact is, that Greek vases have always attracted the most earnest study of thinkers of various classes. The archæologist pure and simple finds in them an endless, a simply inexhaustible subject of theory and speculation, and a series of dogmas upon which he can base those conclusions which are styled "facts" in an historical sense—facts until their certainty is called in question. The student of manners and of costume finds an inexhaustible subject of investigation in the outline drawings and the paintings in red and black upon their swelling sides. The student of Greek poetry and legend has an unending source of wonder and cause of close thought and inquiry in the scenes represented, which may be "Homeric" or from legends earlier than Homer, and which again may be based upon versions of the Greek fable that have perished altogether or have left no detailed record behind. There is, too, the constantly recurring question as to the universality of the stories as we have them in those works of Grecian literature which have survived. Was it in that way that all Greek-speaking people of all the Mediterranean lands which they inhabited thought of the legends in question? And, finally, the artist's interest in the Greek vase-painting is infinite and most varied, because, while the decorative quality of the pieces is not preeminently great, and while a room adorned with the finest pottery of Attica is, after all, not made brilliant by its contents, yet the pieces taken separately in the hand convey to the student the loftiest and most stimulating lessons in the way of storied art applied to decorative purpose.

Musical Studies. By Ernest Newman. John Lane. 1905.

A great change has come over the spirit of English musical criticism in the last decade or two. Before the nineties there were able writers in London, but even those who, like Dr. Hueffer, saw that there was something in music besides Handel, Beethoven, and Mendelssohn, never dared to lay rough hands on the old idols. Then came some men who, like naughty boys in school, threw paper balls at everybody and everything. They did no harm, but actually achieved some good by forcibly calling attention to the fact that some of the old things might be bad and some of the new ones good. Another type of the present-day criticism is personified in Mr. Ernest Newman, who, while always preserving his dignity, does not hesitate to speak out his mind freely in regard to both the older and the younger masters; to refer, for instance, to "Beethoven's nonsensical remark about the Pastoral Symphony being 'more the expression of feeling than painting,'" on the one hand, and on the other to rebuke his own countrymen by remarking, with reference to the "Margaret" movement of Liszt's "Faust" symphony: "In face of this divine piece of music alone the present neglect of Liszt's work in England is something inexplicable."

Mr. Newman also ventures to fly in the face of public opinion with a few pages of very depreciative remarks on Gounod's "Faust." Here he is decidedly in error. Whatever the faults of what is, after "Carmen," the best opera ever written outside of Germany (unless Verdi's "Aïda" be excepted), it has the divine gift of melody; and it is the almost utter lack of this gift that will make Mr. Newman's particular idol of the moment, Richard Strauss, an ephemeral figure on the musical stage. The essay, in the present volume, on this maker of megatherian tone-poems would be more amazing had it not been preceded by a similar panegyric in this country, waggishly perpetrated by Mr. James Huneker, who is noted for his virtuosity in paradox and self-contradiction, and who has already lowered his admiration of Strauss several pegs. Mr. Newman attributes to Strauss pretty nearly everything except the creation of the world. He is "a master of orchestral effect such as the world had never seen"; he "stands proudly, loftily alone, unique among musicians"; he has been "unconsciously evolving a musical bias that was to remould the æsthetics of music"; he "appears to be wildly artificial because he is absolutely natural"; he is "the destroyer of . . . all previous values, . . . the creator at once of a new expression and a new form"; he has shown that the symphonic poem is the real music of the future, and will bring about "the ultimate passing away" of the opera; he has emancipated music "from the tyranny of the voice"; he is the first who has sufficiently appreciated "the astringent quality of the discord"; he is "the first complete realist in music"; he makes "one ask one's self whether it is

possible for music to develop farther than this." This, and much more of the same sort, Mr. Newman tells his amused and incredulous readers, most of whom, in all probability, see in R. Strauss nothing more than an unbalanced, extravagant imitator of Berlioz and Liszt, who has added absolutely nothing new to musical form, and very little of value to its substance; whose orchestration is far inferior in sensuous charm and emotional warmth to that of Johann Strauss, Dvorák, Tchaikovsky, Grieg; and who is also vastly behind these men and other contemporary musicians in the capacity of creating new melodies, which decides the ultimate rank of composers.

Oddly enough, in the last seven pages of his book, an appendix to the Strauss essay, Mr. Newman seems to have suddenly discovered that his idol is, after all, stuffed with sawdust. This appendix is concerned with Strauss's latest work, the "Domestic Symphony," which had its first performance in New York. Nearly all of its composer's German admirers consider it his master-work, and it is certainly quite as good as any of its predecessors; yet our author takes it to be "the work of an enormously clever man, who was once a genius." To his mind, there is "not a memorable theme in it"; and, concerning the man who, on p. 259, was the "wielder of the mightiest orchestral language ever yet spoken," we are told frankly (on p. 301) that he "wants to wear all the clothes in his wardrobe at once," his work being "grossly overscored, a good third of the notes being perfectly superfluous." As for his "remoulding the æsthetics of music," there is, in truth, "a strain of foolishness in Strauss, that always prompts him to go through the heavy farce of mystifying his hearers at first" by saying he wants his new work to be taken as absolute music, yet giving a few words of the clue to his literary scheme to-day, and a few more to-morrow, until the story is complete. In the case of the "Domestic," he has "thought it worth while to put about a hundred people to a great deal of trouble and expense in order to suggest the imbecile spectacle of a baby shrieking in its bath; and I think it is time the world protested against so much of its leisure and its funds being taken up with sheer inanities of this kind." Verily, Mr. Newman's postscript is the most important thing in his letter.

In the other essays of this volume we find our author much more sane and satisfactory, and less self-contradictory. We were not particularly interested in his attempt to trace "a curious similarity between the æsthetic systems" of Wagner and Maeterlinck; but his chapter on "Herbert Spencer and the Origin of Music" is a notable specimen of brilliant dialectics, which leaves that philosopher (who should never have ventured into a field in which his ignorance was so dense) floundering in the mire. Mr. Newman's contention is that "music has its origin, not in speech, but in the venting of vague emotion in mere vague sounds." Better still than his demolition of Spencer are the two longest section of his book, which are concerned with Berlioz and with Programme Music. He fails, indeed, to prove that Berlioz belongs in the first rank of composers (for that, his melodic faculty was too weak), but he does much to correct the popular misconception of that interesting Frenchman as a volcano that was perpetually in a stage of eruption; giving a list of his works, with brief characterizations of them, to show how few of them deserve the epithet of "extravagant." He admits that the last thirty years of Berlioz's life were a failure to redeem the promise of his first period, and his theory regarding this is that he was overflowing with ideas in his younger days, and that there was a gradual failure of them in his latest years, owing to the terrible physicial tortures he endured from his intestinal neuralgia and the large quantities of morphia he had to take to still his pangs.

The essay on Programme Music is unquestionably the most lucid, original, and convincing discussion of that question ever printed. All those (their number is still considerable) who still fancy that music with a definite pictorial or literary substratum or programme is an illegitimate branch of the art, may have their brains cleared of cobwebs by reading this chapter. Whereas most of the older orchestral music of any value was absolute music, most of the later works of value come under the head of programme music; and the momentum of the latter species seems to be increasing every year. "One has only to take up a catalogue of the Russian, French, German, Belgian, American, or even English, music published during the last twenty years, to see how enormously this form of art has grown, and how the really big men all display a marked liking for it." We are very far from agreement with Mr. Newman in all of his ideas as to the reasons for this change or his forecast of the future—his strictures on the opera, in particular, are absurdly insular, and he fails to perceive that Liszt applied Wagner's principles to the symphony; but, on the whole, we must commend this chapter as a masterly specimen of original reasoning, rare in musical literature.

Metapsychical Phenomena, Methods, and Observations. By Dr. J. Maxwell, Translated by L. I. Finch, with a new chapter containing "a complex case," by Professor Richet, and an account of some recently observed phenomena by the Translator. London: Duckworth & Co.; New York: G. P. Putnam's Sons. Pp. xiii., 448.

This is certainly one of the most remarkable contributions to the literature of "Psychical Research," and impressive enough to deserve, though hardly to need, the two prefaces with which two distinguished men of science have supported it—the one, by Prof. Charles Richet, the physiologist of the Paris Faculty of Medicine, and (with the book itself) translated from the French; the other, by the well-known physicist who presides over the University of Birmingham, Sir Oliver Lodge. The latter's introduction informs us that Dr. Maxwell was originally a lawyer, being indeed at present the Deputy Attorney-General of the Bordeaux Court of Appeal, who has for ten years devoted his leisure to the study of psychical phenomena, and, in order better to do so, studied medicine and proceeded to the doctorate. It is evident, therefore, that he possesses what would seem to be the ideal qualifications for the handling of a very perplexing and treacherous subject, while the book itself testifies further to his intelligence and literary ability. Now when a man of this calibre vouches for his personal observations of supernormal happenings, he may well expect to extort a moment's attention even from the most contentedly skeptical, and when his testimony is most calculated to stagger belief.

It would require a singularly open mind to accept Dr. Maxwell's conclusions at first hearing without reluctance. He has devoted special attention to what are known as "the physical phenomena of spiritualism," with the result that he practically rehabilitates the old-fashioned "raps" and table-turnings. These he has constantly observed under the most favorable conditions, in broad daylight and without contact. After experimenting with many mediums, private and professional, he seems recently to have discovered in a friend of his, a gentleman of scientific training, who is called "M. Meurice," a medium of singular power. Some of his performances—*e. g.*, in attracting light articles of furniture by "passes," and producing raps on an open umbrella which "look like drops of some invisible fluid falling on the silk" (p. 278)—are as extraordinary as anything recorded by the most credulous spiritists, and much better evidenced. For they were witnessed not only by Dr. Maxwell, but also by Professor Richet and a "Dr. X.," who is apparently too great a medical personage to compromise his name, and seem to have been well observed. This medium, in short, seems destined to accomplish for the "physical" phenomena much the same as Mrs. Piper has done for the "intellectual," and his feats are as difficult to account for on any hypothesis of fraud. It is earnestly to be hoped, therefore, that other men of science can be induced to avail themselves betimes of the unique opportunity of further testing this remarkable medium, and that in subsequent reports we shall be furnished, at least in some cases, with all the dry and precise details of the conditions of experiment, which Dr. Maxwell usually omits. He holds, rightly enough, that enough detail can never be given to silence the cavils of a sufficiently determined and ingenious skeptic. But, after all, there are minds less prejudiced who would like to judge reasonably for themselves of the adequacy of the precautions.

It should be noted further that, though Dr. Maxwell is, of course, quite familiar with the spiritistic interpretation of these strange phenomena, he is loth to accept it. He prefers to adopt the hypothesis of a physical nerve-force to account for the movements observed, and of a "general consciousness" to account for the intelligence displayed. But throughout he keeps theory discreetly in the background, and very candidly avows that not only with the regular mediums, but also with "M. Meurice," the phenomena spontaneously assumed a spiritistic form and tendency. Some, indeed, of the proofs of "spirit-identity" given him are very nearly as good as anything of the sort yet recorded. Finally, it should be said that, in spite of its size, Dr. Maxwell's book is eminently readable, although the translator has admitted a good many disfiguring gallicisms. An index was worth providing.

Five Years in a Persian Town. By Napier Malcolm. E. P. Dutton & Co. 1905. Pp xvi, 272. 12 illustrations.

The town is Yezd, and what we have is a description of Yezd, or, rather, of the people of Yezd, from a missionary's point of view. Mission work itself is kept in the background, but the attitude naturally remains. The description is good and wonderfully objective, considering that Mr. Malcolm has really attempted to express in intelligible formulæ the essentials of a racial and religious character which had worried and puzzled him. The strain of the worry shows; but he has worked out very fairly some general attitudes which command respect if not complete acquiescence —character is too full of incommensurables ever to permit finality. One of his most fertile ideas is the effect of environment—the desert, with its separated plants each in a hermit existence, the solitary village visible at a day's journey on the even plain, the uniform mountain range, an atmosphere which shows a wealth of isolated units but checks all coördination. It is not that you cannot see the wood for the trees; there are only trees but no wood. So he sums up thus :

"I think I am right in saying that it all points to the fact that the great difference between Persia and Europe is that the Persian tends to take things piecemeal, and the European to regard ideas in their relation to others. At the same time this is not always at once obvious. A European is firmly convinced of the value of scientific knowledge, and will decorate a man who has discovered all that there is to be discovered about a black beetle. Here the Persian will laugh at the European, as he also will when the European rewards highly extreme excellence in the practical trivialities of life. But it is obvious that these exceptions are more apparent than real. The Persian is like a man who has got a pair of glasses that give him a very clear view of a very small field of vision. He does not view things absolutely piecemeal, but he generally regards only a very small area at a time. A man who picks up shells with an idea of adding to the general store of human knowledge is to him an imbecile; but he is only willing to pay the same attention to an invention like Marconi's that he would to an improved hair-wash" (p. 163 f.).

Naturally, a five years' residence, while it destroys the traveller's keen sense for the strange, does not give that depth of familiarity which such an attempt as this demands. Thus, it is plain that Mr. Malcolm's studies in Muhammadanism as a faith and a science had not gone very deep; the chances would be high against his passing examination in theology or law. So we have the extraordinary statement that "the Mussulman does not pretend to know anything about the attributes of Deity" (p. 84); as a fact, Muhammadan theologians, always protecting themselves with the doctrine of God's essential "difference" from man, have entered upon the most elaborate catalogization of the divine attributes. The fundamental conception, too, of the *sunna*, the usage of Muhammad, has evidently not been thoroughly apprehended (pp. 73 ff., 124 ff.). A fuller appreciation of its habit-forming power and, still more, of its multiform and contradictory elements would have cleared up much. Similarly the question of motive or purpose in an action will be found at length in the canon-law of Islam and even, in criticism of its perversion, in the 'Arabian Nights' tale of Abu Niya and Abu Niyatain—he of one motive and he of two. But, for all that, the book fulfils its purpose excellently, and makes a fair guess at some Persian characteristics. The illustrations—photographs and reproductions of native paintings—are very good.

La Nature et la Vie. Par Henry de Varigny. Paris: Armand Colin. 1905. 18mo, jésus, pp. 356.

Although it is the essential aim of physical science to explain phenomena without resort to any hypothesis of a direct action of mind upon matter (not but that mind *does* act on matter in any common-sense understanding of the phrase, of course), yet many of us are attracted to certain results of biological study with a quality of interest only to be accounted for as being grounded upon some vague hope of getting light from them upon the mystery of the life we feel within us. It is to such readers that M. de Varigny addresses himself. His nineteen chapters, arranged in seven parts, wear, in the table of contents, a vague air of consecutive thought; and precisely so they appear when one comes to read them. They are composed of anecdotal facts of natural history strung upon a thread of reason without which they would lose half their charm, which is very considerable. In the way neither of observation nor of reflection has M. de Varigny much to communicate that is original; but he tells us much that is recent, and tells it with scientific accuracy.

By simply chatting about a few fair specimens of the work, we shall best convey an idea of its quality. The first chapter discusses the question of how life first came upon the cooling earth. Throughout, the author abstains from explicitly laying down any conclusions. As the advertisement puts it, his pages "n'ont rien d'un traité didactique." But his statement of the evidences pretty nearly amount to acceptance of Kelvin's theory that life was imported upon an aerolite; and perhaps that is the best opinion in the present state of science, though for quite different reasons from these which Varigny commends. To begin with, the author admits, as scientific men mostly do, that Pasteur proved that there is no such thing as spontaneous generation. Yet Clifford demonstrated to the satisfaction of every competent logician that Pasteur only refuted a particular argument, and left the general question untouched. For the hypothesis of spontaneous generation is that, under a certain complex combination of circumstances which may occur in the whole mass of the ocean once in a hundred centuries or so, living protoplasm will be produced; and all that Pasteur did was to show that in certain flasks of broth—say one or two hundred litres in all—no life was produced in several months. If Clifford were to meet a person who thought this a sound inductive argument against the possibility of spontaneous generation (say, M. de Varigny), the following conversation might ensue:

Clifford—Suppose that a little over a century ago, when the possibility of aerolites was disputed, a man had carefully prepared a quarter of an acre of ground so that nothing could fall upon it undetected, and had closely watched it for a whole day and night without catching a single stone from the skies. Do you think that that would have amounted to solid proof that no aerolite could have fallen in any civilized country during the previous four hundred years? Or do you think it would have been an argument of only moderate value, or how should you esteem it?

Varigny—It would have been a silly performance because of the insignificance of the area and of the duration of the experiment as compared with four centuries.

Clifford—Yet, estimating the value of the argument on that principle, it is hundreds of times as strong as the inference from Pasteur's half barrel of broth to the million and a half millions of millions of tons of sea water and the thousands of centuries of time that are in question.

Varigny—Well, you must admit that Pasteur proved that nobody had ever observed spontaneous generation; and reduced it to the rank of a bare possibility, a mere fancy. Now do you mean to say that scientific men should give up their time to the examination of the host of fanciful things that the idle from time to time amuse themselves by believing in?

Clifford—No; but I think that to argue that because it is not wise for a scientific man to bother with a certain supposed phenomenon, therefore that phenomenon does not exist, is uncommonly bad reasoning.

The probabilities seem at present to be decidedly against the theory that life came upon the earth by spontaneous generation, not because if such a phenomenon were possible it ought to have shown itself in Pasteur's flasks during his weeks of experimentation, but, on the contrary, because, even if the event be possible, the whole mass of the sea and the whole time since the solar system was a nebula fall short by millions upon millions of multiples of being sufficient to render the requisite combination of circumstances probable. For we know, what was not known in Clifford's time, that a molecule of protoplasm is composed of thousands of atoms; and very likely thousands of molecules must concur to produce life. These atoms, too, must all be arranged in certain ways. It would seem, then, though we really know next to nothing about it, that for such a combination to occur by pure chance must require the fortuitous satisfaction of at least a hundred independent conditions. Now how rapidly can we imagine these conditions to be satisfied? If we suppose that in every single molecule of water they are satisfied as frequently as light vibrates, the probability of the fortuitous occurrence of one molecule of protoplasm in the mass of the sea in a million million centuries would be so small that one might call it a miracle. The merit of Kelvin's idea is that it opens our prison doors. We are no longer limited to this puddle of an ocean or to the twinkling of an eye that has elapsed since the solar system was a nebula, but have the whole vast universe of space and time to draw upon, in which it may be that living protoplasm was produced fortuitously in sufficient quantity to reproduce itself. M. de Varigny shows that there is no serious objection to Kelvin's theory. As it is sometimes stated, it seems to make life inexplicable; and that is the greatest logical sin an explanatory hypothesis can fall into. But the true effect of Kelvin's theory is to open a wider field of possibility.

Among other entertaining chapters are those concerning an indispensable poison (carbonic acid and its effects upon climate), concerning the advantages of degeneration and concerning universal interdependence. In the last we learn that in New Zealand ill-managed lumbering spoiled the oysters, which were attacked by a parasitic worm that increased when more mud was washed down in the rivers. The penultimate part of the work is entitled "Ce que veut la Nature." This was inevitable. This crystallizes the interest which was in solution throughout. But biology, as M. de Varigny rightly says, "will have none of final causes at any price whatever." Now, then, can it tell us "ce que veut la Nature?" It can give no other answer than that which we read in 1852 in a little brown book republished by Ticknor. The *poet* ought to know "ce que veut la Nature." The man of science ought not to know; and if he does, it is surreptitiously.

The Ethics of Imperialism: An Enquiry whether Christian Ethics and Imperialism are Antagonistic. By Albert R. Carman. Boston: Herbert B. Turner & Co. 1905.

This is an inquiry into what the author calls the apparent quarrel between "some phases of the system of ethics" which Christians accept as a revelation from the Deity and "the spirit of Imperialism," accompanied by an attempt at a reconciliation. The nature of the difficulty is easy enough to state, and is set forth in the first chapter, called "The Paradox." Christian ethics are altruistic, and involve the brotherhood of man and nations. Imperialism is nationalist, and involves hostility between nations. The ethical system of the author is not that of Spencer, whom he criticises, but his own, and we confess that we do not fully understand it, and shall therefore refrain from attempting to restate it. But of one thing we feel very certain, that he has not succeeded in reconciling Christianity and Imperialism, for the simple reason that in practice they are irreconcilable. Christian ethics involves Peace on Earth wherever possible, and Imperialism involves War on Earth wherever advantageous, and hence there is no common ground for the two systems to rest upon. They can be made to coexist, as so many other things in a queer world can, by our sometimes behaving like Christians and sometimes like Imperialists. When we arbitrate national differences, or refuse to fight if not attacked, we act like Christians; when we get up wars for the sake of expansion or trade, we play the rôle of Imperialists. This is part of the inconsistency of human nature, which explains a great many things otherwise very difficult to understand.

Mr. Carman seems to us to labor under the delusion that his paradox can be got over by a *systematic* reconciliation of opposites both of which he believes (no doubt correctly) to be involved in the scheme of evolution. But this is too deep for any one but a philosopher. Evolution reconciles everything historically, but logical and moral difficulties remain what they were before; and, despite all Mr. Carman's acumen, the reader continues to feel that the "paradox" is unsolved, though it remains perfectly natural as a phenomenon of the human mind and conscience, deeply embedded in original perversity.

Betting and Gambling: A National Evil. Edited by S. Seebohm Rowntree. The Macmillan Co. 1905.

This is a collection of papers by various hands, intended to set forth the present state of gambling and betting in England, as well as the measures of law designed to repress it, together with suggestions for their amendment. The point brought out with great distinctness is that, in the last fifty years, betting and gambling in England have, like so many other things, become democratized. Two generations ago they were still the vices of the upper classes; to-day, in England as elsewhere, they have spread throughout the whole community. Another point of importance, of which much shocking evidence is given in this volume, is that there is throughout the country a regular propaganda of gambling, through house-to-house solicitation. Not merely does the tout knock at the door of the industrious workman, and offer him opportunities of risking his money on chances of which he knows nothing, but, in the absence of the workman himself, the "runner" besieges the women of his family and leads them to stake earnings entrusted to them for household purposes. The chapter on "Gambling among Women" is full of sickening details of this sort, apparently amply vouched for by responsible witnesses.

When we come to the question of repression, great difficulties arise. Public gaming and betting may be suppressed, as the old "tables" in the Kursaals of Germany have been suppressed; betting may be legitimated and "elevated" by a system of licenses and inspection; but, to judge by this book, the main reliance must be in the long run on the enlightenment of the masses. A good chapter is that on "The Deluded Sportsman," contributed by a bookmaker, who shows very conclusively that the man who puts money on a horse against the professional invariably in the long run loses; this is the principle on which the business of bookmaking is founded.

The Declaration of Independence: An Interpretation and Analysis. By Herbert D. Friedenwald. The Macmillan Co. 1905. Pp. xii., 299.

Nothing in recent years has made so favorable a report as the work done in American history. A decade ago there was plenty of criticism of the "isolation" of our historical studies, cautious praise of the laudable awaking of interest, constant emphasis upon the insufficient and unsatisfactory output, with accompanying declaration that the value was distinctly out of proportion to the bulk. Those who were disposed to regret the barrenness of literature generally, had commended for consideration the activity shown in historical study and in economics, with the hope that, if the energy was intelligently devoted, one had the right to entertain high expectations. Slowly but surely we are beginning to see the growth of that "methodical, analytical, distrustful, not too respectful turn of mind which is often mystically called 'the critical sense,' but which is nothing else than an unconscious habit of criticism," to quote Seignobos.

The large body of young students who, ten years ago, entered enthusiastically upon the study of American history, are now beginning to produce the results of their labors, exhibiting a clearer perception of the facts and of the logic of history, in a better proportioned narrative; and eventually we may hope for some work of genuine historic art. In Mr. Friedenwald's book we have particular evidence of the harvest we are to reap. As a phase of the tendency to rewrite the old subject from a new point of view, this contribution to American history must be generously welcomed. It is an earnest of what we may expect from the author later, for he tells us that this preliminary study is in part but an abstract of a larger and more detailed work on the same subject. The significance of it lies in its offering a clearer picture of the development of the power of the Congress that produced the Declaration; of the interrelations of the growth of the power of Congress in strengthening the Union; of the democratic movements in the several colonies; and of the development of the sentiment of independence within and without the walls of Congress. It is the first attempt to give to the general reading public an adequate treatment of the period concerned, and within its compass it does what has been pressingly needed. Here we have knowledge kept within bounds, original authorities sifted and their pith extracted. Reading Mr. Friedenwald's essay will dispel the erroneous impression in regard to the supposed unanimity, or approach to unanimity, with which the Revolution was undertaken. It makes clear that the war was to be essentially a civil war—more so even than that of 1861-65; and emphasizes certain very important early phases of the struggle which have received scant consideration from those who have had much to do with framing public opinion.

The Country Day by Day

By E. KAY ROBINSON

Illustrated. $1.75 net. (By mail $1.85.)

A diary of nature for a twelve-month, descriptive of English country scenes, but of interest to the American nature-lover by reason of its marked literary quality and the wealth of detailed observation which it contains. It is first of all a note-book of birds, but flowers, animals, and all the varied life of the woods and fields are not neglected.

BURTON'S SELECTIONS FROM LIVY

$1.50

This is the only edition with English notes that has attempted to include the best passages from all thirty-five books of Livy. The passages are varied in nature and are not confined to military history; they are not so short as to appear fragmentary. The introduction contains a discussion of Roman historical writing, the earlier historians, and Livy's life and work. The Notes are intended to give information—historical, linguistic, and grammatical—which would be useful for younger students. References to ancient and modern works are provided at the beginning of each period. There are six maps, on which all places mentioned in the text may be found.

Dodd, Mead and Company's New Publications

Important Fiction

Nedra — By GEORGE BARR McCUTCHEON, Author of "Beverly of Graustark," etc.
One of the big Fall Novels—a splendid story of romance and adventure. With color illustrations by Harrison Fisher. 12mo. $1.50.

The Resurrection of Miss Cynthia — By FLORENCE M. KINGSLEY, Author of "The Singular Miss Smith."
A rare good story, every page of which makes delightful reading. 12mo. $1.50.

The Man from Red-Keg — By EUGENE THWING, Author of "The Red-Keggers," etc.
A virile, wholesome American story about real people. 12mo. $1.50.

The Mystery of June 13th — By MELVIN L. SEVERY, Author of "The Darrow Enigma."
An exceptionally clever mystery story. This author's former book had great vogue. 12mo. $1.50.

Biography and Belles-Lettres

A Life of Charles Dickens — By GILBERT K. CHESTERTON, Author of "Varied Types," etc.
Mr. Chesterton's new work is novel, interesting, and in every way worthy of attention. 12mo. Probably net $1.20.

My Life: A Record of Events and Opinions — By DR. ALFRED RUSSEL WALLACE, Author of "Darwinism," etc.
Probably the most notable autobiography of the season. Two vols. 8vo. Net $6.00.

Autobiography of Anthony Trollope — With a Preface by His Son, HENRY M. TROLLOPE.
A most interesting autobiography of the great novelist. With engraved frontispiece. 12mo. Cloth. $1.25.

Wagner and His Isolde — By GUSTAV KOBBE, Author of "Opera Singers," etc.
The correspondence of the musician and Mathilde Wesendonk, who inspired his most impassioned creation—Isolde. Small 12mo. Net $1.00.

The Romance of Royalty — By FITZGERALD MOLLOY, Author of "The Sailor King," etc.
Histories of four royal personages comprise the contents of this interesting book. Illustrated. 2 vols. Net $6.50.

French Profiles — By EDMUND GOSSE, Author of "Critical Kit-Kats," etc.
A volume of critical and appreciative essays on modern French authors. 12mo. Net $1.60.

A Noteworthy Work on Art

The Artist's Way of Working — By RUSSELL STURGIS, Author of "The Dictionary of Architecture," etc.
"The Artist's Way of Working" is addressed not to artists or to art students, but distinctly to the art-loving public. It tries to disclose to them in untechnical language so much of the methods by which the artist produces his effects as will enable them to enjoy and appreciate art works much more fully than ever before. Cloth, 8vo, with over 200 illustrations. 2 volumes. Net $15.00.

READY IN OCTOBER

LIPPINCOTT'S NEW GAZETTEER

A GEOGRAPHICAL DICTIONARY OF THE WORLD

J. B. LIPPINCOTT COMPANY

PUBLISHERS PHILADELPHIA

NEWPORT, OUR SOCIAL CAPITAL

By Mrs.
JOHN KING VAN RENSSELAER

WITH FRONTISPIECE IN COLOR BY HENRY HUTT
MANY ILLUSTRATIONS IN PHOTOGRAVURE AND DOUBLETONE AND FROM DRAWINGS BY EDWARD STRATTON HOLLOWAY

Printed on Arnold's hand-made paper, especially made for this edition. Bound in two shades of genuine English buckram, with design in gold. Quarto. Per copy, $30.00 net. Limited edition, bound in full levant, handsomely tooled. Per, copy, $50.00 net.

This is the first book to tell the whole story of Newport. It is written by one who knows every side of Newport life; who has made a special study of its history; who is familiar with the town in its present aspects and the spirit of the place. The volume is much more, however, than a history of Newport and its people. It is the story as well of a great social institution. Indeed, it is the record of some of the most brilliant chapters in American fashionable life.

Ready Shortly

FRENCH MEN OF LETTERS

Edited by ALEXANDER JESSUP

Each volume will contain a frontispiece portrait of its subject, and an adequate index. 12mo. Cloth, $1.50, net, per volume. Postage, 10 cents extra.

Just Published, Volume I. **MONTAIGNE**
By EDWARD DOWDEN

In Preparation, Volume II.
HONORE DE BALZAC
By FERDINAND BRUNETIERE

Other volumes by leading critics will follow

"Professor Dowden has given the new series a most auspicious introduction; he has also laid the lover of good literature under a considerable obligation."—*Brooklyn Eagle.*

"It is indeed an admirable volume, bearing witness to the author's years of research, and setting a high standard for the whole series."—*Record-Herald*, Chicago.

"There seems to be a distinct place for the new French Men of Letters. Opening with a biographical study of Michel de Montaigne from a no less eminent and authoritative critic than Professor Edward Dowden, and promising for early issue the lives of Balzac and Rabelais, its entrance into the modern world of letters is made under the most auspicious circumstances."—*Evening Transcript*, Boston.

THE TRUE ANDREW JACKSON

By CYRUS TOWNSEND BRADY

Illustrated. 8vo. Cloth, $2.00, net; half levant, $5.00, net
Postage, 14 cents extra.

A new volume of the series of the "True Biographies" which have been so eminently successful. Mr. Brady has been studying Jackson for many years, and his present volume will prove to be one of the most readable of the series. Jackson himself is the most picturesque of the characters yet treated in these Biographies.

Ready Shortly

SADDLE AND SONG

An anthology of the best verse about the horse, by the most widely known writers in the English language. Illustrated, cloth, $1.50 net. Postage 13 cents extra.

Just Published

FACTS AND FANCIES FOR THE CURIOUS

FROM THE HARVEST-FIELDS of LITERATURE

By C. C. BOMBAUGH, A.M., M.D.

A mélange of excerpts. A handy book. Not for a class of readers, but for the multitude.
8vo, cloth, $3.00 net. Postage extra.

Ready Shortly

Publishers J. B. LIPPINCOTT COMPANY Philadelphia

THOMAS Y. CROWELL & COMPANY'S

New Books and New Editions—1905

AUTO FUN

Pictures and comments from "Life." An original book sure to please all "motor" devotees and their friends. Handsomely printed and bound in novel style.

Oblong 8vo, cloth, $1.00 net. Postage 10 cents.

Abbott, Jacob
THE ROLLO BOOKS—New Edition

In answer to a general demand we have issued a new and cheaper edition of these famous books, with the original illustrations, and attractive binding.

14 vols., 16mo, 50 cents each.

Abbott, Lyman
THE PERSONALITY OF GOD

The authentic draft of a sermon which caused great commotion at the time of its delivery before the students of Harvard University. Newspapers and periodicals everywhere discussed Dr. Abbott's meaning, as the press accounts did not quote him fully.

12mo. 30 cents net. Postage 5 cents.

Beecher, Willis Judson
THE PROPHETS and THE PROMISE

One of our foremost theologians here analyzes the teachings of the Old Testament with respect to the Messiah. The lectures, originally delivered at Princeton, are a notable contribution to Bible scholarship.

8vo, cloth, $2.00. Postage 20 cents.

Bolton, Sarah K.
FAMOUS AMERICAN AUTHORS

Short, chatty sketches of Emerson, Holmes, Lowell, Longfellow, Hawthorne and Whittier. Printed in two colors, with 24 full-page illustrations printed in tint.

8vo, cloth, gilt top, boxed, $2.00; art leather, gilt top, silk marker boxed, $3.00.

Bradford, Amory H.
THE INWARD LIGHT

The latest book by this well-known preacher and lecturer is devoted to a series of talks on present-day theology, the power of conscience and individual opinion.

12mo, cloth, $1.20. Postage 10 cents.

Chapin, Henry Dwight
VITAL QUESTIONS

The vital and important questions of life as they appeal to the individual, the family, and to society at large, are here discussed by a physician of wide experience. The book is helpful and stimulating, with a wide range of interest.

12mo, $1.00 net. Postage, 10 cents.

Cobb, Benjamin F.
BUSINESS PHILOSOPHY

A practical book which will interest both business men and their employees. The author, a man of wide experience, treats of the most important features of business life—buying, selling, credit, letter-writing, and the like.

12mo, $1.20 net. Postage 10 cents.

Cole, Samuel V.
THE LIFE THAT COUNTS

A practical, clear, and earnest presentation of the virtues necessary to effective and satisfactory living. Printed at the Merrymount Press.

12mo, cloth, gilt top, 75 cents net. Postage 8 cents.

Dole, Nathan Haskell
THE LATIN POETS

An anthology of the greater Latin poets, giving sketches of their lives and copious examples of their work in the best English translation. A valuable handbook of an important literature. Photogravure frontispiece, rubricated title-page.

8vo, boxed, cloth, gilt top, $2.00; half calf, gilt top, $3.50.

THE DIARY OF A BRIDE

The title accurately describes the book. It is a real diary of a real woman written in a real way. Both men and women will read this book because it deals with intimate matters of the heart in a way that readers like. It is better than a novel because it is a narrative of actual human experience. Printed in two colors, with decorative cover and title-page.

12mo, tinted top, cloth, $1.00 net. Postage 10 cents.

Eliot, Charles W.
THE HAPPY LIFE

A new edition of a book by the President of Harvard, which has aroused some discussion as to its similarity of theme with Pastor Wagner's book (though originally published before the latter). Printed at the Merrymount Press in two colors. With photogravure portrait.

12mo, 75 cents net; art leather, boxed, $1.50 net. Postage 8 cents.

Franklin, Benjamin
SELECTED ESSAYS

Edited by U. Waldo Cutler. A representative selection, including the almanac, political and scientific papers, and personal letters.

18mo, cloth, 35 cents; limp leather 75 cents; 12mo, cloth, 60 cents.

Howard, John R.
BEST HUNDRED AMERICAN POEMS

As the title indicates, this is a selection of 100 poems from different authors, typical of the best poetic effort of our literature.

18mo, cloth, 35 cents; limp leather, 75 cents; 12mo, cloth, 60 cents.

Huckel, Oliver
LOHENGRIN

Richard Wagner's music drama is here retold in spirited English verse, in the same manner followed so successfully in his "Parsifal" last year—spoken of by critics as a version deserving high place in poetic literature. Printed in two colors and finely illustrated.

12mo, 75 cents net; art leather, boxed, $1.50. Postage 8 cents.

By the same author
THE MELODY OF GOD'S LOVE

A study of the 23d Psalm.

12mo, 75 cents; art leather, boxed, $1.50 net. Postage 8 cents.

IRVING'S SELECTED WORKS
(Crowell's Miniature Edition)

Printed on India paper, from readable type, bound in limp ooze leather, gilt edges, size of volumes 1⅛x2¼. The smallest and daintiest set of Irving in the world. *Contents:* "Sketch Book," "Christmas Sketches," "Alhambra," "Bracebridge Hall," "Traveller."

5 vols., in leather case, per set, $2.50.

Jefferson, Charles E.
THE MINISTER AS PROPHET

While primarily addressed to theological students, this book will be found of much interest to laymen. It defines some of the duties of the minister and explains his mission in a practical way.

16mo, cloth, gilt top, 90 cents net. Postage 10 cents.

CROWELL'S NEW BOOKS AND NEW EDITIONS—1905

Jefferson, Charles E.
FAITH AND LIFE
12mo, 30 cents net. Postage 5 cents.

Kobbé, Gustav
THE LOVES of GREAT COMPOSERS
Entertaining accounts of the romances of Chopin, Schumann, Mendelssohn, Liszt and others. Many new facts are brought out and many old errors corrected. Printed in two colors, with 24 full-page illustrations printed in tint.
12mo, cloth, gilt top, boxed, $1.50 net; art leather, gilt top, silk marker, boxed, $2.50 net. Postage 15 cents.

Leonard, Mary F.
THE STORY OF THE BIG FRONT DOOR
A pleasing tale, for children, of how some young folks "helped everyone his neighbor."
12mo, illuminated cover, 75 cents.

Lynch, Frederick
IS LIFE WORTH LIVING?
A well-worded brief discussion of this important theme. Thoroughly logical and to the point.
12mo, 30 cents net. Postage 5 cents.

McSpadden, J. Walker
STORIES FROM WAGNER
The heroic myths and folk tales, utilized by Wagner in his great operas, are here retold in simple language for children and readers generally.
16mo, cloth, 60 cents; 18mo, cloth, 35 cents; limp leather, 75 cents; 12mo, cloth, 60 cents.

Marble, Annie Russell
BOOKS IN THEIR SEASONS
A thoughtful essay on the subject of right reading.
12mo, 30 cents net. Postage 5 cents.

Miller, J. R.
WHEN THE SONG BEGINS
More than a million copies of Dr. Miller's books have been sold, because he is "a man with a message." This new devotional book will not disappoint.

LITTLE, BROWN & CO., Boston, Mass.

FOUR DELIGHTFUL BOOKS OF PENNSYLVANIA HISTORY AND LITERATURE

HANNAH LOGAN'S COURTSHIP

No historical novel has ever succeeded in so reproducing the atmosphere of the past, down to the smallest details of life, as do the love-letters and diary in which John Smith, the young Quaker merchant, tells of his wooing of the beautiful daughter of James Logan, Penn's famous secretary. If we sometimes smile at the equal faithfulness with which he records his sufferings both from doubtful love and from toothache, we none the less admire and sympathize with the noble young lover, whose descendants fill so large a place in the life of Pennsylvania to-day.

360 pages, in cloth, **$2.50**; *three-quarters levant, gilt top,* **$4.00.**

SALLY WISTER'S JOURNAL

This famous journal, half romance and half history, is one of the most vivid and charming pictures of Revolutionary times that have come down to us. This lively Quaker maiden gives us the most fascinating pen sketches from life of the officers of the Continental army, from Washington down to the young captains and lieutenants who were smitten by her charms. The "Journal" is equally attractive to the historian and the novel-reader. Both of these volumes are exquisitely illustrated.

12mo, 224 pages, extra cloth, with cover design by Walter Whitehead and André Koronski, net, **$2.00.** *Gift edition, three-quarters levant, gilt top, in blue and buff box,* **$4.00.**

A CHARMING HOLIDAY GIFT.—"Sally Wister's Journal" and "Hannah Logan's Courtship," uniform in size and binding, in a handsome box, in cloth, **$4.00** for both. In three-quarters levant, **$6.00** for both. Sent to any address without charge, with privilege of returning if not purchased.

QUAKERISM AND POLITICS

By ISAAC SHARPLESS, LL.D., Pres. of Haverford College

This volume comprises nine essays which are best characterized by the word "bracing." They deal with political and moral questions in most vigorous and inspiring fashion. President Sharpless has explored the original sources of Pennsylvania history to good purpose, and gives us strong and vivid sketches of Quaker politics and politicians in the golden age of Pennsylvania, the days before the Revolution, sketches which are doubly interesting in view of the present struggle for reform in that State.

About 250 pages, 12mo, **$1.25** net, postpaid.

LIFE AND ANCESTRY OF WARNER MIFFLIN

"The Battle of Germantown happened on the day of the Yearly Meeting of the Quakers in Philadelphia. . . . The cannon shook the house where they were assembled, and the air was darkened by the smoke of the guns. Warner Mifflin undertook the service of communicating their Testimony [against war] to General Washington and General Howe. To perform this duty he had to walk in blood, and among the dead bodies of those who had fallen in battle." Warner Mifflin, "Friend, philanthropist, and patriot," one of the first Americans to work for the abolition of slavery, is one of the most interesting characters of Revolutionary times. This book, compiled by his great-great-granddaughter, is an important contribution to American history.

240 pages, 12mo, on fine deckle-edged paper, with four copper-plate and half-tone illustrations, **$2.00** net, postpaid.

FERRIS & LEACH :: PUBLISHERS :: PHILADELPHIA

The American Journal of Sociology

EDITED BY ALBION W. SMALL

ESTABLISHED IN 1895

The Only Magazine Published in English Devoted Exclusively to the Field of Sociology

It is of special interest to professional men. The contributors include the best known sociologists in Europe and America, who keep its readers fully abreast of the times upon all debatable social relations—political, economical, educational, and religious—as well as upon those problems of social amelioration which are popularly and erroneously supposed to constitute the sole scope of sociology.

AN UNUSUAL OFFER

In the interests of our patrons arrangements have been made for many combinations of this journal with books and other periodicals. The book list includes such works as Small's General Sociology Howard's Matrimonial Institutions, Ross' Social Control and Foundations of Sociology, etc., with material savings in comparison with prices through other channels. The following is an example of the opportunities which we are offering for a list of periodicals covering a wide range:

American Journal of Sociology
Review of Reviews
Cosmopolitan
Woman's Home Companion

One Year, $3.75
(Regular price, $7.00)

OPEN TO NEW AND RENEWAL SUBSCRIPTIONS

This is only one of the many combinations we can make. Write for particulars regarding others.

ADDRESS DEPARTMENT 21

THE UNIVERSITY OF CHICAGO PRESS

CHICAGO and 156 Fifth Avenue, NEW YORK

CURIOUS OLD BOOKS

(Rare and Scarce)

We are about to issue a catalog of good books in all departments of literature at prices ranging from **5c. to $2.00** (none higher), in which there will be included many first editions (English and American), Association Books, Autographs, some good Americana, books about the Indians, etc., and a great number of miscellaneous high-class volumes at wonderfully reduced prices. This list is **ABSOLUTELY FREE** while it lasts, and will be sent on receipt of name and address on a post-card, directed to

THE BURROWS BROTHERS COMPANY

Dept. B, **CLEVELAND, OHIO.**

Handy Volume Classics

Used by schools and colleges everywhere. 155 vols., pocket size. List prices, cloth, 35c. per vol., limp leather 75c. per vol. (Special prices to schools and colleges.)

SEND FOR CATALOGUE.

Thomas Y. Crowell & Co., New York

SHAKESPEARE

First Folio Edition

Edited by Porter-Clarke, Printed by DeVinne

VOLUMES NOW READY—"Midsummer Night's Dreame," "Love's Labour's Lost," "Comedie of Errors," "Merchant of Venice," "Macbeth," "Julius Cæsar," "Hamlet." Price, in cloth, 75 cents per volume; limp leather, $1.00 per volume, postpaid.

Thomas Y. Crowell & Co., New York

The Nation

Was established in 1865 as a weekly review of literature, science, art, and politics, and its editorial management has been unchanged from the first. It is conducted in a spirit of complete independence. The list of contributors includes most of the leading names in literature, science, art, philosophy and law at home, and many of corresponding eminence abroad. THE NATION presents a complete and accurate record of the world's current history, with impartial comment on questions which would occupy the attention of intelligent men. To the scholar, the student, the thinker and to all professional men it is confidently recommended as an aid to sound thinking.

Subscription, $3.00 a year, post-paid. Shorter term at a proportionate rate.

Publication Office, 206-210 Broadway, New York.

THE CLARENDON PRESS

"A book of exceptional interest at the present time."

THE FAR EAST

By Archibald Little. 8vo, cloth, $2.00. Comprising Japan, Siam, China, The Yellow River, The Yangtse River, The Province of Szechuan, The Chengtu Plateau, The Lower Yangtse Provinces, The Intermediate Provinces, Yunnan to Canton, Manchuria, Mongolia, Turkestan, Tibet, Indo-China, and Korea. With nine Maps and thirty-seven Illustrations.

THE WORKS OF LUCIAN OF SAMOSATA

Complete with exceptions specified in the preface. Translated by H. W. Fowler and F. G. Fowler. Extra foolscap 8vo, 4 vols., $4.00.

THE ELEMENTS OF RAILWAY ECONOMICS

By W. M. Acworth, author of "The Railways of England," "The Railways and the Traders," etc. 8vo, cloth, 70 cts.

"An intelligent man, if he will apply his mind for a few hours to the study of this little book, may have a clearer understanding of the problem of railway rates than is now manifested by most of our public speakers and newspaper editors. Mr. Acworth has explained a difficult problem with such admirable lucidity as to bring it within the popular comprehension, and he would have been censurable had he hid his light under a bushel. While his book may have been intended for his students at the London School of Economics, and while his illustrations and applications are primarily English, the American people stand in especial need of its lessons, and their need has never been so great as it will be during the coming years."—*The Evening Post, May 8, 1905.*

ICELAND AND THE FAROES

By N. Annandale. Crown 8vo, with illustrations, $1.50.

This book describes the people of the Faroes, their life, manners, and customs, the Algerians in Iceland, the bird cliffs of the Western Isles, Iceland to-day, the domestic animals of the Faroes and Iceland, etc.

CONSTITUTIONS

By James Bryce, D.C.L., author of "The Holy Roman Empire," etc. 8vo, cloth, $1.25.

"Highly profitable reading."—*The Evening Post, New York, July 22, 1905.*

"It is especially instructive to read what Bryce, himself a great critic—a critic in the highest sense of the word—of our institutions, has to say about De Tocqueville."—*New York Times Saturday Review, Sept. 16, 1905.*

"Mr. Bryce's volume should be especially welcome to all serious political students."—*Record-Herald, Chicago, July 8, 1905.*

"A most judicious presentation of those instruments by which nations are governed and safeguarded, by one who is an acknowledged expert in such matters."—*Journal of Education, August 24, 1905.*

MARRIAGE AND DIVORCE

By James Bryce, D.C.L., author of "The Holy Roman Empire," etc. 8vo, cloth, 75 cents.

*** In this volume Mr. Bryce does not deal with the history of primitive marriage, as recorded by ancient traditions, but treats of civilized European marriage only, sketching its development from the date of the earliest Roman legislation known to us down to the twentieth century.

ELEMENTARY CHEMISTRY

Progressive Lessons in Experiment and Theory, by F. R. L. Wilson, M.A., and G. W. Hedley, M.A. Part 1, 8vo, cloth. With many diagrams, 75 cents.

The object of this book is to provide a school course of practical training in Chemistry, suitable for those studying the subject as an integral part of their general education, and at the same time to lay a solid foundation for such as may require to specialize in it later.

COMBINED GERMAN READER, WRITER AND GRAMMAR

By H. G. Spearing, M.A. 8vo, cloth, 75 cents.

ELEMENTARY MODERN GEOMETRY

By H. G. Willis, M.A. Part I. Experimental and Theoretical. Crown 8vo, cloth, 50 cents.

For Sale by all Booksellers—Send for Catalogue

OXFORD UNIVERSITY PRESS—AMERICAN BRANCH

91-93 Fifth Avenue, New York

PUTNAM'S NEW BOOKS

The Life of Charles Lamb

By E. V. LUCAS, Editor of "The Works and Letters of Charles and Mary Lamb."

2 vols., 8vo, with 50 Illustrations, net $6.00.

"We finish the book not with a note of admiration after a brilliant display of rhetoric, but with a quiet sigh of unfeigned sorrow at a forced parting from a very dear friend. . . . This is perhaps the greatest triumph of the biographer, who is a man after Lamb's own heart and one of his own best pupils. . . . The biography contains a wealth of entertainment which it would be difficult to over-estimate."—*London Times.*

Romance of the French Abbeys

By ELIZABETH W. CHAMPNEY, author of "Feudal Châteaux," etc.

8vo, 61 Illustrations, net $3.00.

A delightful blending of the history, art, and romance. It fully carries out Guizot's suggestion: "If you are fond of romance, read history."

Our Asiatic Neighbors

12mo. Fully Illustrated. Each, net $1.20. (*By mail,* $1.30.)

4. Australian Life in Town and Country

By E. C. BULEY

A bright, readable description of life in a fascinating and little-known country. The style is frank, vivacious, entertaining, captivating, just the kind for a book which is not at all statistical, political, or controversial.

5. Philippine Life in Town and Country

By JAMES A. LE ROY

Mr. Le Roy is eminently fitted to write on the Philippines. He was for several years connected with the Department of the Interior in the Philippine government, when he made a special investigation of the conditions in the Islands.

Send for Illustrated Circular

Portraits of the Eighteenth Century

Historic and Literary

By C. A. SAINTE-BEUVE. Translated by K. P. Wormeley and G. B. Ives.

Two Parts, 8vo, 30 *Illustrations, net* $5.00.

The quality, the discernment and balance, intuitive grasp of essentials, the grace, force and justice of Sainte-Beuve's critical work have placed him in the front rank—perhaps, it would be better to say, have given him a place alone and unapproachable in the history of critical literature.

Louis XIV. and La Grande Mademoiselle

By ARVEDE BARINE

Authorized version. 8vo, Illustrated, net $3.00.

All French history is fascinating, but few episodes are more fascinating than the kaleidoscopic career of La Grande Mademoiselle, a relation of Louis XIII. through both parents, and the richest heiress in France, who aspired to be an empress, a political power and a nun. Her memoirs give unique and valuable pictures of life at the court of Anne of Austria, and of the Wars of the Fronde, in which this strange woman played so remarkable a part.

The Life of Goethe

By ALBERT BIELSCHOWSKY. Authorized Translation from the German by William A. Cooper, Assistant Professor of German in the Leland Stanford Junior University.

Three Volumes, Fully Illustrated, Large 8vo, net.

Dr. Bielschowsky was acknowledged as the foremost authority on Goethe, and it is generally conceded that this is the most important life of Goethe, from the standpoint of scholarship, sympathetic interpretation, and literary art—in fact, the most important biography of any man written in German for many years.

The Novels of Henry James

A Study.

By ELISABETH LUTHER CARY

Author of "The Rossettis," etc.

With a Bibliography by Frederick A. King

Crown 8vo, with Portrait in Photogravure. Net, $1.25. *By Mail,* $1.35.

Not so much a criticism as a comment upon the author's point of view and the inferences he draws from life.

Kate Greenaway

By M. H. SPIELMANN and G. S. LAYARD

Large 8vo, with over 100 Illustrations of which 50 are Colored. Net, $6.50

This book is something more than a personal biography. It is rather a peep behind the scenes, led by Kate Greenaway, into the intimate converse of the foremost artists and writers of our time.

The Development of the European Nations

1870-1900

By J. HOLLAND-ROSE

2 vols., 8vo, with Maps.

A discussion by a scholar of authority of those events which had a distinct formative influence upon the development of European states during the latter part of the nineteenth century, a period remarkable because of the great progress made by the peoples of Europe in their effort to secure a larger measure of political freedom for the individual and the legitimate development of the nation.

The Nation.

NEW YORK, THURSDAY, OCTOBER 12, 1905.

The Week.

President Roosevelt is evidently looking for no compromise with the railroads. His direction to the Attorney-General to bring suit against the Terminal Railroad Association at St. Louis, on the ground that it is a monopoly operating in violation of its enabling charter, will be regarded in certain Senatorial and railroad circles as throwing down a new gauntlet. There is no sound reason for that view, however. The grievance is one of long standing. Two years ago it was brought to the attention of the Administration by the Attorney-General of Missouri, but it dragged along under Secretary Root, who passed it over, together with the War Department, where jurisdiction was thought to lie, to Secretary Taft. The latter finally decided that he could do nothing, but recommended a suit by the law officers of the Administration. This Mr. Roosevelt has now ordered, as in the due course of business; and no one can deny that there are important questions of law and public policy involved which ought to be decided as soon as may be by the courts.

Schemes for bond issues to finance the Panama Canal are under discussion in Washington, though somewhat prematurely. Until the plan is decided upon by the consulting engineers, we do not know how much money to provide. There remains also the question whether the work is to be done by the Government or by private contract. In the former case, as Walter Wellman telegraphs to the Chicago *Record-Herald*, the cost will doubtless be 50 or 100 per cent. higher than by contract. He says that it will require something like "heroism" in the President to order this saving made, so many be they who would profit by lavish Government undertaking. But the Treasury will soon require heroic treatment if economies are not somewhere effected. In this connection, the rumor is interesting that the bond issue will be made large enough to pay back the $50,000,000 taken out of the surplus to buy out the French company for $40,000,000, and to squander $10,000,000 on the Isthmus. It is alleged that the canal is to be a work for posterity, and that posterity ought to foot the bills. Also, posterity will not be nearly so much interested as the living generation of stand-patters in preventing a Treasury deficit and so an enforced enhancement of the tariff.

President Roosevelt's reported determination to promote Brig.-Gen. John F. Weston, the commissary-general of the army, to the coming vacancy in the list of major-generals, will gratify every progressive officer in the service. Amid all the blundering at Santiago, Gen. Weston's work as commissary of Shafter's army was remarkably successful. Moreover, his department has been well handled ever since he became its head. While some line generals, notably Gen. Grant, the senior brigadier, will feel disappointed, the tonic effect of this promotion for merit, after the long series of advancements for friendship or by reason of political favoritism, will be of great value. Incidentally, the President's choice enables him to escape for a little longer the problem of what to do with Gen. Grant. The army thinks that this son of his father, who left the service a lieutenant to come back a brigadier-general after a varied career of twenty-five years in civil life, has had at least all the reward he deserves. It does not wish to have Wood, Grant, and Funston three of the six major-generals, particularly as they all have long periods to serve. Yet if the President should desire to advance the army's choice for the next vacancy, Brig.-Gen. J. Franklin Bell, the next in rank to Gen. Grant, he would find Gen. Grant's friends using in opposition the argument of seniority which the President himself invoked successfully to force Wood through the Senate.

If any excuse were needed for taking Secretary Bonaparte away from his duties at Washington to preside over Republican State conventions in Maryland, it would be furnished by his speeches exposing the purpose of the Gorman machine in urging the Poe disfranchising amendment. On October 4 he showed up the fallacy of the Gorman claim that the "grandfather clause" and the "understanding clause" are aimed only at the negroes. There are about 52,000 colored voters in Maryland, a majority of whom would be disfranchised; according to Mr. Bonaparte, there would certainly be more than 60,000 white voters who could not qualify under the Poe law. The Democrats have promised to bring the Governors of other Southern States to testify that, under similar disfranchising statutes, the whites are not affected, but Mr. Bonaparte shows that such testimony will be irrelevant, for it comes from States where hardly a white voter is barred by the "grandfather clause," and the temptation to apply the education test strictly has not arisen because there have been no critical party fights. In Maryland, on the other hand, the parties are closely matched, and the percentage of foreign-born voters, or those of foreign parentage, is large; in comparison to Virginia's 3 per cent., Baltimore shows 38 per cent. In the State's chief city, therefore, the Poe amendment might affect 45,000 white voters and 18,000 negroes. It is to be hoped that a series of joint debates between Secretary Bonaparte and those Southern Governors may be arranged; it would be a sort of torpedo-boat versus iron-clad encounter that would enrich political, if not naval, history.

The open letter issued by Senator Dick, chairman of the Ohio Republican State Committee, entitled "As to George B. Cox," throws a new and interesting light upon the political owner of Cincinnati. The Democrats have been unkind enough, in their campaign against Gov. Herrick, to intimate that Cox's ambition to be promoted from owner of Cincinati to boss of Ohio is known to the Republicans, and perforce approved by them. In the public mind the impression has been planted that the election of Herrick means the extension of Cox's rule. But Chairman Dick hastens to assure the voters that Cox is really the most modest of all the unassuming men who have had to do with Republican politics in Ohio. "No Republican of influence has made fewer requests of the committee or has shown more consideration . . . to the interests of others than has Mr. Cox." Again, "No Republican with his political power has shown less disposition to dictate in State politics or to assume to be a 'boss.'" Furthermore, Cox's political activity has been confined to Hamilton County (Cincinnati), "which was once Democratic or doubtful, but is now strongly Republican." Having consented to come down from a discussion of the national issues concerning which he announced the Ohio campaign was to be fought, Chairman Dick should add to his letter, "As to George B. Cox," some mention of the man's antecedents, and an outline of the methods by which he rose from the obscurity of a dive-keeper in "Murderers' Row" to the headship of the "worst-governed city" in the country. Unless the letter is thus made complete and comprehensive, the people of Ohio may very well smile at this "character" furnished by Mr. Dick.

The "Boy" left standing on the burning deck of the Philadelphia organization craft, whence even Senator Foraker has fled, is United States Senator "Boy" Penrose. To-day he stands in sinister isolation, urging his "party loyalty" issue, with men like "Dave" Martin, Durham, Lane, and "Jim" McNichol to aid him. In explaining why he changed his

mind about speaking in Philadelphia on national politics and in support of the State ticket, Senator Foraker denies that the Administration's friendly attitude toward the revolutionists influenced him in cancelling an announced engagement. It seems to us that the Senator from Ohio has put his case badly. He says he cannot properly have anything to do with local issues in Philadelphia, and implies that he has just learned the reason. Upon finding out how matters really stood, Mr. Foraker must either have felt the same hot indignation against a "corrupt and criminal combination masquerading under the name of Republican" which fired Root and Bonaparte to emphatic speech, or have approved Penrose's attempt to save the Quay machine, which in city as well as State had contributed so lavishly and consistently to the party's success. In the one case a letter far different in tone from that sent to Chairman Andrews should have been written; and in the second, that liberty of movement and speech which the Senator boasts, should have held him true to his promise. In any event, some answer to Penrose's appeal should have been made. As the matter now stands, Senator Foraker too closely resembles the boy who would like to "paddle in the mud," but "dass'nt."

The support which Mayor Weaver can count upon in the Philadelphia Councils, in his efforts to protect the city against the predatory Durham organization, was accurately measured on Thursday. As a test, the passage of one loan bill over the Mayor's veto, and the failure of another, of less importance to the machine, by a single vote in the upper branch of the Councils, was discouraging. It will be recalled that when the "gas steal" bill was resubmitted earlier in the year, after the Mayor had vetoed it, the measure was decisively beaten. But public indignation against the gang's plan to loot the city was then at white heat, and the legislator who dared to uphold the gas grab actually felt that he was putting nimself in some bodily peril. Now that popular feeling has somewhat subsided, the reanimated machine holds its creatures to their old-time unquestioning loyalty. Behind the loan for $4,000,000, which Thursday's action of the Councils authorized to be submitted to the voters, can be seen the ring's plan to impair Philadelphia's credit, exhaust her resources, and force a sale of the city gas works after all. The ostensible purpose of the $4,000,000 loan was to provide a fund for changing railway grade crossings within the city limits. In his veto, Mayor Weaver pointed out that the negotiations with the roads as to the distribution of the cost of the work had not gone far enough to justify any decisive action on a loan, and, besides, the city has a million dollars in treasury which can be used at any time to begin the work.

Moderate tariff revisionists appear to be satisfied by the plank in the Massachusetts Republican platform, adopted on Friday; and since the stand-patters obtained the nomination of Eben S. Draper, a member of the Hopedale family of manufacturers, as Lieutenant-Governor, they should not be wholly disgruntled. Of course, Mr. Draper's brother, Gen. W. F. Draper, had to dissent and affirm that there is no demand for a change in the tariff; but even he must have derived some pleasure from Mr. Foss's failure to produce the thoroughgoing revision plank threatened by this insurgent, and by his readiness to accept the Lodge substitute, with some mutterings about a more radical measure next year. Lodge, of course, supplied the light-comedy features of the gathering, carrying water on both shoulders with his usual facility, and gravely replying to Mr. Foss's criticism of the Massachusetts Senators and Representatives by saying: "It is not well to impugn the motives or question the loyalty of your representatives in Congress." The fact remains that the revision plank adopted does come out for "present action," and as such it is extremely significant if only because it will help to force Mr. Roosevelt's hand. He cannot much longer keep the country in doubt as to whether he is sincerely for tariff revision, or whether he is going to allow his political managers to call him off because of their desire to earn the campaign contributions of the stand-patters, life-insurance companies included.

Mayor McClellan's speech of acceptance on Thursday sounded the non-partisan note prominently. This is a great change from two years ago, when the frequent theme of his campaign speeches was that non-partisan government of the city was impossible. We are willing to believe that the Mayor's experience in office has convinced him that a good business administration has forever to be at war with partisan scheming. His open declaration that some of his incompetent heads of department will not be reappointed if he is elected, will also be noted with approval—except by Hopper, Oakley, *et al.* Mr. McClellan's reference to municipal ownership, with the platform affirmations on that subject, snows how absurd it has been all along to imagine that Tammany could be beaten on such an issue. If it bade fair to become politically potent, Tammany was prepared to run off with it. To the Mayor's position on municipal ownership, little exception can be taken. He is for the Government's keeping its hands off private management until private management grows, in any given case, intolerable. Even then the municipality is to go forward cautiously and experimentally, not in a doctrinaire or fanatic spirit, much less in a temper of blind and confiscating rage. And it must count the cost thereof. The Mayor was stating the simple truth when he said that the sweeping measures of municipal ownership proposed by amiable enthusiasts or selfish plotters would surely result in either wrecking the city's credit, or heaping up a burden of taxation wholly insupportable.

After announcing that he was looking about for a high-grade Irish-American to nominate as President of the Board of Aldermen, Murphy has given the city McGowan. In an evil hour, that gentleman was induced, or allowed (a great mistake), to make a speech at a Tammany ratification meeting, and promptly revealed himself as a man of decided intellectual limitations, and political limitations almost shocking. He boasted himself a worshipping creature of the discredited Oakley, and talked loudly of the spoils he would have to distribute. The nomination of such a man is an insult to the Irish element of New York. Why did not Murphy call upon one of our many Irishmen of parts and character? Clearly, the McGowan candidacy is a distinct handicap to Mayor McClellan's, and a queer proof of his determination to compel Murphy to put up respectable men. The idea of one of McGowan's calibre succeeding to the mayoralty is enough of itself to give one a shudder. Mr. McClellan may be sure that the voters would think twice before making him Governor in order to make McGowan Mayor. In fact, the McGowan nomination is so discreditable and threatening that we think Col. McClellan will speedily have to make a pledge to serve his term out, if elected.

Under happier auspices, Mr. Hughes might have been a fitting and formidable candidate for the mayoralty. He had demonstrated his marked ability, and shown himself a fearless and unsparing investigator of public abuses. Hence if his first duty did not lie elsewhere, and if a free conference of all who oppose Tammany maladministration had pitched upon him as the man to lead the fight, there might easily have been an enthusiastic rallying to his standard. But what is the actual situation? The Republicans turned to him in desperation. They make no pretence of thinking that they could win with him, or anybody. The tactful Woodruff laid their motives bare when he compared the present party emergency to that when Mr. Roosevelt ran as Republican candidate for Mayor merely, as was afterwards confessed by Roosevelt himself, "to keep the organization together." Precisely for that

Mr. Hughes's name has now been invoked. Odell is looking simply for a figurehead behind which to hide—unless, and here is the most serious aspect of the whole matter, he hoped to call Mr. Hughes off the insurance investigation. In this connection, it must be remembered that the *Sun* has made the specific and detailed charge that Odell himself had $75,000 out of the Equitable "yellow dog" fund. He might well shrink from facing Mr. Hughes on that point. The latter has done what every one who believed in his clear head and public spirit expected him to do—declined to become a party to Odell trickery. This he sufficiently characterized, by implication, when he said that it was his duty not to give "the slightest occasion for questioning the sincerity and singlemindedness" of the insurance investigation. In electing to prosecute that to the end, unembarrassed by political entanglements, he has chosen, we are convinced, to perform the greatest public service now open to him. His refusal, according to Chairman Barnes of Albany, leaves the Republican party in a "deplorable" condition.

One good service which Mr. Hughes did in his plain-spoken address to the committee, lay in his blunt repudiation of a party conscience superior to the individual. It was the supreme obligation of party which was held up to him as the norm of public duty. The committee supposed that, if they rubbed that Aladdin's ring, the instant response would be: "Here am I." But listen to the surprising Mr. Hughes: "I may be pardoned for saying that I am a better judge." It was enough to throw all the party hacks standing by into convulsions. Their binding creed is absolute submission to the behests of their political organization. If ordered by that arbiter of life and death to go through fire and water, they would rise to the sublime act of faith and go, nothing doubting. "I am a Democrat. I am a Republican. Therefore, whatsoever my party commands me to do, that I will do in unquestioning obedience." But Mr. Hughes resents and disowns such a slavish rule. He will be the judge of his own first duty. A party man, he is not a party bondman. It is superfluous to point to the almost fatal character of the blow which Mr. Hughes has dealt Odell. That boss's conduct of the city campaign has been throughout a very miracle of mismanagement, and to-day he sits disconsolate in the ruin which he himself has made.

Senator Fulton of Oregon should be a marked man during the coming session of Congress. Not often, if ever before, has it been given to one man to speak wholly for a great State in matters of national import. But, so far as the Oregon delegation is concerned, Senator Fulton may truly claim that he is

> "The bosun tight and the midshipmite
> And the crew of the captain's gig."

Ordinarily, Oregon has two Senators and two Representatives. They also are marked men just now, but the marking has been done by the law. Senator Mitchell and Congressman Williamson, having been convicted of crime, are in line for the distinguishing dress in favor in Federal prisons. The other Congressman, Binger Hermann, is under indictment, and bids fair to make the convicted delegates stand as three to the one at liberty. Now, all this may be not without a bright side for Senator Fulton, but let him beware lest in rising to "speak for Oregon" he inadvertently remark: "As I and the distinguished convicts of the Oregon delegation believe," instead of using a more familiar phrase. Oregon, too, might not like to hear Mr. Fulton proclaim oratorically, "I protest against this measure, and so would the rest of the delegation were it *at liberty to*," for there is plenty of proof that the good people of the State are not pleased with the present condition in their national delegation, however much Senator Fulton's chest may expand when he thinks of his own triumphant virtue.

Under the new primary election law in Illinois, the voters of the State will be called upon this fall to select the successor to Senator Shelby M. Cullom, whose term expires in 1907. The party nominees chosen in the primary will go before the Legislature merely as a matter of form. In effect, the popular vote will determine the matter, and there is no reason to doubt that the choice of the Republican primaries will go to the Senate. It is of interest, therefore, to note the developments of the political round-up at the Springfield State Fair preliminary to the opening of the Republican campaign. When the long deadlock at the State convention last year was broken by the nomination of Deneen for Governor, it was understood that Yates, who was Deneen's chief rival, was to have the Governor's backing for the Senatorship. It was also believed that Sherman and Hamlin, the other rivals in the four-cornered fight for Governor, were to be lined up for Yates and against Cullom. But now the news comes that Lieut.-Gov. Sherman is for Cullom, that Hamlin is not enthusiastic for Yates, and that Deneen himself is of two minds about taking sides in the primary fight. If this really means the end of "Dick" Yates and his crude "office-holders' machine," it is cheering news.

The Mutual's contribution of $2,500 last year to Chairman Babcock of the Republican Congressional Committee was thoughtfully made not in a possibly awkward check—Judge Parker was saying ugly things about corporation checks just then—but in cash. And there was no nonsense about the danger to "the standard of value" and about policyholders having to be protected against a depreciated currency; the money was squarely given, so the intermediary testified, to prevent "tariff legislation." This is the first time that any of the illegal gifts from trust funds has been admitted to have been made in the interest of a "stand-pat" purchase of the Republican party. Congressman Babcock, who narrowly escaped defeat himself, and who has lately resigned as chairman, will have something to explain. Not long ago he was himself one of the most ardent tariff revisers going. Evidently, he had at least 2,500 reasons for changing his opinion. But what is that other tariff reformer, President Roosevelt, going to do about it? The evidence is cumulative that his campaign was financed last year largely by the money of men who make their pile out of the tariff. Is he to continue silent on that issue, after having once served notice that he was going to free his mind on it boldly; and so give added color to the charge that his managers sold him out to the men who have waxed fat on the tariff?

M. Witte's remark in Paris about the Anglo-Japanese treaty, that such alliances always have two edges and cut both ways, is already receiving confirmation. Russia is visibly gravitating towards Germany, and Germany is determined to have an *entente* of her own with France. Prince Bülow's authorized interview on the settlement of the Moroccan difficulty is full of benevolence towards France. M. Hanotaux, in his capacity as contemporary historian and also ex-Minister of Foreign Affairs, comments interestingly in the Paris *Journal* upon the resulting situation. He would evidently look with some coolness upon an understanding between Russia and Germany. He doubts if the Franco-Russian alliance could remain what it has been if a German satellite were to swim into the orbit of the twin stars. Besides, he warns Russia, German motives will bear study. M. Hanotaux indulges in one significant reminiscence:

> "Some ten years ago, when Count Muravieff had the idea of occupying Port Arthur, a high German personage said to me: 'Do let your Russian friends throw themselves into Asia. That will make the burden of Europe all the lighter.' (The expression actually used by the German personage in question was more forcible and vivid.) It is hardly necessary for me to add that when he said 'Europe,' Germany must be understood."

This recalls vividly Bismarck's cynical account of his urging French statesmen to go in for colonial ventures. If they wasted their army and money in that way, they would not have such resources to use against Germany.

THE PRESIDENT'S QUESTION OF THE HOUR.

Mr. Roosevelt has resumed in Washington that series of confidential talks with his callers which at once become public property. It is his way of both sounding and shaping public opinion. His private forecasts of the legislation which he is "determined" to extort from Congress, are supposed to be in the nature of prophecy which helps to fulfil itself. Last year, it will be remembered, these determined Presidential interviews were mostly about tariff revision. His visitors came away reporting the firmest resolution on that subject. It was known later that Mr. Roosevelt contemplated, if he had not actually written, a special tariff message. That, however, was a light which failed at the time, and it seems now to have been permanently extinguished. To-day, at any rate, those who go to the White House to scoff at the tariff, remain to pray over railway regulation. It is upon the latter issue that the President is now said to have decided to concentrate all his energies, adjourning tariff revision to that more convenient season which will never come.

We will not question Mr. Roosevelt's persuasion that railroad evils are now crying more urgently than tariff injustices for him to discharge his heaven-born duty of setting them right. It is said, also, that he regards the railway issue as simpler and clearer. On both points, however, we think his judgment might be attacked with good show of reason. If a champion were to set forth asking what were the most grievous public wrongs he might redress, we do not well see how he could overlook the outrages of the protective system. It has more helpless victims waiting for a knight errant than any other giant abuse. As a fountain of political corruption, social injustice, business vice, private demoralization, and governmental extravagance, waste, and fraud, it is without a rival. And if the tariff question is to be dropped because it is complicated, and the railway question taken up because it is as easily unloosed as a garter, we need a new definition of what is simple and what is involved. The President avers that he wishes only to do "justice," through Government control of railroads; but it will be found that an amount of detail is implied which would make even the intricacies of tariff iniquities seem like matter for the kindergarten.

What the President's precise plans and proposed remedies are, we shall know when he tells us; meanwhile, we have instructive light upon the motives which actuate him. Professor Ripley concludes his second article in the *Atlantic* in explanation of "President Roosevelt's Railway Policy" with some very interesting avowals. It is not the immediate question of railway rates which most concerns Mr. Roosevelt. He is made anxious by the strength of the movement in this country for Government ownership of railroads. "Will it not be better," asks Professor Ripley, "that the attention of this huge electorate should be diverted from such issues by the prompt application of really remedial legislation before the question is too widely advertised in a Presidential contest?" And he adds:

> "Whatever the future may some day contain, it seems clear that, under present conditions, public ownership and operation of the railways of the United States would be a highly dangerous experiment—dangerous not alone to business and property, but to the safety and welfare of the republic. In appreciation of this fact, the President of the United States is neither demagogue nor Socialist. He realizes the irresistible force of public opinion when once fully roused; he is well aware that public ownership of railways is no mere dream of idle theorists, but an accomplished fact in many foreign countries, and he foresees the political dangers latent in such a programme for our own country."

This, of course, is a very common form of political argument—"assent to this lest worse befall you"; but it has its obvious limitations. It has too much of the despairing air of "after us the deluge." We see a great danger coming, but, by consenting to a small danger, we can put off the evil day. How long will a newspaper-reading and demagogue-driven electorate allow itself to be "diverted" when the net is so ostentatiously spread in sight of the bird? Is not Mr. Roosevelt putting a powerful argument *ex concessis* in the hands of Mr. Bryan and his Socialist allies? We think it undoubted, and that Mr. Bryan is in an immensely stronger position politically for the water which the President has sent to his mill.

There is the further question, When is public opinion "irresistible"? When should it be given its head, when jerked to its haunches? According to the only test supplied by Professor Ripley, Mr. Roosevelt would have been for the Granger legislation because public opinion in the Western States demanded it imperiously; he would have bowed to the greenbackers in 1873, to the free-silver men in 1878, and surely would have been an eager defender of the silver-purchase law of 1890. This last is a capital instance of what happens when you go a little way along a hazardous road in order to prevent going all the way. Silver-purchases were excused as necessary in order to stave off free silver. But they were both bad in themselves and simply inflamed the free-silver agitation. Bland and Bryan were able to turn upon the Republicans with tremendous effect, saying, "You have conceded the principle, but you have been cowards, and gone only half way. Now make room for us, that we may give the people full justice." Is not President Roosevelt preparing just such another political appeal for Mr. Bryan, or for his Socialistic successor? Professor Ripley quotes with approval President Hadley's opinion that, even if the Interstate Commerce Commission were given power to fix railway rates, the number of changes would be "very small indeed." Yes, but one can hear the roar coming across the prairies: "What was all the excitement about, then? You were simply trying to 'divert' the honest electors, and all you have given them is a rate on shoe-pegs and canary-seed. Get out of the way, and let the real servants of the people take hold of the weapon you have forged and use it to some effect!"

The best way is to tackle political questions separately as they arise, and on their own merits. If we allow ourselves to be frightened by the spectre of the Socialism of the future, we cannot keep a clear head and steady vision for the Socialism of the present. That there are absues in railway administration cannot be deniad. If they cannot be reached by the unflinching enforcement of existing law, and if more thorough-going statutes will get at them, by all means let us have the needed legislation. But let us have it in and of itself, here and now, with sufficient reason shown, and without these dire insinuations about the great peril if we do not take the plunge into the small peril.

LODGE AND THE REVISIONISTS.

Senator Lodge told the Massachusetts Republican Convention that he was opposed to free raw materials. His speech cannot come in free, then. It was raw to the bleeding-point. Not even he ever succeeded better in amassing rhetorical material crude in point of fact and badly worked up as argument. It was, in truth, of a nondescript order which would compel it to go into that catch-all tariff classification, "Not otherwise provided for."

The Senator advanced the proposition: "Free raw material is nothing in the world but free trade, because it is an advocacy of partial free trade, and partial free trade means the complete downfall of the protective system." Then the McKinley tariff was partial free trade. It admitted hides free of duty. In that fact Massachusetts Republicans gloried, Lodge among them. They had saved free the raw material of a great Massachusetts industry. They did not go about bewailing the complete downfall of the protective system. Their wails, on the contrary, arose when the Dingley tariff clapped a tax on hides—a tax which Lodge mourned over and resisted. On his present principles, however, he should have hailed it as a boon, since it took Massachusetts manufactures just so much further away from the awful perils of free trade.

Apparently, also, Senator Lodge has forgotten the argument which he and

other McKinleyites used to produce so triumphantly on the question of drawbacks. "You say you ought to have free raw materials, else you cannot manufacture for export. Well, we give them to you through the drawback provisions of our tariff. We return to you 99 per cent. of all the duty you have paid on raw materials, provided you can show that they have been worked up into manufactures for export. What more can you ask?" That question has been put tauntingly from a thousand protectionist stumps. But this was before Lodge had discovered that free raw materials are inherently anathema. Of course, that tariff argument was a hollow pretence. Manufacturer after manufacturer has testified that it has been impossible in practice to take advantage of the drawback. It has, indeed, been worth millions of dollars to the Standard Oil Company; but whenever Congressman Lovering has pressed his bill to extend its advantages effectively to others, he has found insurmountable obstacles in the way. Yet, humbug or not, the claim has been, till wisdom was born with Mr. Lodge, that even our crazy American protection provided free raw materials for our exporting manufacturers. The German protective tariff, it is well known, takes minute care to give German industry its prime materials as cheap as possible. We fear that German protectionists would laugh in their coarse way at this latest notion of a Yankee Senator that free raw material means the complete downfall of the protective system.

The crudest nonsense of all is Senator Lodge's implication that anything like a scheme of logic or a consistent policy has led to the tariff as we know it. It is, rather, the haphazard and amorphous resultant of a long series of impudent and selfish demands by special interests, making corrupt use of political power corruptly obtained. Our tariff taxes are very like the transit taxes enforced by local barons in the Middle Ages. They took toll from every one that passed, the alleged reason being some service rendered, like building a bridge or keeping a road open, but the real reason being that they had the power to rob travellers and traffickers. In like manner our various powerful seigneurs have had their toll written into the tariff laws. The latest of them to insist upon their share of the plunder were the cattle barons, who, in spite of Lodge's protests, made Massachusetts pay them a tax on hides. It is this fact which lends peculiar significance to the present movement of revolt in that State. As the tax on hides was the pitch of protectionist stupidity and effrontery, so its removal might be the beginning of a return to sense and decency. Even Lodge is constrained to promise to work for this—though "only through the Republican party." He is not going to "enter upon a revision of the tariff by uniting with the Democratic party in Washington and voting down other Republicans." No wonder that Congressman Dalzell indulges in ribald jeers at Lodge's kind of tariff reform!

The Senator as a political historian is almost more diverting than as a political economist. Plaintively appealing to tariff-reform Republicans not to desert the sacred party, he said: "We went through that free raw-material agitation some years ago. I hope that some of us at least remember it. We lost the Governor three times; we lost the majority of our delegation in Congress." Do we sleep, do we dream? Was W. E. Russell elected Governor of Massachusetts and so many Republican seats in Congress emptied because of Republican trifling with the heresy of free raw materials? The records are open to those who cannot "remember" so well as Lodge. That disaster befell the Republicans because they would *not* admit the need of tariff revision. Hence Lodge's appeal is that Massachusetts Republicans be again as foolish as they were in the early nineties, and, by resisting tariff reduction once more, get whipped once more.

The Massachusetts Democrats have promptly seized upon their opportunity. Declaring that "the paramount issue at this time before the people of Massachusetts is relief from tariff restrictions," they demand that "the raw materials of our industries, such as coal, iron, lumber, hides, wood pulp," be put on the free list. Incredible as it may seem, after thus defying Lodge, they nominated Gen. Bartlett for Governor, who promises to make a fighting campaign, and hopes to repeat the success of last year, when a Democratic Governor was elected in Massachusetts on a tariff-reform platform.

UNIFORM MUNICIPAL CHARTERS.

The suit instigated by Governor Hoch to remove the Mayor of Kansas City, Kan., and the County Attorney of Wyandotte County, in which the State's largest city is situated, as well as to forbid to the city itself the exercise of corporate powers, is a reminder of the need for a clearer definition of the status of municipalities. Kansas is a prohibition State, but the Mayor of Kansas City, Kan., has persistently refused to close the 150 and more "joints" that have been doing business there, and the County Attorney has refused to take any action against their proprietors. Indeed, Mayor Rose has defended his course on the ground that the city needs the money paid into the treasury as fines by the lawbreakers. The case is likely to prove a test of Governor Hoch's power to enforce the statute against liquor selling. This, in certain towns, is now a regularly licensed business. From the point of view of the city officials, the Governor's action is considered to be quite as arbitrary and unwarranted as the action of Pennsylvania's Legislature last winter in passing the "ripper" bills directed against Philadelphia. In both cases the effect has been to substitute for the judgment of the municipality the conclusion of the State authorities.

The theory that the municipality is merely the agent of the State for specified purposes carries with it the tacit assumption that the agent shall be given wide discretion, and that the State shall not discriminate against one agent and in favor of another similarly placed. Uniform charters, classified according to the size of the municipalities, and framed with the actual experience of successfully conducted towns and cities in mind, are obviously desirable. But States have been slow to recognize the fact. The code which went into effect in Indiana last April, and which applies to cities and towns within the State the well-tried Indianapolis charter, or some necessary modification of it, is, therefore, of special interest. In the current *Forum*, Mr. H. O. Stechhan has taken the trouble to digest the 272 sections of the new code, and point out its advantages over the old system of individual charters and separate incorporation acts. In the past, the experience of one town or city contributed practically nothing to the well-being of its neighbor; every incorporated municipality has had to learn the same lesson for itself. The result has been, in Indiana as in other States, that one city has developed rapidly under a wisely framed charter, while another has been retarded by expensive, cumbersome, and unwise administrative methods.

Like the best of the "city-made charters" in force in this country, the Indianapolis model follows generally the Federal plan of government. Changes have been made during the fourteen years of the charter's life, but the fundamental idea of dividing the functions of government into the executive, the legislative, and the judicial, has been preserved. The Mayor is chosen for four years, and is ineligible for reëlection. Six administrative divisions, known as the departments of public works, public safety, public health and charities, law, finance, and collection and assessment, form the cogs in the executive machinery. The Mayor appoints the heads of all of these except the last, who is the regularly elected city treasurer. But the head of the finance department, the comptroller, who is an appointee of the Mayor, acts as an efficient check on the treasurer, who becomes merely a collecting and disbursing agent. The legislative authority is vested in one body—a common council. The judicial power is vested in a city court, presided over by a police judge, assisted by a city clerk and a bailiff. The judge and the clerk, like the Mayor, are elected for a term of

four years, and are not eligible for re-election.

In thus centralizing power in a responsible head, Indiana has followed the teaching of experience. If any proof were needed of the wisdom of such a system it would be furnished by the history of the "ripper" legislation at Harrisburg last winter. Finding that Mayor Weaver was becoming restive under the dictation of the Philadelphia machine, and was making trouble for the ring contractors and the police, who, at the gang's orders and for a price, were permitting vice to flourish, Durham decided that the departments of public works and safety must be taken from the Mayor's control. The Legislature passed the necessary bills, putting these departments under the control of the City Councils, and Gov. Pennypacker approved them. In 1907, therefore, when the "ripper" legislation takes effect, we shall have the crowning illustration of the mediævalism of machine government—a valuable example of what not to do to secure good municipal government.

The Indiana code divides cities into five classes, with a more complete consolidation of powers as they decrease in size. For communities of less than 2,500, a separate form of town government is provided, and this, too, is uniform and based upon the experience of successful small municipalities. Elections in cities and towns occur in "off years," the first coming next month for officials to take office in January 1, 1906. What must be regarded as a serious defect in the code is the failure to limit the time for which public franchises may be granted. Former charter enactments defined the life of a municipal franchise, according to its nature, at from ten to thirty-four years. New Jersey might have given Indiana valuable hints as to the danger of granting perpetual franchises to public-service corporations. Of course, the supporters of the Indiana law do not pretend that it is ideal; doubtless it will be amended after its workings have been observed for a time. But it puts clearly and simply before the municipalities the promise that all shall be treated alike by the State; and the form of the code is dictated by fourteen years of actual experience in charter-making and amending by the chief city of Indiana.

THE NEW YORK LIFE ON THE STAND.

President McCall's previous testimony had led the public to believe him capable of much moral callousness, but his attitude and admissions on October 4 were more damaging than his worst enemy could have believed possible. If he has any defence at all, it must be along the line of Mirabeau's saying about his younger brother: "In any other family than ours, he would be considered a scapegrace." In any other business than that in which the Equitable revelations had been made, Mr. McCall's confessions would be regarded as absolutely damning. It is true that no such palpable mismanagement, or outright looting, as marked the administration of the Equitable has been shown to exist in the New York Life; but the disclosure of its loose methods and reckless payments of huge sums for political corruption—avowed as they are with singular effrontery—has come with an especial and cumulative shock. We think that the country will be more stirred and feel more outraged by President McCall's latest evidence than by anything that has gone before.

Note, first, how the head of a great fiduciary institution acknowledges that $150,000 can be taken from its funds without a single trace being left on the books. Apparently, President McCall's contributions to successive Republican campaign funds were not even hidden under that broad mantle which covers such a multitude of sins, "legal expenses." The $150,000 was taken from the policyholders and left not a wrack behind. Mr. McCall had to confess with mortification that he had not been able to discover any bookkeeping entry showing from what fund the money was withdrawn. It is presumed that "profits" were diminished by so much, though there is no record. But what every policyholder will at once ask is, If $150,000 could thus disappear, why not $500,000? If money of the company can be taken for politics, and no tell-tale track left, why not for speculation, for gambling, for debauchery? In other words, the door for embezzlement seems to stand wide open. This is the implication of President McCall's statements; and it is almost more amazing than the gifts to politicians themselves, shocking and illegal as these were.

But the positively sickening thing is the final uncovering of the reptile fund to which President McCall has ordered such vast amounts paid from year to year. Within the past four and a half years, he swore, he had turned over $476,927 to a legislative jobber wholly without voucher. During that same period, he had paid out $1,103,920 in "law expenses," a good part of which, it is clear, must have been used to corrupt legislatures. Of course, Mr. McCall did not use the word "corrupt." His phrase was, "produce results"; but he knows, and everybody out of the infant school knows, that the most abhorrent means might have been used, and doubtless in many cases were used, to secure the desired "results" and demoralize our public life. The president of the New York Life must be commended for greater frankness than he displayed when first testifying about his payments to Hamilton. Originally, he talked evasively about "real estate" transactions; now, the only inference from his acknowledgements is that the money was a legislative corruption fund.

Naturally, Mr. Hughes had to go through the form of asking whether any direct proposition to bribe a legislator was ever laid before him, and, naturally, Mr. McCall replied with indignation, "Never." But this deceives no one. Mr. McCall was bred at Albany. He knows from the inside the game that is played there. It is idle for him or any president of a corporation who gives money to Albany lobbyists, to pretend that he does not know what is done with it. No member of the investigating committee could have kept his countenance if he had supposed that President McCall's protestations of ignorance and innocence were meant to be taken seriously. No, the facts stand out clear as noonday: the great insurance companies have poured out money like water to defeat or procure legislation. We have a blunt man out West who tells us just what to think of this business. Gov. Folk calls it crime. He says that President McCall's payment of trust funds to politicians is "embezzlement"—"just the same as if a public official in charge of the public funds were to put his hands into the public treasury."

One knows not whether to wonder more at the criminality than at the folly of the insurance companies in maintaining these bloodsuckers at the various State capitals. In so doing, they really invite blackmail. Their $2,000,000 a year fund, or whatever it is, creates ten "strikers" where it buys one, and raises up harpies on the right hand and the left. President McCall declares that he "trembles" at the beginning of every legislative year. But is not the more correct expression "cowers"? These officers of great insurance companies who surrender to lobbyists and hire bribers, simply advertise themselves as the most gullible of victims. The predatory gang which dogs their steps and snaps up the juicy bones they throw, is doubtless filled with joy at having found such "easy marks." This kind of corruption grows by what it feeds upon. Giving $200,000 one year leads to a demand for $300,000 the next. What is worse, when once you have struck hands with a corruptionist, he has you in his power. All your belated moral scruples he laughs at, and compels you, having gone with him one mile along the crooked road, to go with him twain.

As we have all along maintained, the business aspects of this affair are secondary to the moral. We can endure money losses, but we cannot abide management of great fiduciary institutions which is revolting to every honest instinct. The time has come, we submit, when the policyholders, agents, and directors of the New York Life must seriously ask whether its control can any longer be left with safety or honor in the hands of a man who has so grossly

affronted the uncontaminated moral sense as President McCall has done.

RUSSIA AFTER THE WAR.

Moscow, September 23, 1905.

Apparently there is not so much rejoicing over peace in Russia as there is in America. On the morning after the news of the agreement at Portsmouth was announced, the streets of St. Petersburg presented a scene but little different from that which is observable on ordinary occasions. There were but few flags flying, and no one seemed anxious to discuss the matter, though the newsboys were somewhat more vociferous than they were the day before. The army men who were interviewed upon the subject simply shrugged their shoulders and said, "The war should have gone on, and we might have done better." In justification of this feeling, they point to the fact that the strategical position is much more favorable to the Russian army than it was a year ago, and that Russia is most at home on land. In fact, the fleet has been practically a negligible quantity from the beginning. The army has always had to depend upon its land connection for reinforcements and supplies. A year ago the Russian army was compelled to project itself into the enemy's country, far beyond its natural base. The relief of Port Arthur was a practical impossibility, yet it had to be attempted to satisfy the demands of the people at home. Now the situation is reversed. The Japanese must advance beyond their natural base, while the Russians are drawing in upon their own.

Few of the newspaper critics seem to have any appreciation of the fact that a wide and impassable mountain barrier, extending from Mukden to Vladivostok, protects the Russian army along its entire left flank. Vladivostok, too (which an American editor a short time ago referred to as a Kamtchatkan fortress), would be a much more difficult fortress to subdue than Port Arthur was, since the natural base of the Russian army is but a short distance in its rear, making a prolonged investment well nigh impossible.

The very fact that, since the battle of Mukden, nine months have passed without the Japanese army's having made any advance upon land, shows that in that effort it had strained itself to the utmost. Another campaign meant large additional reinforcements, a great addition to the national debt, with a prospect, at the best, of a partial victory, and the hazard, at any rate, of a defeat. The Russian army is still 200 miles in front of Harbin, and has, 100 miles behind it, a strong natural line of defence in the Sungari River, while the army itself is now better disciplined and in better condition than at any time before. Such is the military point of view, and it certainly warranted the confidence of the Russian plenipotentiaries in making the stand where they did. It was no "bluff" on their part, but it simply brought the Japanese to face conditions which their wise statesmen fully appreciated, and led to the result in which both nations and the whole world may well rejoice.

One reason for the apparent lack of interest in the war is, that, relatively to the size of the country and of the army, the actual losses in battle have not been great, while the heaviest losses have fallen upon the Siberian troops, who were earliest drawn upon for defence. When there are 1,500,000 men continually under arms, and only one-third of them are at the seat of war, and less than 10 per cent of that one-third have lost their lives, the real extent of the calamity is brought down to moderate proportions; illustrating anew the hopeful fact that the increased efficiency of modern instruments of war, by modifying military tactics, really becomes less destructive of life than were former methods.

In Denmark, only, on our way to Russia, did we find warm sympathy for her cause. The English and the Swedes filled our minds with lugubrious accounts of the state of things we should encounter on landing at St. Petersburg. But in this we were happily disappointed. Our passports, of course, had to be presented, but our trunks were not even opened at the custom house, and there is no more restriction upon our movements here than there is at home. The churches and theatres are crowded with their usual throngs, with no more display of police supervision than one sees in New York. Admission to the great museum in the Hermitage, the principal palace of the Czar, is unrestricted. In gazing upon its rare treasures, one rubs elbows with officials and subalterns, tourists and students, peasants and priests with their families. In no place in the world does one see more signs of real democracy. The finest theatre in the city was filled with a plainly dressed audience, while the upper gallery, with its cheap seats, was crowded to suffocation. The opera was that most popular, beautiful, and wholesome composition of Tchaikovsky's, "Eugene Onegin," this being its 248th repetition.

Of the peasant, more anon when we have completed our tour in southern Russia. After all, he is the real controlling factor in Russian civilization, and must be dealt with in just comprehension of his nature and history. The question of his elevation and of admitting him to the franchise is not much different from that which we have with our negro population in the United States, only that the peasant in Russia is four-fifths of the nation, while the negro is but one-tenth of the United States.

G. Frederick Wright.

THE KARLSTAD CONVENTION.

Copenhagen, September 26, 1905.

The agreement announced yesterday evening by the commissioners lately in session at Karlstad closes the third act of the exciting political drama which began with the Storthing's declaration of secession on the 7th of June, and was continued with the approving plébiscite of the Norsemen on the 13th of August. A clear "triumph" for neither party, and received without jubilation by the press of both Stockholm and Kristiania, the convention of Karlstad may fairly be called a victory of civilization. The past fortnight has witnessed a renewal of the dangerous tension of feeling in the two countries concerned, and the eyes of the world have turned anxiously to the little Swedish city of Karlstad, where the appointed delegates were debating the "conditions" imposed by the Riksdag as the price of its consent to the legal and peaceable dissolution of the Union. In sharp contrast with the example set, to the amazement of mankind, at Portsmouth, the Karlstad negotiators remained throughout the conference as mum as an oyster. If they granted an interview, it was to discourse urbanely of the weather and the crops.

Nevertheless, the assembled correspondents rose mightily to the occasion, and there was no dearth of news. I have long supposed that the American reporter, with his constant practice in writing up political conventions several days before they take place, could beat the world in manufacturing gas out of nothing. But it is not so. A month's sojourn in Stockholm, with constant attention to the Swedish newspapers, during the exciting days of August and September, 1905, has quite shattered my patriotic illusion. What endless quantities of the sheerest east wind! Guesswork and gossip galore, canards and threatening rumors, and infinite credulity! At such a time one learns the meaning of Shakspere's phrase, "exsufflicate and blown surmises." But now the air is cleared, and the prospect is fairly bright. The fourth act of the drama will be the acceptance of the Karlstad convention by both parliaments—perhaps with some sharp debate—and then the fifth act will be the creation of a new and permanent executive in Norway, with the necessary changes of organic law.

The readers of the *Nation* doubtless know pretty well where the pinch came in the deliberations at Karlstad. It was over that one of the Swedish "conditions" which related to the demolition of the so-called "border fortifications" that have been erected in recent years by Norway. For Sweden this was a reasonable demand, in the interest of future good relations; for Norway it was a bitter pill to swallow. In the year 1895 there was in Sweden something like a flood-tide of pugnacious chauvinism, so that the Norsemen, hitherto neglectful of defensive precautions, began to feel that they must reckon with the possibility of an attack by land from the east. Accordingly, they built new outworks covering the old and interesting but useless fortresses of Frederiksten and Kongsvinger, and threw up strong modern fortifications at two other points.

This was done under the Union, with the consent of Sweden's King, as part of a system of national defence. The Norseman's account of the matter was that these works were necessary for the protection of Kristiania against a land attack—say by Russians, or Germans, or whoever it might be—from the east. And certainly one must allow that the right to fortify a national capital, in the way deemed most effective by its military experts, is one of the fundamental rights of a sovereign state. But the Swedes have always felt very sore over those border fortifications, and have insisted upon regarding them as a menace to Sweden, and nothing else. In vain the Norsemen pointed out that the works were of such a character that they would be worthless as points of concentration for an attack upon Sweden, even if the absurdity of an invasion of Sweden by its weaker neighbor were to be regarded as coming within the range of possibility. The Swedish re-

ply was: "Nonsense! A remote borderline is not the place for defending your capital against a *foreign* enemy. Your works are meant for *us*. They are a standing token of suspicion and unbrotherly feeling. If they remain as they are, after the dissolution of the Union, we shall have to fortify against you. This competitive race of fortification will cost money, provoke continual ill-feeling, and divert a part of the defensive strength of both countries to a point where it should least be needed."

Before and even during the conference at Karlstad, the more radical organs of opinion in Norway opposed the razing of the fortifications. They asserted that the demand was unreasonable and made simply for humiliation, and that it was better to fight than to submit to it. Presently, however, attention was focussed on what seemed a good solution of the difficulty. It was asserted in the papers—no one knew what the negotiators were saying—that Norway would consent to raze, or at least to dismantle, its fortifications, if Sweden would enter into a treaty of arbitration providing for the peaceable settlement of all disputes that might arise. But this seemingly hopeful suggestion forthwith aroused the bad temper of the Swedish chauvinists. They said: "We have no objection to your treaty of arbitration—indeed, we rather like the idea; but you must raze your fortifications *first*. Until you have complied with our conditions and thus prepared the way for the legal dissolution of the Union, you are not a nation with whom a treaty can be made. You are simply a pack of revolutionists. You have violated one compact; who guarantees us that you will not violate another?" (It should be remembered that, from the Swedish point of view, the Union still exists. The Union flag still flies over the Government buildings at Stockholm, and King Oscar is regarded as in law, though not in fact, the king of both countries.)

Naturally, this view of the matter was derided by the Norsemen as untenable and even absurd. They declared with emphasis that Norway, under the Union, had been a free and independent nation, with full power to make treaties, to adopt defensive measures, and to do all other acts proper to a sovereign state. Thus the angry debate in the press narrowed down to a question of precedence. Should the treaty or the demolition of the fortifications come first? As there was no sign of yielding on either side, and as the air was full of canards about the mobilization of troops, the situation became, a few days ago, extremely grave.

How this hard problem was finally solved by the Karlstad negotiators, is already known to the world through the telegraphic dispatches. The proposal is that the two governments bind themselves, for a period of ten years, to refer to the Hague tribunal all disputes except such as affect "independence, integrity or vital interests" (*Livsinteresser*). If there is a difference of opinion as to whether any particular dispute does or does not come under the exception, that question itself is to be referred to a special court of arbitration, the constitution of which is duly provided for. On either side of the border line between the two countries, from the sea on the south to the 61st parallel on the north, there is to be a neutral zone 15 kilometres in width, within which all military works, preparations and demonstrations of every kind are to be prohibited. Within a period of eight months the Norsemen are to demolish their new fortifications, the work to be done by a commission of three foreign officers. The sentimentally interesting forts of Frederiksten and Kongsvinger are to be left standing.

There is little doubt that this tickl[illegible] paragraph of the convention will be accepted by both parliaments. It complies substantially with the "condition" imposed by the Riksdag, and the Norse negotiators at Karlstad were in constant touch with the Government majority of the Storthing. The wisdom of the adjustment is sufficiently attested by the surly comments with which it has been received by the Jingo press of both countries. Many Norsemen evidently feel that their country has paid a wofully high price for the peaceable acknowledgment of its independence by Sweden; and many Swedes are disappointed that their headstrong neighbor was not more thoroughly humiliated. Meanwhile, the friends of peace in the world at large may well be gratified with the result, and congratulate the leading men of both countries upon the splendid example they have given to mankind. In particular, the aged King of Sweden will deserve to be remembered by posterity as Oscar the Good. One may feel, to be sure, a momentary regret that it was found necessary to make so large a reservation with regard to the kind of differences that are to be sent to the Hague tribunal. But the special court provided for in the convention will do much to offset that defect. It supplies the great desideratum, namely, delay and discussion, when grim-visaged war begins to show a wrinkled front.

A minor point dealt with in the convention is of considerable interest to the ethnologist, though of no great political importance. I refer to the Riksdag's demand that the Swedish Lapps should continue, after the separation, to enjoy the grazing rights they have hitherto enjoyed on the soil of Norway. A shimmer of romance rests upon the Lapp, just as upon the American Indian. He, too, represents a fading remnant of a stock that was once widely disseminated, but has been pushed to the wall by men of superior intelligence. Yet the case is not quite so pathetic as most people probably suppose. According to Professor Wiklund, who has made a special study of the Lapps, it is only those of the lowlands, the so-called forest Lapps, that are threatened with extinction. The highlanders are more than holding their own. They are nomads; their wealth consists mainly in their herds of reindeer, and during the greater part of the year they inhabit sterile mountain-tracts of which civilization can never make any use. But when summer comes, with its heat and its gnats, the reindeer make for the nearest coast land. The Lapp follows his animals, indifferent, of course, to national boundaries. In this way a large number of Swedish Lapps annually cross the line and spend the summer on the coast lands of Norway, where the deer help themselves freely to young trees and other vegetation, as well as to the hard-won hay on the farmer's rick. A Norse paper estimates, how accurately I have no means of knowing, that these unbidden four-footed guests number every year a hundred thousand, and that they do damage to the amount of five crowns each. If this estimate is within a gunshot of the truth, the hyperborean Norse farmer, whose battle with his environment is hard enough at best, has a rather substantial grievance against the nomadic Lapps and their reindeer from across the border.

It will be evident that the international problem presented is rather difficult. It is hard to see how the migrations can be prevented, or even regulated, without killing the reindeer; and killing the predatory quadruped would involve the speedy extinction of the biped who depends upon him. This is a result that no one desires, for, apart from considerations of humanity, the Lapps are in the main an inoffensive folk, whose trade is of considerable value. For centuries the Swedish Lapps have enjoyed the right of migration across the border, and this right was specifically conceded to them in a codicil to the boundary treaty of 1751. Some time ago it seems that the old law was suspended, and a temporary agreement made which has of late been in force. So far as can be told from the dispatches at hand, the Karlstad convention makes no attempt to deal finally with this question. It is provided that the rights of migration guaranteed by the law of 1751 shall not be abolished, and that the temporary agreement now in force shall continue to operate until 1917.

The other paragraphs of the convention, relating to traffic and waterways, are of smaller interest to the outside world.

And what of the fifth act of the drama, as I called it above? Will Norway find a king at last, or will it give up the search and elect a president? This is a field in which, so far as I can see, one man's guess is as good as another's. I have asked many Norsemen to tell me what was going to happen, but they all refused to commit themselves. They said: "We do not know; we have never voted on the question." From personal observation, I surmise that there is a clear preponderance of sentiment in favor of a republic. But many thoughtful men who at heart favor a republic dread the internal war of parties and factions that will be sure to come with any attempt to change the Constitution. They know that they lately won the admiration of the world for their unanimity and calm determination; they fear to lose it by a revelation of their internal dissensions. But this danger should be faced. The people have a right to be consulted with regard to the form of government they are to live under; and it would certainly be a sad commentary upon their political capacity if they could not express their will, after a vigorous educational campaign, and then abide unitedly by the decision of the majority. As time passes, the difficulty of picking up a satisfactory king seems to increase; all the more reason, then, for letting the people decide, very soon, whether they really want a king at all.

CALVIN THOMAS.

THE SIXTEENTH VOLUME OF CARDUCCI'S WORKS.

FLORENCE, September 14, 1905.

This volume, completed last year in August and now issued, contains a genial letter to the faithful publisher, Cesare Zanichelli, whose eldest daughter was married at the time of its conclusion.

"*Extremum hunc, Arethusa, mihi concede laborem.*

"Let me, if it be not arrogant, repeat the prayer of the Virgilian shepherd in the last Eclogue, here at the beginning of this, which is assuredly the last of my Dantescan works—the last, because, during the short span of life that remains to me, I may collect and go through once more those too numerous writings which, in the enthusiasm of youth, I allowed myself to pen; but the idea of thinking out and constructing new ones would be quite out of season. It is just forty years ago, my Cæsar, that I, with the 'Discourse on Dante's Rhymes,' set my foot firmly on the field of Italian literature; and now, weary, I withdraw it with this essay on the noblest of Dante's Canzoni. With him I began, with him I end. How many thoughts, how many hopes, how many projects, how large a portion of our little world has passed before our eyes—now uplifted to the ideal, now immersed in petty cares—during this not lengthy space of life summed up in forty years. A source of hopes, and thoughts, and now of pleasant life-plans for you is your first-born daughter, with whom it is pleasant to associate the birth and growth of the publication of my so-called literary works. The printing of the volumes increased as Louisa's years increased; the former, once exuberant with youthful ardor, now begin to halt and to decline, the latter rejoice and prosper in their florid maturity. May she so continue to flourish for a long season in the companionship of the worthy man, Dr. Francis Mazzoni, to whom you have entrusted her youth. And may it be granted you through her to reap the reward of your modest, laborious, well-spent life, for which I, who have received many proofs of friendship, wish to leave a token of gratitude in these papers, which, from their subject at least, borrow a friendly garb that will, I trust, make them dear to you.

"GIOSUE CARDUCCI."

Dante's "noblest canzone," "Tre donne intorno al cor mio son venute," which forms the subject of this essay, is, according to the poet, if not the most beautiful —the superlative being reserved for "Donna pietosa"—assuredly the most powerful and imaginative, its intonation the widest and highest, its construction at once solid and graceful.

"It was written in the early, nay the earliest, period of his exile, when the conviction that he had always aimed at the welfare of his country and at justice was fresh and vivid, and the poet had not lost the hope that this would be acknowledged by some of his adversaries. . . . Now when could Dante have hoped for the gift of peace? When could he have imagined that his adversaries might listen to the admonition,

"Che 'l perdonar è bel vincer di guerra?

Assuredly only in the very first moments of exile, before rage and thirst for vengeance had reawakened, when memories were yet sad and gentle. That this canzone was composed before the sentences of January 26 and March 3, 1302, who runs may read in the verses:

"Onde s'io ebbi colpa,
Più lune ha volto il Sol, poichè fu spenta;
Se colpa mûore purchè l'uom si penta."

After examining the canzone as a whole and in its minutest parts, Carducci passes in review the comments of ancient and modern critics. At the commencement of the nineteenth century, Dionisi and Ginguené illustrated the canzone. With Dionisi (1724-1808) may be said to have commenced the Dantescan criticism of to-day. Ginguené (1747-1816), who had passed through the Revolution, approached it in the spirit of the new time. As commentators should be remembered Giovan Gaspar Orelli, Foscolo's friend, and other Italian exiles who, mindful of their country, educated Helvetian and Italian youth in the worship of Dante. Carducci is not satisfied with Fraticelli's illustrations of the Canzone, preferring the notes of Carlo Witte and the commentary of Mamiani.

In this canzone, as in the "Amor, che movi tua virtù dal cielo," the poet realizes the idea of the perfect allegorical canzone as it appeared to his imagination, a poetry that dresses moral beings (or, rather, purely symbolical conceptions) in the forms and appearances of persons who have passed through the historical world of phantasy, making them felt and heard, and grouping them in plastic and figurative positions. If we add the masterly framing of this movement in a really Oriental landscape, the skill with which the personages are made to take part in a truly dramatic dialogue that gradually assumes the color and the warmth of actual events as the poet himself intervenes with his great heart in his grand fable, we have the contents and the development of this canzone, which is truly remarkable in the poetry of the fourteenth century.

Carducci's Dante essay was first read and expounded in the University of Bologna, in March and February, 1901, then published in the *Antologia*. Another essay, on "The Development of the Ode in Italy," appeared in the *Antologia* of February, 1902. The "Springtime and Flowering of Italian Lyrical Poetry" was printed in 1903, and, with a few corrections and additions, closes the present volume. It traces the development of lyrical poetry from the Emperor Frederick II., who died in 1250, after thirty-five years of empire and of kingship of the Two Sicilies, to the Genoese Goffredo Mameli, who died in the hospital of the Pellegrini, July 6, 1849, just as the French entered Rome, under whose walls the poet-soldier fell mortally wounded. And what is that blast, like the trumpet of youth? It is Mameli's war hymn. Arise! to our feet! It is eighteen hundred and forty-eight:

"Fratelli d'Italia,
l'Italia s'è desta:
dell'elmo di Scipio
s'è cinta la testa.
Dov'è la Vittoria?
Le porga la chioma,
Chè schiava di Roma
Iddio la creò."

"The century between Machiavelli and Tasso, rich in literary epopee and classic prose, has scant and meagre lyric glory. . . . Still, there are some fugitive signs of vigor and native power. Amid the rumors of the bombardment of Genoa, ordered by Louis XIV., the Jesuit Pastorini sings: 'I sought to retain liberty, and gladly kissed each ruin, saying, Welcome ruin, but never servitude.' And a fresh breath of spring among the grey fumes of rice fields seems to hail a new era in the verses of Lemene." As the canzone took shelter in the shade of the epopee in the seventeenth century, so in the eighteenth the ode was developed in the shade of the drama. Metastasio as a lyric poet is of small account, he is content modestly to sing the canzonetta, but round him grouped minor canzonettisti, and from the union of canzonetti and canzoni came forth, more virile and harmonious than in the Cinquecento and Seicento, the Italian ode in the eighteenth and nineteenth centuries.

"Here comes Parini, and with Parini modernity and variety. Here, too, is Alfieri, and with him the sonnet sighs and roars with new passion in Italy. Beside him, Vittorelli intones his hymn; and between him and Monti the idyllic Bertola murmurs an adieu to Posilipo; Monti admirable (let who will gainsay), the renewer of lyrical forms. . . . And between Monti and Foscolo we have the Piedmontese Saluzzo, with his coloring of Ossianic feudalism. And here is Foscolo himself, who dominates and compels in his train a nervous and rebellious generation with the fiery and sweetly fantastic force of a few sonnets and no large amount of blank verse. Finally, Manzoni and Leopardi, and many other minor poets."

Besides these original essays, which all attest the vigor and verve of our poet, who has just completed his three score years and ten, the sixteenth volume contains some of the choicest of his older works—the long, erudite essay on "Muratori and his Collection of Italian Histories from 500 to 1500"; two long essays on Leopardi, and the gem of gems, "Del Risorgimento Italiano." In fifty pages are condensed and luminously illustrated the history of Italy and her literature from 1749 to 1870. The fourteenth volume of the series, to contain Carducci's studies on Giuseppe Parini, has not yet appeared, but will be published during the present year.

That our poet is in good health and spirits is shown from the many racy little letters that appear from time to time. In one he requests the public to refrain from troubling themselves about himself and his family matters, or at least to keep to facts and not invent fables. In another he declines to permit an institution to bear his name—"not, at least, until Beccaria and Manzoni have been duly honored." There was a rumor that his health was declining when he left Madesimo earlier than was his wont in former years, but on inquiry he assured us that he had merely returned home because he was "weary of the place." He is now in *villeggiatura* with his great friend, Count Pasolini, attending to the proofs of his Parini volume, which will be followed by the remainder of his works until everything that he has written is before the public.

J. W. M.

Correspondence.

LINCOLN'S WRITINGS.

TO THE EDITOR OF THE NATION:

SIR: Your statement in reply to a letter concerning the two forthcoming editions of the works of Abraham Lincoln, in your issue of October 5, is, from what it does not say, liable to convey a wrong impression. We feel sure that such was not your intention, and should be obliged to you if you would let your readers know the facts of the case.

Col. Robert T. Lincoln particularly requested Nicolay and Hay to compile his father's works, and transferred to them all rights that he might have to copyright

protection. Under arrangements with the present owners of the Nicolay and Hay copyrights, by which we pay them a royalty on every copy, we are bringing out an entirely new and enlarged edition of their collection. The new edition will contain nearly double the amount of material contained in the first edition, consisting of nearly 25 per cent. more of Lincoln's own writings, explanatory and biographical notes, a general introduction by Richard Watson Gilder, and special articles by other prominent persons. Our aim has been to make this a complete, definitive edition of Lincoln's works.

Of course, the State papers and messages of any President are not subject to copyright, but all his personal correspondence and unpublished writings are, for the common-law copyright to a letter vests in the author and not in the person in whose possession it may be; so the Nicolay and Hay edition must ever remain the only authorized and complete edition. We are naturally surprised that another house should, so soon after the death of John Hay, announce an edition of Lincoln's writings on which they pay no royalties to the holders of the copyrights, and which competes with an edition that does.

Yours truly,

FRANCIS D. TANDY & COMPANY.

NEW YORK, October 7, 1905.

TEACHERS AND PUBLISHERS.

TO THE EDITOR OF THE NATION:

SIR: A late open letter of Mr. Edwin Ginn to the editor of the *Nation* raises certain questions concerning the relations of publishers and teachers in the schoolbook business. The imputation of Mr. Ginn is of such a nature that I for one do not wish to let it pass unchallenged.

Some of Mr. Ginn's statements are expressions of facts all too familiar to school men. It is well known that publishers are desirous of manuscripts for publication, offering sometimes advance payments on contracts. The wish of nearly all publishers for competition in books of every grade and upon all subjects leads to the acceptance of manuscripts often inferior to books already published, in the hope that they may be patched up and made to sell by skilful agency work and generous treatment of school boards and teachers. It is true, as I believe, that publishers have sought to win the friendship of teachers and the adoption of one or more of their books by an almost wholesale presentation of their publications. To my knowledge, teachers receive many books for which they do not ask, books in which they are not interested, and which are mere lumber to them. It is not an unusual practice for publishers' agents to request the privilege of sending, not one, but many books to teachers. The same is true of the treatment of school boards, and no doubt some of the many books thus presented find their way to the second-hand dealers; but if there is abuse to the publishers from the sale of these, the publishers are primarily responsible, and they have a means of remedying the evil of which Mr. Ginn complains.

But a large number of schoolbooks for sale by second-hand and pirate booksellers is not to be accounted for on Mr. Ginn's hypothesis. His forty years of close acquaintance with the schoolbook business should have made him familiar with another favorite device of publishers and their agents. The wornout or partially used books of one house are accepted in exchange for the new books of its rival. Publishers openly announce exchange rates for this business, and it is well known that they make all sorts of special rates in order that they may get the other publishers' books out of a school and their own books in. (Profits are to be made from future sales.) Let no one think that the books received by the publishers in this exchange are destroyed; they go straight to the pirate dealer, where a new cover, with trimmed edges, and often a new title-page, fit them to be turned out, as Mr. Ginn says, to the damage of their original publishers. In view of this well-known practice, it would appear that Mr. Ginn might find a very different explanation for the conditions which he describes.

May I add a word for the craft of authors of schoolbooks, for whose welfare Mr. Ginn is solicitous? The practice of exchange rates and introduction prices by publishers is a favorite device for reducing authors' royalties, or, in some cases, of eliminating royalties altogether. This is a phase of the matter which many readers of the *Nation* could discuss with feeling.

Beyond question our publication of schoolbooks has been attended by some of the abuses commonly termed graft; it has been attended also by much unfair and cutthroat competition; but to charge teachers with responsibility for present evils goes wide of the mark. Fair business methods by publishers will furnish better books at more profit to themselves, and these methods will yield a larger revenue to authors. In the long run, better methods can but advantage the schools. I feel that I speak for the teaching fraternity when I say that more straightforward and businesslike dealings would be welcomed in the publication of schoolbooks.

CHEESMAN A. HERRICK.

CENTRAL HIGH SCHOOL, PHILADELPHIA, October 2, 1905.

TRAVEL IN SWITZERLAND.

TO THE EDITOR OF THE NATION:

SIR: May I add to the interesting suggestions for travel in Switzerland contained in the letter of "S. N.," in your issue of September 28, a word about a form of railway ticket to be had there which is unknown, I think, to many tourists who might find it valuable? The Swiss Government, which owns all the railways, issues a third-class ticket, good on every road in the republic for one month from date, for, I think, seventy-five francs ($15). There is some red tape to be gone through in procuring the ticket. It can be had only at the stations in the large cities; notice that it is desired must be given beforehand; the photograph of the user must be appended to it. But, once issued, the holder may travel all day and all night, if he pleases, for one month throughout Switzerland. If he wishes to go by second or first-class, he may do so by paying the usual supplement in addition. There are also mileage, or rather kilometre, tickets to be had in several of the countries of Europe, as Switzerland, Italy, Spain, which are available for members of one family. Cook's agencies do not handle any of these tickets, and at their offices no information can be had concerning them. But, where much travelling is contemplated, they reduce materially the expense.

Yours, etc., FREDERIC PALMER.

ANDOVER, MASS., October 4, 1905.

A SUPERSTITION.

TO THE EDITOR OF THE NATION:

SIR: One of the most familiar of superstitions is one of the most uncertain. Let it be questioned in any mixed company, "Over which shoulder is it best to see the new moon?" and a voice is sure to answer, "Over the right one, of course," while another retorts, "Yes, over the right one, but the right one is the left shoulder."

A writer in this month's *Atlantic* seems to have strong feeling on this point, but equal vagueness of belief. In an article on "Portents" she writes of her father being in the habit of lifting up herself and her brother, when children, to look at the new moon; "and always the children . . .felt . . . a . . . hand lightly pressing the left side of each little head and so turning it . . . towards the right. And they knew that this was to help them see the thin little moon over the right shoulder, and that this was best." Let not the advocates of the right shoulder take comfort in this testimony, for in the next paragraph we read: "One of these children feels still that touch of a vanished hand when the new young moon is in the sky, and turns in response to see the crescent as of old over the left shoulder."

Decision is difficult enough when doctors disagree, but when the emotional believer waggles from side to side, assurance seems impossible.

A LOVER OF SUPERSTITIONS.

Notes.

The Arthur H. Clark Co., Cleveland, announce "Audubon's Western Journal, 1849-50,' edited by Maria R. Audubon and Prof. F. H. Hodder (it has only recently come to light); 'Fordham's Personal Narrative of Travels, 1817-18,' edited by Prof. F. A. Ogg; and volume ii. of the 'Crown Collection of Photographs of American Maps,' from the rare originals in the British Museum, confined to twenty-five sets.

John Lane Co.'s fall issues include a biography of Edward A. MacDowell, by Lawrence Gilman; a translation of the Life of Tchaikovsky by his brother; 'Moorish Remains in Spain,' by A. F. Calvert, illustrated in color; 'The Homes of Tennyson,' painted by Helen Allingham and described by Arthur Patterson; and 'Great Japan: A Study in National Efficiency,' by Alfred Stead.

Macmillan Co. will issue a *de luxe* edition of Kaempfer's 'History of Japan in 1693,' uniform with their Hakluyt and Purchas; and will with 'Normandy,' the text by Miss G. E. Mitton and the drawings by Nico Jungman, initiate a new and cheaper series of "color books."

'China,' by the late Col. Charles Denby, will shortly be published by L. C. Page & Co., Boston, with photographic illustrations.

We recall no edition of Charles and Mary Lamb's 'Tales from Shakspere' comparable at all points with that just issued by Jack in London (New York: Scribners). It is a small quarto, liberal and very clear in print, and adorned for each play by a full-page colored design from the pencil of Norman M. Price. These designs are, in point of merit and attractiveness, in perfect keeping with the rest of the elegant volume, and will impress and educate the taste of any child who reads this classic by himself—better so, than to have it read to him, when it will be less intelligible. The portraits of the authors after those in the National Portrait Gallery face the bordered title-page. The cover is richly gilded.

Similar praise must be accorded to the edition of Bunyan's 'Pilgrim's Progress,' bearing the same London and New York imprint; companionable in size to the 'Tales,' and of equal stateliness in the manufacture. The three-color prints are by Byam Shaw, and, though decorative enough, are of less even excellence than Mr. Price's, and generally inferior in color. However, where a bit of landscape comes in, we have such pleasing conceptions as Faithful helping Christian up, Lot's Wife, and Feeble and Ready-to-Halt; and at his best this artist is at no disadvantage in imagination or facility.

Pepys's Diary now issues in a Globe Edition (Macmillan), with an introduction and notes by G. Gregory Smith, who picks a crow with his countryman, R. L. Stevenson, over the diarist's contemplating ultimate publicity for his journal; taking the negative view. In spite of the failing eyesight which caused the discontinuance of this record, we believe the preservation of it had to do with Pepys's desire to live it over again in rereading, more particularly in the frail portions of it. The text follows Lord Braybrooke's, with Mynors Bright's corrections, and Braybrooke's notes are discriminated with his initial. The 800 pages of small print, including the copious index, still do not make a clumsy or very heavy volume.

Fox, Duffield & Co. bring out a reprint of Kenyon Cox's 'Old Masters and New: Essays in Art Criticism' in generous margins and with sixteen well-chosen illustrations, beginning with Veronese and ending with Saint-Gaudens (the Sherman statue). This is a distinct gain for the reader's understanding, and it makes the work still more desirable to own and to keep.

The steady demand for Henry Van Dyke's 'Fisherman's Luck' has led Messrs. Scribner to reproduce it once more from new plates, and it remains a very dainty book, though the cover stamp is not wholly to our liking.

In previous numbers of the *Nation* we have noticed the books of Mrs. E. W. Champney, published by the Putnams, which deal with the famous châteaux of France, finding them more fitted for shelves devoted to history, or to legend, or even to fiction, than to those where "geography and travel," or topography, or local antiquities are at home. Though all have a nominally architectural subject, they have no business at all in an architectural library, although the photographs might be taken out of the volumes for their intrinsic value. Thus, in the case of the new book proceeding from the same author and publishers, and entitled 'Romance of the French Abbeys,' there are nearly fifty half-tones taken from photographs of architectural and decorative subject, all well chosen; and he must be rich in material who possesses among his photographs one-half of these subjects. Some of the buildings are little known even to French students. In other cases the point of view is novel; or perhaps the sculptured detail chosen is one seldom given on so large a scale. Then, again, there are photogravures from historical paintings by Lesur, Jean-Paul Laurens, E. W. Joy, and Vibert, of modern men, and from the well-known "Vision of St. Bernard" by Filippino Lippi. There are, besides, two or three colored prints from rich mediæval windows. The book, then, will hold its own as a collection of attractive and instructive pictures, while the text is found to be just such a collection of fantastical, pathetic, and half-humorous stories as tradition associates with the monasteries of France.

Americans of Welsh extraction will find much to interest them in Owen Rhoscomyl's 'Flame-Bearers of Welsh History' (Merthyr Tydvil: The Welsh Educational Publishing Co.). It tells of the fortunes of the "Cymry" from their first beginnings to the day when their countryman, Henry Tudor, recaptured the crown of Britain on the field of Bosworth. By the "flame-bearers" are meant the champions from Caratacus (usually misspelt Caractacus) to Owen Glendower, round whom they gathered through centuries of savage warfare with the invader—Roman, Saxon, Norman—or too often with one another. The story of old Wales is a story of bloodshed and devastation, relieved by heroic valor and self-sacrifice. It does not lose in the hands of Owen Rhoscomyl. A soldier as well as a man of letters, he writes with a vividness which is little short of startling. He feels and he makes his readers feel all the horror and the glory of his subject. Not that he sacrifices the matter to the style. On the contrary, he aims at being scientific in his methods; and, in discovering the "formula" of the Welsh pedigree, he has supplied scholars with a new and valuable form of evidence. The book has attractive illustrations, and two prefaces, one by Professor Rhŷs, the other by Prof. Kuno Meyer. An abridged edition for use in schools is in course of preparation.

Another book of a different order relating to the Principality is the 'Church-Plate of Pembrokeshire,' by the Rev. J. T. Evans, vicar of Stow-on-the-Wold. The author is no novice at his work—he has edited the 'Church-Plate of Gloucestershire' for the Gloucester Archæological Society—and from his well-written introduction much may be learned as to the history of church vessels not only in Pembrokeshire, but in Great Britain as a whole. The greater part of his book is an exhaustive catalogue, with notes as to their appearance and history, of the chalices, patens, flagons, etc., in every parish in the "premier" county. Ninety-seven of them date from the sixteenth century, forty-seven from the seventeenth, fifty from the first half of the eighteenth; except for the thirteenth-century sepulchral vessels at St. Davids, not a single one is prior to the Reformation. This is not surprising. The spoliation of the monasteries under Henry VIII. was followed by the spoliation of the chantries under Edward VI., and, as Mr. Evans points out, the "one, two, or more chalices" which Edward's commissioners had been ordered to leave "according to the multitude of the people," were put into the melting-pot to make "decent communion cuppes" on the accession of Elizabeth. The book has been printed by subscription, and may be had from W. H. Roberts, 10 Cecil Court, Charing Cross Road, London. It is to be followed next year by a volume on the 'Church Plate of Carmarthenshire.'

The American Club of Paris, of which the offices of honorary president and vice-president are respectively held by the American Ambassador and the American Consul-General for the time being, was organized on the eve of Thanksgiving, 1903, for the purpose of giving public dinners on national anniversaries. Its first Year-Book, a pretty little pamphlet of thirty-one pages, printed in green, appeared in July, and contains, besides the names of the officers (both honorary and active), and of the one hundred and fifty members, an address on Washington, delivered February 22, 1904, at the first banquet of the Club, by Major H. A. Huntington.

The progress of education among the native African races is shown by some recent publications of the S. P. C. K. The most interesting, possibly, is a Swahili 'Geography of Africa' for use in the schools of Mombasa on the east coast. A Nupe Reading-Book is intended for one of the northern Nigerian races, and there is a collection of hymns and psalms in the language of the Baronga, a people resident in Portuguese East Africa, as well as a partial version of the Prayer-book in Malagasy. Uganda is represented by a 'Luganda-English and English-Luganda Vocabulary' and a revised edition of the Prayer-book.

"The Papuan Industries (Limited)" is the latest outcome of attempts by several missionary societies to promote the industrial and commercial development of the semi-civilized and savage races by business methods. It is a company, composed of supporters of the London Missionary Society, which proposes to have, at various points on the coast of New Guinea, cocoanut plantations of 150 to 500 acres, under the management of competent South Sea Islanders. Papuans living in the neighborhood will be employed on these plantations; but the chief object in view is to encourage the natives to form and work plantations of their own, the products of which the company will buy at fair prices. The cultivation of rubber, cocoa, coffee, and cotton will probably follow, as well as the development of the forest wealth. Special efforts will be made also to train the people in boat and ship-building and other handicrafts. The capital is to be $150,000, of which two-thirds has already been provided, and the surplus of profits, after paying a 5 per cent. dividend to the shareholders, will be used for the extension of the company's business. Similar companies have been in operation in India and Uganda for the past two years, but the parent enterprise is an Industrial Commission founded sixty years ago by the Basel Missionary Society to develop industry and self-support among its converts in India. Its success was so marked that in 1859 what

was substantially a branch company was established for work on the West African coast. The latest available annual report of the now united companies, known as the "Missions - Handlungs - Gesellschaft," shows a total profit of $135,600, or a surplus, after paying all expenses and a 5 per cent. dividend, of $57,880, which was given to the Missionary Society. In India, 2,462 persons were employed, chiefly in brick and tile-making, weaving, tailoring, carpentry, and smith's work. In Africa, the company's operations consist mainly of trade—a trade from which spirits, guns, and gunpowder are excluded, and in which the natives receive full worth for their produce. The commercial value of the palm kernel, which is the most important export of some of the colonies on the coast, was discovered by a representative of the company.

The illustrated account of the homes of working people in Germany and England gives to the issue of the Daily Consular and Trade Reports for September 25 a most attractive appearance. In the Krupp colonies at Essen there are 4,274 houses, occupied by 26,678 people. This includes the colony of Altenhof, of 159 dwellings, where invalid workmen are housed for life, and are exempt from the payment of any rent whatsoever. A basket-weaving house industry has been introduced, with the object of enabling the invalids to earn something in addition to their pensions. The colony is situated on the edge of a forest far away from the noise and smoke of the factory. There is also an outline description of the methods adopted by some one hundred towns or district councils in England to carry out the housing of the Working Classes Act, and of a work similar to that of the Krupps' undertaken by two great business establishments. Pictures are given of the different types of houses, as well as of village streets before and after the improvements.

The advent of spring in Middle Europe is the subject of the leading article in *Petermann's Mitteilungen*, number five. It consists of a résumé of observations made during the past twenty years in a large number of places as to the time of blooming of thirteen designated plants and the leafing of four species of trees, chestnut, birch, beech, and oak. The five zones (the earliest dates being April 22-28, the latest May 20-26) are represented in five colors on the accompanying map. The "orthogonal-Tellurium" is described in number six as an instrument for aiding in instruction in mathematical geography, as well as showing the length of the day at any given place. Observations demonstrating the retrogression of a glacier at Salzburg are given in the same number, and the extension of our knowledge of Africa in the last half century is graphically pictured by a reproduction of the maps of the continent in the first edition of Stieler's Hand-Atlas, published in 1820, and in the latest, just issued. "Cuba under the North American Military Government and as a Republic," in number seven, is a condensed summary, by Prof. Karl Sapper, a well-known authority on Central America, of what has been accomplished in the island in political, industrial, educational, and sanitary reforms since the close of the Spanish war. In answer to the question whether the progress will continue under the present régime, he shows from numerous facts and statistics that the prospect for the future is most hopeful.

The Prussian Government has invited seven prominent sculptors to compete for a sitting statue to be erected in Berlin to the memory of Mommsen. It is proposed also to erect a companion statue of Leopold von Ranke. The Cultus Ministry has decided to expend the sum of 60,000 marks for Mommsen's statue, which is to be of marble, and is to be placed in front of the University building, to the right of the main entrance.

Technically and as a likeness, Mr. Jacques Reich's large etched portrait of President McKinley, in his series of eminent Americans, ranks among his best productions. It is nearly full-face, and catches well the expression of those alert, political eyes, and the mouth which knew so well when to open and when to keep shut. McKinley's admirers should make a note of this print, which may be had of the artist at 2 West 14th Street.

—'The King in Exile,' by Miss Eva Scott (Dutton), traces the wanderings of Charles II. from June, 1646, to July, 1654, and will be followed by another volume in which it is designed to carry the same story forward until the Restoration. As the present book contains more than five hundred pages, Miss Scott evidently has determined that no essential feature of the subject shall escape her, save the details of the King's debauchery. By 1653 his general conduct had become so scandalous that the biographer must take some notice of it, and a regretful passage from Clarendon is inserted to show what his best friends thought of him at this date. Otherwise the text keeps strictly to the development of the political situation, and Charles is described as the central figure of a party rather than as an individual whose psychology furnishes the main motive of the piece. In comparison with the later years of his exile, the period here dealt with was a time of prosperity, for during the early part, at least, he had powerful allies in Scotland and Ireland, while his own position at the French court was one of comfort and dignity. A hundred years had yet to pass before Louis XV. should style the Stuarts "that unfortunate family whose name I do not care to hear mentioned"; and Charles with his youth, his quickness of mind, his royal pedigree, and the interest lent him by his father's martyrdom, could not fail to be a romantic figure wherever he found himself. Montrose, a much finer man, was betrayed by Macleod of Assynt, but Charles II. after Worcester commanded the loyalty of his friends as completely as Charles Edward did after Culloden. It is with this picturesque part of the King's wanderings that Miss Scott has to do in the first instalment of her work, and she uses with good effect the ample materials which are afforded by the Clarendon, Nicholas, and Thurloe papers, in addition to a host of memoirs and an abundant body of correspondence. Among single episodes the most entertaining is Charles's perfunctory courtship of Mlle. de Montpensier, whose imperial ambitions and never-failing self-esteem shine forth in this affair as they do in the history of the Fronde. The bickerings between Charles and his mother are also a considerable element in that portion of the book which centres at the French court. A little unfortunately for Miss Scott, the flight from Worcester, embracing the whole body of Boscobel literature, has been claimed of late by Mr. Allan Fea; but though at this point she has little fresh information to communicate, her narrative of the adventure is clear and animated. In many ways the patient Clarendon is the hero of the piece, for Miss Scott shows no disposition to cloak Charles's precocious callousness of heart, and the chancellor's efforts to keep him on the path of public duty are most pathetic. In June, 1653, Hyde wrote to Nicholas: "If I did not serve the King for God's sake I would not stay here a day longer"; and as a whole Miss Scott's painstaking study shows more clearly than ever before how little Charles cared for his friends.

—Dr. Konrad Haebler of Dresden, known for his investigation in Spanish and Portuguese bibliography, has just published the first volume of his 'Typenrepertorium der Wiegendrucke,' the scope of which he outlined at the 1903 conference of the German librarians. It is a handy volume of nearly 300 pages, and is issued as a part of the "Sammlung Bibliothekswissenschäftlicher Arbeiten" of which Dr. Haebler succeeded to the editorship on the death of Karl Dziatzko. It deals with the printers of Germany and "neighboring" countries (meaning countries where no distinct typographical style was developed, but where the influence of German printers predominated, namely, Denmark and Sweden, Bohemia and Austria; the few incunabula cities of eastern Europe have been included for geographical reasons). Its purpose is to offer some basis of comparison between different types known to have been used by certain printers, offering therewith a guide, not only for the arrangement of individual works of known source, but also for the identification of books that do not bear the name of their printer. This is a welcome addition to the works of reference which of late years have been published for the benefit of students of early printing, such as Mr. Copinger's Supplement to Hain with Konrad Burger's index to the Hain-Copinger catalogue, and the late Robert Proctor's Index to early printed books in the British Museum. The 'Typenrepertorium' is built on Proctor's Index as a foundation, even if Dr. Haebler with his more exact method of measurements has gone one step farther and at times corrected some of Proctor's conclusions. Proctor utilized too much, it would seem, the impression which a certain type as a whole made on him, while Haebler's method has been to select as a basis for comparison the capital letter M, which, by the number of its variations and its frequent occurrence, has offered more opportunities than any other letter. For the Roman type, which does not come in for much consideration in the present volume, he has used the capital Q in its relation to the following U. Of course in no case has the form of the letter alone been taken as a guide. The measurement, in millimetres, of twenty or, in case of large type, of ten or even five lines has invariably been employed with it, and various other characteristics of each type have also been noted. It was while on a bibliographical jour-

ney to Spain and Portugal in the winter of 1897-98 that Dr. Haebler first began to work out his scheme for a repertory of types, when Proctor's Index appeared and gave the impulse to an extension of the work to cover the whole field of incunabula. The volume is divided into two parts, the first being a list of printers, arranged by cities, and under each city alphabetically; the second a tabulated list of types. Both parts contain references to facsimile reproductions, the first part also to Proctor's Index and other bibliographies and books on early printing. We have noted a couple of misprints: type M31:3 belongs to Arnold, not to Peter Ter Hoernen of Cologne, and the type of Gutenberg's 42-line Bible is M67, not M66 as indicated in the first part.

—The burning question for the last ten years with regard to Athenian topography has been as to the position of the fountain Callirrhoë (*Fair Stream*), which, according to Thucydides, was transformed by the Pisistratidæ in the sixth century B. C., and renamed the Enneacrunus (*Nine Springs*, from the openings of the fountain). The Greek periegete, Pausanias, in the second century of our era, mentions this fountain in his account of his way to the Acropolis from the city gate, on the northwest or southwest, while the best known Callirrhoë of classical times was by the river Ilissus, on the east of the Acropolis. Scholars have been at a loss as to an explanation for this sudden and unmarked digression from the traveller's route to an entirely different part of the city. But Dr. Dörpfeld, for many years at the head of the Athenian branch of the German Archæological Institute, bearing in mind the precision with which he and his fellow-explorers had followed the course of Pausanias in his description of the sacred enclosure at Olympia, conjectured that the periegete and his text were right, after all, and obtained permission to make excavations opposite the Acropolis at the foot of the Pnyx hill, where he thought the Pisistratean Enneacrunus might have stood. He found extensive remains of more than one system of water conduits, cisterns and larger reservoirs, but very little water, and scholars have been loath to believe that a famous ancient fountain stood where so little water could easily be obtained.

—The German Archæological Institute has considered this question of sufficient importance to send to Greece a technical expert in water supply, Herr Gräber, whose report is published in the latest number of the *Athenische Mitteilungen*. At nearly every point he confirms Dörpfeld's observations, and stoutly maintains his theory. Under the limestone hills of Athens lies a stratum of marly slate which is impervious to water, and slopes in such a way as to facilitate the supply of water for the ancient town; but the country has little rain, and water was scarce. In very early times, water was gathered at different points in the neighborhood and conducted to the old agora. In the sixth century B. C., however, this supply proved insufficient for the growing city, and the "tyrant" Pisistratus brought a fresh supply from the upper valley of the Ilissus. The conduits of Pisistratus are said to have continued in use until the seventeenth century, and Gräber has found, several miles from Athens, numerous shafts and galleries which seem to have been part of this system. The city still receives its chief supply of water through the aqueduct built by the Roman Emperor Hadrian, but the needs of the town are far beyond the present supply, and plans have been made to bring water eventually from Lake Stymphalus, eighty miles away, though this is an expensive undertaking for a poor state. The present mayor of Athens has improved both the quality and the quantity of the supply by repairing the ancient aqueduct of Hadrian, and Herr Gräber suggests that substantial further relief may be secured by discovering, clearing, and using the old Pisistratean pipes.

A UNIVERSAL HISTORY.

A History of All Nations from the Earliest Times: Being a Universal Historical Library by Distinguished Scholars. In twenty-four volumes. Philadelphia: Lea Brothers & Co. 1905. (Vols. I.—IX.).

The above heading contains part of the announcement which stands upon the title-page of this work, but in the same place will also be found the names of the chief contributors. The writers thus singled out from a number of minor colleagues are Charles M. Andrews, the late John Fiske, Theodor Flathe, G. F. Hertzberg, F. Justi, J. von Pflugk-Hartung, M. Philippson, Hans Prutz, and F. Wells Williams. Even with the full title and a list of the principal authors before him the reader is not in possession of all the facts. The present undertaking had its origin in Germany, where the universal history flourishes only less luxuriantly than the monograph, and where, in the 'Allgemeine Weltgeschichte' (Berlin: Grote),* was found material for nineteen volumes out of the twenty-four which form this set. For American needs, however, the task of adaptation and enlargement was found to be so considerable that the publishers organized a staff of their own, with whose aid they now issue four new volumes and an index, after having recast or amplified large portions of the German original. Dr. P. H. Steenstra of Cambridge supplies a more connected account of Biblical history and literature than was at first contributed by Professor Justi; Professor Jastrow of Philadelphia has revised the sketch of Babylonian and Assyrian civilization; and Dr. Jackson of Columbia gives an independent survey of Persian history. To the four volumes which have been added, John Fiske, Prof. Morse Stephens, and Prof. C. M. Andrews are the leading contributors. The series is to close with an elaborate index volume.

So much pains and money have been expended upon the preparation of this work in its American form that we should gladly hail it, if we could, as the ideal coöperative history. But, however reluctantly, we must temper our praise with reservations. To the public it may seem that a band of historians, if individually well qualified, should be able to produce an adequate sketch of human progress, on the coöperative plan. Yet how fraught with difficulties is all such labor those know best who have tried it, and President Woodrow Wilson did not exaggerate when, at St. Louis, he described his trials as a contributor to the Cambridge Modern History. For the reviewer a series like this, whether a true mosaic or containing but the materials of a mosaic, must ever remain an object of despair. The work is too large to analyze in a single article, and the few remarks which one can offer must almost inevitably be tinged beyond due measure with praise or blame according to the writer's habit of presenting his criticism. If the note of praise is sounded first, one's space is exhausted before he has fairly begun to illustrate the nature of an excellence which must vary with different volumes and different writers. If one begins to blame, he has thousands of pages to range over before it is time for the language of appreciation to be used.

These platitudes we set down in cold print merely because, beginning as we shall with certain strictures, we would not have the rest of our remarks rated as pure and perfunctory compliment. We have, it is true, been unfavorably impressed with the prospectus which heralds or accompanies the series, and through the help of which it will be offered for sale. Flamboyant statement we are all familiar with, but familiarity should not be permitted to breed a mood of cynical acceptance instead of avowed disapproval. We quote in full the concluding paragraph of the prospectus:

"Recent historians of the Dry-as-dust school have been apt to push this fashion to an extreme which has brought about its own reaction. They have forgotten—what the authors of the present volumes are careful never to forget—that history is a branch of literature as well as a branch of science. It can be made to delight as well as to instruct. These volumes are a proof of the fact. They combine history as a science with history as a fine art. They tell the entire story of man from his earliest known beginnings down to the present day in a style that makes history as interesting as romance. Yet they are severely and unswervingly accurate as to facts. The complete work constitutes a Library of Universal History which has no rival in the book world to-day."

The purchaser who is on the watch for history made "as interesting as romance" would not unnaturally feel some disappointment in turning from this announcement to the long and topographical account of the Egyptian nomes that Professor Justi contributes to the first volume:

"The fourth nome, Prosopites, has for its capital town Teka, probably modern Tukh, southwest from Tanta; the Greek appellation is derived from the town of Prosopis, which Dümichen has identified with the town of Pa-ari-shep, situated in the southern part of the western Delta. The fifth province is Saites (now Sa-el-Hugar), with the sanctuary of the goddess Neith, or Net. As a part of the same is to be regarded the name of Temi-en-hor ('the fortress of Horus') situated west, and now called Damanhnr. The sixth province, called Xoites, had Khasûû (now Sakha) as its capital, and lay northeast from Sais. The capital of the seventh province was Pa-neha (now Benha), lying on the southern part of the Damietta branch. Pa-tum was the capital of the eighth province, lying to the east."

Over ten pages are devoted to the nomes, and the passage we have cited gives a fair example of the treatment which Professor Justi has pursued. A minute geographical statement is undoubtedly most useful when inserted in a geographical work or in a technical work on historical geography, but to suppose that the general reader, for

*This series is not to be confounded with the 'Allgemeine Geschichte in Einzeldarstellungen,' which was also published by Grote, under the editorship of W. Oncken.

whom the prospectus is written, will find such history possessed of romantic interest, is to show a vast ignorance of practical psychology.

We have cited and commented upon the foregoing passage from the prospectus because in our opinion these volumes are a typical piece of German scholarship rather than a series of historical studies to be readily assimilated by the American public. For graphic and spirited episodes like Macaulay's trial of Warren Hastings, or Carlyle's description of the charge at Dunbar, or Bryce's coronation of Charlemagne, we may search in vain, nor is the vivid strain of writing attempted. We do not offer this remark as an unfavorable criticism, but merely as a definition. The tone of the work is scholarly, and those who are gifted with the historical instinct will find much in nearly every volume which they can read with pleasure and profit. What one misses is lightness of touch such as might lead the average person to take up historical literature with a fresh sense of its possibilities. The style of treatment suggests the intelligent manual rather than the historical essay or the rapid and animated narrative.

One reason why the element of the picturesque is not stronger we find in the comparative brevity of the text. From the size and weight of the volumes one might think each one of them would comprise at least two hundred and fifty thousand words, but on analysis the heaviness of the paper and the abundance of the illustrations account for a large proportion of the avoirdupois and of the space. Picturesqueness cannot be had without detail; and in volume five, which deals with 'Imperial Rome,' there are (omitting chronological tables and table of contents) less than a hundred thousand words. This is the shortest of the volumes before us, but we doubt whether the longest contains more than one hundred and fifty thousand words, while the average would be about midway between these figures. Such a computation may mean little to those who do not reckon habitually in terms of numbers; but any one familiar with the structure of books can see at a glance that where 'The Age of Feudalism and Theocracy' is covered in about a hundred and fifty thousand words, detailed information, comprehensiveness of treatment and picturesqueness of narrative cannot be combined. The work may be most valuable for a given purpose, but it cannot possess all the qualities which are claimed for the present series in the prospectus.

Those who overpraise or praise for the wrong things are laying up a store of disappointment. In our opinion the 'Allgemeine Weltgeschichte' was worth translating and adapting for an American circle of readers. The original contributors are good scholars, and the auxiliary corps of American writers comprise men of standing. But these solid and not too lively volumes should be understood to possess the virtues of erudition rather than the graces which shine in the popular presentation of a subject. Undoubtedly the aim of Justi and his colleagues was to prepare something which the German public could read with a degree of zest. The work as it stands can be read in America with profit and a measure of interest by the historical student, but upon the attention of the average book-buyer it places a heavy strain.

All of the volumes in this set are profusely illustrated. In many cases the subjects are well chosen, and often the work of reproduction has been satisfactorily done, but at the best the illustrations, as a whole, cannot be enthusiastically praised, while at times they fall below an average level in respect either to choice or to quality. Why, for example, we should be given such a view as appears in volume iv. (p. 43), with the title "Rome on the Palatine: ruins of Walls," it is hard to see. Our final criticism is, that the translation does not always conform to the genius of the English language. For example, in volume ix. (p. 258) occurs the following sentence:

"While he [Louis IX.] permitted to continue unchanged in form, nay, by the erection of the court of peers, consisting of the six greatest ecclesiastical and six greatest lay vassals under the presidency of the sovereign, as the supreme feudal tribunal, secured in the eyes of many its existence for all time; yet this very tribunal was essentially calculated to protect the interests of the monarchy as against the feudal powers."

In brief, the merits of this work, as a repertory of historical facts, are considerable; but we have not found it very readable or very smoothly translated or very beautifully, however copiously, illustrated. It must be pointed out that our criticism applies to the first nine volumes, which is the only portion of the work under review.

RECENT POETRY.

'The Vale of Tempe,' by Madison Cawein (Dutton), is a volume which, along with some crudities and weakness, has both the old glamour of poesy and an individual tang, so to say, that is uncommon in contemporary verse. Mr. Cawein draws his inspiration in equal draughts from the Kentucky landscape and from the world of pagan poetry, and in at least two of the aptitudes of the poet he stands pretty much by himself. His turn for vivid imaginative phrase is of the first order, whether he is dealing with lurid grotesque, as in the striking phrase "gaunt as huddled terror," or with the beautiful, as in his fine couplet—

" Invisible crystals of aerial ring
Against the wind I hear the blue-bird fling."

His command of the technique of tone-color is also exceptional. He is a master of tone, whether in the difficult key of "v," as in this description of oaks in spring:

" Velvet and silk and vair,
Vermeil and mauve and fawn,
Dim and auroral as the hues of dawn."

or in the imitative pedal-tones of this:

" The tumult and the booming of the trees,
Shaken with shoutings of the winds of March—
No mightier music have I heard than these,—
The rocking and the rushing of the trees,
The organ-thunder of the forest's arch.

"And in the wind their columned trunks become,
Each one, a mighty pendulum,
Swayed to and fro as if in time
To some vast song, some roaring rhyme,
Wind-shouted from sonorous hill to hill."

In poetry like Mr. Cawein's, for the most part so limpid and musical in tone, small discords are specially noticeable. We wish he could have avoided such minor defects as the stammering repetition of the "th" sound in such a line as

" 'Twas this that that sweet lay meant,"

and that he had not written, with but two lines between,

"She sits forgetful of her pail,"

and

" Her thin pale hair is dimly dressed."

At times Mr. Cawein's exuberant imagination and riotous musical impulse lead him into flighty, ineffective phrase and dissolute syntax. He does not always realize the good prose style, the essentials of which lurk within the best poetic styles, even in the heightened and "enthusiastical" modes.

All this, however, is by the way. Mr. Cawein is a "true poet," both in his art and in his inspiration. The concluding strophes of his fine ode, "'In Solitary Places," will serve to show his safety in the Siege Perilous of the poetic hall:

" I stood alone in a mountain place,
And it came to pass, as I gazed on space,
That I met with Mystery, face to face.

" Within her eyes my wondering soul beheld
The eons past, the eons yet to come,
At cosmic labor: and the stars,—that swelled,
Fiery or nebulous, from the darkness dumb,
In each appointed place and period,—
I saw were words, whose hieroglyphic sum
Blazoned one word, the mystic name of God.

" I walked alone 'mid the forest's maze,
And it came to pass, as I went my ways,
That I met with Beauty, face to face,

" Within her eyes my worshipping spirit saw
The moments busy with the dreams whence spring
Earth's loveliness: and all fair things that awe
Man's soul with their perfection—everything
That buds and bourgeons, blossoming above,—
I saw were letters of enduring Law
That bloomed one word, the beautiful name of Love."

In 'The Poems of Ernest Dowson' (John Lane Co.) we have a volume of "decadent" poetry, so called, of exceptionally fine quality. The pitiful facts of Dowson's brief life are frankly presented by Mr. Arthur Symons in an introductory essay. It was a frail and feverish existence, which embraced evil with a tragical eagerness. It was a life not unlike Poe's, but without the relief of domestic affection, and with no intermittent periods of citizenship and good repute; more subterranean, sordid, and unmanly. Yet the doubting dislike with which one acquainted with the facts begins the reading of Dowson's poetry, soon gives place to admiration and delight. Though he perversely chose to surround himself with moral and physical ugliness, he had the poet's vision of beauty. He was a scholar in words, and endowed with the gift of song. His poetry contains little suggestion of riot. In the main it expresses an almost cloistral ideal of calm and pure beauty, which to the reader who knows the poet's life carries a burden of haunting wistfulness. The final quality of Dowson's work a little suggests that of Leopardi's in its crystalline expression of unhappy moods, in its conflict of vision and volition. At its best, as in the piece characteristically entitled "Non sum qualis eram bonae sub regno Cynarae," it has a melody and a meaning that will not easily be forgotten:

" Last night, ah, yesternight, betwixt her lips and mine

There fell thy shadow, Cynara! thy breath was shed
Upon my soul between the kisses and the wine;
And I was desolate and sick of an old passion,
Yea, I was desolate and bowed my head;
I have been faithful to thee, Cynara! in my fashion.

" All night upon mine heart I felt her warm heart beat,
Night-long within my arms in love and sleep she lay;
Surely the kisses of her bought red mouth were sweet;
But I was desolate and sick of an old passion,
When I awoke and found the dawn was gray:
I have been faithful to thee, Cynara! in my fashion.

" I have forgot much, Cynara! gone with the wind,
Flung roses, roses, riotously with the throng,
Dancing, to put thy pale, lost lilies out of mind;
But I was desolate and sick of an old passion,
Yea, all the time, because the dance was long:
I have been faithful to thee, Cynara! in my fashion.

" I cried for madder music and for stronger wine,
But when the feast is finished and the lamps expire,
Then falls thy shadow, Cynara! the night is thine;
And I am desolate and sick of an old passion,
Yea, hungry for the lips of my desire:
I have been faithful to thee, Cynara! in my fashion."

'Peace, and Other Poems' (John Lane Co.), which, if we mistake not, is Mr. A. C. Benson's seventh volume of verse, maintains the even, comfortable level of his earlier books. Scholarly, sensitive, and sincere, without quite the temperament of a romantic poet, or quite the finish of a classic poet, Mr. Benson may perhaps best be described as a lesser, thinner Arnold. Like Arnold's is his way of compassing in a line or two the sentiment of nature in her sadder moods, as in these lines from the strophe of "Peace":

" The glancing stonechat piped his thin refrain,
And made the hills more silent, gray and old."

Like Arnold's, too, are his conscious Wordsworthianisms; and at a time when the landscape in most English poetry is Italian, or Indian, or Greek, or Irish, it is pleasant to find a volume full of the bird songs and cool, cultivated beauty of the English countryside. Perhaps the most interesting poem in the volume is a Wordsworthian piece called "The Charcoal Burner." There is something too much of it, but the poetic heart of it in the five stanzas that follow is a complete and detachable little poem of a peculiar charm:

" He hears the first shy songster spill
His liquid note, nor loud nor long
Faint tremulous pipe and drowsy trill,
Till all the wood is rich with song.

" He listens when the night-winds rise
About his turf-piled parapet,
And when the last soft murmur dies
He dreams of something stiller yet.

" And if the rattling thunder break
From ragged cloud-wreaths, piled in air,
He hides himself within the brake
And all his mind is dim with prayer.

" He is not merry, is not sad;
Unthinking hour by lonely hour,
Is in the sunshine dumbly glad,
And dumbly patient in the shower.

" He hath no fierce desires to slake,
No restless impulse to control,
And moving woods and waters make
A secret music in his soul."

The chief individual quality of Mr. Benson's work, the quality that most differentiates it from that of his masters, is a certain wistful Epicureanism, a disposition to dally with the thought of the decay of beautiful things rather than with that of the sempiternity of beauty. "A Song of Sweet Things that Have an End" is the most typical of his titles.

From a commendatory epistle affixed to Mr. Louis Alexander Robertson's 'From Crypt and Choir' (Robertson) we learn that the work of this poet is "super-Byronic." For ourselves, we should have thought "sub-Mooresque" a juster epithet, particularly applicable to such stanzas as this:

" I have swooned nigh to death in those white arms of thine,
Till the trance that enthralled me hath grown
To a dream where the glories of heaven were mine,
Then have waked on thy bosom to own
That the seraphs who stroll through the regions above,
Never know the rare bliss that I feel
When I wander with thee where the labyrinths of love
Their most exquisite raptures reveal "

Mr. Robertson's poetic instrument is not so much the lyre or the reed as the cornet-à-piston. There is, none the less, a certain attraction in his magniloquence. This is chiefly due, perhaps, to his proficiency in tossing about the names of Greek women and Egyptian deities—an art in which the Californian Muse, for some reason yet to be explained, is peculiarly apt.

Mrs. Helen Hay Whitney's 'Sonnets and Songs' (Harper) are love poems, of a passion and a sincere subtlety that are none too common. All of the sonnets and most of the songs give evidence both of temperament and of the study of the older poets, and frequently attain a richness of tone that neither could have accomplished without the other. The following fine sonnet is characteristic:

" And if I came, ah, if I came again,
And laid my hand on your forgetful heart,
Where once it lay so warm, could the pulse start,
Remembering Spring? Now, at the sound of rain,
I do but turn a little in disdain
To see the flowers renew their lovely part,
Blooming afresh. For memory holds no smart,
Love aches no more to know how it was slain.

" Yet if I came to you who heed no more
My name upon the wind? Love's ghost, lean near,
I have a word that only you may hear.
If you should come to me with dear desire,
My soul's dry staff should tremble to its core
And flame against your touch in buds of fire.

Mrs. Whitney's work does not always give evidence of the last pains with the file. In the penultimate line of this sonnet, "would," we take it, would have been better syntax and better poetry than "should." But such pedantic considerations are not of the first importance. There is in her work a joyous fervor in conception that gives a kind of poetic importance to even so slight a conceit as that of

THE DANCE.

" Like little eager children
The tiptoe tulips stand,
Row upon row of dancing heads
In joyous saraband.

' With lithe, long emerald petticoats,
And happy hands tossed up,
The sunshine is the laughter
That brims their golden cup "

'Love's Journey,' by Ethel Clifford (John Lane Co.), is a pleasant volume of slight but unaffected and musical poems. Despite a disposition to attempt the "Celtic twilight," there is a certain thinness of temperament in Miss Clifford's work that keeps it from being quite memorable. But if the rill of her inspiration is neither very deep nor very broad, it always flows freely and musically, with an amiable fineness of feeling, a simple ingenuity of phrase, and an unbroken atmosphere of poesy. Perhaps her verse is most telling when it catches something of the sentiment of other arts than literature, as in these lines

TO CHOPIN.

Singer divine of the unending sadness
Of those who never drank of Sorrow's cup;
Incarnate voice of their remote dim gladness
Who have not seen Joy's banners lifted up;
Poet of shadows and the mystic yearning
Of souls toward the shadowy unknown,
There is for you no bodily returning
Along the ways by dreams now overgrown.
So, to the Place of Sleep that you inherit,
The singing darkness where your soul must dwell,
Goes from our living hearts to your far spirit
The word that all your music means—Farewell.

Despite a considerable fervor of feeling and great readiness of phrase and metre, few of the pieces in the Rev. Minot J. Savage's 'America to England, and Other Poems' (Putnams) are of a sort to engage serious poetic criticism. Mr. Savage is most quotable in certain poems like "Where Is God," in which he contrives to give poetic suggestiveness to what is essentially a homiletic analogy.

"Oh, where is the sea?" the fishes cried,
As they swam the crystal clearness through.
" We've heard from of old of the ocean's tide,
And we long to look on the waters blue.
The wise ones speak of the infinite sea:
Oh, who can tell us if such there be?"

The lark flew up in the morning bright,
And sung and balanced on sunny wings:
And this was its song: "I see the light,
I look o'er a world of beautiful things;
But flying and singing everywhere,
In vain I have searched to find the air."

'The Rainbow and the Rose' (Longmans, Green & Co.), the most recent of E. Nesbit's (Mrs. Herbert Bland) numerous books of verse, has the same qualities that have given her other collections rather exceptional circulation. Mrs. Bland's poetic sentiment is appealing rather than poignant with the true poetic poignancy; though she has no gift of verbal magic, she has verbal adequacy, and her verse is always readable. "La Dernière Robe de Soie" is a fair sample of her lighter, and better, vein:

" Oh, silken gown, all pink and pretty,
Bought, quite a bargain, in the City,
Your ill-trained soul full false has played me—
No Paris gown would have betrayed me.

You knew, my pretty silken treasure,
I must not wed for love or pleasure,
But for a settlement and title;
Yet you encouraged his recital!

He said—oh, faithless gown, you listened
While on your sheen two tear drops glistened—
He said. . . . let love to music set it,
I'll never speak it—nor forget it!

'No, no!' I cried, I tried to save you—
False gown, you showed the tears I gave you!
You looked discreet when first I found you,
How could you let his arm go round you?

You darling dress—I'll smooth your creases,
I'll wear you till you drop to pieces;
But poor men's wives wear cotton only—
Dear gown—I hope you won't feel lonely!"

Among the Latin poets, Tibullus would seem to be peculiarly suitable to furnish pleasurable exercise to a talented English translator. He was preëminently a stylist, yet with scant affection for the anxious and recondite in phrase; he was without the incommunicable fire of genius that makes a perfect English rendering of Lucretius or Virgil forever an unattainable ideal, yet with a quality of his own that is as "fine and pure" to-day as Quintilian found it in his; and the views and sentiments of an observant, amused, rather easy-going gentleman that make the texture of his verse, have a singular air of modernity. In 'The Elegies of Tibullus' (Badger), Mr. Theodore C. Williams offers a metrical version of all of the genuine poems of Tibullus, together with those wrongly ascribed to him, that bears in every line evidence of his long pleasure in the writing. If we have any quarrel with Mr. Williams, it is for the variety of metres into which, as it seems without due reason, he has transmuted Tibullus's elegiacs. He would have done better to restrain his metrical fluency from the pentameter couplets, the "fourteeners," the assorted stanzaic forms that he gives us, and kept wholly to the elegiac quatrains, in which he has been particularly happy in catching the mood of his original. Perhaps, if the form were a little less hackneyed, he would have done better still to have adopted the Fitz-Gerald stanza. As a whole, however, the work is admirably performed. The note of it is not too modern, and it preserves to its advantage something of an eighteenth-century color in its phrase, yet it is exceptionally free from any suggestion of labored artifice. Though it is in no sense a slavish rendering, it does present the substance of Tibullus with remarkable fidelity, as may be seen by comparing the passage of the fourth elegy of the second book beginning,

"Heu! quicumque dedit formam cœlestis avaræ,"

with the following stanzas of the translation:

"'What God did beauty unto gold degrade,
And mix one bliss with many a woe and shame?
Tears, quarrels, curses were the gifts he made:
And Love bears now a very evil name.

False girl who dost for riches thrust aside
Love's honest vow, may winds and flame conspire
To wreck thy wealth, while all thy beaux deride
The loss, nor throw one bowl-full on the fire!

O when dark Death shall be the final guest,
No lover true will shed the faithful tear,
Nor bring an offering where thy ashes rest,
Nor lay one garland on thy lonely bier!

But some warm-hearted lass who loved not gain
Shall live a hundred years yet be much mourned;
Her tomb shall be some lover's holiest fane,
With annual gift of all sad flowers adorned.

'Farewell, true heart!' his trembling lips will say,
'Let peace untroubled bless thy relics dear!'
Oft will he visit, and departing pray,
'Light lie this earth on her whose rest is here!'"

Mr. Williams has a little sentimentalized his author, but this perhaps is no more than a fair compensation for the melancholy music of the Latin vowels.

BOOKS FOR MUSIC LOVERS.

The Study of the History of Music. By Edward Dickinson. Scribners.

Studies of Great Composers. By C. Hubert H. Parry. Geo. Routledge & Sons.

Joseph Joachim. By J. A. Fuller Maitland. John Lane Co.

Chats on Violins. By Olga Racster. J. B. Lippincott Co.

An Elizabethan Virginal Book. By E. W. Naylor. E. P. Dutton & Co.

Der Moderne Dirigent. Von Arthur Laser. Leipzig: Breitkopf & Härtel.

While every year brings some new books on the history of music, very few of them have so good a *raison d'être* as Professor Dickinson's, which makes a strong appeal to teachers as well as to students. It is based on the plan and method followed in the courses of lectures on the history and criticism of music given by the author in the Oberlin Conservatory of Music, and it suggests the thought that if all the branches of music are as thoroughly and lucidly expounded in that institution as the history of the art, Western students need not any longer come East or go to Europe—except to cultivate their taste by hearing elaborate works that are not performed in their longitude. But perhaps Professor Dickinson is a *rara avis;* his book is certainly almost unique in its clearness of statement and general usefulness; it is a marvel of condensed information. Not only are all the main epochs in the evolution of music briefly and happily characterized, but every section is followed by a paragraph in smaller type referring the reader to the best books and articles in the English language on that particular phase of the question. This feature, which shows the author thoroughly at home in musical literature, it is that makes his book of interest, not only to students of musical history, but to the much larger number of those who wish to "read up" on this or that composer. The countless women's clubs in the country will, of course, give it a place of honor in their libraries, and the busy musical critics who are perpetually besought for information as to what books should be read for certain literary or lecture purposes, may now save time by ordering a few hundred postal cards with these words printed on the back: "Dear Madame, you will find everything you want to know in Dickinson's 'Study of the History of Music.'" For this relief much thanks, the critics will say.

A good sample of the terse yet comprehensive style of the book, and of the author's art of stimulating thought, may be found in his remarks on the difference in the conceptions of the functions of singers and players in the eighteenth century from those that prevail to-day:

"The singer was part creator with the composer. Song was not rendering prescribed notes in a prescribed way, but an act of spontaneous creation. This practice was the continuation of a usage common in the church far back in the Middle Ages. It was taken up by instrumental music. It was far along in the nineteenth century before pianists renounced the privilege of embellishing off-hand the pieces they played, even though they were the works of famous composers. In the oratorio of Handel's time the practice was permitted. It has flourished, although in a less degree, in the Italian opera of the nineteenth century. It was a token of the belief of the seventeenth and eighteenth centuries that improvisation is a higher art than the strict interpretative rendering of the work of another."

Among the best chapters in the book are those on Liszt and on Programme Music. Concerning Liszt the author remarks that "many of his works are so novel that they are difficult to classify," and he emphasizes a point too often forgotten by commentators, that Liszt's transcriptions of songs, orchestral works, etc., for pianoforte, "are full of original material, and are cast in a mould that was wholly Liszt's invention. In such cases as the Hungarian Rhapsodies and the Schubert 'Soirées de Vienne' they are as original as, for instance, the chorale preludes of Bach." As for the pictorial and literary programme in music, its chief value

"seems to be to the composer; his creative power is quickened by definite scenes and experiences, and musical effects are suggested that would not otherwise occur to him. He ransacks history, nature, poetry, and fiction for themes which he may illustrate. . . . It is beyond doubt that the principle under discussion is the chief cause of the vastly increased variety in the music of the present day. The mutual attraction of music and literature, with an increased deference to the latter, is the cardinal fact in the history of music in the nineteenth century."

The least satisfactory sections of Professor Dickinson's book are those relating to Dvorák, Rubinstein, and Tchaikovsky. To say that Rubinstein's vein of melody lacks originality, or that Dvorák represents the older (absolute) style in music, is to fly in the face of facts; nor is it true that Berlioz's operas "are not now heard." America receives scant justice, with two pages, as against England's five; but as the American section closes the book, it will be easy to enlarge on this subject in future editions, which ought to be, and doubtless will be, many in number.

Concerning Dr. Parry, who comes next on our list, Professor Dickinson says that "he is of the highest type of the university man in music, and in educated circles his scholarly attainments give him a regard which no other English musician enjoys in quite equal measure." Of his compositions little is known in this country, but his literary works are the delight of the highest type of amateurs. His 'Studies of Great Composers' is not a new book; it now appears in its eighth edition, and it is this circumstance that makes it worthy of renewed brief mention. Its chapters were written originally for a periodical for young people, and its popularity is probably due in part to the avoidance therein of the more abstruse questions which interest the inner circle only. The eleven composers selected for biographic and critical treatment are Palestrina, Bach, Handel, Haydn, Mozart, Beethoven, Weber, Schubert, Mendelssohn, Schumann, and Wagner, while a supplementary chapter deals briefly with other masters. Narrowness manifests itself in the fact that the non-German composers (Liszt, Dvorák, Tchaikovsky, Grieg) hardly seem to exist for this British Teuton's eyes; he even classes Chopin among those "who come near to the greatest," and tells us that his music is not "bracing or elevating"; but this only shows that even an eminent musical scholar may still have a great deal to learn.

When Joseph Joachim paid his first visit to London he was armed with a letter of introduction from Mendelssohn, who spoke

of his "perfect comprehension of music," as shown "in his manner of playing all modern and classical solos." That was sixty-one years ago, and Joseph Joachim is still active, a subject for inclusion in John Lane's series of "Living Masters of Music." Were this series restricted to composers, Joachim would hardly be in it, for, although his works number about two dozen, they lack the melodic originality which alone ensures long life in music. Their austerity exceeds even that of the compositions of his idol, Brahms, to which, by the way, Joachim not infrequently lent a helping hand; he wrote, among other things, the cadenza that is usually played in the Brahms violin concerto. Throughout his life, Joachim championed the cause of Brahms against Wagner, Liszt, and the other leading modern masters. Mr. Maitland makes a feeble attempt to defend him against the charge of partiality, mentioning the fact that portions of Wagner's operas were performed at the Berlin Academy of Music by Joachim's authority; but this only shows that even the director of that institution could not stem the Wagnerian Niagara. Mr. Maitland's treatment of the Liszt-Joachim quarrel presents only one side of the question, but even thus he cannot prevent the reader from smiling at Joachim's fears that if the form created by Liszt—the symphonic poem—succeeded, it would "result in a widespread contempt for the great things of the old masters." Surely, the leading champion of these old masters (next to Liszt!) should not have shown such small faith in their staying powers. Of Joachim's art as a violinist, Mr. Maitland gives an admirable account. Every violin student should read what he says (p. 36) as to Joachim's carrying the bow in such a way that he can use precisely the number of hairs that he needs to produce the desired effect. Nothing, too, could be more luminous and instructive than the following:

"Technically, the secret of his regulated or logical freedom may be said to be based on the principle of what is now sometimes called the agogic accent, *i. e.*, the kind of accent that consists, not of an actual stress or intensification of tone on the note, but of a slight lengthening-out of its time-value, at the beginning of the bar and at points where a secondary accent may be required. All the greatest interpreters of the best music have been accustomed to lay this kind of accent on the first note of the bar, or of a phrase, as taste may suggest; but none has ever carried out the principle so far or with such fine results as Joachim has done."

Olga Racster's 'Chats on Violins' is well named; it is made up chiefly of gossip relating to fiddles and their makers, yet the book is considerably better than one might expect from the author's introductory remark: "I simply intend to strive to follow in the steps of the great George Washington by telling as few lies as I can." The greater part of the volume is devoted to the Italian and German violin makers. The instrument's ancestors are also described, but the pictures of them are not placed where they would have been helpful.

Dr. Naylor's 'Elizabethan Virginal Book' is a critical essay of 220 pages on the contents of a manuscript in the Fitzwilliam Museum at Cambridge, England. The author is organist and lecturer of Emmanuel College in the same city. With the aid of copious illustrations, he analyzes nearly 300 pieces of the Tudor period contained in the Fitzwilliam Virginal Book. He presents himself not as a mere antiquarian, "praising days long since outworn," but as one "doing battle with the ignorance which still attributes the invention of the main features of Modern Music to the eighteenth century." It must be admitted that he makes out a good case for his thesis.

The author of 'Der Moderne Dirigent' had the great good luck of being for a time a player in the Berlin Philharmonic Orchestra under Hans von Bülow, one of the first of the truly modern conductors—that is, the conductors who use their brains as well as their bâtons in controlling a band. It was another member of this organization while it was under Bülow's control—the eminent violoncellist Anton Hecking—who once said that for the first time in his career he enjoyed playing in an orchestra: "Here, at last, is a chance to learn something." Mr. Laser, who until lately was a musical critic in New York, gives some invaluable examples of Bülow's method, which transformed mere players into artists. He successfully fights the foolish notion current here that the orchestra is more important than the conductor; he shows up the hollow pretensions of the talk about "following the traditions"; he points out that while Bülow and Seidl were two of the most eminent Wagnerian conductors, their interpretations often differed not only from one another's, but from Wagner's own; he tells of a case where Bülow conducted a symphony by Villiers C. Stanford quite differently from the conceptions of the composer, who, however, declared afterward that he had not known that his work was so beautiful till he heard Bülow's version. The conclusion Mr. Laser draws from this and more of the same kind is, that so-called "tradition" in music is usually synonymous with hypocrisy, and that the greatest conductor is he who eschews all attempt at "objective" interpretation, but gives his individuality full sway. The author then proceeds to show that Anton Seidl's unparalleled popularity and influence in America were due not to his having been a pupil of Wagner, but to his great and fascinating personality. He had entered into the spirit of Wagner's music so deeply that he "played it as if it had been of his own creation."

The second part of Mr. Laser's treatise considers the mooted question as to whether players at concerts should be invisible to the audience; he decides against this innovation, which has been frequently attempted in Germany. He then proceeds to give a number of practical hints to conductors; adduces reasons why they should not delegate the orchestra to an assistant when called upon to provide an accompaniment for a soloist; and explains in full why the concert master (leader of the violins) has lost his importance since conductors have adopted the modern idea that the orchestra is their instrument, on which they cannot play well at concerts unless they have practised on it at rehearsals (the older way having been to let the concert-master do most of the rehearsing). These are a few of the salient points in Mr. Laser's pamphlet, a treatise which cannot be too highly commended, not only to orchestral and other conductors who want to be up to date, but to all players, singers, and students.

The Book of the Spiritual Life. By the late Lady Dilke. With a Memoir of the Author by the Rt. Hon. Sir Charles Dilke, Bt., M.P. E. P. Dutton & Co. 1905.

The mystical stories by Lady Dilke are not very remarkable, either for their symbolism or for their imaginative power. They seem to us chiefly the result of reading, for they are full of ideas and thoughts of great writers gracefully strung together in language derived from a blend of Ruskin and the Bible much in use in the poetic prose of our day. We find ourselves, as in the world of the 'Hypnerotomachia,' in dark forests, rocky landscapes, sunset splendors, and Italian gardens in which fair women and strong knights move as in a dream, distilling in the end wise axioms from their fateful experiences and struggles. Little remains in the reader's mind but a sense of culture and a reminiscence of quattrocentisti pictures. These stories loudly cry for woodcut illustrations to give them point.

Sir Charles Dilke in the memoir of E. Frances Strong, afterwards Mrs. Mark Pattison, then Lady Dilke, his wife, shows himself to be of the opinion that biography should take the form of panegyric, for his narrative abounds with eulogy from beginning to end. This excess of post-mortem marital adulation, however regrettable it may seem, cannot wholly detract from the interest in the life of such a gifted woman, who, from her earliest years, was in touch with all the celebrated people of her time, in art, literature, and politics, in England, Germany, France, Italy. E. Frances Strong came of the stock of the United Empire Loyalists of Georgia; her father, Capt. Henry Strong, a retired Indian officer, became the Oxford manager of the London and County Bank. His daughter showed from her earliest years great aptitude for drawing, and by Ruskin's advice was sent to study at South Kensington, where Mulready became her master. She also became known at that time to G. F. Watts, Millais, Tennyson, and other celebrities of the circle of Little Holland House. Before this (1858), from a small child, she was subject to hallucinations of which she gives exact accounts, but which she seems to have attributed to an overfatigued brain and her power of visual memory, which was very remarkably developed. Brought up in strict High Church principles, she became on her emancipation as an art student from home supervision an ultra Puseyite. Her orthodox companions were astonished at her doing severe penance for any fault she recognized by lying for hours in the attitude of the cross on the bare stones; later on, she abandoned the Church to take part in the Positivist movement, which enabled her, as the wife of Mark Pattison, to face the shipwreck of her beliefs caused by the intellectual society without any faith in revealed religion which formed her surroundings in Oxford. Sir Charles Dilke asserts that although George Eliot did not draw the character of Dorothea Brooke in 'Middlemarch' from Mrs. Pattison, she used this lady's letters to herself to describe the religious ideal of her heroine, and further informs us that Casaubon's account of his marriage to Dorothea is given almost in Mark Pattison's own words, although Casaubon was in every way unlike the Rector of Lincoln.

After her marriage, Mrs. Pattison gave

much time to the study of foreign languages, literature, and philosophy with her husband, for whom she worked without giving up her studies in art, although at the same time she was a great success in Oxford society and created a "salon." Her contributions to the *Saturday Review* began at this moment in order to increase her personal income. In 1870 Mrs. Pattison turned her attention to art criticism, and from 1872, at the invitation of Mr. Appleton, the originator of the weekly *Academy*, she became its art critic. This position brought her in touch with all French and English artists and writers on art, and we are given extracts from letters from Burty, Müntz, Herman Grimm, Bertolotti, Thausing, Browning, Renan, George Eliot, Burne-Jones, Prince Leopold, and other eminent men. Mrs. Pattison had a wonderful faculty for work, and a great desire to get at the root of things; in her quest for information she evidently did not spare letters to specialists on her subjects. Her correspondence must have been enormous, but Sir Charles Dilke, in his compilation, does not give us much that is noteworthy; he chiefly picks out the elaborate and rather perfunctory compliments of literary celebrities in acknowledgment of her presentation copies, and samples of her own fluency in French in letters written to French critics.

'The Renaissance of Art in France' is Lady Dilke's most important literary labor. It remains valuable as a book of reference to writers on that period, and gave her an unique position in Paris in the art world, although her subsequent eighteenth-century books introduced her to a wider public. These are as follows: 'French Architects and Sculptors of the Eighteenth Century,' 'French Decoration and Furniture in the Eighteenth Century,' 'French Engravers and Draughtsmen of the Eighteenth Century,' and 'French Painters of the Eighteenth Century.' She was writing a book on seventeenth-century art when she died.

Another side of her active career was the interest she took in the Women's Trade Union League. She frequently was the principal speaker at its annual meeting in London, and in 1880 advocated at one of these meetings a system of technical education for women in advance of the times, on this occasion being supported by William Morris and Professor Bryce. Her work in this direction was not without general recognition; she was frequently invited to open textile halls in Lancashire constructed by the efforts of the unions, and in 1899 an address from the American Federation of Labor signed by its president, Samuel Gompers, was received by Lady Dilke. He wrote that her example had been commended for emulation to the women of America. Her idea of trades-unionism was not that it would be the "gospel of the future, but salvation at present." She took her work in this cause very seriously, and carried it on to the very end.

The book contains portraits of Lady Dilke and samples of her pen-and-ink drawings, and sketches from her notes of pictures about which she intended to write.

The Outlook to Nature. By L. H. Bailey. The Macmillan Co. 1905.

In this little volume Professor Bailey gives to the reading public four lectures delivered last January in the Colonial Theatre, Boston, under the auspices of the Education Committee of the Twentieth Century Club. The general purpose is to emphasize the importance of nature study, rightly defined, as a basis for the education of the young. The first of these lectures is a call away from the conventional, the sensational and other false scents which we are vainly following, back to the spontaneity and simplicity of "the commonplace." This is well if kept within reasonable limits, but we think that Professor Bailey would hardly induce a general movement toward the study of botany, for instance, by proving his assertion that "every plant is just as interesting as every other plant. If not, the fault is not with the plant." There is nothing quite so tiresome as a dead level of interest, whether that level be high or low. Nature has no half-hearted worshipper in Professor Bailey. In her domain, "whatever is, is right." "Bad weather" is simply an ill-chosen name for our fear of spoiling our fancy clothing, "one of the greatest obstacles to a knowledge of nature." The path of the naturalist cannot be trodden in patent-leather shoes. The weather is the nearest thing at hand in our natural environment, and no man can be content and happy who puts himself out of sympathy with his environment. Give us the rain and the hail, the snow and the mist and the biting wind! Choose the "bad" weather as the very time for your sally into the fields and woods; you will then be fellow with bird and stream and tree.

We fear that our author has been swept from his scientific moorings here by an enthusiasm wrought up over the ink-bottle. The tree and the stream cannot help themselves, nor give intelligible testimony as to possible sensations under the strokes of the storm, but the depressing influence of various phases of weather on most varieties of birds is so evident that he who runs may read. Mrs. Eddy is likely to abolish pain before Mr. Bailey rids even the most scientifically educated of bad weather. He looks to "nature poetry" as a valuable ally in bringing the commonplace to its own, but the poet must free himself from the bondage of literary form, and be "as unconfined as the inaccessible mountains, the great plains, or the open sea." His product must be rugged and continental, and Walt Whitman is held up as an earnest of what we are to look for.

The second lecture presents for inspection the respective advantages and disadvantages of city and country life. The third deals with "the school of the future," which is to be evolved from present conditions through a gradual recognition of present defects and of the essential fitness of the material which nature has put right at hand to remedy those defects. The closing lecture is a rather unnecessary defence of the fundamental postulate of the doctrine of evolution. The acceptance of this fundamental principle may have seemed slow to impatient scientists, but a broad knowledge of human nature would hardly have led to the expectation that so radical a change could have moved more rapidly. And the great progress which this readjustment of our point of view has already made, has come about almost entirely from the constant discovery and recording of facts in harmony with the new hypothesis, and not from the incessant stream of heated argument, however logical, which scientists of polemic inclination have based upon these facts.

Provincial America, 1690-1740. By Evarts Boutell Greene. [The American Nation, Vol. 6.] Harper & Bros. 1905. Pp. xxi, 356.

Professor Greene's book is a welcome addition to the literature of the "neglected period" of American history to whose investigation scholars have at last begun to devote themselves. In the plan of the series to which it belongs, the volume follows the one by Prof. Charles M. Andrews on 'Colonial Self-Government,' but without treating in detail the colonization of New France or the intercolonial wars, both of which topics are reserved for another hand. The four chapters on the French and Indian wars are summary accounts, dealing mainly with the relation of the wars to the English colonies.

The half-century from 1690 to 1740 witnessed in America three parallel lines of development. The first was the growth of the colonies in political experience and efficiency; the second, the development of economic resources and economic activities; the third, the increasing concern of the home Government about the colonies, as shown in the effort to tighten administrative control over colonial affairs. It was not a time of sweeping changes or striking incidents, for the period of colonial beginnings had passed. It was not a time of expansion: only one new colony of importance (Georgia) was founded during the period. It was rather a time of institutional adolescence, of growth and adjustment, bridging the years between political infancy and young manhood. The difficult task of the historian is to discriminate what is significant in such an irregular process, to appraise both efforts and attainments in political directions, and to show the connection between events—a task the more difficult in this case because of the lack of organic unity between the various English colonies, and their unequal development at both the beginning and the end of the period.

The most noticeable aspect of the political development of the time is the growing power of the colonial assemblies and their practical independence of English control. Everywhere, whatever the type of government, the Legislature absorbs more and more of the powers of government, trenches on the Executive, and overshadows the courts. The bone of contention was, more often than not, the grant of supplies; and here, almost without exception, the assemblies successfully insisted upon grants for a year or for short periods, while not hesitating to coerce the governors by withholding the grants altogether. Professor Greene has done well to call attention to the high character of some of the governors of the period, such as Spotswood and Burnet, and to the substantial interest in the colonies shown by many of them. As a whole, however, colonial administrators were of an inferior sort, and even good behavior did not always win concessions or prevent capable officials from falling under the general disfavor.

Not less important, however, though less striking, is the development of the colonies

in economic and social ways. Towards the end of the period the rapid natural increase of population is reinforced by immigration, with consequent extension of the settled area, especially in New England and the middle colonies. Colonial manufactures, though shortly checked by parliamentary interference, have at least a beginning. There is increased exploitation of the fisheries, particularly in New England, and notable growth of foreign trade, especially with the West Indies. The plantation system took definite form in the South, while the African slave trade, directly fostered by England, grew apace. We could wish for more detailed accounts of these matters than Professor Greene gives, though the main facts are clearly presented and the economic life as a whole adequately dwelt upon.

The social aspects of colonial life are, we think, less satisfactorily treated. The American people certainly made substantial progress in the fifty years with which Professor Greene's volume deals. They cleared more land, raised better crops, built better houses, had better furniture and clothing, wrote, printed, and bought more books, and indulged in more social relaxation than was the case with the colonists of a generation before. The intellectual movement was equally pronounced. An increasing number of American youth sought Oxford and Cambridge. An increasing number of American lawyers, especially in the South, received their training at the Inns of Court. American culture was unquestionably provincial, but there was growth in intellectual freedom, as witness the struggle for the control of Harvard College and the waning hold of Puritanism. Professor Greene touches upon all these points, but hardly, we think, with equal sureness, or with the intimate knowledge which the political sections of his book everywhere exhibit.

It was this obvious growth in wealth, interest, and resource which alarmed Englishmen at home and prompted restrictive measures. Instead of being a time of "salutary neglect," the period was one of marked activity; and Professor Greene points out clearly the operation of new plans of administrative control due in part to the desire to keep the colonies politically in check, and in part to the desire of English merchants and manufacturers to appropriate the larger share of the profits of colonial industry. As fruits of the new policy, we have a considerable number of trade laws, of which the Molasses Act of 1733 was the most important; a varied list of parliamentary statutes regulating colonial interests, such as those directed against manufactures and paper money; the frequent disallowance of colonial acts in England, with the accompanying imposition of restrictions on the governors in the matter of the approval of colonial laws; and significant proposals for the alteration of the charters. Fortunately for the colonies, the more radical suggestions were not carried into effect, while the discussion of them, though it kept the colonists stirred up, contributed to bring about a considerable similarity of political thinking and action from New Hampshire to Carolina. On the vexed question of the evasion of the acts of trade, Professor Greene concludes that "though there was much illegal trading, the volume of this illicit trade, with the exception of that carried on with the West Indies in defiance of the Molasses Act, was not relatively large, and that the eighteenth-century colonists drew the great bulk of their European goods from English ports" (pp. 294, 295).

Professor Greene does not appear to have used manuscript material, or to have paid particular attention to the mass of local records and pamphlets in which so much of the history of the time is imbedded; but the other literature of the time, particularly the documents, has been industriously explored. As a condensed account of a peculiarly difficult period, written in the light of modern historical scholarship, the volume is a commendable piece of work, and a worthy addition to the series in which it appears.

Hebrew Humour, and Other Essays. By J. Chotzner, Ph. D., late Hebrew tutor at Harrow. London: Luzac & Co. 1905. 8vo, pp. 180.

Nearly all of these sixteen separate essays have appeared separately in periodicals, all on Judaic topics, coming down from the Old Testament to modern Jewish journalism. The author is evidently a Hebrew scholar, well versed in Bible and Talmud and in the mediæval and modern literature of his people, but rather awkward and very loose as a writer. In his title essay he gives to "Humour" a very unusual meaning; for he illustrates it by the fiercest invectives, sometimes tinged with cruel irony, of Isaiah, Hosea and Amos. The most important of his other essays is a "Sketch of the Talmud," misleading in every way. He tells us that when "the time of dispersion came, the Jews abandoned the sword for the pen." Waiving the minor point, that nearly all the teaching was oral, the writing of religious books being deliberately avoided for a century and a half after the destruction of the Temple, and the pen being used only to copy the Scriptures, the author implies that there was but little learning or study before Jerusalem fell. But he certainly knows that when Johanan ben Zakkai, by Titus's permission, opened his school in the orchard at Jamnia, he taught the same doctrines which Hillel and his grandson Gamaliel had developed in Jerusalem during the reigns of Herod and of Agrippa. Even worse is the assertion that, in Rabbi Akiba's time, the activity of the sages was confined to the exposition of the Scriptures or the "written law." Any reader of the Mishnah finds in it opinions of R. Akiba and of his contemporaries, Meïr, Ishmael, and Jehudah ben Il'aï, on questions in all branches of the traditional law, hardly touching in any way on the written text. The statement of the immense bulk of the Babylonian Talmud (5,154 folio pages) is also misleading, for the octavo edition, with the same paging as the folio, is in good enough print; besides, more than half the space of all editions thus paged is taken up by the commentary of Rashi of Troyes and the "additions" *(Tosafoth)* of his grandsons. The author fails to explain how the Talmud was swelled to even this more moderate size by discussions in which really or apparently conflicting traditions, ascribed to different Sages, sometimes to the same teacher, are sought to be reconciled. He does not even mention the Baraïtha, *i. e.* the traditions "outside" of the official compilation of the Mishnah, but constantly quoted in the Talmud, and which makes up its most important element and the pivot of its discussions.

Among the other essays, one treats of the life and literary work of Leopold Zunz, the creator of *Wissenschaft des Judenthums*, probably the most learned Jew of the nineteenth century. It gives much useful and interesting information, but blunders curiously in speaking of his best known work 'Gottesdienstliche Vorträge.' These are simply *Vorträge* (lectures) on the *Gottesdienst* (services, liturgy); our author turns them into "Homilies of the Jews."

With all its faults and inaccuracies the book is useful in giving an account of the life work of some literary Jews of originality and force, the most noteworthy among whom is Immanuel di Roma, a contemporary and personal friend of Dante, who wrote both Italian and Hebrew poems, but mainly the latter, and who proved that something very much like true poetry can be written in a dead language, though he never reached the earnestness and force of Jehudah Hallevi; nor could he, as his Hebrew poems dealt with earthly topics, not with the sacred aspirations and hopes of the people in whose language they were written.

The fifteenth essay, on "The Influence of Hebrew Literature on Heinrich Heine," will prove the most interesting of all to the lay reader.

Some of Henry Holt and Co.'s New Books

New catalogue with portraits on application to the publishers at 29 West 23d St., New York.

Nature. An interesting book by a very high authority is **LANKESTER'S EXTINCT ANIMALS.** The illustrations are numerous and striking. The author bases this book on his popular lectures, and has been able, without in the least diminishing its scientific value, to make it intelligible even to children. ($1.75 net, by mail $1.90.)

Very remarkable pictures of some of our familiar wild animals and birds in their native environment, from photographs taken in the field by the author, are contained in Lottridge's **ANIMAL SNAPSHOTS.** Together with highly readable papers on the life and habits of the subjects, and how the photographs were made. ($1.75 net, by mail $1.87, November.)

A diary of nature for a twelvemonth is comprised in E. Kay Robinson's **COUNTRY DAY BY DAY.** Though written of England, most of the descriptions fit American scenes as well. The literary quality is high and there is a wealth of detailed observation. ($1.75 net, by mail $1.85.) A new supply (sixth printing) of that charming outdoor anthology, Lucas's **OPEN ROAD** is now ready ($1.50).

A well known New York physician, Dr. Edward Curtis, has incorporated the teachings of modern medical science, good sense, and many years' experience in his book **NATURE AND HEALTH,** a popular treatise on the hygiene of the person and the home (November).

History and Sociology. "Invaluable, nay indispensable," says the *Nation* of the **UP-TO-DATE AND REWRITTEN WALLACE'S RUSSIA** ($5.00 retail). "Mighty interesting reading" about the Romanoffs is contained in **ULAR'S RUSSIA FROM WITHIN.** The *Literary Digest* says: "A vivid picture of the depressing moral influences exercised on the nation" ($1.75 net, by mail $1.84).

Three new books on vital problems in our national life are Willis's **OUR PHILIPPINE PROBLEM** ($1.50 net, by mail $1.64), which the Washington *Post* says "is a most exhaustive, careful, honest, and unbiased review of every phase of the question." **THE NEGRO AND THE NATION,** by George S. Merriam, is a witty and scholarly study of the negro question, interpreting the facts of history, from the beginning of slavery to Tuskegee, with special reference to present-day problems (November). **AMERICAN TRADE UNIONISM,** twelve papers by graduate students and officers of Johns Hopkins University, edited by Professors J. H. Hollander and George E. Barnett (November.)

The Drama. Three noteworthy works relating to great dramatists.

Stopford Brooke's **LECTURES ON SHAKESPEARE,** an interpretation of Shakespeare as an artist. It is not so much an analysis as an appreciation of *Midsummer Night's Dream, Winter's Tale, Merchant of Venice, As You Like it, Richard II., Richard III., Macbeth, Tempest, Romeo and Juliet, and Coriolanus.* (November.)

Stephenson's **SHAKESPEARE'S LONDON,** which the *Nation* says is "an excellent summary of great value . . . the illustrations are of great value, and the reproductions are excellent." This work is at once a vivid portrayal and a careful, scholarly study, largely from contemporaneous sources, of the topography, customs and picturesque side of Elizabethan life. There are some 40 illustrations, mostly from old prints. ($2.00 net, by mail $2.15.)

Edward Everett Hale, Jr.'s, **DRAMATISTS OF TO-DAY** is an informal discussion of the principal works of Rostand, Hauptmann, Sudermann, Pinero, Shaw, Phillips and Maeterlinck. *The New York Evening Post* says: "It is not often nowadays that a theatrical book can be met with so free from gush and mere eulogy, or so weighted by common sense." ($1.50, by mail $1.62.)

A House Filled With Books.

The household book shelf, whether it be a single shelf or an entire library, should be filled with the books you care for, that add something to your life, whether amusement, instruction or inspiration. There are books published every day which every man or woman who wishes to keep in touch with certain phases of thought, certain new ideas, certain new presentations of old ideas, or certain methods of doing certain things, must read and had better read while the topics and the books are fresh. Here are some such books, popularly known as "serious" books, merely to distinguish them from stories, but certainly not serious in the sense that they are not interesting, timely, readable, or worth while. A book telling how to play the ancient game of golf may have more readability than a novel. It all depends upon how well the author writes and how fond you are of golf.

A Commercial Traveler in South America

By Frank Wiborg. Eight illustrations. Postpaid $1.10; net $1.00.

Here is a business man—an ink manufacturer, if you will—who went to South America on a business trip. Being a man of considerable powers of observation and possessing a plain, straightforward way of putting things, his impressions of the business conditions of South America are valuable to every man engaged in export trade in this continent, while at the same time being a book of travel of a rather unusual kind. It contains a powerful message to American manufacturers who are neglecting this important market.

The Complete Golfer

By Harry Vardon, with fifty photographs of Mr. Vardon playing characteristic strokes of the game. Postpaid, $3.67, net $3.50.

There are enough people playing golf, or trying o play it, to make it worth while to publish as elaborate and careful a book as this one, which is not only the literature of the game, but a first-rate guide to it. It is written by a man who plays golf well, who knows how to write about it, and if the text were cut out, the pictures would almost tell the story.

A Modern Symposium

By G. Lowes Dickinson, author of "Letters from a Chinese Official." Postpaid, $1.07; net $1.00.

We do not have enough of this kind of book in this day. One hundred and two hundred years ago it was common enough to express ideas in the form of a dialogue. In fact, two thousand years ago the disputation was a favorite literary diversion, and Cicero's Immortality of the Soul is still a masterpiece of the dualogue. "A Modern Symposium" is a discussion of modern life problems in which a large number of typical moderns take part—journalist, poet, painter, idealist, socialist and the like. The author has good ideas, and he takes this form to give them more sprightly expression.

The Horse in America

By John Gilmer Speed. With sixteen illustrations, two in color. Net $2.00; postpaid $2.20.

This is a horse book—not a horsy book, describing the horse in all his noblest aspects—breeding, the paddock, pasture and the stock farm; technical but not dull, and magnificently illustrated. It is to the horse lover what "The Complete Angler" is to fishermen.

Old Greek

By S. N. D. North of Hamilton College. Illustrated. Net, $3.50.

All of us who have gone to college have enshrined in memory some professor who is to us what Old Greek was to a large number of students of Hamilton College. Anyone who remembers such a professor will read Old Greek with sympathetic interest.

The Torch

By George Edward Woodberry. Author of "Heart of Men," "Makers of Literature." Postpaid $1.30; net, $1.20.

Eight delightful lectures interesting to have heard; more interesting to read and to keep for rereading, tracing step by step, from civilization to civilization, the growth of those ideas which have expanded and flowered into literature. "The Torch" is the idea of handing down light from epoch to epoch—those inherited traditions which are the greatest gift of the last age to the succeeding one.

Plunkitt of Tammany Hall

By W. L. Riordon. $1.00.

This book is different from any other kind of book, as it gives the real opinions and real talk of a real politician, well known in the Eighth Ward of New York City and elsewhere, who is still living and still acting in politics. It is not a book of ideals. It is a frank exposition of practical politics, as they are carried on.

Justice

By Charles Wagner. Postpaid $1.07; net $1.00.

Just how much the vogue of Charles Wagner in this country is due to his own inherent merit, and just how much is due to the popular recommendation of a popular President, we shall never know, but it is safe to say that he who really liked and cared for "The Simple Life," will really like and care for "Justice," which is in the same vein, but which goes farther and supplements and rounds out the theory of "The Simple Life."

McCLURE, PHILLIPS & COMPANY,
44 East 23d Street, New York.

Memoirs of Henry Villard

Journalist and Financier

1835-1900

Two volumes, with Portraits and Maps.
$5.00 *net*. Postage, 35 cents.

An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

"This posthumous autobiography of the late Henry Villard is a work of exceptional interest."—*Commercial and Financial Chronicle*, November 12, 1904.

HOUGHTON, MIFFLIN & CO.,
BOSTON AND NEW YORK

The Nation.

A WEEKLY JOURNAL OF POLITICS, LITERATURE, SCIENCE, AND ART.

Established in 1865, *The Nation* was a pioneer as a journal of literary and political criticism of the highest order, conducted free from the control of party, school, or interest of any sort. It has long been a recognized authority at home and abroad. The list of contributors includes most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. *The Nation's* departments are:

THE WEEK. Brief Comments on the most important current events, domestic and foreign.

EDITORIAL ARTICLES. Careful and moderate discussion of prominent political and social topics.

SPECIAL CORRESPONDENCE. From all quarters of the globe, by intelligent and trustworthy observers.

OCCASIONAL CORRESPONDENCE. Letters to the editor on every subject germane to the scope of the paper.

NOTES. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.

REVIEWS OF BOOKS. By able writers and scholars (mainly specialists) of both hemispheres.

FINE ARTS. Competent criticism of art exhibitions and works of art, the drama, etc.

The style and form of the paper are chosen with a view to the most suitable shape for binding, and a set of *The Nation* preserved, bound, and indexed makes the most complete and readable record of current events of importance in the political and literary world available for the American public. Two volumes are completed annually. The index and title-page accompany the last issue of each volume.

SUBSCRIPTION PRICE—$3 per year postpaid in the United States, Canada, and Mexico; $4 a year postpaid to other countries included in the Postal Union. Subscriptions for a shorter period taken at the yearly rate. Remittances should be made by check, draft, or money-order, payable to "The Nation." Specimen copies sent free at any time on request. Address

The Nation, 206-210 Broadway, New York City.

Rec'd OCT 21 190 B.P.L.

EARLY FALL PUBLICATIONS

JOHN BURROUGHS'S WAYS OF NATURE

A rational view of nature's methods containing many interesting original observations, recounted with the old-time charm of their author, in which he answers the attacks made upon him during the past year. 16mo, $1.10 *net*. Postpaid $1.21.

JAMES RUSSELL LOWELL

By Ferris Greenslet

A compact and readable narrative of the life of Lowell, giving the reader a lively sense of his personal quality and containing new material. With portraits and other illustrations. $1.50 *net*. Postpaid $1.62.

SIDNEY LANIER

By Edwin Mims

The first complete and adequate life of one of the finest and truest of American poets. With portraits and other illustrations. 12mo, $1.50 *net*. Postage extra.

THREE GOOD NOVELS

THE ANCIENT GRUDGE

By Arthur Stanwood Pier

A typical example of the best American novel of the day. Crown 8vo, $1.50.

PARADISE

By Alice Brown

A powerful New England novel with a direct human appeal. Crown 8vo, $1.50.

THE GREEN SHAY

By George S. Wasson

An intimate picture of life in a "down East" fishing community. 12mo, $1.50.

TWO JAPANESE BOOKS

THE ROMANCE of the MILKY WAY

By Lafcadio Hearn

The posthumous volume of the greatest American writer on Japan. 12mo, $1.25 *net*. Postpaid $1.35.

IN THE LAND OF THE GODS

By Alice M. Bacon

A charming rendering of the beliefs and superstitions of Japan. 12mo, $1.50.

THE ENDLESS LIFE

By Samuel M. Crothers

A powerful, reverent and thoughtful treatment of the subject of immortality. 16mo, 85 cents *net*. Postage extra. (Ready Oct. 28.)

JAMES G. BLAINE

By Edward Stanwood

Blaine's biography is in effect a condensed history of the political events of the time. With portrait. 12mo, $1.25 *net*. Postage extra.

IN OUR CONVENT DAYS

By Agnes Repplier

The childish adventures of an eager American girl in a French-American convent school. 16mo, $1.10 *net*. Postage extra. (Ready October 28.)

BY HENRY JAMES

THE QUESTION OF OUR SPEECH and The Lesson of Balzac

In the first part are some pungent and pertinent criticisms; in the second, a searching discussion of the art of fiction. Narrow 12mo, $1.00 *net*. Postpaid $1.07.

ENGLISH HOURS

Illustrated by Joseph Pennell

Mr. James's impressions of English life, illustrated with about seventy charcoal sketches by the famous artist, Mr. Joseph Pennell. Crown 8vo, $3.00. (Ready October 28.)

THE ENGLISH WORKS OF GEORGE HERBERT

Edited by George Herbert Palmer

It is very fitting that Herbert, in whose work the purest poetry and the most devoted piety are mingled, should have been treated with such fidelity and taste as characterize this incomparable edition.

Professor Palmer has added a worthy introduction, which, together with the notes, makes this the most complete, and critically speaking, the final edition of Herbert's works. With 29 photogravure and half-tone portraits, views, and facsimiles. In three volumes, $6.00 *net*. Carriage extra.

Somerville's First Year in Algebra
$0.60
THIS introductory book in elementary algebra furnishes a satisfactory one-year's course. It takes the pupil through fractions and simultaneous simple equations. Although remarkable for its simplicity and careful gradation, it is characterized by an unusually scientific presentation, which enables students to master the fundamental principles of the subject with less effort than is commonly the case. New elements are introduced as the result of some natural process. Recapitulations of the main principles occur at frequent intervals. All of the exercises are carefully graded.

A COMPLETE SET OF SHAKESPEARE *for* $8.00

Pocket form, 40 vols., cloth; each with a new Critical & Historical Introduction by GEORGE BRANDES, who is perhaps the greatest of modern Shakespeare scholars. *Printed from new plates, with photogravure frontispiece in each volume.*

THE BRANDES SHAKESPEARE

No other handy volume set of Shakespeare's works equals this new edition either in quality or price. George Brandes, the distinguished Danish critic, furnishes an analytic and historical introduction to each play; and a photogravure of a famous actor or actress in costume forms a frontispiece for each volume. There are forty volumes in the set, each 3⅞ x 6 inches. Large type is used on good paper—and the bindings, in either green cloth or deep red leather—are both artistic and serviceable.

The Set in a box, cloth, $8.00 net; Leather, $16.00 net. Sent prepaid on receipt of price.

A CONSENSUS of CRITICAL OPINIONS

William Archer: The edition is indeed a triumph, extraordinarily attractive and readable. It certainly deserves the widest popularity. It is a service at once to the poet and to the public to bring out such an edition at such a price.

Dr. Brander Matthews: Especially noteworthy is the extraordinary cheapness of the edition; the volumes are shapely and seemly, convenient for the pocket and yet not trying to the eyes.

Bishop Vincent: I wish that every minister of the Gospel, and aspiring laymen as well, might see the wisdom of putting on their shelves this most convenient and charming little Shakespearean Library. . . . It is a temptation to the busiest person to read a few pages of Shakespeare every day.

The Review of Reviews: You will not be able to resist the temptation of buying this cheap and dainty edition of the plays of Shakespeare.

Dr. Max Nordau: You have surpassed yourself. It is a marvelous edition. The get-up is wonderful, and the text the best available.

Austin Dobson: These are eminently desirable little books, light to handle, pleasant to look at, irreproachably prefaced.

"Good paper, binding—plain to read—
What needs my Shakespeare now, indeed?"

I hope they may have every success.

Edmund Gosse: Although Shakespeare has been reprinted in a thousand forms it seems to me that these little volumes present the plays in the most graceful and delicate way that has hitherto been achieved.

A. C. Swinburne: Mr. Watts-Dunton desires me to say how thoroughly he agrees with my estimation of your little books' unrivaled beauty.

The Nation.

NEW YORK, THURSDAY, OCTOBER 19, 1905.

The Week.

The Civil Service Commissioners are at it again, sticking their noses into other people's business. It is true, Francis E. Baker, United States Circuit Judge for Indiana, violated one of the Federal laws he was sworn to enforce by making postal clerks pay 5 per cent. of their salary to the Republican campaign fund of 1902; but when he has enforced so many laws, can't he break one now and then just by way of aiding the glorious Republican party? Folks may think that there was something mean and contemptible in making a poor postal clerk borrow money to pay over his $30 or $50, but Judge Baker and George W. Plunkitt see the thing in a different light. They know it is far better that every least clerk should go into debt than that their respective parties should be defeated, and they are naturally not willing to let a little thing like the law stand in their way. As if their action were not mean enough in itself, the Civil Service Commissioners go out of their way to cast a slur on the judge and a very worthy law by saying that the statute of limitations is the "only defence which can be opposed to the charge"! Well, why should it not be? Isn't it on the statute-books? Haven't Congressman Lucius Littauer, the New York canal ring, and a host of other lights, including at least one insurance president, got out of trouble by resorting to it in time of need?

The report of H. H. Schwartz, special agent of the Government Land Office sent to investigate entries on the Shoshone forest reserve in Idaho, should be published and distributed as 'The Land Grafter's Hand-Book.' It covers an even one hundred claims in one township; and its brief paragraphs, ending always with the refrain, "has never lived on the land," show the wide range of infection from the land-grabbing fever that has raged throughout the West. At the head of Mr. Schwartz's list marked "Exhibit A" is this brief statement: "J. P. O'Brien, claiming land in section 19, is the general manager of the O. R. & N. Co., and resides and has his headquarters at Portland, Ore. He has never lived on the land." At the head of the list marked "Exhibit B"—including thirty members of the "Slate Creek Settlers' Association"—is the name of James Boaz, claiming land in section 17, who is a saloonkeeper of Wallace, Idaho. He "has never resided on the claim." A milliner, a dentist, an ex-mayor, a "train butcher," a carpenter, a cigarmaker, a policeman, a dance-hall proprietor, a lawyer, a railway conductor, a millman, a miner, and so on, to the end of the list—apparently no one was free from the danger. How did these one hundred claimants attempt to fulfil the residence and improvements requirements of the law? Mr. Schwartz's report says of the Slate Creek Settlers: "There is a small log-house or cabin on each of the above claims. Most of the cabins were built by William Fisher on a general contract at $25 each. They were never worth $25 in labor and materials. . . . These claimants, with one or two exceptions, all voted in the towns where they lived and not in the precinct where the land is situated, and not in the precinct where they should have voted if they had given their residences as that of the land claimed by them." The report is an eloquent comment on the solicitude of Senator Heyburn for those Idaho pioneers who are "hewing homes out of the wilderness," and who are being robbed by the "forest reserve cranks" at Washington.

Anybody could have foreseen that the demand for an 18,000-ton battleship would speedily be followed by the cry that we must have one of 19,000 tons lest the nation be subjugated by the Philistines. We confess to a little surprise, however, at finding that the demand for the 20,000-ton vessel has already begun. It has been started by Commander Bradley A. Fiske in an article in the *Proceedings of the Naval Institute*, to which he gives the humorous title, "Compromiseless Ships." He is satisfied that in a 20,000-ton war vessel no compromise between armor, guns, and machinery would be necessary. His ideal battleship will have "sufficient speed, sufficient armament, and sufficient power to whip any ship of any probable enemy." So it might, for about one year, or until England and France had launched vessels of a similar type or of 21,000 tons. This game will not stop because Commander Fiske is satisfied with his 20,000-ton vessel. Admiral Dewey is already insisting on an 18,000-ton boat because England and France *would* go our last creations of 16,000 tons one better. If we did not know Commander Fiske's excellent reputation as a scientific officer, we should be tempted to regard his paper as a charming bit of sarcasm, particularly as he plans for a speed of only eighteen knots. Yet one of the reasons why our two new battleships, the *Mississippi* and *Idaho*, are declared obsolete before they are finished, is that their speed is only seventeen knots, and they cannot keep up with their consorts.

Not content with his slap at the big-navy boomers by his praise of our coast defences, Secretary Taft proposes to take sharp issue with his chief in the matter of army promotions—if Washington dispatches are to be trusted. The President, it will be remembered, wishes to have officers advanced not by seniority as at present, but by selecting for advancement the brightest men and the hardest workers in their grades. His public declarations to this effect have done a good deal to unsettle the army, and have brought about a very warm discussion which has revealed the opposition of a great majority of the army officers. They are convinced that no method of selecting can be devised which will not sooner or later be improperly influenced by politics, nepotism, or social entanglements. Secretary Taft appears now to have come to their point of view, and to lean to the plan, long advocated in these columns, of weeding out the drones and the unworthy by severer discipline and by difficult examinations for promotion. Not selection, but elimination, is what the army needs. Time has shown that Assistant-Secretary Roosevelt was all wrong in his efforts to remedy the naval engineering situation; it is to be hoped that he will in this case defer to the judgment of his Secretary of War.

After all, it seems that American fishermen do care whether or not Newfoundland furnishes them bait. It will be recalled that, over a year ago, Senator Lodge, in discussing a possible retaliatory measure against us for our failure to ratify the Hay-Bond treaty, asserted stoutly that American fishermen could get all the bait they wanted at Gloucester and Eastport, and keep it on ice. Now, however, when the Gloucester men are actually at Bonne Bay without bait, and when Newfoundland is emphasizing her determination to seize the vessel of any captain who violates the provisions of the "bait law," we see Son-in-law Gardner, the Senator's special envoy in the House of Representatives from Gloucester, posting off to Washington to see what help he can get. It was all very well for Premier Bond to complain that Newfoundland had for fourteen years been giving the United States greater privileges than England herself enjoyed without any reciprocal advantage. Of course, that was but evidence of our tariff wall's skilful construction. When a benefit could flow in unobstructed, and yet meet an air-tight valve when it tried to flow out, the contrivance was admirable. But when the beneficent inflow is checked there is a great row. The "Convention of 1818" is appealed to, and

Secretary Root is asked to see if something cannot be done. Now is the time for Senator Lodge to start his great bait-refrigerating plant.

Along with the annual bankers' convention, delegates of the country's trust companies and savings banks meet for separate discussions, and the topic which last week at once came up at Washington was the danger involved in the present lax law and supervision governing those institutions. Safeguarding of fiduciary business is expected from New York State as it is not from a score of other States where banking experience and conservatism are less developed. When, therefore, it can be said that trust companies of this State, holding eight hundred million dollars of demand deposits, are allowed by law to invest deposited money in ways by law forbidden to a bank (real estate and stocks, for instance, without restriction), and that no requirement of any cash reserve is made by law, then it is easy to guess what may be the situation in the younger sections of the country. The committee reporting pointed out that in four States—Ohio, Arkansas, Tennessee, and Virginia—there is actually no supervision of trust companies. It is a very grave question how far supervision in many other States is worthy of the name. The president of the trust company convention, while not endorsing the plan of Federal incorporation, declared emphatically: "I do want to go on record as advocating frequent and rigid official examination, whether State or Federal."

The convention had much to say of the Federal charter plan, to which Secretary Shaw drew particular attention in his last annual report. After pointing out the possible dangers from these companies, he proposed to give them "the privilege of incorporating under Federal law, with corresponding supervision"; and he argued that "if such right were extended, the more conservative would probably avail themselves thereof, and this would compel others to cultivate conservatism." The force of this argument did not appeal to us very strongly, since the companies thus incorporating would certainly have to give up very broad powers for privileges much more limited. In the case of the national banks, the exclusive right to circulate notes was an inducement to Federal incorporation, and, as a rule, the powers of the banks remained as they were under the old State charters. But whether the Federal plan is feasible or not, we do not consider it a solution of existing problems. What is needed is strict and careful revision of the State laws governing these institutions, and equally strict enforcement of public supervision. If this is not obtained in all regions where the operations of this type of companies are extensive, we shall have our day of reckoning in good season, and it will be one to remember. The most astonishing thing about the public attitude on this question is that any one with the faintest knowledge of our banking experience in 1837 and 1857 should for an instant imagine the present system to be safe.

At the close of August, when money could still be borrowed at the very low rates which had prevailed for a twelvemonth, the New York bank position was the weakest, and the surplus reserve the lowest, reached at that date in a dozen years. Although the cash in our city banks was $54,000,000 below the preceding year, loans were $45,000,000 greater; easy credit had absorbed, in one or another type of enterprise, an exceptionally large part of the market's ready capital. The approach of harvest-time, with the trade requirements consequent on the huge crops, foreshadowed extremely large interior demands for money. The expectation has proved correct. For the first time in three years, Wall Street has passed through a genuine "money squeeze." The interior's demands have drained away money from the New York bank reserve. The 25 per cent. ratio of that reserve to deposit liabilities has been kept good only by drawing gold from Europe, at a rate of exchange which hardly warranted such imports, and, apparently, by some jugglery with the statements. Day-to-day loans in Wall Street have gone as high as 8 per cent., and now bring 6—the highest rate for the season since the severe strain of 1902.

Rhode Island is promised a lively political campaign this autumn. The Democrats have nominated for Governor Dr. Lucius F. C. Garvin, who held the office for two terms, but who was swept out by the Republican tidal wave of last year. His popularity is proved by his two successes in a State normally Republican, and by the fact that in 1904 he was defeated by only 856 votes, while Roosevelt's plurality was 16,706. He appeals to the electorate of Rhode Island as a man who is virile, honest, an uncompromising opponent of the Aldrich-Perry-Brayton ring, and a champion of Constitutional reform. His campaigns, though dignified, have always been vigorous. In public meetings and in open letters he has fearlessly denounced the corruptionists who have made the politics of his State a cesspool. He has pointed out the malign alliance between the Republican ring and the traction interests that have fastened upon Rhode Island like a leech. Above all, he has, in season and out of season, labored for the one reform which is pregnant with all others, a new Constitution. Under the present antiquated instrument, a score of little rotten boroughs return a majority of the State Senate and block all legislation which is hostile to the ring. The Governor, without the power of veto, is almost helpless. The most that he can do is to rouse public sentiment through his messages and addresses.

Mr. William M. Ivins's nomination by the Republicans of this city, viewed in itself, would have made it at least possible to retrieve a situation grown well-nigh desperate. Here is a candidate for Mayor of undoubted capacity, of large acquaintance with municipal affairs, who, in 1886, was, as an independent Democrat, exposing the inner corruption of Tammany in alliance with certain Republicans, and was ferociously attacked for it by the *Tribune*, in language which that newspaper would not care to reprint to-day, and which we will not pain it by recalling. But what followed on his nomination shows that the Republicans are not going into the campaign with either seriousness or good faith. Their proceedings in the matter of county and borough nominations have all the appearance of a debonair recklessness, affronting the intelligence of their own party deliberately, in the full purpose of inviting defeat. Not content with spurning Jerome, therein flouting the advice and urgings of Mr. Ivins, the Republican machine has given us in his place Flammer! And as if to match the Tammany McGowan, it has dug up a Duffy! This is a farcical business. With it the Odell machine abandons the last pretence of earnestness or decency in this canvass. The reasons given for refusing to endorse Mr. Jerome are of the flimsiest. He had declined to make a specifically "anti-Tammany campaign"! That means simply that he had declined to be silent about Republican bosses and Republican corruption. Mr. Jerome has been consistently an independent candidate for reëlection, going directly to the people without first going on his knees to a boss. As we felt from the start, that was a defiance of machine tyranny which the tyrants could not forgive. They have not dared to attack Jerome openly, but they have set their minions secretly to work to crush him if possible.

Mr. Ivins's open letter to the other candidates for Mayor is vigorous and direct. His promise to continue in office for his full term, and not to be a candidate for any other place whatever, will, we trust, provoke McClellan into a similar declaration. Mr. Ivins clearly realizes that in accepting a nomination from the Odell-Halpin machine, he has laid himself under grave suspicion among all decent men. His announcement that he

will be absolutely free from boss or party control is thus of unusual significance. If he will actually maintain himself in "absolute independence of every organization and individual," will conduct the city's business "without regard to partisan considerations," and will completely ignore "all merely national party" lines, he will give New York what it most needs at present. His challenge to McClellan and Hearst to meet them in public debate is not likely to be accepted. Hearst is not an effective speaker. McClellan will hardly care to defend on the stump such an appointment as that of Oakley, or to explain how it happens that Murphy in Manhattan, McCarren in Brooklyn, Haffen in the Bronx, and the most disreputable elements of Greater New York generally are among his enthusiastic supporters. If the Mayor were anxious for a joint debate with any one, he would lose no time in closing with Mr. Coler's specific charge that he first tried to crush McCarren, as a disreputable politician, and then, finding he could not, fell upon his neck.

There is a trite moral to be drawn from the tragic end of Armitage Mathews, but we shall merely point out that his shocking end, with its implied confession, is another indictment of the Republican organization in this city and county. That a man of his stamp could ever have been favored with an office at its hands, should have been impossible after his first term in the Board of Aldermen. That he should have actually been Secretary of the Republican County Committee, is plain evidence to what depths the organization has fallen. To men like Cornelius Bliss, Elihu Root, Horace Porter, and a host of others who think the salvation of the Republic depends on their party's success, this tragedy should come as an appeal to their political conscience. How much farther can their party sink? How much longer are Odell, Halpin, Gruber, Quigg, and others to stand for the decent Republicans of this city?

President McCurdy's explanation to the legislative committee makes both the end and the means of philanthropy so clear that every one will instantly recognize the disinterestedness of officers of insurance companies. The Mutual Life, said he, is "a great beneficent missionary institution," "participating in a great movement for the benefit of humanity at large." Such a concern would scorn the idea of encouraging a man to pay his premium in the hope that at the end of a year he would receive a dividend. If the policyholder got the dividend, say $7, he would "go home and spend it for cigars and billiards." President McCurdy's real object was "to insure as many men as possible, to pay them at their death, and not during their lifetime one penny." There speaks the true lover of mankind. Rather than demoralize policyholders with wealth, President McCurdy would draw a salary of $1,000,000 a year, instead of a mere $150,000, and would smoke cigars and play billiards all day. Think of the corrupting influence of $7 in the family of a country minister or doctor, and then thank heaven that President McCurdy, or one of his relatives, is willing to pocket the accursed gold. The new philanthropy calls for a new edition of that once popular juvenile 'Ministering Children.' The part of hero belongs to that sweet young innocent Robert H. McCurdy; and the minor parts may go to the various little McCurdys, McCalls, Alexanders, and Hydes, and their cousins and kin by marriage. The little band of angels was, like the fathers, animated by a single desire—to save the world from the deceitfulness and peril of riches.

The annual report of the Metropolitan Street Railway system is an interesting test of the practical effect of the Subway on city passenger traffic. The report of the street railway company for the fiscal year ending with June shows total earnings $596,000 below last year's. There are, however, some oddly perplexing facts about this decrease. The Metropolitan's president points out, to begin with, that the season of heavy snow blockades, which prevailed last winter, crippled earnings seriously. It appears, for instance, that, of this $596,000 shrinkage in earnings, $544,000, or nearly the whole, occurred in the three months of December, January, and February, when the blockade was most troublesome; whereas in June and July passenger earnings actually increased over last year. On the other hand, every one knows that winter is the time when Subway competition would injure the surface lines most seriously, whereas in summer, with the open street cars, the reverse should be expected. Behind all these considerations stands the fact of the amazing increase in total travel over city railways since the Subway was completed. If only the earnings for the quarter ended June 30 are taken, it will be found that while the street railway system lost $62,700 in its gross receipts, as compared with 1904, and the Elevated $547,000, the Subway earned $1,349,000. But as the Subway was not open in those months of 1904, its receipts may all be classed as increase. Deducting the losses on the surface and elevated lines, it is evident that, in that single quarter of the year, some $700,000 more was paid in 5-cent fares for local transportation than was paid a year ago.

A tense, suspicious, and timorous state of mind is displayed by nearly all the participants in the controversy over last May's threatened war between Germany and France, still raging between Germany, France, and England. Prince Bülow's interviews, the revelations and comments inspired by Delcassé, the semi-official utterances of the English press, all reveal a most unhappy international jealousy and distrust. The more Prince Bülow assumes an air of frankness, the more confident are both English and French that he is but masking his duplicity. The stouter Delcassé makes his denials, the less are they believed by the German press. British assurances to the German Foreign Office are perfunctorily reported to have been "satisfactory"; but every member of the German Navy League firmly believes, on the strength of the avowals of the London *Times*, that England was aching for a chance to join hands with France and sweep the German fleet from the sea. Thus the chief stock in trade of the statesmanship of either country seems to be settled suspicion of that of the other. Is the true moral of all this the one which the big-navy boomers of every land are drawing?

It would seem as if there must be a mistake in the report that, according to official returns, only 72,450 Japanese soldiers lost their lives in the war with Russia. Otherwise, some of the lurid war correspondence with which the public has been favored must needs be rewritten. According to this report, but 46,180 Japanese were killed outright, while 10,970 died from wounds, and 15,300 from disease; and these figures, it must be admitted, stand in proper proportion to one another. But if the losses were no greater, what of all the brigades and divisions wiped out at Mukden? or of the army corps which is supposed to have fallen at Port Arthur? Even if we were to allow five wounded for every soldier killed, the total casualties would not be over 276,000, which is not an exceptionally large figure when the desperate assaults on Port Arthur and the fierce character of the fighting at Nanshan, Liaoyang, the Shaho, and Mukden are considered. Certainly no foreigners who followed the armies will credit these figures. So far as the deaths from disease are concerned, they should be compared to the 5,000 lives sacrificed in our summer campaign with only 275,000 men in the field, as against the million or more Japanese who battled for a year and a half under the terrible Mantchurian conditions, to bring out the triumph of the Japanese sanitarians. Should these statistics prove to be correct, the world's impressions of the struggle will have to be sharply revised, and Japan will be open to congratulations that the number of lost lives is comparatively small. Also, we shall have to change our ideas about the deadliness of modern weapons.

SHAW ON SHIPS.

If there has been any doubt that Secretary Shaw is a Presidential candidate, he removed it by his address to the bankers at Washington last week. Passing by all miserable interrogatories about currency and reserves and trust companies and the responsibility of directors, he went in gloriously for the old flag and an appropriation for shipping subsidies. Some may question the appropriateness of his discourse. What has the mercantile marine to do with the technique of banking? Would Mr. Shaw be capable of haranguing a congress of physicians about the Alaska fisheries, or urging upon the New England college presidents the advantages of farming in the Philippines? But such questions ignore the chief duty of a Presidential candidate. Nice points of good taste are not for him. Having got, as he thinks, a taking issue, he must air it on every occasion, whether bankers will hear or forbear.

Secretary Shaw has long made it plain that his chosen issue is ship subsidies. His latest deliverance was a surprise only in being so malapropos. He did, however, develop some of his older positions, thereby making them a little more indefensible. For example, he gave this hint of his method of getting Congress to vote a subsidy: "No difficulty is ever experienced in pressing a river and harbor bill, *if its benefits are sufficiently distributed*." In other words, by skilful log-rolling, by striking hands in the dark to divide the plunder, by promises and bargains and bribes, it may yet be possible to induce Congress to increase the Treasury deficit by millions taken out for subsidies. This is an open advocacy of a policy of lavishness, ill becoming a Secretary of the Treasury at a time when the question of making both ends meet in national finance should occupy a serious mind. But then, Mr. Shaw is now more candidate than Secretary.

His argument fairly wallowed in the self-contradictions of a protectionist. We have "protected" the country into a prosperity which is the envy of the world; now we must "protect" it into a vast trade with foreign nations. Of course, that is the very thing protection was to prevent. Secretary Shaw professes to be the chief of those who stand pat on the Dingley tariff, and he ought to know what opinion the framer of that law held and expressed. It was the crass old protectionist view that the more this nation could be isolated commercially, the richer it would grow. Congressman Dingley avowed the wish that the oceans bounding us were seas of fire, so that no ships could cross them filled with abhorred foreign products. Yet it is in the name of a protection thus inspired that Mr. Shaw would have a marine artificially created to go in search of "new and important markets"!

There is always a comic as well as instructive aspect of the impotent anger of protectionists at finding that they have taxed American shipping out of existence. They remind one of a man who has fed and drunk himself fat and puffy and short-winded, and who falls into a rage when he discovers that he cannot win a free-for-all foot race in competition with trained athletes. The writs of protection do not run upon the high seas. There it is the best ship that wins—and the best ship is the one that is built with the greatest skill and economy, and sailed with the greatest intelligence, care, safety, and profit. Once let a nation admit that it cannot compete on equal terms, and it may as well quit the business. It may squander money in subsidizing inferior or too expensive vessels, and keeping them afloat for a time, but the inevitable crash will come in the end. The sea is free to all. Protection sinks like lead as soon as it leaves the land. Within your own coasts you may screw up the cost of materials and of labor, and handicap inventiveness and enterprise, while diminishing their rewards, by a backward and corrupting system of tariff taxes, but if you do it, you must be content to renounce the blue water. There the wholesome law of competition has free sway, and the survival of the fit is the rule. To listen to Secretary Shaw, one would think that ships were never built except by Government aid; yet, at the very moment he was speaking, the largest and latest example of modern marine architecture, the *Amerika*, was setting sail for our shores, the product of brains, not of bounties, the result of ingenuity and experience applied to seafaring, owned by a company which has built up a great fleet absolutely without subsidies.

We share to the full the desire to see the American mercantile marine restored to something like its prestige before protection and stupid navigation laws drove it from the seas. But we must meet the conditions squarely. No trick of subsidy will be of any lasting benefit. The nation has got to get rid of some of its "protected" flabbiness if it is going really to compete for the commercial mastery of the ocean—not, as Secretary Shaw would have it, try to brace itself up for the contest by another stiff horn of protection. We have not the slightest doubt that American ability and mechanical aptitude and executive capacity are adequate to the task of building and operating a mercantile fleet second to none; but first they must be given an object; the ships must have some promise of return cargoes; the fetters upon American industry forged by the protective system must be stricken off. The exultant stand-patter may be a sublime spectacle, but he will never stand on the bridge of an ocean steamship.

THE SORROWS OF THE OPTIMIST.

One of the significant signs of the time is the dejection of our old friend, the optimist. It is but a few years since his voice was heard in all parts of the land, and his cheerful loquacity had shamed every pessimist into respectful silence. In industry, in finance, in politics, in religious and social affairs, the reign of the optimist was absolute; and at his command the people were ready to laugh every carper out of court.

In industry, it will be remembered, the advent of the Trust promoter had banished competition and introduced the reign of that kindly and sympathetic cooperation which Mr. Perkins has recently declared to be the very life of the insurance business. Panics were to be abolished, and industry was to be scientifically "integrated" in a manner that should defy the forces of industrial depression. In finance, we were told, a new era had been introduced, in which the old rules were not to apply, while the teachings of past experience should count for nothing. Our financiers, their eyes in a fine frenzy rolling, were filled with boundless optimism concerning the value of securities, digested or undigested, and banished the last vestige of the old and pessimistic methods of appraising commercial assets. Sympathetic coöperation, with Christian charity for human frailties, prevailed universally in dealings between the promoter who supplied the watered stocks, the banker who agreed to underwrite them, and the insurance companies that furnished the money by which the deals were carried through. All hands were agreed to be as good trustees as they conveniently could; and it did seem that the coming of the financial millennium could not be long deferred. And this, of course, the optimist hastened to proclaim in season and out of season. President Alexander contributed to the *Atlantic* a roseate description of the new methods of caring for the funds of widows and orphans; Mr. Schwab, in the pages of the *North American*, severely castigated Russell Sage for expressing doubt concerning the new order of industrial society; while Chauncey Depew——!

The same genial spirit pervades all the political world. By assuming "new duties and responsibilities" in the East we all became model citizens at home. When it was rumored that graft still existed in the Executive departments at Washington, optimists Payne and Wilson declared the reports to be mere "hot air"; so that our complacency remained undisturbed. Then Dr. Hale assumed his duties as Senate chaplain, and discovered that his flock was composed of pure-souled children of God, who had

been cruelly maligned by the rumor-mongers. It was clear, therefore, that national political life was on a higher plane than ever before in our history; and we were urged to inaugurate an era of good feeling, in which cruel criticism of public men should disappear, and all should take a hopeful view of the policies of the Republican party. Not to be outdone, sundry members of the clergy gave thanks to God that such an opportunity had come to spread the blessings of our civilization and religion in the benighted East. When, they asked, had God ever given a nation such a noble mission or such enlightened and righteous rulers?

But visions of Paradise so nearly regained were rudely shattered in 1902, when most unexpectedly the bottom fell out of the stock market. Something had gone wrong with the new plan for abolishing hard times, and pessimism as profound as the optimism of 1901 suddenly took possession of Wall Street. Then the lid was taken off from the Post-Office Department, and an unsavory mass of wretched scandals was revealed at Washington. Straightway the popular magazines instituted a systematic investigation of the darker nooks and corners of American life, and published, month after month, unpleasant stories of lawlessness and graft in city, in State, in industry. This made at first but little impression upon our indomitable optimists, who insisted that the evil was confined to a few sporadic cases. They were inclined, in fact, to attribute all the trouble to a few "soreheads" and "croakers," and put forth strenuous efforts to drown out the voices of the pessimists.

Yet, struggle as they would, their best efforts were in vain. The Post-Office revelations were followed by the exposure of the public-land frauds; and hardly had the courts begun work upon a new batch of Senators and Representatives when the scandals in the Agricultural Department came to light. Meanwhile, outside of official circles, some eminently respectable insurance grafters had fallen out with one another and begun to wash their dirty linen in public. In vain did Mr. Depew assure the people that the troubles would soon be "adjusted," and that the Equitable would speedily be "stronger than ever before"; vainly, too, did insurance magnates of other companies protest that not a suspicion of graft could attach to their own methods of doing business. Revelation followed revelation. Saddest of all was the discovery that the chief of the optimists, the genial Depew, was among the meanest of the grafters.

The *Nation* has been sometimes accused of pessimism; and it is true that, prior to 1902, when the optimist reigned triumphant in the land, this paper did express doubts about the immediate coming of the millennium which was expected to follow the new developments in industry, finance, and "world-politics." Indeed, in the exulting of the optimist we saw reason for the most serious misgivings. But in the process of heart-searching and house-cleaning now in progress, the *Nation* perceives only happy auguries for the future. It was the loquacious optimist who led us into the moral quagmire; now that his voice is silenced, even temporarily, there is hope that we may give heed to wiser counsels and retrace our steps to the safe, if narrow, highway of financial and political integrity. Perhaps from our recent experiences we may yet learn where and how to erect some fences that will prevent the future traveller from straying off in the bad company of the chattering optimist.

SIR HENRY IRVING.

To say that the English-speaking stage has lost its greatest surviving representative by the lamented death of Sir Henry Irving is to tell but a small part of the truth. It has lost also the one link that connected it with the days when the stage was yet capable of inspiring the respect of intelligent men and women; lost the influence of illustrious example, and the inspiration of a force whose tendency was, almost invariably, upward.

During the last few years several great actors have on their decease been praised, mourned, and forgotten. Their departure has created a certain void—it is certain that they have thus far no successors; but inasmuch as, in most instances, they stood for nothing but their own fame, their death, however deplorable, did not assume the character of a general calamity. But with Sir Henry Irving the case is different. In him existed the essence of the ideal theatrical spirit—the spirit that was charged with a sense of responsibility, with a conviction of the tremendous scope and limitless possibilities of the drama as an agent of intellectual and moral good in the form of entertainment, and an ambition to restore the stage to a dominant position among the arts; and with him that spirit, the spirit of high endeavor as opposed to the greed of mere commercialism, has, it is to be feared, vanished. It is true, of course, that his life-work was nearly done, that he was meditating an early retirement from the stage which he had adorned for nearly fifty years, and that, latterly, failing health and cruel losses had compelled him sometimes to subordinate the claims of art to the need of a competency for his old age; but even when he descended to popular melodrama as a sort of inevitable concession to a debauched public taste and the inexorable demands of sordid speculative management, he yet contrived to invest these performances with a dignity and a significance peculiar to his own productions, and redeemed them from the charge of being altogether trivial and vulgar. There was a fine illustration of this capacity which he had for elevating the scene, when his noble and pathetic figure of Dante imparted some sort of poetic value to the brazen and hollow ingenuities of the later Sardou.

His great service to the stage, of course, was done during the memorable years of his management at the London Lyceum, which became the Mecca of intelligent playgoers from all parts of the world. There he took up the work which was laid down, almost in despair, by Macready and resumed, with wonderful success, by Phelps at Sadlers' Wells. With the labors of the latter he was well acquainted. At one time, for a brief period, he shared in them, and it was in the Shaksperian precincts of the once despised Islington, doubtless, that he found the inspiration which later on was to lead him to wealth and fame. That this inspiration was deep in him cannot be questioned. It is no mere whim or vanity that could induce an actor who had won prosperity in such parts as *Digby Grant* and *Mathias* to risk both fortune and reputation in such a character as *Hamlet*. From the first his aim was to command success by the general perfection of his representations rather than by his own individual impersonations. No man, probably, knew better than he his own complete inadequacy for such characters as *Romeo* and *Claude Melnotte*, for instance, but he did not hesitate to undertake them, in the hope that the general excellence of the performance would compensate for his own deficiencies. Perhaps he would have been wiser if he had entrusted some of these parts to players better suited to them, but he must, at least, be credited with the courage which enabled him to dare all.

His career, at its best, was one long demonstration of the fallacies of the abominable "star" system, to which he, too, at the last, was compelled to have recourse. Wonderful as were many of his acting triumphs, it is nevertheless true that some of his most notable productions at the Lyceum owed their success quite as much to his associates as to his own efforts. His own renown as an actor still rests mainly upon his extraordinary ability in eccentric and romantic melodrama. It was in such parts as *Louis XI.*, *Mathias*, and *Malvolio*—to mention only a few types—that he was seen at his best. He was supremely great also in parts of high intellectual and spiritual quality, including such priestly studies as *Becket* and *Wolsey*. In his spectacle of "Faust," the mental quality of his *Mephistopheles* gave weight to the whole trivial show. His *Hamlet*, too, was full of intellectual brilliancy—perhaps a little too full—while

sadly deficient in real tragic power. His *Macbeth*, again, was but a variation upon his *Mathias*. His *Richard III.* was a superb embodiment upon the intellectual and cynical side, but weak in its tragic moments; and illustrations of a similar kind might be continued indefinitely. In short, Irving was not a great tragic actor, ranking in this respect below Edwin Booth, Phelps, or Macready; but he was a great actor by virtue of his eminence in many directions and his supereminence in some.

It is, however, as the greatest of all modern actor-managers that he will be known hereafter in the chronicles of his period. He found the stage in hopeless disgrace and collapse, and for a time raised it to a position of admiration and respect. He showed how companies ought to be formed, how they ought to be directed, and how the resources of modern scenic art could be applied to the illustration of literary masterpieces. He raised not only the condition of the stage, but the social position of the performers themselves. He himself assumed a social rank almost unheard of among actors before, and the knighthood which acknowledged his worth lent it no additional emphasis. For almost a generation he has been the exemplar of all that a manager ought to be; and long indeed is it likely to be, judging from present appearances, before we shall look upon his like again.

THE CENTENARY OF TRAFALGAR

One hundred years ago, on the 21st of October, was fought Trafalgar; and as we look back from the vantage-ground of the present, we may dimly discern that no battle of the nineteenth century —not Waterloo, not Sedan, not Solferino, not Königgrätz—was charged with such consequences for the development of the world's civilization. Yet the learned scholar of a thousand years hence who, searching into the history of our age, should chance on a store of French newspapers for the year 1805, might search them through and through and never suspect that so much as an engagement between two frigates had occurred. France, or rather her ruler, Napoleon, chose to pass over in complete silence the great event that had taken place on the Atlantic Ocean; and that silence tells us that the significance of Trafalgar was immediately realized. The more significant the event, the less Napoleon's pride allowed him to acknowledge it.

Notwithstanding his despotic methods, notwithstanding his cruel abuse of war, there is a penetration, a prophetic insight about Napoleon's political perceptions that appeals to every intelligent student of his history. He saw what we, a century later, marvel at as a new thing: all the continents merged into one great political arena. He was prepared, one hundred years ago, to deal with the Indus as the strategic turning-point of the globe; and this is what we deem the most startling novelty in the latest diplomatic achievement of our own day. He was prepared to conquer by placing himself at the head of an army of Asiatics, while we, at the beginning of the twentieth century, are still agog at Great Britain's foresight in making of an Asiatic power her equal ally. He perceived that, in world politics, to use our present phrase, the control of the sea is decisive, and that control he set to work to obtain.

In that attempt he failed, and the record of his failure is inseparably connected with the name of Nelson. That is why the name of that great fighter and sailor is surrounded by a halo of veneration by his countrymen. It was he, and what he stood for, that made the British Empire possible. Nelson belongs less to history than to the Imperial tradition; he represents an ideal more than a subject for historical research. And it is best so. Not that the historians have allowed him to repose in peace. He had scarcely been laid in the marble tomb that so many reverently visit in St. Paul's Cathedral, before Southey wrote his life and told the public that its hero was of the earth earthy. Since then controversy has raged, and during the last fifteen years with great bitterness. Learned professors have lost their reason over Nelson, have slung ink on his behalf, or in his condemnation, with the zeal of pamphleteers. Passion rivalling that of mediæval theology has been displayed over the interpretation of his least fortunate actions. But the great British public remains calmly indifferent to the disputes of the historians, and clings faithfully to its hero.

In truth, Nelson, as he appears to the dispassionate observer, is a somewhat disconcerting figure. This little flaxen-haired, one-eyed, one-armed man hardly belongs to the nineteenth century. If Napoleon was modern, Nelson was Elizabethan. He would have taken the *Victory* straight into the midst of a French fleet with as cool unconcern as Grenville steered the *Revenge* for the *San Felipe* and her consorts. His mouth was ever full of exaggerated sentiment, chiefly of hatred for the enemies of his country, of ardor for his coarse enchantress, Emma Hamilton. In such sentiments he was as whole-souled as a Viking, as blunt as a boatswain, and it is difficult to forget that he enjoyed having the head of a Jacobin pickled, or that he gulped down with childish vanity Lady Hamilton's outrageous doses of flattery. But what does it all matter? The great fact, the fact that remains, is that in those supreme moments in which the destinies of men and of nations are decided, he had the genius that compels victory. It was not force, but genius, for in most of his great battles he was outnumbered; and although Napoleon, as is generally forgotten, still possessed a great fleet of battleships after Trafalgar, he acknowledged after that decisive test the superiority of Great Britain on the sea—her superiority in genius.

What was the nature of this supreme quality in Nelson, of the quality that focussed in him the whole fighting efficiency of the Saxon, of the Dane, and of the Norman? In the first place, he had the ordinary skill of the seaman highly developed. The landsman still wonders at his calm confidence in the early hours of the 21st of October, 1805. On the horizon hung the long line of Villeneuve's sails crossing the *Victory's* bows. The wind was very light; the ships crept but slowly over the water. Nelson's problem was so to direct the course of the British fleet as to strike the French line in the centre and divide it at that point. How delicate and unerring his judgment was, is shown by the fact that, two hours before the *Victory* got within cannon-shot, he closed his telescope, and, turning to Captain Hardy, declared that he had now done all that could be done, and that it remained for his captains and sailors to do their part. He gave practically no more orders from that moment, and it is recorded that the fleets eventually came into contact precisely as he had intended.

In seamanship Nelson had peers; he had none in his fighting instinct. He never accepted the defensive; he always sought out his enemy; he was ever careless of victory or defeat, content to get within range and to pour forth all the damage and destruction of which he was capable. And that, after all, is the whole secret of successful war. High intelligence will help the nation that is driven to this last arbitrament, but the supreme quality must ever be determination to destroy the enemy. It is just in the matter of this mental attitude that the shadow of a doubt crosses the mind as to Lee's conduct of the army of Northern Virginia; it is at all events clear that in this respect Stonewall Jackson, and not his great commander, was the exact counterpart of Nelson.

Fortunately, the opinion of the peaceful citizen is now, in all countries, of more weight than in times gone by; war appears less necessary, more criminal. At the same time we are evidently not yet out of the period when the struggle for national existence must still be the crucial test of every community. Some communities, indeed, are faced by problems that make war probable at a period more or less near, and among such communities, unfortunately, is England. British civilization—and in the largest sense our own country represents its most advanced form—has spread its benefits ostentatiously over

the globe. It has carried with it not only increased happiness for all men, but increased wealth; and that wealth is viewed with envy. During one hundred and fifty years one thing alone has maintained untouched this greatest of all factors in the advance of humanity, and that thing is the British fleet. England has occasionally lost sight of this fact, though never for long. But the ships are not everything, as Napoleon found to his cost; there must be a spirit behind them. It is that spirit which England looks for in the tradition of Horatio Nelson.

And so on the hundredth anniversary of the battle in which Nelson fell in victory, the British Navy League distributes far and wide patriotic pamphlets and shilling souvenirs carved from the old oaken timbers of the ship that carried the British admiral on the brave day of Trafalgar. And those whose business it is to comment on passing events attempt to point the moral. That task will have been accomplished in this place if attention is once more directed to the fact that there are two Nelsons, one the subject for historical investigation, the other a national hero, the embodiment of a national ideal. It is this second Nelson whose festival is now being observed by our cousins over the water.

POSSIBLE EFFECTS ON ENGLAND OF JAPAN'S TRIUMPH.

LONDON, October 4, 1905.

During the war with Russia, Japan has commanded the deserved and all but universal sympathy of England; but Englishmen who have at last, though very slowly, begun to appreciate the marvellous character of Japan's sudden rise to a place among the great Powers of the world, have allowed gratified astonishment to banish sober reflection, and—to judge from the tone of our press, whether gathered from the most sensational of daily newspapers or from the gravest of quarterly reviews—have hardly turned their attention towards the astounding and perhaps lasting effects which may flow from an extraordinary and unforeseen event.

One immediate effect of Japan's triumph is visible to every one. The attitude of England in the East has undergone a change. English statesmanship now relies for the maintenance of our Eastern Empire, not upon England's isolated and unaided strength, but upon the force derived from an intimate partnership between the two strongest of naval Powers. The Japanese navy has rivalled the triumphs of English seamanship, and the navies of England and Japan are now united, by the bonds of a treaty, as one force, prepared to defend Japan on the one hand and the Eastern possessions of England on the other against all assailants. This great naval league is a new thing in the history of the world. The statesmanship which has created it has aroused the almost unanimous applause of England, and is, we are told—I doubt not with truth—as popular in Tokio as it is in London. So completely has English public opinion endorsed the action of the English Government that a ministry which is apparently losing its hold upon the country, is deemed even by its opponents unassailable as regards the Japanese alliance. Yet this admired stroke of statesmanship is itself a satire on the theories and claims of modern Democrats. The alliance which binds together the fortunes of Great Britain and Japan was no result of parliamentary debate. It was the work of statesmen who did not in this matter consult either Parliament or the electors, but exercised (no doubt with the assent and approval of the King) one of the most striking of royal prerogatives. The treaty-making power still lies with us in the hands of the executive. This is a point well worth consideration by constitutionalists who suppose, erroneously enough, that prerogatives of the crown which are rarely used are dead.

Japanese victories have already changed popular ideas as to the East. The notion, sanctioned by many eminent thinkers, had obtained currency that Eastern states were stationary; the belief, justified by the experience of many generations, that in any conflict between an Eastern and a European Power victory must fall to Europe, had assumed the character of an incontrovertible dogma. These ideas have now, in the opinion of most Englishmen, been proved erroneous. One Eastern state has fallen into the line of European progress, and has progressed more rapidly and perhaps advanced further in the arts of civilization than many European countries. Japan has adopted the latest forms of constitutional government, and has seized hold of the political ideas prevalent in the most progressive countries. Japan has assuredly shown a preëminent capacity for turning to account the inventions of every civilized community. Japan, again, has defeated on land and on sea one of the most powerful of European states. No doubt the change of feeling produced by striking events is far from entirely rational; a revolution of belief is always mixed up with a mass of exaggeration. People to whom, even two or three years ago, it seemed absolutely incredible that Japan should be able to resist the attack of Russia, now appear to assume that Russian power is a thing of the past, and that the forces of Japan will turn out in every contest an ever victorious host. But the question with which we are concerned is not the validity, but the existence, of certain opinions; and no candid observer can doubt that, for the moment, Englishmen at any rate are filled with astonishment and admiration at the achievements of their ally, and believe that Japan not only has achieved an immense triumph, but has also reversed the course of history, and forced us to form a quite new estimate of the triumphs, not only in arms, but in all the arts of civilization, that may be achieved by an Eastern state. This new belief may, indeed, turn out a delusion; but a faith firmly embraced may, even though it rest on delusion, produce, for a time at least, as many miracles as a creed which rests on the most certain and the most reasonable grounds.

Nor is it in the world of action—in the sphere, say, of diplomacy or of war—that the success of Japan is likely to produce the most extraordinary, and it may be the most formidable, results. Man is above all things an imitative animal: what he admires he imitates. Admiration itself is all but a form of imitation. Now the admiration felt for Japan by the Englishmen of to-day is one of the most patent phenomena of our time. Of the bravery, the skill, and the patriotism displayed by our allies, it is hardly possible to speak in too strong terms. It is absolutely certain that the classes who at present guide the policy of Japan must possess some rare virtues, and possess such virtues in a very rare degree. There runs throughout English society a curious idea not only that there are good and great men to be found in Japan, which is true enough, but that all Japanese are good and great, which is assuredly false. And with this idea is connected another, which obtains the readiest acceptance, that the Japanese, with virtues greater than those to be found in most European and Christian countries, have not, like the inhabitants of all other States, faults as well as virtues of their own. This sort of unqualified trust in the virtues of our allies is inconsistent with all the lessons of history, and all the inferences to be drawn from the knowledge and observation of human nature.

If there be one theological doctrine of which philosophers may accept the essence while rejecting the form, it is the dogma of original sin. The true life and the inner thought of Japan are at present equally unknown to us. I am willing enough to admit that the peculiar history of the Japanese people has produced special characteristics well worthy of respect or reverence. This one may not only admit, but hold to be almost certain. But the virtues, no less than the defects, of Christendom, are themselves the outcome of a long and complicated history, and of traditions, political, moral, and religious, in which our allies have not shared. It is folly to assume that a people whom we scarcely know, possess, in combination with the noblest characteristics of their own, every virtue which we rightly hold to be the product of the philosophy, the jurisprudence, the ethics, and the religious ideals which make up the realization of Christendom. This unbounded admiration excited by the heroic efforts of the Japanese to protect the independence and extend the power of their country is certain, in the long run, to promote imitation of Japanese habits and institutions.

But the matter does not end here. Englishmen have hitherto tacitly assumed that progress is identified with Christianity, and also with ideals derived from Greece and Rome. But Japan is a country which, while claiming and obtaining a place among the great civilized powers of the world, has been uninfluenced by the history and the literature of Judea, of Greece, or of Rome. There is a sense, indeed, in which Christendom has less in common with the civilization of Japan than with the civilization of Mohammedan Powers. Is it not conceivable that the rise of this non-Christian State will tell in many ways on the thoughts of Christendom? Is it not certain that the ethical and religious influence of Japan will, in all European countries or countries which derive their civilization from Europe, be vastly increased by the existence of that general disintegration of

beliefs which is a marked phenomenon of our time? But this topic is of too vast and complicated a character to be dealt with at the end of a letter, the aim of which will be accomplished if any readers of the *Nation* should be convinced that the triumph of Japan not only is an astonishing occurrence, but is also an event big with unforeseen and unknown consequences.

It may be allowable to add that this letter is written in no spirit of hostility to England's new ally. The present writer, in common with most other Englishmen, has watched the resistance of Japan to Russian aggression with sympathy, and, further, believes that, against the errors committed by the Unionist ministry, must be fairly set the boldness and the wisdom with which Mr. Balfour and his colleagues have fostered and strengthened the alliance between England and Japan.

AN OBSERVER.

THE ECONOMIC HESITATION IN ENGLAND.

DAWLISH, DEVON, September, 1905.

Plutarch, discoursing in his 'Morals' of the affairs of divers ancient peoples, declares that the prosperity of the Romans must be attributed to fortune. Not that the Romans had not great qualities—he gives them due praise; but, on a number of occasions which he specifies, circumstances favored them most wonderfully. The scales were trembling when some trifling event not the result of human volition turned the balance on their side, and they knew how to use their advantage. We moderns are not accustomed to speak of fortune as a cause, at least when we assume to be speaking scientifically, and we certainly would not hold true the refrain of the French song:

"Du bout du monde
Au bout du monde
Le hasard seul fait tout."

Nevertheless, disguise it as we will, we cannot help attributing exceptional prosperity, whether of a man or a people, to favoring conditions; and we are even readier to recognize misfortune as a *vera causa*. When one considers the amazing prosperity of the English people, after allowing full effect to their numerous virtues, there is a great residuum which can be explained only as the result of chance. It is, of course, superfluous to mention such advantages as their temperate climate, their bulwarks of stormy water, which differ from most fortifications in contributing, through the fisheries, to the common support, instead of being a burden—and their mines of coal and ore. Nor need we dwell on the material gain, or, perhaps we should say, the absence of loss, arising from the comparative homogeneity of the population and the mildness of religious controversies and differences. It is easy to see that these conditions, with the absence of dynastic disputes and revolutions, have enabled the common people to escape the military servitude which weighs down that class on the Continent—in itself an immense economic advantage. That trade should flourish under such circumstances is natural, but its prodigious development is, on the whole, to be explained by the removal of legislative restraints. Some measure of prosperity the English people would have enjoyed under any conceivable misgovernment, as Macaulay says; but there would have been no such accumulation of wealth as has taken place under the policy of free trade.

To be sure, this policy is not commonly spoken of as the gift of fortune. It is described as the embodiment of reasoned convictions. But, as a matter of fact, the reasoned convictions were the property of a small fraction of the educated class, and the corn-laws could not have been repealed had not the potatoes rotted for two years in succession in Ireland. The landlords, as a class, were then, as they are now, as they always have been and probably always will be, bigoted protectionists; the manufacturers as a class, wanted the taxes that hindered their business removed that their own gains might be increased, not because they accepted the principle of free trade. The common people knew little about principles, but they knew that bread was taxed and that they were starving because they could not afford to buy it at the price to which it was raised, as they were told, by this taxation. Their distress was grievous; it was not only pitiful, but alarming. Something had to be done to pacify, if not to relieve them; and Peel, with the convictions of a statesman, but by what his party regarded as a betrayal of his trust, took off the odious taxes. The relief was immediate; or, at all events, the suffering decreased, and the *post ergo propter* argument, always conclusive with most men, brought the policy of free trade into such favor that it carried everything before it. Even the landlords found their rents presently rising instead of falling, and, although perplexed at such a mysterious phenomenon, they could not very well grumble at being enriched when they had anticipated ruin.

Now the overthrow of protection (or, as Mill preferred to call it, the policy of restricting trade) was perhaps the greatest reform that was ever effected without revolution. Indeed, it would be hard to specify any reform effected through revolution that can be compared with it. It was a much greater reform than was understood by the mass of the English people. What they wanted was not a different principle of government, but cheaper food; and they got both. What the great leaders in the movement wanted was not cheaper food more than a change in the principle of government. Cobden said it was not the pounds, shillings and pence that he cared most about. He, and those who worked with him, longed for peace and good will on earth, and they knew no better way to promote it than to banish from government the practice of levying taxes either for the purpose of increasing the gains of a few citizens at the expense of the rest, or for the purpose of diminishing the gains of foreigners, no matter at whose expense. For it seems still not to be clearly understood that free trade, during centuries to come, perhaps, does not mean the abolition of customs duties, but taxation for revenue only. If government can obtain its necessary revenue most economically by levying customs duties, the free-trader does not object. His position is simply that rulers shall not tax the many for the gain of the few, nor tax commerce in order to inflict loss on foreigners. In either case government is corrupted, and in the latter case international hatred is stirred up. Would not Plutarch be justified in calling it the gift of fortune that the English people, calling for cheaper bread, received not only that, but also a principle of government more enlightened and beneficent than was ever enjoyed by any considerable people, under which they have had a half century of unparalleled prosperity?

Nor has fortune ceased to smile on this people. Other countries—our own, for example—having adopted an evil principle of government, cannot get rid of it. England, having blundered, or at least stumbled, into a sound system, finds it impossible to change it; for there are many reasons for believing that a majority of the English people, even of the better educated, would reject the principle of free trade, and would abandon the practice, if they could agree on any substitute. The landlords, if they ever had any doubts, are now protectionists *à outrance*. Cheap transportation brought their rents down, and a Liberal Government confiscated a large part of their remaining wealth by its enormous death duties. They would have the corn laws back again to-morrow if they could. The Imperialists—at least those of the Chamberlain type, for there are a few who cling to free trade with the invincible faith ascribed by Gibbon to the theologians who hold to both free-will and predestination—can propitiate the colonies only by taxes intended to injure other countries. Even among the manufacturing classes there is much wavering. Chamberlain is not likely to mistake the sentiment of Birmingham; and the grievous burden of the Boer war taxes has caused profits and wages to shrink everywhere. Workmen are not so comfortable as they were, and they are not all indisposed to listen to the argument, familiar to our ears, that foreign competition is ruining home industry. Talk with the people in Westmorland, where copper-mining is ceasing to be profitable, and they will tell you that American copper is brought in at a price which means ruin to the English producer. Talk with the Welsh people, and they will tell you that the French send over slates and sell them at prices which mean lower wages, or no wages, to the quarrymen in Wales. Go to Scotland, and they will point to Galashiels, where both masters and men have been reduced from affluence to poverty because of the prohibitory taxes imposed by our country on imported woollen goods. It is a political truism that when people are suffering they want conditions changed, and that then is the opportunity of the political charlatan.

What shall we say, then, of the recent action of the Trade-Union Congress, at which a resolution in support of the principle of free trade was adopted by a vote of 1,253,000 against 26,000? This means that Chamberlain's proposal to tax bread has no attraction for a poor man. It is not easy to convince him that he would not have to pay more for his bread, or that he would have more to pay withal. But there are several indications that the Trade Unionists do not hold to the principle of free trade, even if they do not favor a change of the existing tariff. Indeed, the most fundamental principle of the trade union is the same as that of the protectionists—special favors to special classes. Workmen outside

their ranks shall get no work if they can help it; and they insist on having a monopoly of governmental employment. The same congress that declared for free trade declared also that Government should feed school children as well as teach them; and Henry George's plan of "nationalizing" the land, *i. e.*, confiscating rents, is regularly approved by this body. Recently the employees of the telegraph service demanded more pay, threatening members of Parliament just as our postmen threaten our Congressmen. The Postmaster-General investigated the case, and it was proved beyond question that these employees were already in receipt of higher wages than persons in private employment doing equivalent work. He declared that he would not hold office if he were compelled to increase the discrimination in favor of a class even now too much favored; but the Radical press, ignoring the facts, roundly berated him, and the Trade-Union Congress endorsed the claims of the telegraphers. Under such circumstances a resolution commending free trade must be regarded as a rather academic declaration.

For the present, therefore, the law of inertia will prevail. Were the Liberals in office, Chamberlain might turn them out and try his experiment. But the Conservatives are in office without daring to let the experiment be tried, and when the Liberals come in they will certainly not try it. But the crisis will come when the Liberals are turned out—and it seems impossible that they should keep office long. They could hardly make up a cabinet out of the discordant elements of which their majority would be composed. The Irish will help only if paid for it. The Radicals are essentially Socialists; the *Daily News* lays it down that no one who does not favor municipal trading shall call himself a Liberal. A Liberal ministry would have to pander to both factions, and the country would soon be disgusted. That thousand million of dollars lost in South Africa will continue to lessen wages and profits under a Liberal Government, and the enormously increased military expenditure will yet make the weary Titan stagger. It is doubtful if such a government would venture to economize in this particular; the people seem to have eaten of the insane root, and the young men are all playing at soldiers. The panic which seized the country when Napoleon gathered his force at Boulogne has returned; people dream of invasion, and shudder at the thought of possible starvation if their enemies should sweep their commerce from the seas.

MACG.

MONTALEMBERT.

PARIS, September 30, 1905.

The past year in the French Chambers and in the French press has been full of discussions on the future relations of Church and State. The Concordat which was made by the First Consul, Bonaparte, and which is now *de facto* abrogated, lasted exactly a century. The future relations of Church and State will depend not only on the law which has been prepared by the French Chamber, and which will soon be submitted, but also on the interpretation and application of this law, and on the spirit which will animate the future Governments. Cavour's famous "Libera Chiesa in libero Stato" is a fine formula, but may be an empty word if the State is not inspired by tolerant and generous sentiments.

I have before me a book which has attracted my attention as emanating from a man who was for some time in the French Chambers, but who is known chiefly as a philanthrophist and as an active Catholic, M. Léon Lefébure, member of the Institute. He belongs to a class of laics who have the fervor of the Catholic priesthood. His work has for its title 'Portraits of Believers of the Nineteenth Century'—to wit, the well-known Montalembert; Augustin Cochin, a great philanthropist; François Rio; and A. Guthlin. The portrait of Montalembert recalled to me a volume, 'Montalembert,' written in 1897 by the Viscount de Meaux, his son-in-law, who became one of the ministers of the Broglie Cabinet. (M. de Meaux has recently published a remarkable volume on the Constituent Assembly of 1870, of which he was a member, and on the administration of Marshal MacMahon.) M. de Meaux sums up in this way the career of Montalembert:

"He conquered for France a new liberty, the only one which has been vindicated without violence and practised without disorder: the liberty of teaching. He did more; a declared enemy of the Revolutionary spirit, but a passionate friend of all liberties, he wished to employ these and these only in the defence of religion. He aimed to give religion a place at the hearth of modern society—an enterprise which he pursued through many difficulties."

Montalembert was born on the 15th of March, 1810. His father was an *émigré*, his mother was English. He was a type of the union of two races, and always preserved traces of his semi-English origin. He was educated by his Protestant grandfather, James Forbes, and spent his youth in England. His father had taken service in India, in the English army, during the Empire, and, after the fall of Napoleon, was appointed French minister to Stuttgart. Montalembert finished his studies in Paris, his father, meanwhile, having been made a peer. He was in England when the Revolution of 1830 broke out, made a visit to Ireland, which was in as great a ferment as France, and, on his return to France, joined the literary staff of a new paper, *L'Avenir*, in association with the Abbé de Lamennais and the Abbé Lacordaire. This journal never had many subscribers, but it made a great sensation; its programme was the alliance of religion and liberty. Its leaders stood off from the Legitimists, and were in favor of parliamentary government; they claimed perfect liberty for the Catholic Church. On his return from Ireland, Montalembert wrote: "I am no longer the same man. . . . My faith and my fervent attachment to Catholicism are no longer what they were. . . . I have gained here ten years of strength and of life." He was a Catholic Liberal, and, we may add, a combative Catholic. His combativeness, and the difficulty of reconciling his liberalism with ultramontane doctrines, prepared for him an arduous life; and it may be said that he struggled always with his natural friends as with his enemies.

He had the natural and invaluable gift of eloquence. Once, in the House of Peers, he said: "If you ask me on what occasion these convictions were born in my soul, I will tell you that it was on the day when I saw, fourteen years ago, the cross torn from the churches of Paris, dragged in the city streets, and thrown into the Seine, amid the plaudits of a maddened populace. This profaned cross I placed in my heart, and I swore to defend it"—language for which the Peers were very little prepared. When he appeared on the 19th of September, 1831, before the House of Peers for the first time, "I have," said he, "over the name which I bear, a name which is as great as the world, the name of Catholic. . . . There is something which is called faith, and this faith is not dead in all hearts. I have given to it my heart and my life; I am ready to sacrifice everything to the great and holy cause to which I have dedicated myself."

Montalembert did not enlist in any political party; he belonged neither to the monarchy nor to the republic; he belonged to a universal church. But there were divisions in this church. The founders of *L'Avenir* did not long remain united. The doctrines of the paper were examined in Rome and criticised; Lamennais did not feel disposed to accept all the Pope's decisions—"this old man, who knows nothing of the affairs of the world and who has no notion of the state of the Church, surrounded by men to whom religion is as indifferent as it is to all the cabinets of Europe, ambitious, greedy, . . . counting the people for nothing." Lamennais wrote these lines to a friend from Rome, which he called "a great tomb, where not much is found but worms and bones"; he spoke with warmth of "this moral desert, of these ruins, where you look in vain for movement, for faith, for love." Lacordaire was also in Rome, with Montalembert, waiting for the papal judgment. The doctrines of *L'Avenir* were solemnly condemned in the encyclical "Mirari vos." Lamennais submitted, as well as his two friends; but in 1834 he wrote to Montalembert that he abandoned his ecclesiastical functions; that he had signed the formulas sent to him for the sake of peace, but that he could no longer remain in the Church; that Catholicism, as it was understood in Rome, seemed to him a dying or dead form. Montalembert and Lacordaire now remained alone; they had shown their submission to Rome, but they did not abandon their liberal views. Montalembert, especially, believed in the necessity of reconciling the Church with parliamentary government and liberal institutions.

Under the Government of Louis-Philippe, from 1843 to 1848, Montalembert was the soul of the Catholic movement; after 1848, he was one of the leaders of a campaign undertaken for liberty of teaching. Curiously enough, the law of 1850, which gave liberty of teaching to the religious communities, under the supervision of the State, was violently attacked by the Catholic press and by a portion of the clergy; Montalembert was accused of having sacrificed the Church to the French University, and he lost some of his popularity. He committed a great error at the moment of the *Coup d'État* of December 2. All his friends in the French Assembly were victims of it; they were imprisoned and proscribed. The Second Empire, at its origin, had the élite of the nation opposed to it. Montalembert's name was placed on the list of a consultative committee, designed by the author of

he *Coup d'État* and placarded on all the walls of Paris. Montalembert went to the Élysée on the evening of the 5th of December. The Prince was very calm and phlegmatic as usual:

"My mission," he said, "is to reëstablish order in this country. . . . You reproach me with always speaking of order while invoking constantly the Revolution. But I see in the Revolution only the accomplished facts and the new interests which it created. . . . I assure you that there is no change in my disposition with regard to religion and the Pope. I desire their triumph, but stripped of the exagerrations which might hurt them without helping them."

Montalembert left the Élysée still irresolute. The Bishop of Orléans, Dupanloup, Father de Ravignan, as well as Lacordaire, advised him not to rally to the Empire; his lay friends gave him the same counsel. He disregarded their advice, and when the people were consulted in a solemn plébiscite, he urged Catholics not to abstain, but to give their assent. "To vote for Louis Napoleon," he wrote in a public letter dated December 12, 1851, "is not to approve all he has done; it is to choose between him and the total ruin of France. My choice is made." This declaration, which he regretted for the rest of his life, did not give him any real influence with the Prince; and, three weeks after, he ceased to visit the Élysée. He refused a seat in the Senate, he was for a time a member of the Corps Législatif, but soon understood that there was nothing for him to accomplish there, and he wrote, when he left it: "Nobody will know what I have suffered in this cave, without air or light, where I spent six years struggling with reptiles."

After his retirement from active politics, Montalembert gave himself up entirely to literary pursuits, like Guizot, Villemain, Tocqueville. An article which he wrote in a review on England was found objectionable to the Government, and he incurred a condemnation which might have had exile for its consequence. A few days afterwards, on December 2, 1858, the official journal published a note which was thus conceived: "The Emperor, on the occasion of the anniversary of the 2d of December, has relieved the Count de Montalembert of the condemnation pronounced upon him." This was by way of reminder that he had contributed to the establishment of the Government which he attacked. He did not accept this pardon, but took an appeal to a higher court, and was condemned only to an insignificant fine.

I shall not speak of the works which Montalembert published on monastic orders and on great saints, but will confine myself to his public career. He summed up his views, which were at the same time religious and political, in these words: "The future of modern society depends on two problems: to correct democracy by liberty, to reconcile Catholicism with democracy." He spoke for the last time in public in 1863, at the Catholic Congress of Malines. After a very long and painful illness, he died in Paris on the 13th of March, 1870. He was spared the torture which would have been inflicted on him by the war of 1870 and the invasion of France. His figure is so commanding that the other figures traced by M. Lefébure fall somewhat into the shade. His book deserves, however, to be read *in toto*, especially the chapters which concern Cochin, the Christian philanthropist, and Rio, the well-known author of 'Art Chrétien.'

Correspondence.

JESUS THE GALILEAN.

To the Editor of The Nation:

Sir: G. H. Warner, in his 'Jewish Spectre,' repeats the fancy of former anti-Jewish writers, that Jesus of Nazareth was not a Jew of Judea, but a Galilean; only thus could he possess the idealism foreign to the true Jew.

Among the ten million Jews of our day about nine-twentieths belong to the German and Polish ritual, hardly one-twentieth to the Spanish and Italian ritual. The pronunciation of Hebrew followed by the former points them out unmistakably as descendants of the Galileans, while the latter are the true Judeans, to judge by the same token. Thus, if the high idealism of the Nazarene, shown in his actions and teachings, sheds honor on his special kinsmen, the Galileans and their descendants, it enures to the benefit of the vast majority of present-day Jews.

Yours truly, L. N. D.

Louisville, Ky., October 11, 1905.

SWISS RAILWAY TICKETS.

To the Editor of The Nation:

Sir: Your correspondent in the *Nation* of October 12 deserves thanks for calling attention to the extremely useful form of railway ticket called "abonnement général," issued by the Swiss railways; but the information that he gives is incorrect in almost every detail. These tickets are issued for first, second or third class, and not only for a month, but for two weeks, three months or a year. The third-class ticket for one month costs forty francs, not seventy-five, which is the price of a second-class ticket for the same period. For a fortnight the rate is slightly higher than one-half of the rate for a month. The holder may, indeed, travel all day and all night, not only on the trains, but also on the lake steamers; but the tickets are not good on all the roads in Switzerland—those from Visp to Zermatt and from Interlaken to Grindelwald, for instance, as well as most of the mountain roads, being excepted. The only red tape to be gone through in procuring the ticket is that the user must furnish a photograph of himself, of an appropriate size, to be pasted on the ticket, for purposes of identification. These tickets can be had at any station in Switzerland, also at the agency of the Swiss railways in Milan; at the stations in large cities they are delivered at once; in small places, notice of twenty-four hours is required. The convenience of this ararngement is very great, to say nothing of the economy. Cook's agents would probably profess dense ignorance of the whole matter; but the traveller who is no linguist will find that a great many of the railway officials in Switzerland speak English and are reasonably courteous.

Similar tickets are issued for Belgium, for Italy (divided for this purpose into zones), and for parts of France. Most travellers will find them more useful than the old-fashioned "circular tour."

Kenneth McKenzie.

New Haven, Conn., October 16, 1905.

Notes.

Charles Scribner's Sons will publish directly 'Outdoor Pastimes of an American Hunter,' by Theodore Roosevelt; 'Essays in Application,' by Henry Van Dyke; 'A History of Egypt,' by James Henry Breasted; 'The House of Mirth,' by Edith Wharton; and 'The Fairy Godmother-in-law,' by Oliver Herford.

The horticultural wizard, Luther Burbank, is the subject of W. S. Harwood's 'New Creations in Plant Life,' just being published by Macmillan Co., together with 'The Character of Renaissance Architecture,' by Professor Charles H. Moore, of Harvard, profusely illustrated.

J. B. Lippincott Co.'s announcements include 'Newport: Our Social Capital,' by Mrs. John King Van Rensselaer; 'Facts and Fancies about Java,' by Augusta De Wit; 'Round about Pekin,' by Mrs. Archibald Little; 'Primitive Art in Egypt,' by Jean Capart; 'Natural History in Zoölogical Gardens,' by Frank E. Beddard; 'Figure Composition,' by Richard G. Hatton; and 'Saddle and Song,' an anthology.

Small, Maynard & Co. have nearly ready 'The Fleeing Nymph,' a new volume of verse by Lloyd Mifflin; 'A Handbook of Figure-Skating,' by George H. Brown; and 'John Fiske,' by Thomas Sergeant Perry (in the "Beacon Biographies").

The Oxford University Press will publish immediately an authorized translation of G. Schiaparelli's 'Astronomy in the Old Testament.'

George Borrow's habit of sprinkling his works with his assorted lingoes, especially the gipsy, without translating the word or phrase, prepared a welcome for his 'Romano Lavo-lil: Wordbook of the Romany or English Gipsy Language,' published in 1873. It is now reissued in very open and readable typography by Murray in London (New York: Putnams). The vocabulary proper occupies about fifty pages; the miscellany which succeeds is largely bilingual, displayed on opposing pages, and embraces anecdotes, songs, dissertations on the English gipsies and gipsy names, on fortune-telling and the metropolitan gipsyries, etc. In the last section, "Kirk Yetholm," Borrow himself appears in one of his inimitable conversations, armed with his inseparable umbrella. No Borrow library can dispense with this book.

A selection, with decent omissions, of 'The Love Poems of John Donne,' by Charles Eliot Norton, makes a delectable little volume in the Riverside Press Editions of Houghton, Mifflin & Co. Mr. Norton supplies also a brief critical introduction and some helpful notes. The limited number of copies can hardly fail to be exceeded by the demand. Brown cloth sides and parchment backing have a fitting archaic simplicity.

The first five out of seven slender little volumes, 'Graded Poetry Readers' (Maynard, Merrill & Co.), commend the enterprise to teachers and parents. The

editors are Miss Katherine D. Blake and Miss Georgia Alexander, of the East and of the West respectively, whose introduction reveals a right conception and is an earnest of judicious execution. There is, for elder critics, a pleasant catholicity that remembers Lydia Maria Child, Eliza Lee Follen, Hannah Gould, William and Mary Howitt, and Mrs. Hemans, along with Christina Rossetti, R. L. Stevenson, Helen Hunt Jackson, Emily Dickinson, Eugene Field, and J. Whitcomb Riley, and the greatest masters of English verse. Beyond the first two or three numbers or grades, the child can roam at large without much attention to the order. The thinness of the volume will encourage him to peruse it to the end.

Richard Hildreth's 'Japan as It Was and Is,' though written in 1861, has no superior as a summary of European relations with Japan up to the Perry era. It has been neatly reprinted in clear type in Tokio (Sanshusha), even to lithographic reproduction of map and title-page, and edited by K. Murakawa, who has supplemented the original footnotes and enlarged and improved the index. Hildreth's appendices are retained. The especial value of this (second) edition is that, after every Japanese word or name, in text and index (except where the editor has been unable to make identification because of uncouth spelling), the Chinese characters or Japanese *kana* are added. This is calculated to give much pleasure, not only to the Japanese, but to all who enjoy the illuminating Chinese picture-characters, which tell a story to the eye that our types cannot. It is good news to hear that Prof. E. W. Clement is about to issue a revised edition of Hildreth's work, of which Americans may be proud, with a continuation, on the same general principles of historical treatment, to the present time.

Archibald Little, the explorer of inland China and author of 'Through the Yang-tse Gorges,' has issued through the Clarendon Press, Oxford (New York: Henry Frowde), 'The Far East,' which is a geographic and physiographic description of what was once the Chinese world, including Japan. Though not a geographer or geologist by profession, Mr. Little has been worthily associated with the distinguished writers of the Geographical Series, of which this book is one. His long and intimate personal acquaintance with very much of the area of the countries described makes full amends for any lack of expert knowledge. Although old residents in the countries which were once Chinese in culture, but are now so only traditionally, may discern here and there inaccuracies, and what in themselves might be glaring errors if set forth in historical monographs, yet these are not of the sort which affect the author's conclusions or the general accuracy of his description, for he has ever an eye to the great underlying bases and to the visible features of the landscape. The numerous maps, sketches, and diagrams show him to be a man thoroughly familiar with China's drainage basins, river routes, watercourses, and coast contours. Consequently, one who reads this book gains quickly and thoroughly a general idea of the country's possibilities for commerce and human advancement. Of the seventeen chapters, nine are very properly devoted to the three great divisions or river-valleys of China proper—that is, the northern and middle basins and the intermediate provinces. The dependencies are then treated, Mantchuria, Mongolia, Turkestan, and Tibet, and those formerly under Chinese rule, Indo-China and Korea; Siam being the buffer kingdom and Japan the Island Empire. With a full index, this is a first-class work of reference. A little revision, by experts in other countries as familiar each with his own province as is Mr. Little with all China, would have made this work almost perfect.

'The Diary of a Girl in France in 1821' (E. P. Dutton & Co.) was written by one Mary Browne, a young north-country girl, who, with her parents and five brothers and sisters, spent rather less than four months of one summer in the neighborhood of Paris about the time of Napoleon's death. Mary Browne was no Marie Bashkirtseff. Her diary is written in the immature style of a girl of fourteen, gifted with no more than the average intelligence. What makes the book amusing is its frank insularity. Little Miss Browne lived long before it came to be good form in England to appreciate, or at least tolerate, foreign clothes and manners. She would have thought it unpatriotic to admire anything essentially French, and she found everything that the family encountered destestable, from the looks of the women to the bread and butter. The Brownes took a house at Versailles, and the daughters went to a school of which the diary gives a lively and most unflattering description. At last their father, who had left Cumberland in search of a warmer climate, decided that even the weather in France was a fraud, and the Brownes turned their backs on French ignorance, dirt, and bad manners. They had suffered such misery on the crossing from Dover that, in returning, they arranged to charter a whole ship, and sailed from Dieppe. The account of both these passages should be read by those who nowadays complain of the discomforts of a Channel crossing. The diary is copiously illustrated with the writer's original drawings, done with great spirit and an absolute lack of technique. The volume is beautifully got up.

We have no word in English to describe a literary type which is not uncommon and is usually wrongly labelled. This is the semi-dramatic dialogue that aims at a sort of photography, at reproducing the scenes and dialogue of every-day life, without any devices of intrigue, development of character, or dénouement. The Greeks called this type the mime, and the best example in Greek literature is the famous Fifteenth Idyl of Theocritus, which reproduces the chatter of two Sicilian women who go to see the festival of Adonis in Alexandria. Just such a mime is Miss Marguerite Merington's 'Cranford' (Fox, Duffield & Co.), misnamed a "play," and arranged in three acts as a "comedy." Sophron, however, the Sicilian writer of mimes, whom Theocritus, and even Plato, imitated, would have recognized in this adaptation of Mrs. Gaskell's novel three mimes really disconnected, wholly undramatic, not in the least suited to the ordinary stage. He would have called the first "act," "Women drinking tea in a small country town"; the second he would have written rather differently, so as to make either the conjuror's illness, or Lady Glenmire's mésalliance, or the loss of Miss Matty's fortune, the central interest, instead of jumbling them all together, as Miss Merington has done; the third "act" he would have called, "The country tea-shop," and omitted the irrelevant brother. 'Cranford,' the novel, is, in fact, a perfect storehouse of "mimes" of provincial women, their manners and affectations and petty social prejudices; but to carve a three-act comedy out of it is a *tour de force* which merely exposes its essentially undramatic qualities. We commend the present attempt to the dramatic societies of women's colleges, and we hope that when they perform it they will label it "'Cranford,' a Mime."

There is some information on a great many subjects in G. Woolliscroft Rhead's 'Principles of Design' (London: B. T. Batsford; New York: Scribners), but most of it is so summary as to be of little use, and not all of it is correct, while only about sixteen pages answer at all strictly to the title. Its only conceivable purpose is that which the author rather disclaims, to afford a crib-book for candidates for English Board of Education examinations.

The two latest volumes of reproductions of drawings, in the series published by Newnes, in London, and imported by the Scribners, are devoted to the drawings of Rossetti and Poynter. In taking up modern work, after Dürer and Holbein, there must necessarily be a lowering of tone, but this is particularly noticeable when the modern work is English. Leighton is almost the only Englishman who really drew. Rossetti's amateurishness is painfully evident in the present collection, but, after all, there is more life and beauty in his often feeble work than in the mediocre professionalism of Poynter. The latter artist's work, while relatively correct, is singularly uninspiring, and among the forty-eight drawings by him here reproduced there is only one that is capable of giving a sensitive eye any real pleasure. It would add very much to the usefulness and intelligibility of these volumes if the publishers would put the drawings in something like chronological order. In the Rossetti volume the mixing up of drawings of all periods and widely differing styles is very confusing. In our copy the confusion is aggravated by the omission of two plates and the duplication of two others. In neither of these volumes is the text of any importance. Its appearance is probably a concession to the notion that a book should contain *some* reading matter.

'A Descriptive Handbook of Architecture,' by Martin A. Buckmaster, A.R.C.A., who is "Art Master" at Tonbridge School and is also an examiner in several public positions in England (London: Routledge; New York: Dutton), contains 180 pages, very largely taken up with cuts of different kinds, and with tables of dates and names. As is natural in such a case, nearly half the book is devoted to the architecture of England. The five English chapters come in the middle of the book, after the very brief treatment of Classic Architecture—Greek and Roman building viewed comparatively. What follows still is limited to a chapter on French Gothic, and a final chapter on the Renaissance, in which, again, England, the country in which the Renaissance is less easily traceable than in any land that it reached

at all, comes to the front, and the illustrations are drawn exclusively from English sources. It is, of course, a grave question how far such a book can be of use to students. Perhaps the title might be changed to something like this: 'English Architecture, with some Allusion to its Affiliations.' Then it might be hoped that the reader would understand that his attention was to be concentrated on chapters v. to x. inclusive, and that he need not look further except for some suggestions. Even in the English chapters, however, there is an unfortunate tendency to insist upon names and dates, to the nearly complete exclusion of guiding principles by which systems of design may be discriminated. This would almost seem, in its innocent inutility, to be a very old volume reshaped with new pictures, including perhaps fifty half-tones of considerable value.

The new volume of the Langham Series of Art Monographs (Scribners) deals with 'Italian Architecture.' It professes to be a "brief account of the principles and progress" of that art, and is illustrated by five half-tones as large as the very small page allows, and a dozen illustrations from rough but expressive drawings. Six chapters treat of the Architecture of Rome, the Basilicas, and the Byzantine, Lombard Romanesque, "Gothic Romanesque," and Renaissance styles. Now when such a problem is set as this, of treating a vast subject in the length of two magazine articles, the need is felt of some special method of treatment; but the thought wanders about through history, social philosophy, principles of construction and theories of design in a way that might lead to clear results with five times the space at the author's disposal, whereas in 20,000 words the thought could be made intelligible only by great compactness and severity of phrasing. The adaptation of a round cupola to a square space which it must roof is called (p. 32) squaring the circle. The Basilican style is assumed to depend upon and to embody the newly introduced springing of the round arches directly from the capitals (p. 21 ff.), although the Christian basilicas which are most highly esteemed have lintels from column to column. The explanation of the Lombard vaulting (p. 55) involves a misconception; and throughout the book there is a searching for poetical analogies where there is really not room enough for the presentation of essential facts. On the whole, we find this book less to the purpose than most of the other volumes of the series.

We have from time to time brought to the notice of our readers the remarkable discoveries of structural refinements in mediæval buildings made by Prof. William H. Goodyear, curator of fine arts in the Brooklyn Museum. The long unsuspected optical refinements of classic buildings have their parallel in the far more obvious, but still longer unobserved or uninterpreted, irregularities of the works of subsequent ages. Thirty-five years ago, Professor Goodyear commenced the study of these puzzling phenomena, and has for the last ten years pursued it with singular vigor and success. That he has won his case in favor of the existence of optical and other refinements in many buildings and in a great variety of forms, no unprejudiced person who has taken the trouble to read his papers and examine their lucid illustrations can be found to deny. The study of ancient buildings which Professor Goodyear has carried on from Constantinople, through Greece, Sicily, and Italy to France, has resulted in the making of surveys and of great numbers of photographs, which, presented in the form of enlargements, constitute a collection of the highest interest. Ordinarily to be seen at the Brooklyn Museum, this collection (or at least the better part of it) has been taken to Edinburgh, where, under the auspices of the Edinburgh Architectural Association, it is now being publicly shown. The exhibition is arousing the lively interest of architects and archæologists, and so distinguished an authority on mediæval architecture as Mr. Edward S. Prior is about to write a complete account of it for the *Architectural Review*. For the exhibition, Professor Goodyear has prepared an admirable *catalogue raisonnée* of over two hundred pages, illustrated with many reproductions of the plans and photographs, and summing up the results of his many years of labor in a most convincing fashion.

Those who remember the great care which the late William Hamilton Gibson was accustomed to bestow upon even the slightest of his publications, will regret that certain of his rough drafts of orchids, which he doubtless intended to elaborate, have been permitted to see the light in the form given to them in 'Our Native Orchids' (Doubleday, Page & Co.). The title-page states that the descriptive text "has been elaborated from the author's notes," but even the hastiest perusal indicates that the work of elaboration has not been upon lines which Mr. Gibson would have approved. Certainly, Mr. Gibson could never have adopted the nomenclature here given. Careful reading of the text and critical examination of the pictures will convince one that this posthumous publication is decidedly a mistake, unworthy of the artist and author whose name it is made to bear.

'Carnations, Picotees, and the Wild and Garden Pinks,' written by several authorities and edited by E. T. Cook (London: Offices of *Country Life*), falls into the comfortably long list of special treatises in horticulture. The volume is a companion to 'Sweet Violets and Pansies.' It is to be hoped that the plain, practical directions for cultivation will lead many amateurs to brighten their homes with these old-fashioned flowers. The silly custom of bestowing on certain varieties of cultivated plants the names of living persons sometimes leads to amusing results, as shown in the following extract from this volume (it is better to abbreviate the proper names): "Mrs. T. W. L. has improved rather than otherwise with those who grow carnations. Ethel C., . . . from newly imported stock, did not come good at first. . . . Royalty appears to be identical with the above." Carnations and picotees differ mainly in the color of the flowers, the latter being variously dotted.

Copious quotations from Dante, in the original and in translation, sketches of Italian travel, accompanied by historical reminiscence and anecdote, if combined by a man of literary taste, may make a book attractive to the many readers who are always glad to be reminded of Italy—all the more attractive if it be liberally furnished with new and artistic photogravures. Such a compound is 'Dante the Wayfarer,' by Christopher Hare (Charles Scribner's Sons), a handsome, portly volume, full of pleasing views of scenery and buildings, and consisting, in large measure, of extracts from the "Wayfarer" himself. The author is evidently not a profound Dante scholar, but he has read his poet assiduously, and shows unusual skill in selecting passages appropriate to the places described. Such chapters as contain a considerable proportion of Mr. Hare's own composition—"Travel in the Middle Ages," for instance—are interestingly written.

In a small and compact volume of about two hundred pages Dr. George B. Hussey has produced a 'Handbook of Latin Homonyms' (Boston: Sanborn & Co.). He has done pioneer's work, for this is the first systematic treatment of the subject for Latin, and indeed it is one which has been little investigated, except for the French language. The lists in this book are made up from an examination of the works of Cæsar, Nepos, Sallust, Virgil, Horace, Terence, Tacitus, and the orations of Cicero, together with what remains of the first twenty-two books of Livy. Much care has obviously been devoted to its preparation, and it will be found to be of considerable service in settling the puzzling questions of identity which often arise in the richly inflected Latin.

Good Americans, to whom the morning meal is (or should be) the pleasantest of the day, will find decidedly helpful to that end Olive Green's 'What to Have for Breakfast' (Putnams). It is the first of this firm's projected "Home-Maker Series," and augurs well for its five successors. Author and publisher profess ignorance of any other work on this momentous theme, and we join ours to theirs. There is some light introductory gossip about the rationale of breakfast as a light or a hearty meal, the digestibility of certain foods, and the like, followed by directions how to set the table; next come the receipts, and finally the year's menus, day by day. The little book is very pretty.

The place which the public library has taken in our educational system is well indicated in the fifty-third annual report of the Boston Public Library. Of its 201 agencies, delivery stations and places of deposit, 103 are public and parochial schools. Instruction in the use of the Library was given during the year to twenty-one classes from eleven schools, and a comprehensive finding-list of books for boys and girls, the preparation of which has extended over several years, has been published. The usefulness of the Library to the general public has been greatly increased by the placing of nearly 200,000 volumes (including selections from the weekly accessions) permanently on open shelves, available for use by any visitor without formality. Its cosmopolitan character is shown by the fact that 23,847 books in thirty-four different foreign languages were taken out for home reading. Out of a total of 597 works of English prose fiction received for examination by the volunteer fiction committee, 129 were accepted. Among the noteworthy additions are twelve works printed by Benjamin Franklin, and the manuscript collection of the late Charles W. Folsom, formerly the literary director of the University Press at Cambridge, Mass., and consequently in correspondence with many distin-

guished writers, such as Bryant, Longfellow, Holmes, Sumner, and Ticknor, the issue of whose publications was under his charge. A history of the Library, giving a complete account of its origin and development during the fifty years of its existence, is about to be published.

—The first volume of the 'History of the Collections contained in the Natural History Departments of the British Museum' describes the departments of Botany, Geology, and Mineralogy, as well as the Libraries; a second volume will describe the department of Zoölogy. The collections of Sir Hans Sloane, which the Parliament purchased in 1753, consisted of "coins, ancient and modern antiquities, seals, cameos and intaglios, precious stones, agates, jaspers, vessels of agate and jasper, crystals, mathematical instruments, paintings, and other things." Among the "other things" not particularly mentioned were Sir Hans's extensive collections of natural history specimens, which formed the nucleus of what is now the richest and most important natural-history museum in the world. Soon after the erection of the large circular reading-room in 1857 it became evident that Montague House could not long suffice for the constantly increasing collections, and in 1860 a resolution was carried at a meeting of the Trustees to the effect that it was "expedient that the Natural History Collections should be removed from the British Museum." In 1863, the House of Commons sanctioned the purchase of a site, but it was not until 1873 that the work of erecting a building began, and not until 1880 that this was turned over to the Trustees. The removal of the collections was commenced at once, and in 1881 the new Museum in Cromwell Road was opened to the public. The volume before us is essentially a history of the collections, and describes their growth and development. The description of each department opens with a summary sketch, whereupon follows a chronological account enumerating the principal accessions; lastly comes a list of the most important contributors, from all countries. Each name is followed by a statement of the respective contributions.

—While the bulk of Sir Hans Sloane's library went to make up the Library proper of the British Museum, three works accompanied the natural-history collections, namely, his manuscript catalogue of them, a copy of his own 'Voyage to the Islands Madera, Barbados, and Jamaica,' annotated by himself, with the original drawings of plants from which the accompanying plates were made, and a copy of Ray's 'Historia Plantarum.' Later on, some other volumes belonging to the Sloane collection were turned over to the Department library. Other works were added from time to time, especially manuscripts and drawings, but it was not until 1842 that books were purchased systematically for the Natural History Libraries. At present the library contains considerably over 100,000 volumes. The Botanical department was created in 1827, when Sir Joseph Banks's herbarium, which he had bequeathed to his librarian, Robert Brown, was transferred to the British Museum. To this was then added the Sloane herbarium. At the death of Robert Brown, who was the first Keeper of the department, his herbarium came into the possession of his successor in office, J. J. Bennett, and was kept in the Museum during his lifetime. The collection of Australian plants then became the property of the Museum. The department of Geology includes Palæontology as well, and among the most important accessions of fossils we might mention James Sowerby's collection, containing most of the original British fossils described in his 'Mineral Conchology'; it was acquired in 1860. Very few large collections of minerals have been purchased by the Trustees, on account of the great chances of duplication.

—The severest of all touchstones of mathematical skill is universally acknowledged to be the working out of an exact numerical account of the way our satellite performs its intricate motions—the "theory" of the moon, as the mathematicians still call it, after Ptolemy. Well, inquire, say in Berlin, or in Pulkowa, or Paramatta, or Tacubaya, or in any corner of the earth where high mathematics is cultivated, who in our time has shown the most surpassing mastery of the theory of the moon, and the answer of any competent authority will come unhesitatingly, "It is Mr. G. W. Hill of Nyack Falls, N. Y." Had that village been aware of its renown, it might not have changed its name, alluring as the melody of "West Nyack" no doubt is. But Mr. Hill is the reverse of the kind of man to whom the Sunday *Herald* devotes a page, and it is probable that the villagers know him only as the genial but retiring gentleman who so loves the paternal farm on which he was born and where he still lives. The next most rebarbative problem of celestial mechanics, after the moon's, is perhaps the theory of Jupiter and Saturn (which have to be treated together), and in this Mr. Hill has outdone all other astronomers. But this is as nothing to his achievements in the theory of the moon. For here the method he pursued launched him on an unknown sea, requiring an entirely new chapter to be added to the calculus; and here, by means of the staggering conception of an infinite determinant, he succeeded in the hardy enterprise of virtually solving a differential equation of an infinite order. The boldness of the undertaking consisted in this: that Hill introduced into mathematics a kind of reasoning unrecognized by the mathematicians (albeit they had often unconsciously employed it), namely, the experimental reasoning of physics. For, an infinite determinant being a complete novelty, it was as yet unknown whether the particular type of such a complex series required for Hill's method of solution was convergent or not, or, if it were, whether it possessed the particular kind of convergency that would adapt it to the operations of the calculus. Hill accordingly treated its satisfying this requirement as he would have treated a physical hypothesis, and proceeded to put it to the test of experiment, by calculating, on that theory, the rate of revolution of the axis of the moon's elliptical orbit, which, of all the elements of the solar system, is observationally the one by far the most sensitive to any erroneous assumption about the perturbations. He relied upon the knowledge that if his mathematics were wrong, there was every reason to expect that his calculated motion of the perigee would be sensibly—would be enormously—at variance with observation. It turned out, however, to agree with observation as closely as the results of observation were known. Yet it must be confessed that it is not as clear as the noonday sun that Mr. Hill himself, any more than previous mathematicians, perceived that he was applying Baconian reasoning to mathematics. In any case the brilliant demonstration of Poincaré was needed to enable future astronomers to apply Hill's method with entire confidence to all problems of three bodies. Nevertheless, when we consider that it would, after all, only be to physical questions that such complicated differential equations would ever be applied, Hill's procedure is seen to be of a piece with all the other reasoning that would go along with it, and therefore logically to be beyond criticism.

—By such means our countryman abridged the labor of certain numerical calculations from months to hours, while vastly increasing their exactitude. Mr. Hill's work upon the Moon, originally published over twenty years ago, has since been perfected in some parts and improved in others by an Englishman, Brown. Still, excellent as Brown's work is said to be, the chief merit of the new method confessedly belongs to our neighbor across the river, eighteen miles above High Bridge. Therefore, with a stately quarto, Volume I. of 'The Collected Mathematical Works of George William Hill,' published by the Carnegie Institution, there came to us a visitor too infrequent of late years—we mean the oldtime glow of exultant American feeling. The volume is prefaced with a long and most interesting account of Mr. Hill and his work from the pen (on the whole the most competent and suitable that could have been selected) of M. Henri Poincaré. It is in French, of course; and we find M. Poincaré writing *collège* with an acute accent, a practice which is redolent of Nancy as it was before the war, the Nancy of old Dr. Poincaré. The volume falls but little short of being a handsome one; paper and type are good. There is a pretty good portrait of the man; but in the pose of the head, though it is not foreign to Mr. Hill, we see more of the photographer than of his subject.

OUR IRELAND IN THE PACIFIC.

Our Philippine Problem: A Study of American Colonial Policy. By Henry Parker Willis, Ph.D. Henry Holt & Co. 1905.

Professor Willis recounts our experience in governing the Philippines, with the design of subordinating his narrative to an elucidation of our pending problem in the islands. His competence for treating the subject is based upon special study of available material in this country, and upon first-hand investigation pursued during several months of travel in the archipelago in 1904. He prefaces his work with a history of our occupancy and conquest, so abridged as to furnish only the necessary clue to an understanding of subsequent happenings. Brief as is this historical introduction, it definitely locates the responsibility for our Philippine problem. Despite Mr. McKinley's ringing avowal that, according to the "American code of morals, forcible annexation is criminal aggression," it was by Mr. McKinley's order to Gen. Otis in December, 1898, before even

the Senate had ratified the treaty of peace with Spain, that the military conquest of the Philippines was begun. Fearful of alienating public opinion, and fearful also of incurring the reproach of inefficiency, "benevolent assimilation" and "pacification" were pronounced *faits accomplis* by the Executive on April 7, 1900; and by an executive order of even date the so-called "civil government," with Judge Taft at its head, was created. The essential character of this Government, its various policies, and the attitude of Congress towards the islands afford the best vantage-ground from which to survey the bulk of Professor Willis's four hundred and fifty pages.

According to him, what is styled the "civil government" is essentially of a politico-military character, and its head, the Governor-General, an autocrat whose decrees the other members of the Philippine Commission register with promptitude and without remonstrance. At the disposal of the Governor-General stand more than ten thousand regular United States troops and five thousand enlisted Filipino scouts now in the pay and service of this country. This is the peace basis of the army establishment in a pacified population about equal to that of New York State. Besides the regular troops, the constabulary or local police number 5,000. The general assembly which is to be convened first in 1906, as a lower legislative chamber to the Commission as an upper house, has been designed as an intentional Rump. Should it negative appropriation measures, the budget of the previous year stands reenacted (p. 45). The judiciary of the islands is described as a pliant and serviceable "political agency," always "bowing the knee to the executive" (p. 102). There is no trial by jury; and, at the instance of the Governor-General (nominally at the instance of the Commission), intractable judges "may be transferred from one judicial district to another" (p. 103). The local government is portrayed as a devitalized and artificial affair. Our form of municipal government—a mayor and council—has been imposed upon the islands despite its novelty and its inappropriateness for districts essentially agricultural with scattered dwellings. The suffrage is so hedged about as to be in the hands of less than 2 per cent. of the population (p. 81). The voters, as might be surmised, are the ultra-conservatives who are naturally most inclined to look with toleration upon American control. Between the municipal or local governments and the central or insular government stand a number of provincial governments. These, as the author shows, are but thinly disguised satrapies, each of which has at its head a board of three. Of this number two are the appointees of the Commission. The civil service of the islands consists of Americans commonly drawing relatively large salaries, and Filipinos, mostly in subordinate positions, drawing relatively low salaries. The glaring disparity in rank and pay is here attested beyond all doubt, but whether it is not the inevitable outcome of a civil service where a knowledge of English, the official language, is indispensable, is hardly given sufficient consideration by Mr. Willis. That his picture of the government's structure is technically correct as to detail is very likely, but the structure of government and the actual workings of government are two different things; and a careful reading of this work suggests the misgiving that the author does not wholly appreciate the extent to which the character and aims of the Governor-General may restrain the potentialities for evil inherent in the abstract political framework. However extreme may have been Gov. Taft's powers, it would strike most people who have followed his career from afar, that he of all men would be least likely to use power tyrannously. The exponent of a mistaken system he may have been, and mistakes he has probably made. But that he had the good of the natives seriously at heart is a cardinal fact clear to common observation. Not to weigh such a fact is to omit a consideration of great moment. On this side, of calculating the personal equation involved, Professor Willis's survey of the situation is defective.

The policies of the civil government have embraced many fields—finance, education, ecclesiastical matters, social customs, sanitation, transportation, and land. To each of these a careful and, apparently, a trustworthy analysis is devoted. From Professor Willis's estimate, it appears that the cost of government in the islands under our rule has vastly increased—he estimates it at fourfold (p. 415). This, however, is only the increased cost to the natives. The annual cost of the islands to this country is not far from $20,000,000. This figure covers the maintenance and transportation of military and naval forces, and the salaries of civil servants "lent" to our colonial administrators. To this annual outlay must be added the liability we incur by our virtual guarantee of Philippine bonds. The increase in taxation imposed upon the natives over the burden borne under Spanish rule is hard to come at. This is partly because the island's financial accounts are not easy to decipher, and partly because the Mexican dollar was the basis of compufation until our advent. It is not necessarily an adverse criticism of this work to say that a more lucid comparison of the relative cost of Spanish and American government than the one here afforded is desirable. It appears clear that the provincial governments in particular have failed to keep expenditure within income. The Commission's imposition of a land tax, although restricted to seven-eighths of 1 per cent. of the capital value of land, is especially condemned by Professor Willis on the ground of its novelty and the depressed condition of agriculture. Perhaps no financial disclosure is more significant than this—that on a four-year average, out of an annual outlay of $10,300,000, only $3,000,000 has been expended on internal improvements and education. The remainder has gone for maintaining the courts, constabulary, and civil bureaus (p. 412).

It is disappointing to learn that the school system is so ineffective. It is, as a whole, "wretchedly equipped, miserably housed, and badly officered" (p. 236). The resignations of American teachers "amount to about one-third of the total force each year" (p. 232); and the result of trying to instruct the mass of the native children in English is alleged to be "a piece of great folly" (p. 239), inasmuch as it prevents them from getting a knowledge of the rudiments in any tongue whatever. Apart from preparing a small number for the civil service, the making of English the basis for instruction is very similar, as the author strikingly puts it, to what we might expect if the negroes in our Southern States were taught the common-school branches exclusively in French.

Professor Willis registers an equally adverse verdict upon the Commission's policy in ecclesiastical and social matters. The purchase of the friars' lands—400,000 acres for $7,200,000—and its tender to the natives at cost, is only affording the population an opportunity to buy what "they in many instances regard as their own, at an inflated price" (p. 199). The cognate topic of the Aglipayan, or independent Catholic Church, is treated in full, but its reputed strength, at nearly one-half the total population, makes one query what the author describes as "conservative estimates, made by American observers" (p. 217). There is much to depress the reader in what is recounted of the practically public recognition and regulation of prostitution (p. 257); and as regards opium, the Commission's action, or rather inaction, is disappointing, from both a social and a financial standpoint.

The modest grain of approval which Professor Willis finds himself able to bestow upon the civil government is mainly in connection with public sanitation and the public-land policy. It is true that he finds the Government fatally at fault in that the roads it has built are totally inadequate to the real needs of the country. But the policy of public land grants, whereby the individual is restricted to 16 hectares (about 40 acres), and corporations to 1,024 hectares, meets with the author's approval as "conspicuously wise" (p. 375). Substantial commendation is accorded also to the Government's policy of sanitation. Mr. Willis's discussion of this topic evokes one of the few far-reaching philosophic observations which he affords the reader.

"On the whole," he remarks, in concluding the chapters on Social Conditions (pp. 269, 270), "it is fair to say that, in dealing with the Philippine conditions, Americans have had greatest success where physical conditions requiring the application of better scientific methods have been involved, and least where general social questions involving greater knowledge of and sympathy with the natives have had to be worked out. In this latter respect we have fallen between two stools, neither applying our own codes of social morality and restraint, nor accommodating ourselves to those of the natives. How far this situation will be remedied in the future will depend entirely on the extent to which we are able to apply sympathetic methods of social control, growing out of a deeper insight into native character, and greater respect for native institutions and prejudices."

The administrative failures of the Commission, however, have never shown the same heartless selfishness as is evinced by our Congress in its economic legislation for the unhappy islands. "Three things," as the author points out (p. 271), "were evidently of primary importance at the outset: sufficient markets for native products, cheap transportation for such products, and a sound and simple currency basis for business operations in the islands." It was only the last that Congress gave them. Even the introduction of the gold standard was attained, in Professor Willis's opinion, at unnecessary expense, and was so manipulated as to advance the price of American silver required for striking the new Philip-

pine coinage. Even if we wholly disallow the author's contentions in this matter—and they do savor of censoriousness—Congressional legislation on the tariff and navigation fully substantiates the finding that "Congress has pursued towards the Philippines a policy of slavish subservience to special American interests" (p. 311). To the crying need for foreign markets Congress responded by enacting the Dingley rates with a 25 per cent. discount on Philippine exports to this country. Congress, moreover, practically struck off the Philippine export duty on hemp sent to the United States. The loss to the Philippine Treasury by this act, up to June 30, 1904, had far exceeded the refunded customs duties collected on our frontier on incoming Philippine goods. To the Philippines' need for cheap transportation the response of Congress was the act of March 8, 1902, which subjects foreign ships coming from the islands to this country to the same tonnage duties as are exacted from foreign vessels coming to our ports from foreign countries. We thus impose on our wards the burden of high freights in order that our carriers, with inadequate transportation facilities by water, may monopolize the carrying trade. Professor Willis does not fail to notice Secretary Taft's denunciation of the avowed intention of Congress to limit all trade between the Philippines and this country after July 1, 1906, to American ships. The net outcome of our legislation has been to do next to nothing for the depressed industrial state of the Filipinos. The recorded increase in imports is traceable to the supplies shipped in for our forces in the islands. The sugar and tobacco industries have declined (p. 292). "The impressions derived from a journey through the Philippine Islands are those which are produced from an inspection of a devastated, demoralized country just emerged from war" (p. 348). Roads and trails "are to-day very much worse than they were in Spanish times" (p. 344). The population is badly housed even "from an Oriental standpoint" (p. 344). Of five thousand business enterprises founded by Americans in the country, not more than one thousand still survive (p. 327).

From such beginnings Professor Willis has seemingly good ground to fear that, in the future, Congress, instead of giving the islands the simple redress that justice would dictate, will attempt to foster exploitation by granting to foreign capital franchises, concessions, guarantees, and subsidies which will further impoverish the patrimony of the natives. The proposed importation of Chinese coolies to afford foreign syndicates a supply of cheap labor is denounced by the author. This is another of the few points where he approves of the judgment of Secretary Taft. Not the least instructive part of this investigation of the Philippine labor question is the proof here given of the capacity of the native Filipino workman (396 sq.). It appears that the average Filipino, while he will not submit to the contumely which the coolie accepts submissively, is amenable to the stimulus of good wages and humane treatment; and that it is by no means impossible to enlist large forces of steady, efficient and intelligent laborers among them.

This comprehensive analysis of the situation gives small promise of a ready solution of our Philippine problem. If it is true, as Professor Willis avers, that all intelligent Filipinos recognize the impossibility of maintaining an independent State "in the face of the sharp conflict for tropical territory now being waged by the principal powers of the world" (p. 188); and if, as here asserted, "our people will hardly countenance the cession or sale of the Philippines to another power" (p. 450), it is hard to see how we could eventually give them independence without continuing thereafter to be incumbered by much the same liability, financial and military, which we now bear. This inability to disburden ourselves may not excuse us from doing justice to the Philippines, but it makes it very much less likely that we shall speedily do them justice. Mr. Randolph's sensible remark that the annexation of the Philippines is not a cross to be borne but a blunder to be retrieved, is likely to prove only half true. As an immediate programme Professor Willis pronounces in favor of a promise of independence to the islands, and "a distinct definition of the time when such independence may be possible" (p. 454). The specific means to that end which he recommends are an enlargement of the scope of local self-government, the abolition of the provincial governments altogether, the reduction of the number and burdensome salaries of American office-holders, and, eventually, vesting the national assembly with the reality of power instead of its semblance.

This work of Professor Willis's will take its place as the authoritative indictment of our Philippine policy to date. It is one which the Imperialist may criticise, or try in part to disannul; but it is one which he cannot afford to ignore or despise.

A GOOD BOOK ON RUSSIA.

Russia under the Great Shadow. By Luigi Villari. With eighty-four illustrations. London: T. Fisher Unwin; New York: James Pott & Co. 1905.

Mr. Villari's preface is dated May, 1905, and the impressions which the volume itself records are, to an extent which the author does not definitely state, reprints of articles on Russian affairs that appeared in the London *Times*. It was his object, he says, "during many a stay of many months in Russia, . . . to examine the consequences of the war on the internal situation, both economic and political." It is obvious that not "many" stays of "many months" could well be included in the period covered by the recent war. But the impressions recorded are those of an experienced and sympathetic traveller; and for statistics, in the more serious portions, abundant sources were available to him, as to the multitude of recent essayists whom recent events have tempted to evolve deductions of widely varying shades of a general pessimistic hue.

Fairness of mind, an aptness for summing up situations clearly and in graphic terms, are among Mr. Villari's special qualities. Occasionally he errs from an unconsciously preconceived prejudice which his brief study and lack of acquaintance with the language (this he does not attempt to conceal) have been insufficient to remove. For example, in his preface, referring to "the mad policy of indefinite expansion" which "found its logical outcome in the Mantchurian campaign," he says: "Russia—an immense country, rich in natural resources, inhabited by a people who, if primitive and ignorant, have many very fine qualities, strong, capable of the hardest toil, inured to the struggle with nature, brave, intelligent, and religious—has been kept out of the march of progress in a condition of semi-Asiatic barbarism for the sake of impossible schemes of universal dominion." Every word of this is just save the last clause, which implies a deliberate policy of repressing knowledge and general progress. Both just and extremely striking is his concluding comment in this same preface: "It is a profoundly interesting moment in the nation's history in which new forces, new ideas, and new movements are beginning to take shape. But we must not expect to see the results immediately, and to find Russia settling down under a liberal constitution within six months. The English Revolution lasted from 1640 to 1689; that of France from 1789 to 1815—almost to 1871; that of Italy from 1821 to 1870. Russia, too, will probably have to go through a long period of turmoil and unrest before she can find lasting peace."

Even in his sightseeing, Villari contrives to mention the usual things without being hackneyed, and to touch with the proper degree of detail on other less familiar points, like the Narodny Dom, or People's Palace, in St. Petersburg. One of his early remarks is: "St. Petersburg is not purely Russian, and a good deal of the misconception and ignorance of foreigners about Russia is due to their seeing so much of the capital and so little of the rest of the country." This eminently sane remark would have been rounded and complete had he added: "But even in the capital there is far more that is genuinely Russian than the average foreigner is capable of assimilating." He is even discriminating and just towards the much-attacked army; and in describing the schools for small boys, orphans or the children of poor parents, which are attached to certain regiments and teach trades as well as the ordinary branches, he concludes: "These schools are not the only aspect of the educational policy of the Russian Army, for the soldiers themselves are given a certain amount of elementary instruction [the officers have to furnish it], and are taught various handicrafts. . . . The Russian Army has this good point, that race is no bar to advancement (save in the case of Jews, who are not admitted as officers). A Mohammedan from Turkestan has as much chance of attaining the highest rank as any descendant of Rurik."

Our author found that people in St. Petersburg took very little interest in the war, apparently, and that very few outward signs of a great crisis were to be noted. One amusing exception was the drama performed at the popular theatre in the Zoölogical Garden, entitled "The Russo-Japanese War," and constructed on lines to suit both popular taste and prophecy, everything being of the most realistic description. The three specimens of Russian cartoons which illustrate this passage, representing Japan getting money for the war out of John Bull

and Uncle Sam, and the ghost of Napoleon warning the Japanese strategists of the fate of those who invade Russian territory, are excellent. It may be remarked here that the illustrations not only really illustrate, but are as superior to the ordinary run in choice and characteristic touches as they are numerically.

In the chapter on Moscow the author goes astray through trusting to the stock statements and prevailing assumptions of ill-informed predecessors. As he gets further off the beaten track he becomes more interesting and profitable in his remarks. "Provincial Russia" contains much information which will be new to most readers—for example, as to the activities of the zemstvo (as illustrated by that of Kharkoff), and again the amazing list of subjects which the provincial press in one large town is still forbidden to print, though censorship has been relaxed in the capitals: "Descriptions of love scenes, criticisms on reactionary journals, the mention of trade unions, criticisms of acts of police officials, the mention of the name of Gorky, accounts of the religion of the Japanese, praises of Tolstoy, the word 'bureaucracy,' the names of certain diseases, the enumeration of elementary schools, facts concerning the bad organization of the local hospital and the barracks, criticisms of the articles by Krushevan (the instigator of the Kishineff massacres)." The first-hand information regarding industrial enterprises and conditions which Villari gathered is particularly valuable because of the well-reasoned and digested form in which he presents it to the reader, and the impartiality of his statements. He does not appear to be biassed to favor or denounce. For example, he cites the opinion of one foreigner in charge of an important factory, to the effect that this manager is a great believer in the industrial future of Russia, and convinced that the destiny of the country is to be one of the chief industrial nations in the world; but he takes care to mention that few foreigners whom he met in Russia were as sanguine and optimistic, and immediately afterwards records the remark of this manager to the effect that "the military aspect of modern Russia was . . . the worst, and the one soonest destined to disappear, while the many good qualities, intelligence, and capacity of the people would lead the Empire up to the highest degree of civilization." Again, while admitting that the Russians have done a great deal for civilization in various parts of their Empire, he says: "An ill fate seems to pursue them and prevent them from enjoying to the full the heritage which should be theirs; there is always a certain lack of completeness in what they do, something wanting to crown the edifice, which, to a great extent, stultifies the rest of their achievements"; and he attributes this to the fact that the alien civilization forcibly grafted on the nation by Peter the Great is really foreign to the nature of the masses, and is not yet assimilated. He thinks that the strength and the weakness of Russia lie in the fact that "the form of government tends to confuse colony and mother-country, . . . and were a Constitution to be granted to-morrow, the question of the relative rights of natives of St. Petersburg and natives of Erivan might assume a serious aspect. One can quite well imagine a Russian House of Commons where the representatives of St. Petersburg, Moscow, Odessa, Smolensk, etc., should meet together; but the question of admitting 'honorable members' for Daghestan or Kaketia might well lead to difficulties." It is well to emphasize this point, the justice of which is rarely appreciated by foreigners who seek to regulate the policy of a land unknown to them on general principles of universal suffrage.

On the Jewish problem our author is equally judicious in his remarks. "The causes of the unpopularity of the Jews are various, and economic questions are doubtless largely responsible for it," he says. He illustrates this by an account of the methods of the Jewish grain dealers of Odessa with the peasants, adding: "There can be no doubt that, in spite of their many undesirable qualities, the Russian Jews are absolutely indispensable to the welfare of the country. . . . I have also been told by Christian merchants that the peasant has got so much accustomed to selling to Jews that he will not sell to a Christian, whom he mistrusts"; and he frankly declares that the Christian community has only itself to thank for not having developed greater business aptitude. On the subject of Poland he is just and uncommonly acute and judicious. "The real enemy of the Pole is the German rather than the Russian," he says; "and under normal circumstances Russia could have derived the greatest benefit from her Polish subjects." And he sets forth what is required to conciliate them. But he also says, with equal truth: "We have all been brought up from childhood to sigh over the loss of Polish freedom, but, much as we may reprobate the conduct of the three Powers who participated in an act of unparalleled infamy, we cannot but admit that the misfortunes of Poland are largely due to the Poles themselves. This explains even if it does not in any way excuse the partition of the country." The practical conclusion at which he arrives after full consideration of the situation is: "The union with Russia is indeed an economic necessity for Poland, for by that means alone can its industries find a sufficient outlet. Poland, as I have shown elsewhere, is far too small, and the buying capacity of the peasants is too limited, to absorb the output of the country's industries. Were Poland to be separated from the Empire, customs barriers would at once arise to exclude Polish goods, and the industries of the country would be ruined." As to the political controversy, he concludes: "The weakness of all the Polish revolutionary movements is that great discord between the various groups, who hate each other almost as much as they do the Russians. 'Two Poles, three opinions,' is a popular proverb." And he ventures the suggestion that recent events may, perhaps, tend towards greater unity.

The final chapter, on "The Effect of the War on Russian Public Opinion," is characterized by uncommon modesty, acute observation, and good sense. In summing up the actions and resolutions of the Zemstvoists, for example, he says:

"These proposals, it will be seen, are far more moderate and practical than those of the revolutionary conference, and, in fact, the backward state of Russia suggests the advisability of proceeding cautiously in the matter of reforms, and of not giving the people the strong wine of universal suffrage at once. . . . Recent events tend to show that there is a dangerous agitation going on even among the peasants, although on lines different to those of the towns. To prophesy how the change will be brought about, or what form of government will eventually be adopted, would be rash indeed, for the situation is altering from day to day. But one thing appears fairly clear, that, for the present, no general rising has any chance of success. So long as the troops obey orders (and, in spite of sensational reports to the contrary, there is as yet no evidence that the army is tainted with disloyalty), an open revolt can easily be put down. . . . What type of political organization will result from this chaos of warring elements no one can yet foresee; what form of government is best suited to the Russian nation it were presumptuous for a foreigner to suggest."

Altogether, the book is excellent and highly to be recommended. Unfortunately, it is marred, here and there, by hasty writing and defective proofreading.

The Romance of Savoy: Victor Amadeus II. and his Stuart Bride. By the Marchesa Vitelleschi. E. P. Dutton & Co. 2 vols., 8vo. 1905.

The Marchesa Vitelleschi has hit upon an interesting subject, and, in spite of obvious shortcomings, she has written an interesting book. The annals of the House of Savoy—that house in comparison with whose ancient lineage the Hohenzollerns are parvenus and the Hanoverians upstarts—has been almost wholly neglected by serious historians in English. At no point is its earlier history more striking than in the reign of Victor Amadeus II., when, through his astuteness, the duchy became a kingdom and the foundations were laid of that Piedmontese ascendency which, after five generations, was to free Italy and unite it under Victor Emanuel II.

Victor Amadeus II., the son of Charles Emanuel and Jeanne de Nemours, was born at Turin, May 14, 1666. His father died in 1675, leaving him under the regency of his mother, a selfish woman, with little ability as a ruler. The youth, however, soon showed force of character, in so far, at least, as stubbornness and rather precocious craftiness indicate character. At the age of eighteen, he took the government into his own hands, and held it firmly for over forty years, and at the same age he married Anna Maria of Orleans, daughter of Henrietta, and granddaughter of Charles I. of England. This union strengthened the ties between Savoy and the Stuarts, and it gave Louis XIV., who was Anna's uncle, family reasons for meddling in the affairs of the duchy.

The Grand Monarque, then at the height of his prestige, did not, however, need other reasons than those of self-interest for planning to absorb Savoy. His troops garrisoned Victor's citadels, and it seemed incredible that the Duke, master of a comparatively small army, should preserve his independence. At first he acquiesced in tutelage, and, when Louis gave an order for the persecution of the Waldenses, Victor joined in carrying it out. He submitted to the King's domination even in personal matters, to such an extent that he abandoned a pleasure trip to Venice when he found that Louis objected. Just as soon as he deemed it safe, he joined the league which Emperor Leopold organized against French aggression, but, being worsted in two campaigns, he made peace, and for a while stood docilely by Louis. But when the

League got the upper hand, through the genius of Marlborough and Prince Eugene, the Duke shifted sides again without compunction, and in 1706 he repelled a French attack on Turin and defeated the French army on the heights of La Superga. Thenceforward, although the general War of the Spanish Succession dragged on till 1713, he ran no further peril. At the Peace of Utrecht, the allies rewarded him for his services by raising his duchy to a kingdom and by apportioning Sicily as his share of the Spanish spoils. Victor took possession of the island, but in less than a year he returned to the more congenial Turin, and in 1720, by another turn of diplomacy, he received Sardinia in exchange for Sicily, which fell to Austria. From that year till 1860 the official title of the Savoy rulers was King of Sardinia. Thus, when Victor Amadeus II. died, in 1732, he left, instead of a precarious duchy, a kingdom of recognized stability among the minor Powers of Europe, strong in its loyalty to the sovereign, and with its foothold in Italy firmly assured. The Fox of Savoy had in the end outwitted the French Lion. Let us add that Victor by economy more than doubled the revenues of his kingdom.

This outline will give an idea of the political importance of Victor's reign in the development of modern Italy; but this is only a small part of the material provided in Marchesa Vitelleschi's book. She enables us to realize how astonishingly personal was government in Europe two centuries ago. We see feudalism entering on its last stage, so far as the relation of small princes to great potentates was concerned. We see the extravagant part played by marriage—a purely arbitrary tie—in consolidating countries. Victor's oldest daughter, Mary Adelaide, at the age of eleven, was married to the Duke of Burgundy; his second daughter was only fifteen when she was given to Philip V. of Spain. Victor himself was a residuary heir to the Spanish crown, and his wife did not allow her claim to the English throne to be forgotten. Indeed, William III. seems to have regarded this solution of the problem of succession as not impossible, for he went so far as to suggest that one of the Savoy princes be sent to England to be brought up at the English court.

Having the general reader, rather than the historical student, in view, the Marchesa Vitelleschi devotes perhaps half of her work to social, domestic, and ceremonial matters. She describes court life in detail, overlooking no function, be it wedding or funeral, the reception of ambassadors or a ducal progress. The letters of great personages which she quotes, simply prove that great personages were as dull then as they sometimes are now. But such a letter as that in which Louis XIV. describes the little Mary Adelaide—"Everything is as it should be, save the curtsey"—compensates for many platitudes. Details of court life appeal to readers who think that in such superficial matters lies the real romance of history; the chief objection to devoting so much space to them here is that they tend to throw events out of their proper perspective. The author's effort to bring in all that she can about England—in order to interest the English public—is tactful, but it adds another obstacle to a symmetrical narrative. The chapter on Henrietta of Orleans, for instance, although entertaining in itself, has very little excuse for existing.

In short, you must not be captious, but must take what the Marchesa Vitelleschi has to give, if you would enjoy her book. She has no great talent for historical construction, no unfailing instinct in selection, nor even an attractive style; and yet, in spite of these shortcomings, she has been able, thanks to the intrinsic interest of her material, to produce a book worth reading. She leaves a distinct impression of Victor Amadeus II., who was rather a complex character; of the long-suffering Queen Anna, and of the Countess di Verrua, the court beauty and royal mistress: and she sufficiently reconstructs the little world in which they lived. She has been conscientious in collecting her material, not only from printed books, but from private archives, to which she has had access.

In her final chapter, the Marchioness rises to her highest level in telling the tragic story of the King's life. Readers of Browning will remember "King Victor and King Charles" as one of his best dramas; but Browning could hardly enhance the impressiveness of the bare facts. After reigning forty-six years, Victor Amadeus suddenly abdicated in favor of his son, Charles Emanuel, who, with hump on back and goitre at throat, had led a neglected and bitter youth. Victor retired to Chambéry, with his second wife, the Marchesa di Spigno, whom he married just before his abdication. King Charles, well-meaning but weak, was easily managed by his queen, Polyxena, and his minister, Ormea. For a while, the relations between Turin and Chambéry were cordial. Then Victor got the idea that he was being ignored and the kingdom misgoverned. Probably, the Marchesa, who had married him expecting to be Queen, and not to live in pompless oblivion, fanned his wrath. He appeared without warning in Turin, planning to revoke his abdication. King Charles, who still trembled from the dread his father had inspired in him in childhood, knew not what to do, but Ormea, who feared the loss of his own occupation, if not of his head, advised that the only way to avert civil war was to arrest King Victor. Queen Polyxena and the other ministers agreed in this opinion, and, accordingly, without delay, King Victor's apartment was broken into in the middle of the night, and he and the Marchesa were violently separated and hurried to different places of confinement. For months he was guarded almost like a felon; his angry spirit broke, his health failed, and only when he seemed too feeble to be dangerous was the severity of his treatment a little relaxed and his wife permitted to return to him. Six months later he died, Ormea and the Queen having steadily kept King Charles from seeing him. This tragic story the Marchioness Vitelleschi tells in a straightforward fashion, so that the last impression she leaves on the reader is the best.

The Church's Task under the Roman Empire: Four Lectures. By Charles Bigg, D.D. Henry Frowde. 1905.

These lectures, which were delivered at Oxford during the Michaelmas term of last year, bear little resemblance to Dr. Bigg's Bampton Lectures on the Christian Platonists of Alexandria. Less erudite in form and dealing with a much less technical subject, they appeal to all serious people, the untheological as well as ecclesiastics. Their aim is "to sketch in broad outlines the nature of the task which lay before the Church when she set out in obedience to the divine call to evangelize the Græco-Roman world, and the degree in which she was enabled to fulfil that task within the compass of the first five centuries."

It is obvious that a theme of this kind might be treated in a conventional and unprofitable way by a doctor of divinity who was anxious only to score points for the Church. Dr. Bigg, however, is free from the reproach of having been led by professional zeal to turn his subject into a theme for edification. One is not always being told how corrupt was the world and how divinely inspired the Church; but each chapter in the volume is a scholarly examination of some one social or intellectual phase. Under the mature civilization of the Roman Empire, life had become so complicated that it is hard for the historian, writing within brief compass, to give a faithful portraiture of the main conditions. Yet certain things are essential, and Dr. Bigg, by fixing his attention upon education, religion, and morality, is able to establish standards of comparison which will strike no one as having been capriciously chosen.

Speaking broadly, the descriptions here given of ancient life constitute a record of deficiency. It being one aim of the Church to improve the condition of mankind, the apologist, even where he is a fair-minded scholar like Dr. Bigg, can only be content when he has shown how grievous were the failings of classical civilization as they appear in the light of the Christian ideal. At the same time, the Church, with all its successes, did not effect a work of wholesale regeneration, and even failed to escape the contamination of ancient influences. As a single example of the tone adopted by Dr. Bigg towards the contact of pagan and Christian, we may refer to his remarks on rhetoric, the staple subject in Roman education. Following Quintilian, rhetoric has three functions—the laudatory, the deliberative, and the judicial. The fathers of the Church found the art of panegyric debauched by the abject flattery of scholars who had lost all self-respect. Under the Christian régime this laudatory rhetoric is preserved, but finds its natural outlet in the language of worship, although some of the Christian panegyrists, in praising the Christian Emperors, sink quite as low in the scale of fulsome expression as ever their pagan predecessors had done. For the chief type of deliberative eloquence in Christian hands we go to the sermon, and for the best example of the judicial style to the church court, as described in the 'Didascalia,' where speech would be unadorned, since the object was not victory, but justice. Having worked out this parallel with sufficient fulness of detail, Dr. Bigg concludes: "The mind dwells with pleasure on this contrast between the false eloquence and the true. But, after all, it must be confessed that the old heathen taint was never thoroughly purged till the deluge of the Barbarian invasion washed away all but the bare foundations of Roman art."

Here Dr. Bigg's main proposition would

seem to be that, under the touch of Christianity, much in Roman education which was base or effete became exalted, though he is by no means blind to signs of bad taste or faulty style among the Christians themselves. A still more conspicuous instance of his willingness to bring out what was good in the pre-Christian order is afforded by his attitude towards the worship of Isis and Mithra. In the cult of Isis, he says, "we have a divine humanity, a God who suffers a cruel death out of love for man, and a divinely human wife and mother, Isis the compassionate and merciful, who loves her husband with a love that is stronger than death, yet sets his murderer free, bidding him go and sin no more. In Mithraism, following the exhaustive researches of Cumont, he sees something higher still—or at least more salutary for the individual, since Isis worship made no attempt to provide the scheme of moral discipline which was prescribed for the devotees of Mithra. In this Persian faith there was "an atonement for the sinner, spiritual comfort, and temporal help for the afflicted, a virtuous and strenuous example for the lovers of righteousness."

St. Augustine set an extremely unfortunate example to his successors in the Church when he made his defence of Christianity against paganism embrace a forensic citation of selected passages which were designed to show how depraved the world had been during the days of Roman greatness. From this old and outlawed style of demonstration Dr. Bigg has completely emancipated himself, with the effect that his chapters on ancient thought, life, and religion carry conviction, not merely from the wide and varied knowledge they display, but quite as much from the disinterestedness of their tone. Without letting the Christian disappear wholly in the historian, he takes high ground for his definition of the Church's task, and is careful neither to misrepresent the extent of pagan iniquity nor the degree of Christian accomplishment His principal conclusion is that Christianity, working in the later Roman Empire, did much more for the individual than for the State. "If we turn our eyes," he says, "to the field of public virtue, then it must be acknowledged that the Church produced very little result indeed. The evils which were destroying the body politic went on unchecked, and the process of deterioration was more rapid than ever under the Christian Emperors." In the field of private morality something, indeed much, was wrought, but neither orthodoxy nor private virtue could help a State so decadent as the Roman Empire.

"Only in quite modern times," writes Dr. Biggs as he concludes his admirable series of lectures, "have we begun to understand that there is a still higher conception of Christian duty; that the private virtues cannot flourish without the public, that religion and policy ought to go hand in hand, and that for the old ideal of Church and State we ought to substitute that new ideal of the Church-State which hovered before the minds of Piers Plowman and John Wyclif, but has not yet been realized."

The Wonders of Life: A Popular Study of Biological Philosophy. By Ernst Haeckel Translated by Joseph McCabe. Harper & Bros. 1905. Pp. xii, 485.

The greatest philosophical questions of all time resolve themselves ultimately into the problems of the relation of mind and matter—the "Riddle of the Universe," to use Haeckel's happy phrase. Some five years ago Professor Haeckel, in his ripe old age, formulated anew and in popular form his solution of this riddle, framing his statement in terms of his own radical evolution theory. The enormous popularity of the 'Riddle of the Universe' among general readers with no scientific training, the adverse criticism which it aroused, and, especially, the questions on matters of elementary biology which poured in upon him from the unscientific public, have led the author to prepare this supplementary volume on the miracles (wonders) of life. It falls into four parts: (1.) A Methodological Section, Knowledge of Life, (2.) a Morphological Section, Nature of Life, (3.) a Physiological Section, Functions of Life, and (4) a Genealogical Section, History of Life; the last concluding with philosophical summaries of dualism and monism.

As a treatise on elementary biology, the work is distinctly inferior to many others in the field; but the public does not buy treatises on elementary biology, no matter how well written, by the hundred thousand copies, as it has done in the case of the 'Riddle,' and may very possibly do now. It is therefore as a contribution to popular philosophy that Professor Haeckel's book must be examined. In spite of the many volumes of exposition he has written, we find it difficult to arrive at an exact idea of his philosophy. It is almost universally referred to by his critics as "materialism," and with some appearance of reason, for we are constantly meeting with expressions like the following: "Modern science . . . has not taught us a single fact that points to the existence of an immaterial world. On the contrary, it has shown more and more clearly that the supposed world beyond is a pure fiction." But materialism in the ordinary sense it certainly is not. Haeckel's own term is *hylozoism*, defined as expressing "the fact that all substance has two fundamental attributes; as matter (*hyle*) it occupies space, and as force or energy it is endowed with sensation." He adds in a later chapter: "I am convinced that sensation is, like movement, found in all matter, and this trinity of substance provides the safest basis for modern monism." And again:

"Of the three great monistic systems, materialism lays too narrow a stress on the attribute of matter, and would trace all the phenomena of the universe to the mechanics of the atoms, or to the movements of their ultimate particles. Spiritualism, with equal narrowness, builds on the attribute of energy; it would either explain all phenomena by motor forces or forms of energy (energism), or reduce them to psychic functions, or sensation, or psychic action (panpsychism). Our system of hylonism (or hylozoism) avoids the faults of both extremes, and affirms the identity of the psyche and the physis in the sense of Spinoza and Goethe. It meets the difficulties of the older theory of identity by dividing the attribute of thought (or energy) into two coördinate attributes, sensation (psychoma) and movement (mechanics)."

Haeckel's philosophic scheme is avowedly built on the doctrine of evolution, and his practical recommendations grow directly out of it. What, then, is this theory of evolution? Briefly, it is a universal cosmic process by which all that is has grown out of nebulous beginnings by continuous change, from the simplest inorganic reaction, through more complex mechanisms, lowly forms of life, the power and intelligence of brutes, up finally to man and his noblest mental and moral qualities. With the broad outlines of the scheme naturalists are in pretty general agreement, though as we approach the terminal members of the series views diverge rapidly—or more commonly sink into agnosticism. Few have the positive assurance of our author on the details of the origin of human faculty. His exposition is in the main well supported by scientific evidence. Comparative psychology is bridging the gap between the mind of man and the brutes. As far as the intellect is concerned, we may say the gap is practically closed. The emotional life of man, too, is undoubtedly similar in some of its phases to that of brutes. We have the same love of offspring and mates, and in social animals we see the beginnings of self-sacrifice for the community at large, or true altruism. As human art may have its roots in the pleasure of a bird in the song and plumage of her mate, so human morals may spring from the impulsive devotion of social animals to the communal welfare. The altruistic impulse in primitive man was stronger, but equally blind, and gave rise to fetishism and finally to religion. Intellect began more and more to dominate these primitive impulses and passions until the dawn of the age of reason in our own time, whence we expect to go on triumphantly to the consummation of this golden age. "While occupying ourselves with the ideal world in art and poetry, and cultivating the play of emotion, we persist, nevertheless, in thinking that the real world, the object of science, can be truly known only by experience and pure reason. Truth and poetry are then united in the perfect harmony of monism."

What will be the upshot in practical life of this peaceful settlement of the problem of the relation of intellect and sentiment? First, "our clear modern insight into the regularity and causal character of natural processes, and especially our knowledge of the universal reign of the law of substance [a bit of pure metaphysics] are inconsistent with belief in a personal God, the immortality of the soul, and the freedom of the will." Again, "hence the destruction of abnormal new-born infants—as the Spartans practised it, for instance, in selecting the bravest—cannot rationally be classed as 'murder,' as is done in even modern legal works." "What good does it do to humanity to maintain artificially and rear the thousands of cripples, deaf mutes, idiots, etc., who are born every year?" "Faithful dogs and noble horses, with which we have lived for years and which we love, are rightly put to death and relieved from pain when they fall hopelessly ill in old age. In the same way we have the right, if not the duty, to put an end to the sufferings of our fellow-men." A careful reading of the entire book (and it requires a careful reading on account of the incoherency of the style) seems to show that these repulsive conclusions necessarily follow from the premises as given in our author's theory of evolution, which culminates in pure reason to the exclusion of sentiment and other factors of the higher life.

How to Collect Books. By John Herbert Slater. London: Bell; New York: Macmillan. 1905.

Books and the House. By A. W. Pollard. Indianapolis: Bobbs-Merrill Co. 1904.

Mr. Slater's volume contains much sundry and miscellaneous information which undoubtedly will prove interesting and useful to those for whom it is intended, namely, the large number of people who desire to collect books, but who are without special knowledge of or scholarly interest in them as human documents. That the author has the general run of collectors in mind is very evident from the way he speaks of William Blades's 'Biography and Typography of William Caxton' and his introduction to the reprint of the 'Boke of St. Albans,' as being, "from a thoroughly practical point of view, . . . of little use."

It would certainly be unfair to scrutinize a book of this kind too closely on the score of accuracy, but some of the most glaring inadvertencies cannot be ignored. On page 4, for instance, Mr. Slater speaks of Aldus Manutius's catalogue of fourteen Greek books, distributed in five classes, as the prototype of classified bibliographies such as Conrad Gesner's 'Bibliotheca Universalis' (1548) and Savigny's 'Tableaux Accomplis de tous les Arts Libéraux' (1587). On page 84 he mentions Van der Linde's 'Haarlem Legend,' naming not the author, but the translator only, and likewise referring to it in the index under Hessel's name alone. To speak of Hain's 'Repertorium Bibliographicum' and Copinger's Supplement to it as a guide to printing-presses (see p. 122) is not quite correct, though the last volume of Copinger contains such a guide, prepared by Konrad Burger. On page 68 the author speaks of Bagford's collection of title-pages as if Mr. W. Y. Fletcher's paper about Bagford before the Bibliographical Society had never been printed. His opinion that the invention of printing "was no gradual development, but a sudden illumination," is contrary to both documents and logic.

Mr. Slater published some years ago a volume entitled 'Book Collecting: A Guide to Amateurs.' While his present venture is not exactly a new edition of the earlier one, the two have much in common, occasionally word for word. The later is uniform with some similar handbooks on old china, furniture, etc.; it has a large number of photogravure illustrations. The index might have been better.

A more authoritative guide is offered in Mr. Pollard's 'Books in the House,' which has been published in an edition of 500 copies, "designed by and printed under the supervision of Ralph Fletcher Seymour at the press of R. R. Donnelly & Sons Co. in Chicago." It is very tastily made up, with bookish headpieces and ornamented initials for each chapter, and printed in the large black type now so common in "privately printed" books. Here we find the matured opinions of a trained and scholarly lover of books on such subjects as "The Buying of Books," "Inherited Books and their Values," "The Keeping of Books," "The Functions of the Collector," " How to Collect," "The Child's Book-Shelf." In the compass of 83 pages one cannot expect great fulness of detail, but what is here offered is worth much more than the repetition of a great number of facts which have been told many times over in easily accessible volumes; we mean, a few sound principles which collectors would do well to follow if they wish to collect to some purpose. Mr. Pollard does not give much space to manuscripts, incunabula and other things which most people never see, but speaks pointedly about the craze for "collected editions" and other allurements of modern publishers. While by no means disparaging the collecting of books as specimens of printing or illustration, or because one may wish to possess all the editions of all the works of his favorite author, he enters a strong plea for subject-collecting as being, "for collectors who will not allow themselves to pay too heavily in the struggle towards the completeness which can never be attained" (and they are in the majority), "the easiest, the cheapest, and the most obviously rational form the pleasure can take." After all, books should be bought to be read, and collected partly from the pleasure of the hunt. To buy books by the yard is not book collecting, as Mr. Pollard truly remarks. Perhaps his most interesting chapter is the one on "Inherited Books and their Values," with its discussion of the market value of books, especially of dull books having nothing else in their favor but age and rarity.

Mr. Pollard does not seem to have had opportunity to read the proofs himself, or such errors as Frossart for Froissart or Perclas (!) for Purchas would not have been allowed to remain.

France in America, 1497-1763. By Reuben Gold Thwaites. (American Nation Series, vol. vii.) Harpers. 1905. Pp. xxi., 320.

To those familiar with the writings of Parkman, any attempt to tell in condensed form the story of the rise and fall of French power in North America is likely to seem disappointing. The period, at once the most picturesque and the most dramatic in American colonial history, demands, for its adequate understanding, treatment on an extended scale. No one, for example, who has read Parkman's account of the taking of Quebec—admittedly one of the best modern pieces of historical description—can ever feel quite content with anything on the same subject less elaborate or less carefully wrought. The actual accomplishment of France in the New World is to be understood only by a consideration of the ideals which animated the French explorers, traders, and administrators, the romance and adventure of frontier and forest life, and the attrition of a decadent feudalism by contact with savagery on the one hand and English common sense on the other; and these are matters not easily brought out in a small space.

We make this preliminary observation, not to disparage Mr. Thwaites's book, but rather to indicate the peculiar difficulty of his task. Within the limitations imposed upon him, he has certainly done better than any writer who has preceded him, while in easy command and skilful use of material, his volume leaves little to be desired. In the distribution of space, five chapters are given to the planting of New France, the settlement of Acadia and the St. Lawrence valley, the discovery of the Mississippi, and the acquisition of Louisiana and the Illinois country; two chapters to Anglo-French relations to the end of King George's war, in 1748; and one to the life of the people of New France. These eight chapters comprise about half of the volume. The other half, with the exception of a final chapter on Louisiana under Spanish rule, is occupied with an account of the Seven Years' War and the expulsion of the French.

Since it is not possible, in a work of this compass, to make much of an original contribution to the subject, the task of a reviewer is limited mainly to the consideration of questions of balance and proportion and the selection of topics and data. On all matters of Western geography, Mr. Thwaites has long been a recognized authority, and his account of the French explorations is commendably well digested. Particularly praiseworthy are the maps showing the area of exploration and the wide dispersion of military posts. Regarding the economic progress of the French settlements in the Mississippi Valley, the author has also interesting things to say. It will surprise many readers to learn, for example (p. 85), that throughout the first half of the eighteenth century the agricultural products of the Illinois country were shipped in large quantities to Detroit, to Ohio River ports, to New Orleans and Mobile, and from the latter places to the West Indies and Europe; that about 1746, provisions being scarce in New Orleans, the Illinois French sent thither, in one winter, "upward of eight hundred thousand-weight of flour," and that sugar, rice, indigo, cotton, manufactured tobacco, and similar articles flowed into the Western country from Europe and the French colonies, in exchange for the local products.

On the other hand, the chapter on the people of New France is disappointing in its brevity, while the account of French administration is only elementary. Throughout the work, too, the treatment of the religious side of French colonization, particularly the work of the missionary priests, is slight. Mr. Thwaites has, indeed, a word of strong commendation for the Jesuits and the Roman Church (pp. 137, 138), but both the Church and its priests tend to drop to the rear in his narrative. As the text of the volume is about thirty pages shorter than, for example, Greene's 'Provincial America,' it would seem that space might have been found for a fuller account of some of these matters. The latter half of the book, on the Seven Years' War, is naturally fuller than the first half, though here, again, the dramatic episodes in the military operations are unequally developed. There is, for instance, an excellent description of the taking of Louisburg, while that of the final movements before Quebec is cut off with startling brevity. Among the personal judgments we note with satisfaction the commendation of Amherst (p. 265). The unlucky Admiral Byng, however, was certainly not a coward (p. 199), nor can we think that Webb was so excusable for his failure to assist Monro at Fort William Henry as Mr. Thwaites's account would make him appear (p. 210).

Mr. Thwaites's style is, in general, so readable that one can but regret the occasional lapses from good taste, and the extraordinary grammar of the paragraph

headed "biographies," page 305. "Unavoidable," page 184, line 6, is a curious misprint.

American Political History, 1763-1876
By ALEXANDER JOHNSTON
Edited and Supplemented by Jas. A. Woodburn
Professor of History and Political Science, Indiana University; Author of "The American Republic," "Political Parties and Party Problems in the United States," etc.
In two vols. (each complete in itself, indexed). Each, net $2.00
1. The Revolution, the Constitution, and the Growth of Nationality. 1763-1832
2. The Slavery Controversy, Secession, Civil War, and Reconstruction. 1820-1876
These volumes present the principal features in the political history of the United States from the opening of the American Revolution to the close of the Era of the Reconstruction. They give in more convenient form the series of articles on "American Political History" contributed to Lalor's "Cyclopedia of Political Science, Political Economy, and Political History," by the late Professor Alexander Johnston.

Jappe's Elements of German Grammar

60 CENTS

This book presents a first year course in German suitable to the highest grade in elementary schools, or to the lowest classes in many secondary schools. The work is mainly conversational, being divided into three parts. The *grammatical portion* is concise, clear, giving only the essential forms and principles of the language. It is complete in itself and does not require reference to larger grammars. The *conversational or colloquial exercises* contain over 800 easy questions on 26 subjects which can be used in a variety of ways, and may be supplemented by the teacher as occasion may require. The *sixteen songs* with musical notation are representative of the different kinds of songs used in the *Volkschule*, viz., religious, patriotic, folklore, and lyric (modern). A thorough knowledge of this course will furnish a good, solid foundation for further studies in German; the reading and understanding of most ordinary German texts will not be found difficult; and the large vocabulary needed for conversation will be acquired without excessive trouble.

IN THE SOUTH SEAS — **MEMORIES AND PORTRAITS**
WEIR OF HERMISTON — **ESSAYS OF TRAVEL AND IN THE ART OF WRITING**

The publication of these four books completes this most successful edition, the volumes of which are sold either singly or in sets of twenty-five. In form, appearance, and makeup this is one of the most attractive editions ever published.

CHARLES SCRIBNER'S SONS, New York

MESSRS. LONGMANS, GREEN, & CO. *have the pleasure to announce that they have made arrangements for the publication of a New History of England, which will be known as*

THE POLITICAL HISTORY OF ENGLAND

It will be written by various authors under the direction and Editorship of the REV. WILLIAM HUNT, *D.Litt., President of the Royal Historical Society, and* REGINALD LANE POOLE, *M.A., Ph.D., Editor of the 'English Historical Review,' and will be issued* **in Twelve Volumes.**

The size will be demy 8vo, and each Volume will contain about 500 pages, and have its own Index and two or more maps.

The price of each Volume will be $2.60 net if sold separately, but COMPLETE SETS *may be subscribed for through the booksellers at the price of $28.00 net, payment being made at the rate of $2.34 net on the delivery of each Volume.*

The first volume is now ready, and is:—
Vol. X., 1760 to 1801. By the Rev. WILLIAM HUNT, M.A., D.Litt., Trinity College, Oxford.

This will be followed by:—
Vol. II., 1066 to 1216. By GEORGE BURTON ADAMS, M.A., Professor of History in Yale University. [*Oct. 30*

Vol. III., 1216 to 1377. By T. F. TOUT, M.A., Professor of Mediæval and Modern History in the Victoria University of Manchester. [*November*

Vol. I., to 1066. By THOMAS HODGKIN, D.C.L., Litt.D., Fellow of University College, London. [*Jan., 1906*

It is hoped that the remaining Volumes will follow at intervals of about two months each.

*** ***Full Prospectus sent on application***

THE LITERARY BIOGRAPHY OF THE SEASON

The Life of Charles Lamb

By E. V. LUCAS

Editor of "The Works and Letters of Charles and Mary Lamb."

2 vols., 8vo, with 50 Illustrations, net, $6.00.

This is the first attempt since Talfourd's day to write the life of Charles and Mary Lamb in full. The new material that has come to light would alone justify a new biography, apart from the removal of many of the restrictions which prevented Lamb's first biographer from quoting freely from the letters or from entering fully into all the particulars of his friend's life and associations.

Ready next week

"We finish the book not with a note of admiration after a brilliant display of rhetoric, but with a quiet sigh of unfeigned sorrow at a forced parting from a very dear friend. . . . This is perhaps the greatest triumph of the biographer, who is a man after Lamb's own heart and one of his own best pupils. . . . The biography contains a wealth of entertainment which it would be difficult to over-estimate."
—*London Times*

"The standard and definitive biography of Lamb."—*London Observer*

"The peculiar union of genius, kindness and whim is to be found not only in Charles Lamb, but in his biographer, who has shown himself in this work a faithful and loving scholar. . . . No writer of his time is more capable of understanding Lamb. Mr. Lucas is wise, witty, catholic, humorous and tender." —*British Weekly*

"A biography written with an all embracing knowledge and a perfect sympathy." —*London World*

The Life of Goethe

By ALBERT BIELSCHOWSKY. Translated by W. A. Cooper.

Three Volumes, Fully Illustrated, Large 8vo, Each, net $3.50.

Part I. 1749-1788. FROM BIRTH TO RETURN FROM ITALY

Dr. Bielschowsky was acknowledged as the foremost authority on Goethe, and it is generally conceded that this is the most important life of Goethe, from the standpoint of scholarship, sympathetic interpretation, and literary art—in fact the most important biography of any man written in German for many years.

The Nation.

NEW YORK, THURSDAY, OCTOBER 26, 1905.

The Week.

"The Republican party has gone to the devil," an Ohio office-holder in Washington is represented to have exclaimed, on hearing of Secretary Taft's speech in Akron, Ohio, on Saturday night. The Secretary has, indeed, given cause for dismay among machine Republicans everywhere by coming out openly against Boss Cox, the Murphy of Cincinnati, and declaring that, if he were able to, he would vote against Cox's municipal ticket. This is pure and unadulterated treason and rank disloyalty, and will, in the eyes of the party henchmen, very nearly insure the defeat of Gov. Herrick, if only because it will induce Cox to sell out the State ticket to elect the city slate. "I wish to come as near telling what I believe to be the truth as I can on this subject," said Secretary Taft in his straightforward and honest way before proceeding to defend Gov. Herrick against the charge that he has been subservient to the boss. Mr. Taft did not hesitate to affirm that the power secured by Cox and his assistants "has undoubtedly inured to their pecuniary benefit, and it is seen in the large fortunes which they now have." A more direct charge of "honest" or of dishonest graft could hardly have been made, and it leaves Cox flat on his back "outside the breastworks" to-day. With the national Administration squarely against him, he has on his hands the fight of his political lifetime. Secretary Taft was, of course, careful to say that neither Gov. Herrick nor President Roosevelt was to be condemned because he received the support of the Cox machine. But Secretary Hay last fall condemned Judge Parker because he had the support of Tammany Hall. Waiving this little inconsistency and Secretary Taft's weak appeal for Gov. Herrick's reëlection on the ground that his defeat would strengthen the hands of Bryan and "Tom" Johnson in national politics, the salient fact is that the Roosevelt Administration appears to be on the war-path against party bosses in Ohio, Pennsylvania, and Maryland.

Mr. Roosevelt spoke a manly word on the Chinese question on Friday, when he declared that he was doing all he could do to mitigate the harshness of the Chinese exclusion law, and insisted that every Chinese business or professional man, traveller or student, should have the same right to enter and be treated decently as the similar representatives of any other nation. Against the coolies the President took his stand—but he admitted that China would have the right to bar out American laborers any time she desired to do so. Best of all, he stated that this new policy of treating Chinese as human beings was due them as a matter of right and justice, and not because of the boycott. Unfortunately, Mr. Roosevelt thought it necessary to couple with this a threat that China "must beware of persisting in a course of conduct to which we cannot honorably submit." Would not China have to submit if we were to boycott her goods as well as her men?

On his Southern tour the President found a new phrase for his Dominican policy in his speech at Richmond October 18. It seems that we are simply carrying out our duty of "policing the ends of the Panama Canal." Now, as San Domingo is about a thousand miles from Panama, it appears to be a queer sort of "end." And a radius swept round the circle of which San Domingo is on the circumference, would take in Hayti, Cuba, Jamaica, and a part of the Bahama Islands, as well as Venezuela, Colombia, Costa Rica, Nicaragua, Honduras, and Mexico —quite a collection of "ends." But the whole argument is really at loose ends. As well might Commissioner McAdoo announce that he was going to police the ends of the Brooklyn Bridge by operating the traction companies in Chicago, running the subway in Boston, and taking possession of the custom house in Baltimore. Moreover, as the canal is not dug, and will not be within eight years, it looks as if Mr. Roosevelt were unduly anticipating his assignment to that beat. But let not the dwellers in or upon the Caribbean Sea think they will have a respite until the canal is completed. The President has his eye upon them; and whenever he perceives that they do not "secure fair dealing," or are not as "stable" as they ought to be, he will interfere in order to set all right. For he takes pains to relieve any fears they may have, to assuage their sense of injured national pride, to dissipate any lurking notion they may have that they know better than he does what is good for them, by kindly assuring them that his meddling in their affairs will always be beneficial to them. We observe that the European press is giving more attention to these amiable remarks of our touring President than are the newspapers of his own land. The latter, perhaps, are a little hardened to Mr. Roosevelt's public declarations of intention, and a little skeptical about their execution. They remember how violently he was reforming the tariff in his trip of 1902, and how conveniently he has forgotten all about it ever since. They recall his announcement in 1903, which so alarmed Europe, that the Pacific Ocean was to become an American lake; but the countless laughter of the waves is all that has followed.

President Roosevelt's order giving heads of departments power to dismiss summarily employees whom they personally know to be inefficient or guilty of misconduct, might easily be abused. The head of a department who was unprincipled, or who was a devotee of the old spoils system, might employ this short-cut to clear away men whose places he or his party bosses desired. Thus much is obvious at first glance. On the other hand, we know that the departments at Washington are stuffed with incompetents and malingerers, men who, having once got snug berths behind the wall of the civil-service rules, do just enough work to escape written charges, a formal hearing, and a discharge. They neglect their duties so skilfully that a superior officer finds it hard to put down their delinquencies in black and white. The new order will, we hope, serve notice on the loafers that they must either earn their salaries or get out. This power of summary dismissal is lodged in the hands of very few men, who in all other matters have large discretion; and even these men cannot fill the vacancies except by drawing, as usual, from the civil-service list. But the chief safeguard against abuse of this authority must, after all, lie in the press. The correspondents at Washington must watch sharply the practical operation of the rule, and warn the country if it is prostituted to partisan ends.

Senator Isidor Rayner of Maryland has rendered a valuable service to his State by joining Gov. Warfield, Attorney-General Bryan, and other Democrats in attacking Senator Gorman, the party machine, and the iniquitous disfranchising amendment it has fathered. He declares himself "utterly opposed" to the amendment, points out that its adoption "would bind the chains of political slavery around this State, would sound the death-knell of our political hopes and aspirations in Maryland, and would be as great a calamity as could possibly be inflicted upon our people." His declaration of independence fills nearly a page in the newspapers, and has hit the Gorman ring so hard that it has found it necessary to retort at length. No summary of one feature of their abominable proposition has surpassed this one of Mr. Rayner:

"It absolutely places within the despotic power of one body of men, namely, the

registration officials of this State, the right to disfranchise at their unlimited discretion any white man—make no mistake, now; not negro, but any white man—who comes within the interdicted class, as a punishment for the crime of not being born upon American soil. And then, worse than all, with a spirit of insatiate revenge, it visits the sins of the forefathers upon their future generations to the remotest degree."

Senator Rayner points out that if his own father, an immigrant from Bavaria, had arrived here after 1869, he could be disfranchised under this amendment, and the Senator himself would be disfranchised unless he passed "a satisfactory constitutional examination conducted, perhaps, by some unconvicted felon in a register's box." This utterance stamps Senator Rayner as a man of ability, courage, and independence.

The collapse of the Enterprise National Bank of Allegheny, Pa., is a very logical supplement, on the one hand, to the political scandals which have stirred Philadelphia to its depths, on the other to the life-insurance disclosures in New York city. No secret is made, since its cashier's suicide, of the fact that State of Pennsylvania money was deposited with the bank at the peremptory demand of Senator Penrose, and that the money thus deposited was distributed, to the extent of probably $780,000, in loans on worthless notes of politicians of the Penrose ring. "This will wreck the Republican Machine. This bank has been robbed by a lot of politicians," the president of the collapsed institution is reported to have declared; and, indeed, in any other State than Pennsylvania such an affair would shatter a political machine; but the people of Pennsylvania have been steeped so long in corruption that they seem actually to prefer misgovernment. Neither the State authorities, nor Pittsburgh banking circles, nor the Pennsylvania people have been without warning in this matter. The use Penrose and his gang were making of this State depository has been exposed in public meetings. Nothing was ever there alleged, however, quite so bad as the facts discovered when the bank had to close its doors. The banking view of the case will simply be that the greed of these political vultures was so insatiable that they threw to the winds all care for solvency. They simply wrecked the bank while plundering it. If the voters of Pennsylvania have any self-respect remaining, their lesson will begin with the downfall of the Penrose cabal.

Mr. Jerome's début at Carnegie Hall evoked an enthusiasm as spontaneous as it was vast. His speech was more measured than many of his public utterances. This was befitting the occasion, since he was deliberately marking out the broad lines of the political battle which he proposes to wage. His speech was his platform; and no one can read it without being persuaded that it presents an issue which is moral in its essence, and which is pressed home by a man of the clearest courage and of a will neither to be bent nor broken. His heart has long brooded over the iniquities of the boss system, as Lincoln's did over those of slavery, and he appears to have resolved, as Lincoln did: "If I ever get a chance to hit that thing, I will hit it hard." As District Attorney, the diffused misery born of political dictatorship has been thrust in his face every day. No part of his speech fell more solemnly from his lips than that in which he spoke of the "pleadings and intercessions of mothers, of unfortunates, of the wives, of children," which had filled his ears month after month. Next to that stood his crushing retort upon those who had dragged out the corpse of Armitage Mathews to make a point against him. Mr. Jerome showed who were the real undoers and murderers of that unhappy man. They were the Grubers and men of that kidney, who took the pleasant but weak young fellow and "put him into that dirty political game" of theirs, which gradually destroyed his morals and finally drove him to suicide in order not to "expose the criminal infamy of that particular gang." If these things do not lay hold on elementary morals, nothing does. If Murphy's "foul hand," as Mr. Jerome called it, upon the judiciary does not show that fundamental justice is imperilled among us, nothing could.

Mr. Ivins thinks that Jerome is a courageous and able man, but "unnecessarily belligerent." But Odell must think the same of Mr. Ivins. The latter lends a distinctly comic air to his depreciation of Mr. Jerome's pugnacity by himself hitting heads right and left with such a delightful abandon that one almost suspects with the old lady in the play, "Irish extraction." Mr. Odell's fine sensibilities are now daily trampled upon by his candidate. "Odell? Odell? Who is he? I doubt if I should know him if I saw him. He has not asked to see me, and certainly I have no desire to meet him." This sort of thing sounds to us as if Mr. Ivins were himself applying for a recognition of his rights as a belligerent. And he rapped his own campaign manager, Senator Elsberg, over the knuckles with a fine and impartial freedom. So it is really a droll stroke on his part to purse up his lips over Jerome's imprudences. But Mr. Ivins is clearly on the right track in his disrespectful handling of bosses and their machines. If he will stick to that, and promise us a millennium of simple independence and honesty, instead of one where all our expenses are to be paid by the city, he will flutter the Tammany dovecotes mightily.

Mayor McClellan made a dignified speech in defending his Administration and appealing for reëlection. He made no pledge, however, that he would serve out his term, if reëlected. In fact, the explicit intimation of the chairman of the meeting was that the Mayor is to be a candidate for Governor next year, turning the city over to the tender mercies of Murphy and McGowan for three years. Mr. McClellan must know that this consideration is seriously troubling the minds of many; and hence, if he maintains silence, he will lend color to the view that he is asking the people to make him Mayor without really intending to serve them as Mayor. A word from him would set this straight; and the stress of the canvass may yet compel him to utter it. On the subject of municipal ownership, his speech contained more sound sense than we have had from any other candidate. His general principle, that the Government should keep its hands off any business which can be well done privately, is simply the principle which has run through all our history. It is precisely the same as that enunciated by President Roosevelt in his speech at Raleigh the same day. We are too much governed, rather than too little. The work already put upon our governments is proving a serious strain upon both their efficiency and their character. When it is proposed that any new public utility should be municipalized, a very clear case has got to be made out. It is not a matter to be decided in a hurrah, but only after looking before and after, like reasonable men, and especially counting the cost thereof. On this latter point, Mayor McClellan was absolutely conclusive. We have not the money, and cannot get it, to enter upon all these vast new municipal enterprises. Those who are clamoring for public ownership and operation of the new subways are really saying that they do not want the subways, since it is at present a financial impossibility for the city to build and run them.

Gen. Francis V. Greene's frank testimony last week gave what should be the deathblow to the movement to induce President Roosevelt to interfere in Venezuela in behalf of the Bermudez Asphalt Company. He admitted that the company had aided and abetted a revolution against President Castro. Within his knowledge, $100,000 had been spent to finance Matos in his fight to oust Castro. So flagrant a violation of law and decency did General Greene consider this, when he was told of the plan of his subordinates to foment an insurrection in order to "protect their interests in Venezuela," that he immediately said it would be "impossible for [him] to make further claims in behalf of the company at the State De-

partment." In fact, he "never went to the Department again." How could he? The company was alleging injustice on the part of Castro; meanwhile, it was making itself guilty of treason, and its officers, if they had been caught, liable to be shot or hanged. We are quite aware that the Bermudez Company has some show of right to redress for the seizure of its property in Venezuela. To invoke, however, the intervention of this Government requires it absolutely to come with clean hands. How can Secretary Root, or the President, think after this of shaking the Big Stick at Castro? The proposal is that this should be done on account of money damages to a company which confesses itself to have been a party to a treasonable conspiracy against the very life of the Venezuelan Government! The amazing testimony of Gen. Avery D. Andrews, vice-president of the General Asphalt Company, on Thursday, confirmed General Greene's. The Asphalt Trust was uneasy about the conduct of affairs under Castro, and was "threatened with the certain destruction of its rights." Regarding Castro exactly as Messrs. McCall and McCurdy regarded Bryan, the officers of the Trust decided that their simplest and cheapest way out of the difficulty was to pay $130,000 to Matos, who, in the rôle of saviour of his country and the Asphalt Trust, promised to combine the virtues of Hanna and McKinley. The whole story, with variations in minor detail, is closely parallel to that told by Joseph Conrad in 'Nostromo.' Below all the revolutions and counter-revolutions, the magniloquent appeals to patriotism, the pomp, and the cruel waste of life, ran a network of sordid intrigue for money.

"Picketing" is declared unlawful in a recent decision of the Appellate Court of Illinois. Several Chicago printers, whose employees were striking, appealed for legal protection against agents of the union who were interfering with the business. The decision of the court, delivered by Mr. Presiding Justice Smith, is published in the last issue of the Chicago *Legal News*. The gist of the matter is that "the union and its members had the legal right to demand higher wages of complainants, either with or without good reason. The members of the union also had the legal right to quit work as individuals or collectively, as a means of enforcing their demand." On the other hand, "the union or its members had no legal right to interfere with the business of complainants or to disturb them in their lawful business." As to interference, the ruling of the court is perfectly explicit: "The picket system once established, the intimidation, assaults, slugging, and bloodshed followed as naturally and inevitably as night follows day. There can be no such thing as peaceful, 'polite, and gentlemanly' picketing, any more than there can be chaste, 'polite, and gentlemanly' vulgarity, or peaceful mobbing, or lawful lynching." This is strong language, but every one who has observed the course of any strike must admit the truth of it. The logical conclusion of Justice Smith is therefore: "It is idle to talk of picketing for lawful persuasive purposes. Men do not form picket lines for the purpose of conversation and lawful persuasion. Such picketing as is established by the evidence in the case at bar is intended to annoy and intimidate, whether physical violence is resorted to or not, and is unlawful in either case." So far as Illinois is concerned, this disposes of that abstract conception and metaphysical sophistry, peaceful picketing.

Both houses of the Federal Parliament of Australia on Thursday adopted resolutions in favor of Home Rule for Ireland. The incident will pass almost unperceived in this country, and probably with very little comment in England. Yet suppose the resolutions had been in favor of Chamberlain's fiscal policy, the welkin would have rung. "Listen to the majestic voice of our great colony! Here is a statesmanlike suggestion looking to the federating of the Empire. Englishmen, will you be foolish enough to spurn these wise counsels?" One can imagine the eloquent cries if it had been a matter affecting English trade. But as it only concerns a problem of century-old misgovernment and racial antagonism, there is nothing to be said about it except that William Redmond's Australian campaign must have been very cleverly conducted.

It is unofficially announced at Paris that Russia is undertaking to borrow $360,000,000 from outside markets. As to the necessity for such a loan, it is to be observed that all Russia's borrowings during the recent war were in the form of short-term loans; the last one, indeed—some $50,000,000, placed at Berlin—being merely a nine-months' note, maturing some time this winter. Within the next few years, then, all of this war debt, footing up nearly $300,000,000, must in any case be refunded; the proposed new loan would no doubt provide for that process in advance and for the closing expenses of the war. But the more interesting question is, Who will lend Russia the money? It appears to be assumed that the French investor, under the guidance of the great Paris banking houses which manage his affairs for him, will again be ready with his savings. The intimation, however, that Germany, England, Holland, and the United States will participate, provokes some doubts. English financial writers have been suggesting that London may take a block of the Russian bonds for political reasons—to show, in short, that no hard feeling need be left over from recent controversies. A similar argument is proposed for German participation. But underwriting bankers are not altruists; they have been known to take a loan because their Government urged it, but they did not do so until they could see where the bonds could be resold to investors. It is scarcely conceivable that the British investor will show any great appetite for Russian Government securities, and while matters might be somewhat different with the German public, the fact that Germany is just now in the throes of a collapsing stock speculation does not entirely favor an operation of this nature. The inference would seem to be that if Berlin and London bankers take up at first hand a portion of the Russian loan, they will have an eye to the possibility of "unloading" at will on Paris, the home market of Russian securities.

The Japanese achievement in raising the sunken Russian warships at Chemulpo and Port Arthur has not received due recognition. The *Scientific American* points out that this salving of vessels universally believed to have been hopelessly ruined "is one of the most astonishing feats of the many astonishing things . . . done during the late war." The ships were not only injured in the attacks on Port Arthur and the sortie of August, but they were finally sunk by the firing of Nogi's guns. More than that, the night before the surrender, the Russian officers sought to make complete wrecks of them by exploding submarine mines under them. To float them, lying as they were in forty or fifty feet of water, seemed impossible, and there was grave question whether they were really worth raising. But the Japanese persisted, and have added to the Mikado's fleet the battleships *Poltava*, *Peresviet*, *Pobieda*, and *Retvizan*, and the fine cruisers *Variag*, *Boyan*, *Novik*, and *Pallada*—a handsome haul, if the four ships captured in the Sea of Japan be added to round out the dozen. Of course, large sums must be spent before these ships can be repaired and in some cases rearmed, but the result will be a net gain in battleships at a far less cost than new ships would come to. Leaving out the two coast-defence monitors captured, the *Seniavin* and *Apraxin*, the Japanese have increased the total of their battleships from six at the beginning of the conflict to ten, despite the two lost during the war. When the two new battleships now building in England are completed, the Japanese will have a dozen battleships, two fine coast-defence vessels, and nine fine armored cruisers, which in their hands are practically as valuable as battleships.

NON-PARTISAN LEGISLATIVE "INFLUENCE."

"I think the whole course of this investigation," said President McCurdy last week, in his astounding lecture to the Insurance Committee, "is entirely outside of what was in contemplation by the Legislature when the Committee was constituted." There can be no doubt whatever that the Committee's course is just what the insurance magnates who have so long purchased the legislatures of this country did not expect. If there had been any question whether Mr. Hughes's inquisition is really getting behind the scenes, Mr. McCurdy's attitude and words must have answered it for all time. No one has cut quite such a discreditable figure as did the head of the Mutual Life. Of the honest, straightforward man, conscious of rectitude, and ready to lay all before properly accredited inquirers, there was no more trace than of the dignified, able, and courteous man of affairs one expects to find at the head of a great trust. Mr. McCurdy has deprived himself of every remaining bit of sympathy any one may have had for him. His best friends must have blushed for him as they read his involved, evasive answers, his sullen defiances, or his impertinent reference of the simplest general questions to his actuary. Such an exhibtion would seem incredible were it not attested in black and white. Some of the insurance questions which President McCurdy was apparently unable to answer, were of such a nature that ignorance about them would have shamed a $25-a-week clerk.

Yet, despite the witness's dodgings and twistings and refusals to answer, Mr. Hughes has obtained no better results in a single session than he did on this occasion. The whole system of legislative corruption is now bared to all who care to read it. Newspapers have hinted at it, reformers have denounced it, and the general public has long felt that the responsibility for the deterioration of our political life lay at the doors of the great corporations. But proof was lacking until Mr. Hughes found the slimy trail of Andrew Hamilton. On October 17 his inquiries into the activities of Andrew C. Fields enabled him to expose the Mutual's method down to its finest ramifications. With complete oblivion of his own party allegiance, Mr. Hughes exposed Mr. Fields's Democratic and Republican alliances without discrimination, and thereby brought out once and for all the non-partisan character of the legislative corruption in which the insurance companies have been engaged. After this revelation not even Mr. McCall can have the face to portray insurance presidents as saviours of the finances of the nation. They care not a whit what party succeeds, what principles control, whether democratic institutions are sapped, so long as they are "protected."

But the truth does not stop here. It was made apparent that both parties share equally in the spoils so freely distributed without an accounting of any kind. Mr. Andrew C. Fields, who is too ill to leave California to defend his reputation, and whose whereabouts is unknown to Mr. McCurdy, has been for some years head of the Mutual's supply department. Curiously enough, the duties of that office seem to terminate with the legislative session, for then Mr. Fields betakes himself to Ocean Grove or to his other summer residence at the Thousand Islands. When in Albany, where he spends a large portion of the months from January to March, Mr. Fields occupies a house with four or five others—his share paid by the Mutual. Naturally, Mr. Fields, being kind-hearted and philanthropic, finds ready employment for the politicians of his party—the Democratic—in Westchester County. Mr. Charles P. McClelland, for instance, Mr. Fields's near neighbor, and known also as an able lawyer, received from December 17, 1900, to March 31, 1902, for legal services, $8,947.32, in return (Mr. McCurdy asserts) for foreclosing mortgages. On his reëlection to the State Senate in 1902, Mr. McClelland was wisely enough put upon the Insurance Committee. So, too, was one of Senator McClelland's predecessors and townsmen, Senator Graney—representatives from Dobbs Ferry are always insurance experts. But Mr. Fields's kindness did not stop there. There was Louis F. Murray, also a Democratic politician of Dobbs Ferry. For him there was $300 for "legal services." And for John J. Cunningham of Dobbs Ferry, who formerly drove for Mr. Fields, there was a position as examiner with the State Insurance Department.

But the Mutual's benevolence extended to Republicans as well as Democrats, and so we find Mr. William Barnes, sr., a lawyer of standing, one of the best-known octogenarians of Albany, and, incidentally, father of William Barnes, jr., Republican boss of Albany, receiving an honorarium from "Andy" Hamilton. We regret to note, however, in this connection, Mr. Barnes's published statement that his connection with the Mutual Life was only "slight." This further appears from the fact that one of the Mutual's checks due Mr. Barnes, sr., was so long overlooked that Barnes, jr., had to write and ask for it. The Mutual's affection for retired Republican insurance superintendents is really touching when one considers how stony-hearted corporations are supposed to be. Besides Mr. Barnes, the Mutual long paid to James F. Pierce $2,500 a year after leaving Albany, not, of course, for any services rendered by Mr. Pierce at Albany, but merely out of regard for a highly conscientious official left to starve by an ungrateful republic.

From all this it will be seen that the non-partisan idea in politics has had no warmer supporters in fact than our insurance companies. Those of us who have hitherto doffed our hats to the Citizens' Union and other reformers as the leaders in this cause, must now admit our error. In national politics, of course, Mr. McCall and Mr. McCurdy have taken care of the ship of state and steered it clear of Democratic rocks. But in the State a broader policy has been followed. After all, should not a State, like a city, be run solely in a business way to benefit business men? The Mutual and its allies evidently thought so, and, as the first step in making the government at Albany a government by business men, for business men, inevitably enlisted the leaders of thought from Dobbs Ferry and elsewhere under their banners. What could be simpler? What more practical?

"FRIENDS OF THE INDIAN."

At last year's "Lake Mohonk Conference of Friends of the Indian and Other Dependent Peoples," Mr. Bonaparte quoted a naval officer as once declaring that "the service would never be worth a ——— until all the well-meaning people in it had been hanged." He hinted that something of the same tenor might have been said with equal justice of the activity of champions of the Indian who are merely well-meaning. Knowledge and discretion in those who have undertaken unofficially to influence the conduct of Indian affairs would have tempered their zeal usefully in the years when service was most needed; and, though little fault can now be found with the methods and personnel of the Indian Rights Association and similar bodies, there is still a too noticeable tendency to let good intentions evaporate in earnest, purposeless talk. That "court of final appeal, public opinion," has been appealed to so often that the last advocate must needs be silver-tongued indeed to rouse more than a momentary interest. The Indian service, bad as it has been at times, has accomplished more for the disappearing natives than it has been credited with in the popular mind. It would have done still more if its critics had been inspired by accurate information and good judgment.

Suppose some well-informed, persistent friend of the Pimas in Arizona had taken up the matter of white encroachment on the tribe's water rights along the Gila River eighteen years ago. Is it conceivable that he would have advised the poor Indians to take the matter to the Department of Justice? If he had done that, he would have gone contrary to the teachings of history. He might have foreseen exactly what happened last year when the

district attorney in charge of the case recommended that the suit begun in 1886 be dropped on the ground of the excessive costs of pushing it to a favorable conclusion, and the impossibility of enforcing a decree "because of the varied interests involved." The moral of Indian litigation against the invading settler could have been read as plainly in 1886 as in 1876 or in 1905: The Indian, "not taxed, not voting," has no real standing in the courts organized by and for the American people. The "varied interests involved" was a phrase in common use long ago to explain away apparent miscarriages of justice. Those 960 white settlers using the water from the Gila River which for generations had irrigated the Pimas' wheat fields, were as confident of holding their ditches when they built them as it is in human experience to be. Why, then, did the Indians go to court and patiently watch their fields revert to desert land while the proceedings dragged along for half a generation? Simply because some well-meaning, unhanged friends advised them that they had a good case.

It is not the despairing cynic who advises the Indian, "For God's sake, get the ballot in your hands as soon as possible." Thirty years ago, a Commissioner of Indian Affairs, commenting on the twenty-five years' struggle of the California Mission Indians to preserve themselves, said: "This class of Indians seems forcibly to illustrate the truth that no man has a place or a fair chance to exist under the Government of the United States who has no part in it." It is such elementary considerations as this that have been overlooked by the friends of the Indian. In Congress, the final court where the cause of a dependent people is decided, the white invader has representation, and the Indian has none. Bishop Whipple, in 1863, said: "I submit to every man the question whether the time has not come for a nation to hear the cry of wrong, if not for the sake of the heathen [Indian], for the sake of the memory of our friends whose bones are bleaching on our prairies." In 1877, the white settlers of the Northwest prevailed upon their representatives in Congress to remove the small Ponca tribe of Indians from their old home in southeastern Dakota, where they had built comfortable houses and opened farms, to the Indian Territory, where in a year a third of their number died. The Ponca reservation was wanted for those troublesome Sioux who were keeping the gold-hunters out of the Black Hills. The nation "heard" the cry of wrong, as uttered by Bishop Whipple; but Congress drove the Poncas from the Niobrara in obedience to the demands of a handful of constituents in Iowa, Minnesota, and Nebraska.

On the whole, the Audubon movement has succeeded better than that to protect the Indians. Bishop Whipple and those who meet annually at Lake Mohonk have insisted, and do insist, that the Government deal with the Indians as with human beings whose rights are co-extensive with those of the whites. Theoretically, their attitude is correct. Public opinion has approved them and applauded their sentiments. Practically, they have plodded along without accomplishing as much as could an obscure Western member of the House of Representatives with a vote on a harbor-improvement bill to trade for a vote to dam Salt River and irrigate Grass Valley. The Indian, until he is absorbed and enfranchised, is not a "person." That was settled in California in the course of the degradation of the Mission tribes. Treaties and agreements with Indians may be abrogated at the pleasure of Congress. That was finally and formally decided by the Supreme Court in the Lone Wolf case, two years ago. The attitude of the settler, at whose request every Indian removal has been made and every tribal reservation extinguished, has been plain and consistent from the beginning. It has been equally plain that the settler, with a sympathetic and industrious representative in Congress, would decide the attitude of the Indian Department.

The need for friends with discretion and detailed knowledge of the economic and political history of the tribes is, of course, obvious at this day. It should be just as obvious in the case of the other "dependent peoples" whose welfare under the guidance of our Government is becoming more and more the subject of friendly discussion at Lake Mohonk. The promoter of an inter-island steamship line for the Philippines has his champion in Congress, while Secretary Taft has no vote to trade, and can only offer a trip to Manila for a vote to reduce the duties on imports from the islands.

THE QUESTION OF ARMY MORALS.

The annual reports of the various generals commanding army departments are, as usual, full of appeals for the restoration of the post canteen. The unanimity with which they give a large part of their space to this subject does not betray an indifference to the well-known wishes of the War Department. At the same time we would not for a moment deny that most of them sincerely believe that to put back the canteen would make a vast difference in the discipline and conduct of the army. All who study this question should give due weight to their opinions. Yet it is proper to point out that the believers in the canteen, both in the press and in the army, are going to ridiculous lengths in advocacy of its restoration. To read their statements one might believe that the supplying of beer and light wines to single men in barracks would at once make them not merely "plaster" but genuine saints, and that, prior to the abolition of the canteen, there never was a trace of drunkenness and immorality. That daily or hourly beer at home is better than occasional bad whiskey abroad, may be the correct view. But this should not lead to the claim that the only opponents of the canteen are the liquor-sellers and the W. C. T. U.

Let us look at some of the facts. It is undeniable that conditions in the army are not as satisfactory as they ought to be. No less than 2,529 soldiers, or the equivalent of three full regiments of infantry, were sentenced to dishonorable discharge in the last fiscal year, the total force aggregating during this period 60,139 men, according to the returns of the Military Secretary. During the same time the number of desertions has increased enormously, there being no less than 10 per cent. of the entire force, *or 6,000 men*, who took French leave—5,000 more than in 1904. Of those dishonorably discharged, 1,470 were convicted of desertion. It must be remembered, however, that the annual report of the Judge-Advocate-General, so far as published last week, from which we take these figures, does not concern itself with the summary courts-martial. It is only serious offences requiring a court-martial with which these figures deal. Minor infractions of discipline and intoxication are punished by a single officer sitting as a "summary court," and it is beyond doubt that the number of these police-court trials has also increased, as well as the general courts-martial.

Even more illustrative of the low tone of the army is the statement of the Surgeon-General that no less than 715 men, or nearly a whole regiment, were incapacitated for service every day in the year by diseases resulting from immorality—a large increase over previous years. No less than 9,157 men were treated for this cause, or almost one in every six—a terrible fact, which might well have given Secretary Taft pause when he reluctantly replied to the criticisms of a German newspaper. Six thousand deserters and 9,157 syphilitic patients are not to be disposed of by Mr. Taft's or Gen. Chaffee's denial that there is something radically wrong with our army. And even when men serve out their enlistment honorably, few of them desire to remain in the army after the expiration of their service. This is particularly true of the Artillery Corps, where the discontent is so serious that Major-Gen. Wade devoted a good part of his report to recommendations for changes in pay and conditions to counteract the dissatisfaction among the men. To cite only one example, the One Hundred and Twenty-second Company of Coast Artil-

lery, comprising 105 men, has now only ten men who were with it in October, 1902. As one of the sergeants of this company recently wrote: "With the continual movement in and out of a company, it is impossible to keep up that *esprit de corps* which is the very essence of discipline"; and he added significantly, "Every few months new men are grafted upon the parent stem," and "the first problem a recruit struggles with is how much time must elapse before he can get his discharge; sometimes he discounts it." In the Third Cavalry recently thirty short-time men were discharged and given a month's leave upon promise to reënlist and accompany their regiment to the Philippines for a full three years' enlistment. Not one of these men kept his word.

Obviously, if the mere application of beer and wine in homœopathic or allopathic doses will heal these undeniably unsatisfactory conditions and reduce desertions and immorality to a minimum, the advocates of the canteen have a strong case. But let us see what actually happened under the canteen. In 1894 the strength of the army was not over 25,000. Yet 2,054 men were convicted by general court-martial, 518 for desertion, and 211 for drunkenness. In 1895 the latter figure rose to 252, or one in every one hundred soldiers; in 1896 it was slightly larger. The total trials were smaller in both these years, being 1,712 in 1895, at which time, however, the Judge-Advocate-General pointed out that the large decrease in trials for desertion was due to the increased number of successful deserters.

To return to the present, it must be plain that other considerations than the failure to supply beer to the soldiers are responsible for the present unhappy army conditions. Gen. Wade attributes the artillery dissatisfaction to the isolated stations along the coast. Secretary Taft points out that the greater rewards in civil life are a temptation to desertion. Col. Duggan, commanding the Department of the Lakes, attributes the desertions, not to lack of beer, but to a lax public sentiment "which favors the deserter." Gen. Sumner thinks the causes which led no less than *1½ per cent.* of his men to desert "were generally as indeterminable as in past years." The increased immorality is partly due to conditions in the Philippines—one of the curses of our colonial adventure. It is by no means wholly attributable, as Gen. Grant argues, to the absence of the canteen, the lack of which in his opinion drives the soldiers into vile resorts. Still other important facts are that the character of the enlisted men is very considerably lower than that of the picked 25,000 who were in service in April, 1898. The same is unfortunately true of many officers who have been foisted on the service owing to political influences which controlled the reorganization of 1901. One does not need to accept the revelations of the Taggart trial as typical of the army to feel that the old sergeant who presented a prisoner by saying: "This man is the most troublesome man in the army. He goes out when he likes, comes in when he likes, and gets drunk when he likes—in fact, he might be a *horficer*," would have some justification for his comparison were he to make it to-day. In the face of all these facts we submit that the proclaiming of the canteen as the panacea is ridiculous. Whether it should be restored remains a matter for argument.

"IMMEDIATE" OWNERSHIP IN CHICAGO.

New York's Municipal Ownership League will not, it is safe to say, hold up Mayor Dunne of Chicago as an exemplar of the way the thing can be done. No tale could be more discouraging to the enthusiastic voter in search of a panacea than the failure of the Dunne "immediate municipal ownership" programme. Those who "winked the other eye" when Judge Dunne was making his passionate appeal to the voters of Chicago to give him the opportunity to throttle the arrogant traction monopoly, may be forgiven for laughing at the present comic significance of the adjective "immediate." They are not wasting their opportunities, be it said. Another class of citizens, however, are not so well provided with material for mirth. These are the patrons of Chicago's street railways, who, while not expecting a revolution from the success of Judge Dunne, were confident that the passing of Carter Harrison meant a vast improvement in the car service. But the truth is that nothing has been done, and the possibility of any material change is growing more and more remote.

As a pioneer of the municipal-ownership idea, Judge Dunne went into the city campaign with characteristic Western enthusiasm. "Immediate" was the word that won for him over Mr. Harlan. Once in office, Mayor Dunne published his plans. The city must obtain control of the lines directly, either by purchase or by condemnation; or, failing that, the city must parallel the corporation tracks, and, by its more efficient operation and honest administration, drive the monopolists out of business. In order to make sure of his ground and strengthen public approval, the Mayor asked Manager Dalrymple of Glasgow to come over and give advice. A Chicago newspaper hurried a trained correspondent abroad to cable descriptions of the operation of city-owned street railways in Europe. The scoffers were silent, and the ordinary fare-paying citizen was hopeful. Mr. Dalrymple's astonishing failure to appreciate the Mayor's splendid plan, and his bluntness in suggesting that Chicago would find it impossible to divorce business and politics, marked the beginning of the scoffers' innings. It seems probable that they will not give way to the triumphant municipal-ownership advocates until long after Mayor Dunne is a mere memory.

Effective as a campaign appeal, the word "immediate" was never spoken seriously after the election. When two or three vague radical propositions had been discussed, and the Scotch expert had returned to Glasgow, Mayor Dunne proposed a municipal-ownership plan that was a practical duplication of the proposal which John M. Harlan, Dunne's opponent at the election of April 4, had made to solve the traction problem. This plan, known as the "contract plan," was to grant to a new company the right to lay tracks and operate cars upon the two hundred miles of streets where franchises have already expired, under an agreement that, whenever the voters so elected, the property should be transferred to the city. A fair constructors' profit and interest on the investment were to be allowed on taking over the roads. But the City Council would have none of the scheme. The "contract plan" was buried in committee, and the street-railway people began the game of submitting counter propositions. Week before last the Mayor ordered his own plan out of committee, and had the satisfaction of seeing it sidetracked to oblivion by a vote of 45 to 18. There yet remains the Mayor's alternative "city plan," by which the municipality might build its own lines, disregarding the presence of the privately-owned tracks and equipment. But it is not conceivable that any possible Council can be got together to approve it, and even Mr. Dunne is not convinced of its wisdom.

Meanwhile, the railway company has submitted a twenty-year contract plan, giving the city the right to purchase after the expiration of three years. But this is not taken seriously, either. Chicago critics point for proof to the final section of the proposed agreement providing for a referendum, "requiring a majority of all voting at next spring's election to *vote against* the ordinance in order to invalidate it." Already the Mayor has published a list of thirteen serious objections to the proposal, and it is certain that the majority necessary to pass the ordinance over his veto cannot be secured. The Council's transportation committee has prepared a modification of the City Railway's plan, but the change is concerned merely with the referendum clause, making it necessary for a majority of the voters to *approve* an ordinance before it becomes operative. There is little hope that anything will come of it; certainly, it does not meet the objections urg-

ed by the Mayor, and could not be passed over his veto.

In a speech at the Chicago Commercial Association's dinner to Mayor Dunne a few days ago, Franklin MacVeagh placed the blame for that city's inefficient street-car service where it properly belongs. "The efficiency of the existing city service," he said, "has long been to all intents and purposes broken down by the weight of city politics, and no new or added city service of any sort, and certainly not one of the magnitude of a transportation service, could be established under present conditions with hope of possible success." If Chicago must change its leopard's spots in order to make municipal ownership and operation of street cars possible, is it not fair to suppose that New York will have to drop a tiger's stripe or two before the taxpayer will welcome the city as his purveyor of light and transportation?

THE BURDEN OF THE COLLEGE PRESIDENT.

The duties and qualifications of the president of a modern university were discussed by the educators who gathered last week at the inauguration of Dr. Edmund J. James as president of the University of Illinois. The ideal president must evidently be a scholar, teacher, disciplinarian, organizer, administrator, financier, diplomatist, and accomplished writer and speaker. Such, at least, is the inference from an interesting address on the subject by Dr. Andrew Sloan Draper, President James's predecessor, and now Commissioner of Education in this State. All college presidents fall short of the ideal in one point or another, but the successful ones must possess both solid attainments and superficial accomplishments. The day has long since passed when a broken-down preacher can be retired to the innocuous ease of a college presidency.

The average man does not realize how much we demand of our college presidents. The college—to say nothing of our few real universities—is no longer a boarding-school for two or three hundred boys of from sixteen to twenty-one. A large faculty of specialists must be steadily recruited and kept in harmonious and economical activity. Buildings and grounds worth several millions of dollars, elaborate libraries and laboratories, must be maintained in a high state of efficiency. The college administration must have close relations with alumni throughout the country, and it must be fittingly represented on many public occasions. However duties may be divided among deans and committees of trustees and faculty, the final responsibility for the smooth running of the machine is laid upon the shoulders of the president. To adjust expenditure to income, to make the college a centre of the best intellectual and moral influences, to be socially acceptable to men and women of widely varying interests—all these things, we can readily see, are rigorously exacted of the head of a college.

He has other burdens which are less apparent even to trustees, faculty, alumni, or undergraduates. Trustees, many of whom are prosperous bankers and manufacturers, sometimes regard a college as a business enterprise. If the annual deficit is not too large, if the teachers are busy and not disagreeably notorious, if the students are not smashing the property, the venture may be reckoned as fairly profitable in its kind. Each member of the faculty is inclined to look at college from the point of view of his own courses. If his department is steadily expanding, if he can secure appropriations for necessary instruction, books and apparatus, and if he is thus able to attract the best students, the president is everything that heart can wish. No undergraduate and relatively few trustees, professors, or alumni fully grasp the notion that the radical difficulty of the much-tried president's position is this: he is conducting an extensive experiment in idealism in a community which asks chiefly for immediate material results. What is more, his failure may mean distress and possible disaster, not for himself alone, but for the faculty and students who are embarked with him. The individual professor becomes unproductive, unable to keep abreast of his science, and as a result a single department suffers from temporary weakness, while the strengthening of the rest of the college may more than outweigh the damage; but when the president is unproductive, every department is weakened.

The church, too, is an organization devoted to an ideal, but no clergyman, unless he be a bishop, can be compared in importance with a college president. Every year in this city of New York some minister virtually confesses bankruptcy. He gives up his pulpit to a successor, or his little church may actually cease existence. One congregation more or less among so many is not an irreparable loss. But if President Butler of Columbia, Chancellor MacCracken of New York University, or President Finley of the College of the City of New York were so to conduct his office as to impair—or even fail to advance—the standing and influence of his institution, the miscarriage would be conspicuous and wide-reaching in its results. A preacher can say: "Here is my doctrine; thus and so I expound it. If you prefer another creed or a more complaisant prophet, go in peace. I will talk to empty pews." But the college president cannot take the attitude of *Athanasius contra mundum*. He need never surrender his principles, but he is doomed to many sacrifices of personal taste and preference. He will be fortunate if he have such clearness of vision and force of character that he can always discriminate between preference and principle. When he sticks for mere preference, he alienates supporters on whose aid he may legitimately rely. When he first persuades himself that a principle is nothing but a preference, he begins to degenerate into a sycophant and time-server.

How powerful the temptations, none but he can ever know. The recent insurance investigations have shown us how hard it is for men supposed to be fortified by intelligence and character to resist the allurement of money for themselves. They contrive some sophistry to excuse theft and quiet conscience. College presidents also are but human. They do not, however, want the money for themselves, but for a noble cause. They are not scheming to filch it by excessive salaries, cooked accounts, or preposterous travelling expenses. Their only fault is to crook the pregnant hinges of the knee. The welfare of the institution is a huge thing—and 'tis a great price for a small vice. When, therefore, we recall the revelations of venality among men high in public confidence, when we remember how ignorant and unreasoning the patrons of education often are, the wonder is that more colleges do not, as Senator Dolliver put it, "smell of Oil."

FIGHTING GRAFT IN THE NAPLES MUSEUM.

CAMBRIDGE, MASS., October 20, 1905.

In the *Nation* of June 23, 1904, a correspondent ("T. D. B.") gave an account of the then recent removal of Professor Ettore Pais from the directorship of the Naples Museum, and reflected severely on both the competence and character of Professor Pais. It was clear that this correspondent wrote in perfect good faith; it was also clear that he had heard only a part of the transaction, or that he looked at it from only one side. But until Professor Pais himself chose to speak out, those who knew and respected him were naturally forced to keep silence. He has now printed his apology in a fifty-page pamphlet, giving a complete account of his difficulties, and confirming his statements by citing official documents. It is only just that this vindication of one of the chief scholars in Europe should have full publicity; and the story, which is essentially tragic, can hardly fail to be interesting.

Professor Pais is a Piedmontese who, after distinguished service elsewhere, was called to the University of Naples. As an historical scholar and archæologist of Ancient Italy he had no superior among his countrymen, and his 'History of Rome' had brought him an international reputation. He was a pupil of Mommsen, thoroughly trained in German scientific methods, and his original investigations had upset many long-cherished views. More than once he had been mentioned as the proper person to

take charge of the Naples Museum and the excavations at Pompeii—the two works being under one head—a distinction which is one of the few great prizes in the world for archæologists. When he asked Mommsen's advice whether to accept the position or not, the wise German, who knew the Neapolitan conditions, replied that it would be a very difficult affair.

"The Neapolitan Camorra," Mommsen wrote, "will without doubt have a hand in it, although I do not know how or when. There will be needed much force of character, which I hope you will have, and much calm patience, which up to the present you do not possess, and which will not be easy to acquire in Naples."

Nevertheless, Signor Pais decided to accept the post. He had a laudable ambition to make the Museum in arrangement and efficiency worthy of its priceless collections. Having carefully studied the ground, he proposed to carry out a complete reorganization, in which there should be four distinct departments—a gallery of sculpture, an antiquarium, a gallery of ancient paintings, and a gallery of mediæval and modern paintings. His plan was approved by Nasi, the Minister of Public Instruction, who ordered him to go ahead. But it was at once seen that changes would have to be made in the Museum building, the capacity of which was outgrown, and which, in any event, needed many repairs.

So Professor Pais went ahead, and in two years the building was restored, with several thousand square feet of floor space added; the collections were rearranged and placed in separate sections, and many valuable objects, which had been stored and forgotten in cellars and garrets, were brought to light. But, from the start, the vigorous innovator had reason to remember Mommsen's warning, "The Neapolitan Camorra will without doubt have a hand in it." The Camorra, it is hardly necessary to say, is the great organization of graft which, like Tammany and the Platt machine in New York city, or like the Quay-Republican gang in Philadelphia, has held Naples in its coils for generations. In the old Bourbon days, King Bomba himself headed the Camorra, as he found it easier to get money in that way than by taxation. The Camorra had fastened its claws on the Naples Museum; guards, doorkeepers, scrubwomen depended upon it for their "pull"; and so did the contractors and even the honorable members of commissions appointed to inspect the Neapolitan art treasures. The Camorra controlled the political affairs of Naples, and sent its regular delegation to the Chamber of Deputies.

Signor Pais inevitably ran against this powerful antagonist from the moment that he set out to have honest work done. He engaged workmen who were not in the ring; he closed bids with low-priced contractors, instead of continuing to employ the highest bidders; he sought for more trustworthy assistants and underlings. He even tried, in connection with the Pompeian digging, to recover for the State rights which under his predecessors had been quietly allowed to slip into the control of private individuals—of Camorrists. He could not help unearthing, as he pushed his investigations, many instances of dishonesty in the previous administration of the Museum; indeed, his own appointment was due in the first instance to the fact that the corruption there had become so notorious that a change had to be made.

One sees readily that every grafter whom he thwarted or exposed became his sworn enemy, and that the "System" neither could nor would tolerate a reformer at the head of the Museum. If honesty were allowed a foothold there, who could tell how far it might spread? Accordingly, all sorts of accusations, calumnies and abuses were heaped on Signor Pais. He was charged with incompetence, with dishonesty, with wilful carelessness, with an almost insane passion for turning the collections topsy-turvy. He found, for instance, that the coin collection contained many counterfeits, and, in order to get the best possible opinion, he asked the leading coin dealer in Naples, a man of great experience and probity, to assist the professional numismatists in separating the spurious coins from the genuine and in appraising them all. At once the Camorrist journals cried out that Pais was in collusion with Signor Canessi, the expert, to rob the Museum. Again, in moving the many collections, comprising, all told, several hundred thousand objects, one box, which contained five antique vases in pieces, fell to the floor. Thereupon, the cry went up that Pais was ruthlessly smashing the most precious masterpieces of the Museum; and persons in other countries may have imagined that the Capuan Venus and the Antinous, the Athene and Homer and all the rest, were being destroyed. Yet five unimportant vases, already broken, seem a not exorbitant loss for a removal of such magnitude.

Unfortunately, he had not only the Camorra against him; he was assailed by local archæologists, by supporters of the old system of classification, by guides and the makers of guide-books, who had to revise their accounts of the collections, and by an influential school of historians, who had obstinately rejected his conclusions in ancient history. In America we hardly know the intensity of the passion with which European scholars are still swayed. Signor Pais had always been a storm-centre, and now he found himself attacked by a formidable cohort of intellectual enemies. The Camorra, of course, chuckled to have honest men as its allies, and it could protest with all the more sanctimony that its objection to Pais was purely scientific.

In spite of everything, however, Professor Pais held his ground, and carried the reformation of the Museum almost to completion. Then he was summarily removed, as it was evident that he would not resign. The reason alleged for his removal was that he had gone to work before the necessary appropriation had been made. This was technically true. He had been ordered by his superior, Nasi, the Minister of Public Instruction, to proceed at once, as he, Nasi, would ask for the required sum when the next budget was drawn up. To meet current expenses, Professor Pais had to borrow money; and then his enemies prevented the appropriation from being made. In his Apology he remarks that it is by no means uncommon to push forward excavations or restorations in advance of the appropriations; he cites the work on the Church of St. Francis of Assisi, and the notorious diggings at the Roman Forum, for which nobody was reprimanded, much less cashiered; but then, he adds, "not all of us have relatives and friends in the Ministries." He counted on permanently increasing the revenue of the Museum by charging a separate admission fee to each collection. He also proposed that the Museum should undertake to make authentic replicas of its statues, from the sale of which it would reap a good profit. This proposal brought down on him the wrath of all the Neapolitan dealers, who had exploited the Museum's treasures without making it any return, and who now bombarded the Deputies and Ministers with telegrams. Pais must be stopped instanter; and stopped he was.

To cap the climax of his misfortunes, before the end of the work Minister Nasi absconded, under the suspicion of having misused money belonging to his department. Professor Pais's enemies tried in vain to implicate him in this affair, but the sums spent by Nasi had nothing to do with the Naples Museum.

Nasi's successor as Minister of Public Instruction, Signor Orlando, cast no shadow of suspicion on Signor Pais's honesty: nor could several parliamentary boards of inquiry, composed of men hostile to him, find one soldo misspent. No one denied that he had simply obeyed official instructions, or that the means he took to finance the alterations had been regularly approved. Nevertheless, he was remorsely sacrificed to the Camorra and his enemies. As if to indulge in paradox, Minister Orlando appointed Professor Pais to represent Italy at the International Congress of Scientists at St. Louis last year, and assigned him a salary, at the very time when he dismissed him from the directorship of the Museum.

But the most malicious assaults of his enemies cannot undo his great work. His reclassification of the collections has met with the approval of Mommsen, of Salomon Reinach, of Ernest Kornemann of Tübingen, of Ettore Ferrari, the most eminent of living Italian sculptors, of Thédenat, of Pollak, of Frederick Hauser, of Steinmann, and of other experts, whose opinions have a very different weight from those of the Camorrists and bureaucrats to whom Professor Pais fell a victim.

I should add that he is a Puritan of the Piedmontese type, brusque, uncompromising; single in his devotion to science and truth; a fighter, if need be, but by preference a scholar, eager to extend the bounds of knowledge. It may truly be said that he wanted tact; but tact, in his predicament, would have meant acquiescence in graft. Mommsen was right as to his lack of patience. But, in spite of it all, he actually accomplished the task he set himself, and accomplished it in two years' time, where ten years had been reckoned insufficient. The service he rendered to students of art, history, and archæology is great; how shall we estimate his service in proving that even in Naples one honest man can terrorize a host of grafters?

WILLIAM ROSCOE THAYER.

FROM TRIPOLI TO TUNIS.

TUNIS, September 11, 1905.

While the average traveller may know well his Tangiers and Algiers, even Tunis, with its thoroughly French atmosphere and bargain-loving yet fascinating native bazaars,

other North African towns are little beyond names. Djerba, Gabes, Mehdia, Sfax—their very sound is unfamiliar, yet few regions more richly repay prolonged sojourn. An intensely picturesque, modern Arab life, grafted upon (or, more accurately, overlying) a splendid Roman civilization long departed, offers singular charm.

In Tripoli province, digging for archæological remains is practically prohibited. Some time the Turkish Government may aid rather than restrict such research, but at present an occasional amphora, unearthed by chance, a few noble columns and capitals, promptly incorporated into corners and doorsteps of sordid Arab dwellings; now and then a majestic statue, generally headless, alone attest the former proximity of that long-forgotten life which the Hegira almost completely blotted out.

In the French possessions, a different spirit prevails, and as money becomes available, research will be increasingly carried on; museums are being founded in towns along the coast which must ultimately offer unparalleled possibilities to the student. At Gabes, in particular, evidences abound of a far past quite different from the nomadic life of to-day, now serenely moving to and fro upon its buried treasures. The present prosperity and growth of Gabes are somewhat owing to an increase of the esparto industry; for, ever since this useful grass was discovered growing wild on hills along the edge of the desert, camel-loads are continually brought not only into Gabes and Tripoli, where its sorting and baling offer unaccustomed labor to black and brown humanity, but to many another coast town, whence it is exported in large quantities for paper-making. Pressing and strapping the bales is conducted by hand in the *funduk* at Gabes.

Interesting as this industry may be, however, especially in its relation to material prosperity, far more so are the great plains, where camels and donkeys move in long, unhurried lines across the dry and yellow expanse, and the domed tomb of a marabout, or a group of date palms, rising against a burning blue sky, give accent to the Oriental landscape. Pictures uncharacteristic of North Africa the river makes, flowing abundantly along the town outskirts, where may be seen the somewhat incongruous sight of Arab and Bedouin women crouched on stones and energetically washing clothes at the margin of the stream. Just beyond, showing a great variety of foliage, is the pleasant garden of the blind governor, General Allegro. Apparently, however, the river does not soften and enverdure the stern landscape. No meadows follow its progress. Instead, it flows through gray mudbanks, hard and uncompromising, although, farther on, roads are shaded by eucalyptus trees; and within low, bordering walls are many irrigated gardens, green and luxuriant.

"La Petite Djara" (Djara Dekhlania), a compactly built little Arab village near by, consists of exceedingly narrow and almost entirely dark streets, in many cases rooms being built directly over and across them; the whole village largely constructed of old Roman columns and marbles found on the spot. At one or two schools with wide-open doorways, handsome Mohammedan boys study in a loud sing-song through the hot afternoons. However tumbledown the structures, or near to complete crumbling old adobe walls may be, or impossibly dark and narrow any alley of a street, fine French signs of blue and white porcelain, no less dainty than in Paris itself adorn every corner; "Rue de Lyons," "Place de la Bourse," gleaming forth in almost startling contrast to what they are supposed to name and represent.

Farther on, beyond Shenini, at Maita, is an ancient Roman barrage, the *rehaa*, still in use for present-day water, the superb workmanship of a centuries-old dam still standing against time and decay. A fine modern one has also been constructed at another point, and a commercially prosperous future for Gabes seems assured.

At Sfax several eclipse missions were stationed, Italian, French, and English, the sites of their headquarters still showing evidences of scientific occupancy in a familiar chaos of departing boxes, tubes, and astronomical paraphernalia, although all of the observers except M. Bigourdan of Paris had gone. Clouds greatly obscured eclipse day here, but happily, at the crucial moments of totality, the corona shone forth through a kindly rift, preventing disaster to the expeditions. The modern French town has its usual wide, hot streets, rows of small palms which offer potential shade for the future, a park, a monument or two, rather solid buildings, and a reign far less picturesque but infinitely cleaner and more sanitary than that of the Turk. Fine Roman mosaics, some of them large and important, have been unearthed at Sfax, and for a time a number of these pavements were kept in a shed on the quay, but are now removed to the Town Hall, and in time will form the nucleus for a good museum. As until this year no attempt was made to preserve these valuable remains, many have been undoubtedly scattered and destroyed. Fine Roman marbles, some of them brought from Gabes, are, as usual, incorporated in doorways and mosques. Arab gardens are here, also, with acres of palms, pomegranates, figs, and grapes, all well fenced, guarded by the usual fierce white dogs—also occasionally by a hobbled camel or an old turbaned Arab. By far the most interesting part of Sfax is the ancient Saracen wall, one of whose gateways is still intact and admits to the native town, where one may see tortuous *suks* or bazaars, finely dressed and wealthy Moors, at the doors of their offices or drinking black coffee in narrow street-ways crowded, thronged, yet entirely different in tone and atmosphere from the well-beloved alleyways of Tripoli. As in that city, also, the sponge industry plays a large part in town prosperity, and fine specimens are collected by divers.

From Sfax it is now possible to go by regular automobile to Sousse—a decided innovation in methods of North African travel. Roads are fairly good, and much of the country may be seen to advantage. Caravans of camels, however, are not yet entirely accustomed to the novel sight, nor even gentle and usually not-to-be-surprised donkeys. One of the latter humble animals, however, was so nonplussed by the sudden appearance of the swift monster that he could express his sensations only by immediately throwing over his head his very respectable and well-dressed Jewish rider, who fortunately landed in soft and sandy soil—it is authentically believed with no bones broken, but considerable injury to his immaculate barracan. Camels attempt to exhibit their usual lofty hauteur, but one long train was discreetly turned aside by an ancient Bedouin dame who belabored them in ample time for safety. Her husband, refusing to take any such precaution in his own behalf, kept serenely on, in the centre of the road, until by dint of resounding blows, pushes, and objurgations she at length persuaded him out of the way; whereupon she turned her attention to the oncoming whirlwind, and, with shrill tones and shaking of shrivelled fists and fingers, besought every variety of Allah's curse and all evil eyes upon the entire machine, driver, the power that drove, the passengers, and all their ancestors. Automobile travel is well worth adopting, if only that by its aid one may see the remarkable ruins of El-Djem, where an amphitheatre of huge proportions still lifts magnificent walls above its desert base, centre now only for a group of dark and dirty Arab dwellings. Was it once, instead, centre of some great Roman city where a life of pleasure and cultivation clustered about its noble beauty? Or was it, rather, placed in this remote district by keen Roman minds who expected to attract a population hither? Both theories are advanced by specialists, and the great building still stands a monument to that superb workmanship which defied the ages.

Among African towns rarely seen by travellers is Mehdia, directly on the coast. Phœnician coins, tear-vials, beads, and other relics of pre-Christian days are found here in considerable numbers, as well as multitudes of coins from a later Roman epoch, glass, lamps, even an occasional theatre ticket of metal, and very perfect pavements. Only recently was one of these beautiful mosaics uncovered, the finder sending it to adorn the already rich museum of Bardo. Neptune again formed the subject, surrounded by sporting Nereids, with four figures at the corners typical of seasons. This magnificent specimen was no less than fifteen feet square; and others are frequently unearthed, evidently once the floors of dining apartments, favorite subjects being fish, game, or fruit. Mehdia, too, has a history all its own, later than Punic or Roman days; in the fifteenth century its long peninsula was fortified completely around its outer edge, and counted the strongest and most thoroughly fortified place in the world. A deep harbor within the walls, having a strong seagate, and room for three or four galleys to repair simultaneously, was made by hand from solid rock. Slave labor was cheap in those centuries. The harbor may still be seen, though now partly filled by sand. Here, too, was the stronghold, the real headquarters, of Dragut the Corsair—that famous pirate who was actually able to threaten not only Francis I., but the redoubtable Charles V. himself—truly the terror of the Mediterranean. In his honor a mosque was built in Tripoli about 1560. A belief is still held there that Dragut Pasha built its walls and two forts; but Leo Africanus mentions such walls about his time, or slightly before.

The ancient castle still crowns the summit of Mehdia's hill, from which a superb view appears of the nearly encircling sea,

and, across the bay, of a faint blue promontory, site of a Phœnician cemetery, where countless lamps, tear-vials, coins, and beads are still found—and Roman relics as well, for it is also reputed the scene of a great battle between the forces of Pompey and Julius Cæsar. Old and rusty cannon and piles of stone ammunition lie about the castle walls, here and there ornamented by beautifully carved Roman columns; and within is carried on both a prison for Arabs and one for offending French soldiers. In the modern Arab town itself fine marbles are, as usual, largely displayed in its sordid architecture, one Roman inscription appearing in a doorstep, while nearly every corner is resplendent with carved columns and capitals. Mehdia's mosque, Djama el-Kebir, is an exceedingly good one. Its large courtyard is surrounded by a noble open cloister, supported by impressive marble pillars, of which no two capitals are alike. A sundial is old Arabic, of much later date than the columns, more of which adorn the interior, itself lofty and as large as the courtyard, where a "watercatch" still conducts modern rain into cisterns fashioned in splendid Roman days. French influence is restoring the mosque, paving the cloisters with marble blocks, and removing desecrating whitewash from pillars, to reveal lovely marble surfaces beneath. So rich is Mehdia in pregnant relics that with more than genuine regret I saw its white gleam fade into distance.

Some of the most striking pavements exhibited at Bardo were unearthed at Sousse, but that city at first sight presents little of interest. Stone quays, wide streets, parks, clubhouses, hotels—all are excessively modern, wide, airy, clean, and commonplace. The native town, within walls, mounts a gentle hill, from whose *kasbah* superb views may be had; but the *suks* are poor and the catacombs perhaps all that the casual traveller would care to visit. There is, however, an excellent little museum near the quay, next the Officers' Club, in which fine collections are gradually augmenting. It was established in 1899, when many of the best "finds" had already gone to Bardo, but enough have been discovered since to make a superb showing, especially in large and complete pavements. In getting out these mosaics, much care must be used to keep the designs intact, and ingenious methods are employed. But the joy of uncovering one of these splendid relics, watching it emerge from the dust of centuries as one works, seeing the design gradually unfold, must be part of the very artist's ecstasy. As usual, subjects of feasting, fishing, and the chase abound, but there is a fine Medusa, two representations of the abduction of Ganymede, a wild "Triumph of Bacchante," three or four Neptunes with tridents, dolphins and nymphs, while masks at geometrical intervals, conventional figures, the swastica and horns of plenty, all in the softest imaginable colors and almost perfect preservation—making this little museum a veritable treasurehouse, adorned by the patient fingers of nearly two thousand years ago. Pavements are not alone rescued from oblivion, for covered funeral urns, lamps, and vials by hundreds, money of several epochs, fragments of inscriptions cut in marble, bits of gravestones, parts of statues, capitals, and masks, iridescent glass, and a few earlier Phœnician utensils are added with great rapidity, each year.

Out through the fine stone breakwater into a summer sea, the course leads on to Tunis, at the head of its shallow lake, through five miles of dredged canal. The city has grown surprisingly in the five years since our last visit, and is almost more French than France itself. While the native town and bazaars are unchanged in outward appearance, the tourist army seems to have had a demoralizing effect upon stately Arab shopkeepers, who now, abandoning their national characteristics, positively pull the passer-by into their places, demanding in a French-English dialect that he shall purchase. Prices have advanced in proportion, but, if one have days at command, may be gradually reduced to their proper level by argument and repeated visits. Coming as a sort of anti-climax to Tripoli, Tunis seems less attractive from picturesque considerations than memory had pictured, despite its beautiful Belvedere Park, now a luxuriant mass of semi-tropical vegetation, and the clubhouse and theatre crowning its summit, where all the amusements of Nice or Monte Carlo may be had for the asking. But there is always Carthage, peaceful on its sun-crowned point, forever at rest. Even the two or three restaurants with their circling pigeons, assiduous Arab boys who offer impossible "relics," demanding to show sites, and modern masses proceeding in the Cathedral, cannot change the brooding pathos of that quiet hill. In the museums at Carthage, collections have been greatly increased in five years; the White Fathers carrying on more or less excavation all the time, as funds are forthcoming. Skeletons lying in state in richly ornamental coffins, their bones all neatly in order, with heavy gold rings still hanging on fleshless fingers, and surrounded by amulets and precious stones, have recently been added, while jewelry in vast amount has been found.

MABEL LOOMIS TODD.

Correspondence.

THE ANGLO-JAPANESE TREATY.

TO THE EDITOR OF THE NATION:

SIR: Has the *Nation* descended to the artifice of making false quotations to sustain its contentions? I trust not; yet an editorial in the current issue would seem to give reason for the belief. In this editorial, in order to uphold your claim that the Anglo-Japanese treaty is neither "for the good of Japan nor of mankind," you assert that Article II. of that agreement "provides that if either Japan or Great Britain becomes involved in war 'in defence of its territorial rights or special interests,' the other 'will at once come to the assistance of its ally.'" And from this premise you essay to prove, and claim to have proved, that the treaty is not fair to Japan, inasmuch as she is likely to be "drawn into hostilities" against a European Power upon a question purely European.

This would be a just conclusion were your quotation correctly given; but it is not correctly given, and offers an entirely false interpretation of the meaning of the article it assumes to explain. Article II., in part, is as follows:

"If, by reason of an unprovoked attack or aggressive action, wherever arising, on the part of any other Power or Powers, either contractor be involved in war, in defence of its territorial rights or special interests *mentioned in the preamble*, the other contracting party shall at once come to the assistance of its ally, etc."

By reference to the preamble, it will be seen that the "territorial rights" and "special interests" referred to in this article are situated "in the regions of Eastern Asia and of India."

From this it is apparent that, under the provisions of the treaty, Japan cannot be "drawn into hostilities" against any nation upon a question that does not vitally affect her interests, with the sole exception of the question of British control of India; and the danger of any forced opposition to that—as the *Nation* seems to admit—is very remote indeed. On the other hand, the treaty ensures the integrity of all territory with which the interests of Japan are in any way concerned. Where, then, is the unfairness to Japan?

Yours most respectfully,

ARTHUR JOHNSTON.

SANTA ANA, CAL., October 12, 1905.

[Our comment was too hastily made upon an imperfect summary by telegraph of the terms of the treaty. Still, the case is not so clear as our correspondent supposes. The alliance covers joint action in resisting an unprovoked attack (the judge of its unprovoked nature being, of course, the ally calling for assistance) "wherever arising." If Germany were to go to war with England over the Moroccan question, for example, is it certain that Japan would not be drawn into a European war?—ED. NATION.]

OUR CHINESE EXCLUSION LAWS.

TO THE EDITOR OF THE NATION:

SIR: The matter of the relation of our Government to that of China, anent the exclusion of the subjects of the Chinese Empire from our lands, has been the subject of much controversy in the press of the United States. One, at least, of your readers has felt disappointment that your journal has not seen fit to analyze this question and to voice a decided opinion in the matter. It must be conceded that the question has important moral and economical bearings, and should not be disposed of without full and free discussion; and your many intelligent readers would welcome a ringing note in your journal, which has always sounded no uncertain word on moral questions.

The general press and the politicians seem to concede that the admission of the Chinese people, other than of the privileged classes, would be an evil, and it is assumed that the people of the Pacific Coast are a unit in desiring to exclude all Chinese laborers. I believe that a very respectable minority, at least, of the Pacific Coast people favor a repeal of our present exclusion laws, and that this feeling is based on sound economical and moral grounds. It would be improper to make this communi-

cation a brief, and to cite statistics favoring a repeal of the present exclusion laws; the facts are open to you. It may be said, however, that the principles favoring free trade and individualism which the *Nation* has always consistently espoused, favor also the free admission of the Chinese to our shores.

I speak for myself only, but I feel sure that many of your readers—and a lot of "Goats"—would welcome a vigorous handling of this subject by the *Nation*.

Very truly yours,

R. C. CALLAHAN.

SEATTLE, WASH., October 13, 1905.

[The right of any country to regulate immigration is hardly contestable, especially now that more rapid and commodious transportation permits the introduction of great masses of foreigners, more or less immediately assimilable, and liable to produce a troublesome if not dangerous congestion at certain points. Had this been the real ground of Mr. Blaine's demagogic crusade against the Chinese, it would have spared us one of the most shameful pages in our history. The matter is now, as it should be, one of mutual agreement between China and the United States, demanding full recognition, on our part, of the respectability of the Chinese, even the lowest of them, as human beings, and an honest intention to interpret any treaty humanely, without reference to caste prejudice and without assumption of white superiority. It is the bane of such restrictive legislation that it tends toward brutality in practice, especially in a country like ours, subdued to the spirit of caste in the case of its black population and of its newly acquired subject populations. The remedy for this has already dawned in the Chinese boycott, and will become more efficient as China grows more self-conscious and internationally powerful. We welcome any screws she may put upon us to force our acknowledgment that a Chinaman's a man for a' that.—ED. NATION.]

THE NEW MOON.

TO THE EDITOR OF THE NATION:

SIR: I should like to say to "A Lover of Superstitions," who writes of those connected with the new moon, in the *Nation* of October 12, that when I rode in Lee's army to Gettysburg, I saw the new moon over my left shoulder. At Gettysburg we met with ill-fortune. When we made our way south again, and recrossed the Potomac, the new moon was seen over the right shoulder as we marched to Orange C. H., where the army had a long and much needed summer's rest.

Then I was reminded that when the Goths and Vandals broke loose from the barren north and marched south, marauding over warmer and richer lands, month after month, in their conquering career, as they lit their camp fires they saw the new moon (a good omen) over the right shoulder. Later, when their advance was checked, and they were driven back, broken in spirit and fortune, for month after month of weary marches, as they crouched by their camp-fires, they saw the ill-fated new moon over the left shoulder. The repetition of these experiences during successive generations of ignorant masses of people looking for a sign, with no compass or guide other than the instinctive mass movement, naturally impressed them with the invariable sequence of good or evil fortune as they saw the moon over the right or left shoulder—an impression so strong as to be passed as an inheritance to later generations.

HARRY HAMMOND.

BEECH ISLAND, S. C.

TRANSLATION, BETRAYAL.

TO THE EDITOR OF THE NATION:

SIR: Some years ago the *Fliegende Blätter* published an imaginary dialogue in which a college professor asks a student, "In what cases did the Spartans expose new-born infants?" and is answered, "When they were of an unwarlike character." I always supposed this new light on history to be jocularly intended; but I judge from a citation of Haeckel's new book in your review (page 326, No. 2103), that it is the sober word of the foremost science. "Hence the destruction of abnormal new-born infants—as the Spartans practised it, for instance, in selecting the bravest," etc. Or is this remarkable perspicacity of the Spartans in detecting latent heroism in a just-matured fœtus to be credited to the translator? If so, perhaps some of the "incoherences of style" objected to may be due to the latter. Thus would Mr. Peterkin, for instance, translate *brav*, if that is what Haeckel said.

Truly yours, F. M.

[We quoted literally from the translation.—ED. NATION.]

AERONAUTICS.

TO THE EDITOR OF THE NATION:

SIR: Any of your readers interested in the history of speculation respecting aeronautics may, by applying to the undersigned, obtain a considerable mass of papers on that subject which were found among the literary remains of John Rae, a gifted all-round man of science of the last generation. The papers were written at least previously to 1872, the year Rae died.

A reprint of Rae's work on Political Economy (Boston, 1834) has just now been brought out by the Macmillan Co. The volume is called 'The Sociological Theory of Capital'; and a full account of Rae's life is to be found in it. Rae's studies in geology are also, I am informed, probably shortly to be published. Rae experimented somewhat with devices for aerial navigation. An account of his operations with a so-called "Sun-Flyer" may be found in a letter to the editor, dated April 17, 1837, printed in volume xxxiii. (pp. 196-198) of the *American Journal of Science and Arts*. This communication to what was then popularly known as *Silliman's Journal*, is erroneously attributed in the Dictionary of National Biography (volume xlvii.) to John Rae, M.D., sometime surgeon to the Hudson Bay Company, and a distinguished Arctic explorer. CHARLES W. MIXTER.

BURLINGTON, VT., October 23, 1905.

Notes.

The flourishing Massachusetts Society of Mayflower Descendants has firmly made the "South Shore" its province for genealogical exploitation. Now, "the Bay" is to have its special band of workers, "The Governor and Company of the Massachusetts Bay in New England" having just been incorporated for "historical and genealogical research and the publication of the results thereof, especially with relation to the history of the Massachusetts Bay Company" chartered by Charles I. Membership is confined to "male descendants of freemen of the said original corporation," and this descent must be proved, as in the case of the *Mayflower* membership.

Mr. Henry Frowde, as publisher to the British Academy, is about to issue the first volume of the Proceedings of the Academy, containing the papers read during the years 1903-4, etc., with introductory matter and obituary notices. The proceedings will be on sale in the ordinary course in a bound volume, and the various papers will be procurable separately.

The excellent annotated Oxford Modern French Series edited by Leon Delbos (New York: H. Frowde) proceeds with Stendhal's 'Mémoires d'un Touriste' and Mignet's gem of a 'Histoire de la Révolution Française.' It was at Aix in 1837 that Stendhal had a vision of a King of Sardinia becoming King of all Italy. "In the more or less near future," he wrote, "that country will belong to the prince who has the best army and shall advertise the most liberal ideas." From the same publishers we have their Boswell's Johnson, following the third edition, compressed from two volumes into one of good print unaffected by the thinning of the paper, and altogether handy.

The John Lane Co. takes for the fifteenth volume of its "New Pocket Library" Edward FitzGerald's "Euphranor: A Dialogue on Youth," very fitly presented after the text of the first edition of 1851. Mr. Frederic Chapman, who supplies a preface, dwells upon the value of the little work (FitzGerald's first-fruits if afterwards elaborated) not only as a classic specimen of English prose, but as reflective of Cambridge and its contemporary life, and the author as a part of them.

From FitzGerald's University's Press (New York: Macmillan) issue the Cambridge English Classics which we have from time to time described, edited by A. R. Waller. This editor's care is solely for his text, and his notes are of corresponding purport. He now gives us Cowley's Poems after the first collected edition of his works, dated 1668. The English prose contained in the same folio will make another volume. These are as near facsimile reprints as possible, and something better for the critical scrutiny observed.

In excellent taste is the little 'Book of English Love Poems Chosen out of Poets from Wyatt to Arnold,' by Edward Hutton, bearing the London imprint of Methuen. Mr. Hutton thinks he has gathered here "all or almost all that is worth preserving in English Lyric Poetry which has Love for its subject." His "almost" will not reconcile an admirer of Shelley to the omission of his "Good Night," and on the whole it is well to take what is

offered without too close regard to what is beyond the pale (*e. g.*, all American verse). Five of Mrs. Browning's "Sonnets from the Portuguese" stand for the whole number. It is noticeable that, after Herrick, Landor contributes more pieces than any other poet save Tennyson, who likewise has ten. Byron is outnumbered by Wordsworth.

F. Marion Crawford's 'Southern Italy and Sicily and the Rulers of the South' forms one rather heavy volume out of two in its reissue by Macmillan. The always interesting illustrations made a glazed paper inevitable, but the sheen is not excessive.

Harry Graham's 'More Misrepresentative Men' (Fox, Duffield & Co.) shows no exhaustion of his satiric vein, and Malcolm Strauss's portraits are clever caricatures, while retaining the likeness. Past and present celebrities, from Euclid to Henry VIII. and Alton B. Parker, are dealt with. Here is a stanza from the Burns:

"'Men were deceivers ever!' True,
As Shakspere says (Hey Nonny! nonny!),
But one should always keep in view
That 'tout comprendr' c'est tout pardonny';
In judging poets it suffices
To scan their verses, not their vices."

'Girls' Christian Names,' by Helena Swan (E. P. Dutton & Co.), is a reprint of a work that appeared several years ago. There has been, however, no attempt to bring its information up to date, so that the Princess of Wales is still referred to under "Alexandra" and the Queen under "Victoria." Miss Swan continues to offer the reader a mass of useless information, as on page 470, where, under "Sarah," she tells us that "in the seventeenth century there lived an unfortunate girl, named Sara Williams," who was accused of being possessed of the devil; under "Angela" we are told that this is the Christian name of the Baroness Burdett-Coutts; under "Rachel" we have five pages describing the career of Rachel, Lady Russell. It is a book that should be in the hands of every parent about to christen a daughter. We hear much in these days about the responsibility of parents, and never before were children so safeguarded by public opinion. But parents still have a free hand to blast a child's career, or at least seriously affect its comfort and self-respect for life, by inflicting on it a name with ridiculous associations or so colorless that no vitality can live it down. Belmontina Methuena Jones exists, and no doubt does well enough now that she has dropped Modderina, her first name of all. But she has no more redress than an animal who has been registered in the stud-book. Miss Swan's index will perhaps prove by its length that no parent need coin a name for his daughter with the help of the daily paper. We hope that mothers with an instinct for correctness will not insist on christening a child "Creirdyddlydd," who, but for Miss Swan and the Celtic revival, might have been content with the milder (Sassenach) version, "Cordelia."

'Red Fox,' by Prof. Charles G. D. Roberts (L. C. Page & Co.), is the history of a hero fox of singular beauty and strength, united with rare intelligence, adaptability, and foresight. Such a fox, Mr. Roberts tells us, might come into existence once in a while, and every incident of his career, however surprising, has been recorded of some fox, somewhere, at some time; so we accept Red Fox as the flower of his race, even though he may belong to the order *Compositae*. His range was the forests, rocky slopes, and backwoods farms of the Ringwaak country in Eastern Canada. Here he ran the full gamut of fox-experience, both with his fellows of the wild and with the men and dogs of the settlement, leading a joyous and adventurous life till the brightness of his renown made him a shining mark for capture. Then, taken by a trick formidable from its simplicity, he was sent to the States to make a Roman holiday for a fashionable hunt club, but escaped by almost supervulpine sagacity and found safety in the mountains. Even the seasoned reader of animal stories is moved to hearty admiration of Red Fox and pleasure at his escape. Mr. Roberts appears to tell his story chiefly for its own sake, but he impresses us quite as deeply as if he had tried to enforce it by didacticism. We feel, for instance, with the rabbit and the mink, the barbarity of trapping, and take the fox's point of view when we see the field of scarlet riders and hear the loud-mouthed pack on the trail.

Mr. William J. Long, in his latest book, 'Northern Trails' (Ginn & Co.), leads us into Newfoundland and Labrador to study the life-history of unfamiliar animals in the light of explanations that he suggests for some of their ways: "why, for instance, the big Arctic wolf spares the bull caribou that attacks him wantonly; why the wild goose has no fear at home; why the baby seals are white at birth; how the salmon climb the falls which they cannot jump, and why they hasten back to the sea when they are hurt; how the whale speaks without a voice; and what makes the fisher confuse his trail, or leave beside it a tempting bait for you when you are following him." Mr. Long assures us of the accuracy of his data, and maintains the reasonableness of his inferences. In these stories, as in his earlier books, he argues that the intelligence of animals is akin to man's, and is developed, as in man, by early training and later experience, and that the actions of animals, therefore, should be studied in the light of what man knows of his own motives and feelings. However this may be, even the makers of what Mr. Long calls "mechanical natural history" will find interest in these sketches, particularly in the half-dozen studies of Wayee-sees, the white wolf. Here is the life of a wolf family drawn with sympathy and spirit—the play of the cubs under the mother's eye; their comical early hunting; their long training; and their full maturity, when, fitted for the needs and perils of life, they range the woods and caribou barrens, and visit the Indian villages for scattered food when famine bites. The book shows something of the life of Northern Indians; but the Indians are less vivid than the fisher, the salmon, and the wolf.

'A Little Garden Calendar,' by Albert Bigelow Paine (Philadelphia: Henry Altemus Co.), gives to little folks a chatty and truthful account of many of the most interesting phases of plant-life. The subjects of dispersal and its advantages, of movements, and of pollination and the like, are briefly and well-treated. The account of the servants which work for the flower is admirably presented, although at times the author goes perilously near the edge of the unknown. A captious critic might well object to the page in which the flower is made to appear almost to reason, but the statement is pretty well guarded by this saving clause: "Perhaps it doesn't really reason, but it does something exactly like it, and there are people in the world who would be happier if they could do the same thing." This is almost as far as any one would dare to go in ascribing thinking powers to plants. It would be safer to recall to mind the often-quoted expression of the vegetating fisherman loafing at the shore, "Wall, there, sometimes I set and think, and sometimes I jest set." It is highly probable that plants just "set."

The German 'Daheim-Kalender' for 1906 (Leipzig: Velhagen & Klasing; New York: Lemcke & Buechner), a bound volume, presents the customary album literary miscellany and useful information. Many of its abundant illustrations are in color, as in connection with the article on the decorative art movement. Attractive themes are pictorially displayed also in Buss's "Characteristic Features of the First Empire" and Bremen's "Jena." A great array of portraits attends the Necrology and the roster of European sovereigns.

The third volume of Dr. Shields's 'Philosophia Ultima' has appeared posthumously (Charles Scribner's Sons). The whole work is a discourse about science from a mind whose incapacity for scientific thought was almost phenomenal. But he was a man of learning, in a certain obsolescent way, and the work may be used to advantage by others than psychologists, for whom it should be a document. The present volume contains a portrait and a biographical notice by Professor Sloane. One portion of Dr. Shields's share in this volume, dealing with "scientific problems of religion," has a serious value; for those problems need a new treatment which they have not received. There is a very judicious review and defence of Butler's 'Analogy.' The greater part of Dr. Shields's new pages seems to have been written to meet President White's 'Conflict of Science and Theology.' He endeavors to show what an aid the traditional view of the Bible has been to science. As a specimen of the author's candor, we remark that, far from representing that *all* anthropologists without exception have been decidedly in favor of resting their science largely on Biblical testimony, he expressly admits that "Leidy, Cope, and Marsh may have left no directly religious testimony." Observe the fine caution of the subjunctive.

Prof. Henry Burchard Fine's 'College Algebra' (Boston: Ginn & Co.) is the most practical and at the same time the most truly mathematical of all the elementary books on the subject that ever came under our notice. It is quite worthy of the author's illustrious ancestor, who, early in the sixteenth century, came to Paris from the terrific Briançon precipices, so suggestive of all that is difficult and grand, and gave its first impetus to French mathematics. Oronce Fine was his name. Though the new text-book is as elementary and as easy as can be—easier than one would believe possible—it carries the student further than other college algebras do, and it is preceded by an elegantly worked-out exposition of the modern mathematico-logi-

cal doctrine of numbers. Professor Fine was a personal pupil of Georg Cantor, to whom (especially through his conception of the "well-ordered" series) our present understanding of this curious subject is almost entirely due. If it has not much to do with algebra, it is at any rate as excellent a lesson in the logic of necessary reasoning as could possibly be found, if it be not better than any other, as Sylvester deemed it.

The fifth fascicle of Postgate's 'Corpus Poetarum Latinorum' (London: Bell; New York: Macmillan) brings the second volume to an end. It contains Martial, edited by Duff, Juvenal by Housman, and Nemesian by Schenkl and Postgate himself, who for this poet's 'Cynegetica' has freshly collated the principal Paris manuscript. Mr. Duff acknowledges his indebtedness to Professor Lindsay, whose labors upon the manuscripts of Martial have recently given us an accurate knowledge of them for the first time. For Juvenal, Mr. Housman, holding that respect for the codex of Montpellier has too greatly overshadowed the other manuscripts, has chiefly devoted himself to the consideration of what is to be found of value in these inferior manuscripts. In his *apparatus criticus* they are therefore frequently cited, and he has himself inspected seven in the British Museum which have not heretofore been used. The resultant text will be a surprise to many, to whom this editor has stood as the antipodes of a conservative. Thus, in the first satire, his text differs from Bücheler's of 1893 and Owen's of 1902 in only three passages: *it*, 145; *gutture*, 156; *irae*, 168; and all of these readings used to stand in the vulgate from times before Aldus down to Jahn.

Especially noteworthy, in view of the previous English neglect of philological journals, is the announcement of the *Modern Language Review*, a quarterly journal devoted to the study of mediæval and modern literature and philology, edited by John G. Robertson and published by the Cambridge University Press. The first number, dated October, contains articles ranging from Shakspere to Shelley, and forthcoming articles both in English and in German will deal with the principal literatures from different periods. One of the most interesting of these is a hitherto unpublished seventeenth-century comedy by George Wilde, edited by F. S. Boas. Book reviews and notices are to form a leading feature of the new publication, and all longer reviews will be signed. The subscription is 8s. 6d., post free.

The Panama Canal is the main topic of the *National Geographic Magazine* for October. Rear-Admiral C. M. Chester gives a brief sketch of the part taken by the navy in the exploration of the isthmus, and narrates some incidents of the work of the De Lesseps company, of which he was an eyewitness twenty years ago. He then describes at length the plan recommended by the Canal Commission and the engineering constructional plans. Incidentally, he refers to the fact that the property transferred by the French company is much more than the partially dug canal and the railroad: it includes scores of machine shops, 2,500 wood, stone and metal houses, capable of accommodating 15,000 to 20,000 people, and hospitals extensive in number and size. The editor, in an account of the progress of the canal, shows that the question of sanitation has been thoroughly solved by the fact that the death rate, which in 1881 was 66.8 per thousand, was, among the 10,000 employees in May, June, and July of this year, but 2.6 per thousand. Of 12,000 men at work during August, 301 were constantly sick, or only 25 per thousand. There are some interesting full-page illustrations, and a large map of the isthmus in five colors, showing the location of the canal recommended by the Commission of 1899-1902.

The geographical bibliography for 1904, in the September number of the *Annales de Géographie*, contains over a thousand main entries, being more than in any previous year. The works relating to France and its colonial possessions occupy naturally the largest place with some two hundred titles, while there are but forty-nine for the United States and eight for Japan, scientific works only. A possible prophetic forecast may be found in the heading "République d'Australie," "république" being apparently the only French equivalent for commonwealth. The list, with its numerous and instructive characterizations of the works contained in it, would be more helpful for reference if there were an index of subjects as well as one of authors and travellers.

It is announced from Stockholm that hereafter the awarding of the Nobel prizes will be divided between Sweden and Norway. The prize for literature and science will be in charge of the former country, and the peace prize of the latter.

Among the prominent deaths recently reported from Germany is that of the Berlin bookdealer, Albert Cohn, at the age of seventy-eight. He was one of the leading Shakspere specialists in the Fatherland, and some years ago published in Englist an excellent volume entitled 'Shakespeare in Germany.' At the time of his death he was engaged on a systematic 'Shakespeare-Bibliographie,' which is nearly completed, and which, according to the Berlin *Neue Presse*, is to be published.

"C. L. F." writes to us:

"The *Nation* gave lately, as authority for the fact that from 70 to 84 per cent. of Oyama's army was affected by that most disabling disease, *kakké*, or beri-beri, the name of Miss McGee. By this was meant, no doubt, Mrs. Anita Newcombe McGee, whose work in the Japanese hospitals during the late war, with the assistance of a body of trained American nurses, is well known."

—It is not too late to quote from Massey's 'History of England' (1855, vol. i., pp. 76, 77) the following passage as bearing upon Japan's claim for indemnity after not only having made war by striking the first blow, but without a declaration:

"If the comity of nations requires that hostilities should be preceded by formal notice, it is plain that the belligerent who has violated this rule cannot justify the retention of any acquisition so obtained on entering into a treaty of peace. In fact, no prize-court in Europe would condemn a capture taken under such circumstances. Civilized warfare would cease to exist, and nations would descend to the practice of pirates if no distinction was to be made between conquests seized before, and those which have been made after, a regular proclamation of war. The unconditional restitution of these captures would seem, therefore, to have been an affair which concerned the honor of England rather than that of France. Had the question been determined on its own merits, it is hardly to be conceived that the high-minded probity of Pitt could for a moment have hesitated as to the course which it became him to take."

—"Two Bird-Lovers in Mexico," by Mr. C. William Beebe, curator of ornithology in Bronx Park (Houghton, Mifflin & Co.), relates the experience of the writer and Mrs. Beebe during a winter in camp near the volcano of Colima. Mr. Beebe is an enthusiastic traveller as well as a trained biologist, and writes with a wide-angled scope, which includes not only birds, but mammals, lizards, insects, flowers, scenery, incidents of the trail and camp, and glances at the natives along the way. He has aimed at an interesting running narrative and commentary, rather than an exhaustive study; but, considering the shortness of the time spent—from Christmas to Easter—he may justly be proud of the information gathered on the habits of birds. He has added considerably to our somewhat scanty knowledge of the food-habits of Mexican species, a subject to which he gave particular attention. We may mention that he found a diminutive kingfisher catching insects, a flycatcher diving after fish, and hummingbirds feeding on grasshoppers after the manner of turkey-gobblers. The deep, shaded drainage ditches between cultivated fields were, like Northern hedgerows and thickets, a place of vantage for studying the food of both seed-eating and insectivorous birds. Here is a suggestive anecdote from the Chapala marshes: "We of the North have neglected the egrets until well-nigh the last survivor has been murdered; but here, in this wild place, where, outside of the towns, a man's best law and safeguard is in his holster, these birds have already found champions. Short tolerance had the first plume-hunter—an American—who began his nefarious work in the Chapala marshes. The rough but beauty-loving *caballeros* who owned the haciendas surrounding the lake talked it over, formed—to all intents and purposes—an Audubon Society, ran the millinery agent off, and forbade the shooting of these birds."

—Of the many books upon Italian villas that have lately made their appearance, it is safe to say that none is so profusely illustrated as Charles Latham's 'Gardens of Italy' (Scribners). As a photographer of architecture, and especially of gardens, Latham stands among the ablest. His work has for years furnished to that interesting English weekly, *Country Life*, its most important feature. He avoids with studious care the eccentricities of focusing and printing that characterize so much of the work of the more advanced school of photography. He belongs, in respect of the distinctness and sharpness of his negatives, to an older time. He secures by the directness of his methods a result which, if it leaves little to the imagination, satisfies every demand for a clear report. In the selection of points of view, he is a past-master. The exact spot from which to secure the most effective grouping of mass or contrast of light and shade rarely escapes him. Mr. Latham has done his work *con amore*. Whether his subject be the sumptuous gardens of the Villa Albani, with their antique fountain-basins and their long ranges of ancient statues and columns set against solemn backgrounds of cypress, or the more intimately charming and not less-beautiful gardens of the Villa Lante, his art is equally assured and convincing. Some descriptive text by E. March Phillipps accompanies the pictures. It is

of a gossiping, semi-historical sort, by no means hard to read, but not notably informing. It concerns itself little with the art of garden design, a subject which the photographs would have served to illustrate most admirably. The value of such a splendid collection of photographs as Mr. Latham's is so evident, and the expense of securing them so great, that it is much to be regretted that they should not be accompanied by plans, such, for instance, as those in H. Inigo Trigg's 'Formal Gardens in England and Scotland'; but, lacking these, it would be better to give the reader mere thumbnail sketches than no plans at all. The present volumes of 150 pages each are similar to 'Gardens Old and New,' heretofore reviewed in these columns, but they have wider margins and better binding.

—Since the Catalogue of the British Museum reveals no biography of John of Gaunt in English, French, German, Spanish, or Portuguese, Mr. Sydney Armitage-Smith has come forward to fill the gap. His 'John of Gaunt' (Scribners) is an ample and scholarly work, which, besides bristling with footnotes, contains a number of appendixes, and is altogether a creditable product of the Oxford History School. Upon such *causes célèbres* as the Duke's defence of Wycliffe and his battle with the leading spirits of the Good Parliament, Mr. Armitage-Smith throws little new light, but, for the Continental ambitions of his hero, he is invaluable. We employ the word "hero" in a conventional sense, for no attempt has been made in these pages to advance the Duke of Lancaster beyond the limits of mediocrity. So far as vindication is concerned, our author contents himself with showing that, moved by sentiments of chivalry, John was a faithful uncle to Richard II. "He remained true to the ethical standard of society as he knew it; he had been loyal to Edward III., to his brother the Black Prince, and, at what cost of personal pride has been seen, to his nephew Richard." Another important subject with which Mr. Armitage-Smith deals is that of the Duke's attitude towards the religious dissensions of his day. The trend of Wycliffe's theology he clearly did not appreciate, for, had he done so, he would have been numbered among the active opponents of Lollardry. Nor did he do anything practical to further Wycliffe's projects of ecclesiastical reform. The vast amount of patronage which he possessed gave him every opportunity to insist upon residence and the proper discharge of pastoral duty, but, as is clear from the instances here cited, he neglected to support the Lollard position at this critical point. And as to the main issue, his alliance with the friars was far more permanent than any connection which he formed with Wycliffe. "The friars," says Mr. Armitage-Smith, "had no illusions about the Duke's heterodoxy and revolutionary ideas. They were willing at first to defend his agent in an attack on ecclesiastical wealth theoretically condemned by their own rules, and later, when the reformer of administration became the heretic, while attacking Wycliffe to defend his patron. The Duke shared both their friendships and their hatreds. He was inclined to regard the Pope as an ally; the friars were the Pope's devoted servants. He hated political bishops; the friars were the enemies of the whole secular clergy." As we have said, Mr. Armitage-Smith is not the first to grasp the nature of John's relations with Wycliffe, but he illustrates more clearly than any of his predecessors the closeness of the tie which bound the Duke to the regulars. We are unable, through lack of space, to touch upon John's part in the complicated affairs of Castile and Leon, but much fuller information regarding it is given by Mr. Armitage-Smith than will be found elsewhere. This valuable biography appeals, of course, to students of Chaucer and 'Piers Plowman' as well as to those of Wycliffe and the Hundred Years' War.

—By the death of Adolf Hedin, which occurred on the 19th of September, Swedish liberalism lost one of its staunchest supporters, one of its most vigorous and courageous advocates. As a member of the Riksdag, with two short interruptions, since 1870, and as a writer for the daily press, he has stood for over thirty-five years as the champion of progress in politics, in social welfare, in education. His very first contribution to political literature, the letters which he wrote for *Aftonbladet* in 1868 on "What the People Expects of the New Representation," may be regarded as the programme of the progressive party which was then in making. The arrogance of the bureaucracy always found in him a consistent enemy, the spirit of the Constitution a watchful guardian. Social questions attracted his attention comparatively late. It was not until 1884 that he made a really important contribution to their discussion in his proposal for old-age and accident insurance for workingmen. The introduction of the new protective system in 1886 opened up a discussion of social problems which is still going on. "For Hedin," it has truly been said, "the tariff question was a social question." Hedin's 'Speeches and Writings' which have recently been published (Stockholm: Bonnier) constitute an interesting survey of Swedish public life during the last quarter of the nineteenth century, and should be studied by all who take interest in Scandinavian politics. Besides the already mentioned newspaper articles from 1868, and the proposition to investigate the question of workingmen's insurance of 1884, the most important of its contents are the articles on "The Meaning of the Suffrage Question" (1902), "Municipalization" (1903), and "The Question of the [Scandinavian] Union" (1895).

LORD DUFFERIN.

The Life of the Marquis of Dufferin and Ava. By Sir Alfred Lyall, P.C. With portraits and illustrations. In two volumes. London: John Murray; New York: Charles Scribner's Sons. 1905.

In comparing Lord Dufferin with other men made eminent by their public services, one peculiarity of his career forces itself strongly upon our attention. By common consent he ranks first among the British diplomatists of his generation, but he was not trained for diplomatic life according to the usual process, nor did he receive an appointment of any great importance until he was forty-six years old. Endowed with a very fair share of ambition, he looked forward at the outset to winning distinction in the field of politics. A little later he had some thought of writing a large historical work. We do not mean to imply that he had not shown signs of talent or even disclosed the possession of great gifts before he became Governor-General of Canada in 1872. The duties which fell to him as a member of the Syrian Commission in 1860-61 had been discharged with both tact and firmness; he had been offered the government of Bombay; and, when Gladstone took office at the close of 1868, he had joined the Ministry as Chancellor of the Duchy. But, though a member of the Ministry, he did not have a seat in the Cabinet, and it may well be doubted whether English politics would ever have rewarded him with anything better than a minor portfolio.

During the years when Dufferin, whether from temperament or circumstances, was fairly to force his way into the van of practical politicians, his more characteristic gifts were making themselves felt within the narrow circle of courtiers and premiers. Besides the actual offer of Bombay, he had been talked of for Ireland and India before he came out to Canada. In other words, onlookers saw the true bent of his genius before he himself had come to recognize that abroad rather than at home lay his destiny as a public man. The reason why he could be transferred so well to the field of proconsular and diplomatic appointments was that he had never taken deep root among the followers of Palmerston and Gladstone. On one subject of domestic interest he held beliefs which might under different conditions have led him to fight hard for a purely political cause. An Irishman and a landlord, he could not view unmoved the discords and aspirations of his native land. Though only twenty years of age when the great famine broke out, he gave largely of his own means to relieve distress, and raised a considerable fund from among his friends. But during the period of his early manhood Home Rule did not become a primary issue in the politics of Great Britain; and after the rise of Parnell, he had passed beyond the point where a return to the strife of parties would have been easy. There can be no doubt, however, that the Unionist cause lost a convinced and stalwart champion when he entered the service of the Colonial Office.

Lord Dufferin certainly deserved to have the keen and scholarly biographer he has found. Indeed, it is a matter of critical importance to a man in his profession that his deeds should be recorded by the proper person. Lord Salisbury has said:

"A diplomatist's glory is the most ephemeral of all the forms of transient reward. There is nothing in his achievements which appeals to the imagination; nothing which art can illustrate, or tradition retain, or history portray. A military commander is more fortunate in his vocation. . . . But there is nothing dramatic in the successes of a diplomat. His victories are made up of a series of microscopic advantages; of a judicious suggestion here, of an opportune civility there; of a wise concession at one moment, and a far-sighted persistence at another; of sleepless tact, immovable calmness, and patience that no folly, no provocation, no blunders can shake. But there is nothing exciting in the exercise of such excellences."

These words may have a touch of exaggeration, but the substance of them is obviously true. Dufferin's life in the hands of a second-rate biographer would make

but a dull tale. It is the merit of Sir Alfred Lyall that he has singled out the large issues, revealed the interesting friendships, and depicted in living colors the qualities which united to form a diplomatist of the highest type. His book is frank yet discreet, and marked in all its parts by delicacy of perception.

Dufferin's lineage gave him the traits of two strongly contrasted families. John Blackwood of Bangor, who migrated from Scotland to Ireland at the beginning of the seventeenth century, was, we may presume, a hard-working and canny colonist. At least his descendants in County Down were sagacious, money-getting people, who seem never to have been gifted with imagination, but whose solid qualities enabled them to build up an estate while keeping the respect of their neighbors. When a family of this kind intermarries with the Sheridans, Mr. Galton and those of his school have good cause to watch the results. Lord Dufferin's father, Price Blackwood, was, like Sir Henry Blackwood and several more of his line, a sailor—with the kindest heart in the world, but wholly innocent of literary culture. On the other hand, his mother, Helen Sheridan, possessed much of the wit which her grandfather distilled into "The Rivals," and a large share of the beauty with which her grandmother distracted the youth of Bath. Once, when Disraeli was talking with her, she said, referring to her famous sisters: "You see, Georgy's the beauty, and Carry's the wit, and I ought to be the good one, but then I'm not." As a matter of fact, she had a full portion of the Sheridan good looks, while her goodness, thus disclaimed with a jest, shone forth in both her poems and her life. The lines which she wrote to her son on his twenty-first birthday convey what every mother would wish for her son, in a strain that rises above the literary powers of all save the rarest.

Sir Alfred Lyall considers that in the character of Lord Dufferin the Sheridan qualities predominated, and it is pretty plain where the free-handedness, the lightness of spirit and the graceful blarney came from. Yet if we are to lay stress upon atavism, Dufferin possessed a steadiness and firmness which seldom appear in the men of the Sheridan family, but are stamped plainly upon the Blackwoods. The public rarely gave him credit for the stiffer virtues he derived from his father's side of the house because, in ordinary intercourse with the world, his speeches and conversation were so honeyed. None the less he had an ample reserve of determination, and used it whenever occasion required. In Canada, for example, he endeared himself to official society by lavish entertainments and to the public by his open, friendly ways. But when, in the days of the Pacific Scandal, it proved necessary for him to take a decided stand, he did not shrink from doing so, even though for the moment it cost him a good deal of his popularity.

"I have been much bored and worried," he writes in a private letter to Lord Kimberley, "and it is vexatious being dragged into such a dirty quarrel; and I regret coming into collision with any section of my Canadians. But I don't think their ill-humor will last long, and I am not sorry to have an opportunity of showing them that, however anxious I may be to be gracious and civil, I don't care a damn for any one when a matter of duty is involved."

In later years he had a good chance to display his firmness when dealing with the Porte, and his demeanor under the attack of certain lying French newspapers was nowhere appreciated with more candor than in Paris itself. When at last he turned on the canaille, he did so in such a spirit of self-respect and at the same time with so much good feeling towards the better element of the French press, that *Figaro* said next day: "Ceux de mes compatriotes qui veulent savoir ce que signifie l'épithète *gentlemanlike* que les Anglais emploient si volontiers, le savent maintenant!"

The boyhood and youth of Lord Dufferin afford comparatively little material for the biographer. By far the most interesting fact of this period is the closeness of the tie which bound him to his brilliant and affectionate mother. Of his father he saw comparatively little, owing to Price Blackwood's duties as a sailor and to his early death in 1841. At the time when Dufferin, an only child, succeeded to his Irish barony, he was a schoolboy at Eton, with no tastes as yet developed which gave sign of specialized talent. At Oxford the general cleverness which marked him from the first had an opportunity of making itself felt within the walls of Christ Church, and was recognized to a limited extent beyond that college. Although not ambitious of winning a high place in the schools, he already gave promise of becoming more than a graceful dilettante. It was here that his interest in people and his capacity for getting on well with all and sundry began to be a prominent trait. "I came here," he wrote to his mother, "with the determination to keep myself as much as possible from pretensions to superior morality, but to avoid any conduct which might be called methodistical." This observation is called forth by the avowal of his intention to steer clear of all hunting men, whose profane conversation seemed to him an offence against both good morals and good manners. Turning from the company of the *jeunesse dorée*, which was readily offered him, he rallied a band of more serious spirits and formed them into the Pythic Club. The name (derived through a doubtful etymology from πυθέσθαι, to inquire into truth) gives some inkling of the founder's purpose. Dufferin furnished the name, was chosen first president, and opened the proceedings by reading an inaugural essay. There were lively debates on Charles I., William of Orange, Frederick the Great, and also upon economic subjects. Among the original members were Boyle, afterwards Earl of Glasgow, Pakington, afterwards Lord Hampton, and Sir William Fraser. The society flourished from the outset, and did not disappear when Dufferin left the University. On July 1, 1898, he presided in London at a dinner of one hundred and fifty old Pythians, he and Sir W. Fraser being at that date the only survivors of the original band.

This brief notice of the Pythic Club will serve to illustrate the presence in Dufferin's nature of a strong intellectual instinct. Throughout his whole life he cherished that fondness for letters and conversation which not only was the best heritage of his mother's line, but which in his own case became a source of unfailing relief amid public labors and anxieties. At Oxford, also, he developed a genius for friendship. Nothing in these two volumes is more delightful than his affection for relatively obscure men from whom he had been separated by many years, great distances, and a complete difference of occupation. He was a tireless letter writer, and whether in Syria, Canada, India, Constantinople, Rome, or Paris, he never denied old friends those intimate accounts of his experience which were rendered all the more gracious to the recipient by a feeling that the writer remembered him amid the press of a thousand occupations. When speaking thus, we refer chiefly to Dufferin's unfailing kindliness towards the companions of school and college days. But wherever he went he was constantly making friends, who were not forgotten when the Atlantic or even the Red Sea had raised barriers to intercourse. From personal knowledge we could supplement the references made by Sir Alfred Lyall to his correspondence with the friends he had made in Canada.

Leaving Oxford at the close of 1846, Dufferin found strong supporters in his guardian, Sir James Graham, and in Lord John Russell. In 1849 he became a Lord of the Bedchamber, and in 1850 received an English peerage as Baron Clandeboye. Over his share in English politics during the next twenty years we must pass hurriedly. For a time his post as Lord of the Bedchamber gave him occupation at court, and enabled him to win the confidence of the Queen. How permanent her regard for him remained may be inferred from their relations in the closing years of the reign, as may be seen, for example, in her statement (1895) "that he was almost the only one left of her old friends whom she might consult, as long ago she consulted the third Marquis of Lansdowne and the Duke of Wellington." So far as his political career was concerned, he took a decisive step in asking for an English peerage instead of entering the House of Commons. It was Sir James Graham who advised this course, and we imagine that Dufferin had little cause to regret his acceptance of a seat in the Upper Chamber. By temperament he was unfitted for the rough-and-tumble work of the Commons. Though he could be firm, he did not possess the peculiar qualities of a party leader, and the decade 1850-1860 was a period when hard hitting continued to be still common.

In 'Letters from High Latitudes,' a product of these years, may be seen one form which Dufferin's activity assumed at a time when he had money in his pocket, and was free from cares of official life. During the same decade he was giving serious thought to the Irish question, and doing what he could, in a quiet way, for Whig interests. It was, however, the Syrian mission of 1860 which first gave him a chance to show his mettle. Placed between the Porte and a European concert, he was enabled to display his talents for negotiation at their best, and the credit which he gained on this occasion placed him in the direct line of pro-consular and diplomatic promotion. The intricate details of the issue it is impossible for us to discuss, but Dufferin, acting under difficult conditions, won a reputation for clear-headedness and fair dealing which he never forfeited. Soon after his return he visited Napoleon III.

at Compiègne, but, on resuming life in England, found himself without congenial occupation. This period of his career was a time of considerable solicitude. He could not, willingly, be idle, and there seemed little likelihood that he would be put over an important department. After Syria, he thought himself "a legitimate graft on the diplomatic service," but Constantinople did not come his way, and he even had some idea of becoming an author, though, he writes: "It will be with great dissatisfaction that I shall subside into that lower form of existence."

The impression which Dufferin had already made upon the leaders of his party was so great that he need have had no fear regarding his eventual employment by the State. Shortly after he had spoken thus disrespectfully of letters in comparison with the life active, he became (1864) Under-Secretary of State for India, and during the next eight years he was in close enough touch with public affairs as Chancellor of the Duchy, chairman of a royal commission on the state of military education, and chairman of an admiralty commission in 1871, to keep him from feeling a useless member of society. His interest in Irish questions continued to be very keen during this period, and, as a result of evidence given before a committee in 1865, he became engaged in a controversy with Mr. Isaac Butt. We pass lightly over these matters, because it is not through his connection with the domestic politics of Great Britain that he will be remembered. Before 1872, all he had attempted had been done efficiently; but, as a candidate for parliamentary honors of the highest rank, he had not been successful. As events were soon to prove, he had been working on a wrong line. His characteristic talents were given full scope for the first time when he was named Governor-General of Canada.

Shortly before Dufferin crossed the Atlantic, Robert Lowe came up to him in a London club, and said: "Now you ought to make it your business to get rid of the Dominion"; and this was a view which some years earlier had been expressed by Sir Henry Taylor to the Duke of Newcastle. As a matter of fact, Dufferin went to Canada with very different ideas, and, though circumstances did not require him to bear a part in any critical events, he did something to cement the tie between Great Britain and the newly-formed Dominion. From this date forward, he began to impair his estate by lavish hospitality, but, at whatever cost to himself, he saw that he represented the Imperial authority as he thought it ought to be represented. No other Governor-General has been such a delightful host, or thrown so much energy into social intercourse on a large scale. The sole unpleasantness of these years was a purely transient one between Dufferin and the leaders of the Liberal party, at the time of the Pacific Scandal; but, in the end, Mr. Mackenzie saw the justice of the Governor's position, and was numbered among his loyal friends.

It is natural to lay some stress upon Dufferin's success in pleasing all classes of the Canadian population because it was so extraordinary. He attended functions as though he liked to be there, and made countless speeches which were felicitous for the reason that he put both wit and mind into them. At the same time his correspondence shows how carefully he watched the development of political conditions, and how keen he was to seize upon the organic defects of colonial public life. A long passage from his first dispatch to Lord Carnarvon (vol. i., pp. 229-31) might be cited in illustration of the thought he gave to such subjects as the future of Canada and the results which might be expected to follow from the growth of a more independent spirit than had existed before Confederation. The growing disposition of the young men to look upon independence as the ultimate destiny of the country, he viewed without suspicion and even with favor. "Nor do I think," he says, "that this novel mode of thought will be devoid of benefit, provided it remains for the next twenty or thirty years a vague aspiration, and is not prematurely converted into a practical object. Hitherto there has been a lack of self-assertion and self-confidence among Canadians, in forcible contrast with the sentiments which animate our friends to the south of us." It is clear that he did not think the connection with Great Britain was seriously threatened by the spirit of Canadian nationality, and anything would be better for the Dominion than the political apathy of the masses which admitted of such wholesale corruption as was revealed by the Pacific Scandal.

Dufferin's life after he returned from Canada was filled up with a series of brilliant and responsible appointments in which he acquitted himself with unfailing distinction, until, at seventy, he was forced by rule to retire from the diplomatic service. From Ottawa he proceeded to St. Petersburg, where he displayed in a very different sphere the same qualities which had made him so popular in Canada. Two years later he was sent to Constantinople, and there he remained during the difficult period when the awards made by the Berlin Congress were being executed, and when Egyptian affairs were brought to the forefront of European interests by the revolt of Arabi. Just before Tel el-Kebir the situation became very trying, and there can be little doubt that Dufferin displayed his highest qualities at this juncture. "I congratulate you," wrote Lord Kimberley, in 1882, "on your brilliant campaign, in which you have covered yourself with glory"; and, best of all, his triumph in negotiation had been won without trickery. The special mission to Egypt upon which he was soon sent and the Indian viceroyalty in 1884 were outward marks of the approbation which he had won in all quarters at home.

The closing years of Lord Dufferin's career we must pass over with a single word. His rule in India was marked by the annexation of Burmah, but as a whole is lacking in those stirring incidents which belong to his residence at Constantinople. On his return from the East he received Rome and then Paris, the cream of diplomatic appointments being within his reach. Regarding his unfortunate connection with the London and Globe Corporation, Sir Alfred Lyall speaks tactfully, but without undue reticence. The fact seems to have been that when Dufferin trusted a man at all he gave him his complete confidence. Unhappily, in this case, he was deceived by a scoundrel, and his dealings with Whitaker Wright clouded his old age, though without touching his personal honor or causing him to forfeit the esteem of the country.

Dufferin's quickwittedness and graciousness of disposition endeared him to a host of people in many lands, and besides these qualities he had enough firmness and breadth of judgment to render him a great diplomatist. The world has always been ready to credit him with the possession of urbanity and other Sheridanic gifts. It has been left for Sir Alfred Lyall to show in this admirable biography how affectionate, robust, and straightforward he was.

LITTMANN'S SEMITIC INSCRIPTIONS.

Semitic Inscriptions. By Enno Littmann. The Century Co. Pp. 230.

This volume constitutes Part IV. of the publications of the American Archæological Expedition to Syria in the years 1899-1900, under the patronage of four public-spirited citizens, V. Everit Macy, Clarence M. Hyde, B. Talbot B. Hyde, and I. N. Phelps Stokes. Part II., "Architecture and Other Arts," by Howard Crosby Butler, A.M., the Director of the Expedition, has already been published. Part I., which contains the itinerary of the journey and deals with the topography and geography of northern Syria, is assigned to Robert Garrett, B. S., while Professor Prentice of Princeton has charge of the publication of the Greek inscriptions. In the present volume Dr. Littmann has brought together 233 inscriptions in six different Semitic tongues or dialects, covering a period from about the beginning of the Christian era well on into the Middle Ages, some 1,500 years in all. The inscriptions are beautifully published, with facsimile reproduction and a transliteration into more modern or usual characters. There is a considerable number of photographs to show the position of inscriptions, the character of the ruins in which they were contained, etc., and, in the case of the Safaïtic inscriptions, reproductions of some of the curious figures which accompany the rude script. The region covered by the explorations of this expedition was Northern Central Syria, Palmyra, and the Hauran, including also a small neighboring section of the desert.

The first four chapters deal with the inscriptions in north Semitic languages—Syriac, Palmyrene, Nabatæan, and Hebrew. The Syriac inscriptions, twenty-four in number, are valuable principally because of the scarcity of epigraphical material in that language. They came from the region west of the Euphrates, where the Antiochian or Hellenistic influence was most strongly felt. This is not the region to which we owe the principal literary productions in Syriac. Those originated in Mesopotamia. The cause of this is evident the instant one studies the inscriptions of Northern Central Syria. Clearly Greek influence was predominant throughout this region. The inscriptions published in this volume belong in general to the sixth century A. D. Dr. Littmann asks why it was precisely during this sixth century that "the inhabitants of Northern Central Syria began to make more use of their native language in their inscriptions" (p. 4), and the answer which he gives is that this use of the Syriac language was connected with a growth of the national spirit expressed in and strengthened by the Monophysite heresy. One of these inscriptions (No. 6) gives some curious details relating to the

construction of the church at Khirbit Hasan in 507 A. D., 556 of the era of Antioch. It cost 65 darics, "and of beans, wheat, and lentils 430 bushels, besides the chief expenses." Dr. Littmann compares this with a memorandum of Liutprand, king of the Lombards (713-744), which prescribes the amount to be paid in his kingdom to workmen engaged on buildings, specifying in detail the provisions which are to form "part of their wages." It would seem from the comparison that the wages in Lombardy were somewhat higher than those in Syria, and that the Lombards received meat and wine as a part of their wages or rations, while the Syrians received only corn and vegetables—a rather curious commentary on the different conditions of the two countries.

The Palmyrene inscriptions, fourteen in number, of which nine are new discoveries of this expedition, belong, of course, to a much earlier period, 10—200 A. D. or thereabouts. The first and second of these inscriptions give some evidence with regard to the history of the great temple. The first accompanied a portrait of a certain 'Ogailū set up in the years 70-71. From this it appears that the temple was in existence as the great sanctuary of Palmyra certainly at the very beginning of the first century. Incidentally we learn that, as in the case of the principal Babylonian temples and of the temple at Jerusalem (at least during the greater part of the period before the Exile), worship was not confined to one god. Besides the great god Bel, other gods had their altars and shrines within the precincts of the temple.

There are only three Nabatæan inscriptions, but one of these dates from the year 5 B. C., which gives it a special importance epigraphically. Two new fragments from the epistyle of the portico in the court of the Temple of Ba'al Samin at Si', together with the five fragments already known, enable Dr. Littmann to reconstruct this inscription, and, on the basis of that reconstruction, to restore in general outline the temple itself, which consisted of an inner temple, an outer temple or precinct, a *theatre*, "which seems to have been the technical name for the inner portico in front of the inner temple," and a gate with towers or pillars, which last remind one somewhat of the descriptions of the eastern entrance of the temple at Jerusalem. (Recent reports from the Princeton Expedition to Syria announce new and important discoveries at this place, and a complete restoration of the plan of the temple, which proves to be unique.)

The last two chapters deal with south Semitic inscriptions, Safaïtic and Arabic. The Safaïtic script is connected with the Thamudene script of Northern Arabia. Both of them were developments from the South Arabian alphabet. Southern Arabia borrowed the alphabet from Phœnicia and then developed it in its own peculiar way. The Thamudene and Safaïtic scripts were developments from the Phœnician alphabet in this secondary stage. In its original form the Phœnician alphabet spread among the Aramæans, and the earliest inscriptions found in Northern Arabia are Aramæan, and in the Phœnician-Aramæan script. The Thamudene and Safaïtic inscriptions of Northern Arabia and the Syrian desert are epigraphical evidence of the way in which new waves of emigrants moved slowly northward from inner Arabia, generally with the slowness and always with the resistlessness of a glacier. The Aramæans, who had themselves superseded a previous wave of emigration, were gradually pushed still further north by peoples whose source of culture was Southern Arabia. For the most part, these Safaïtic inscriptions, 136 in all, are mere *graffiti*, found on the borders of the Hauran, desertward between that region and the oasis of Ruhbeh. They occur scattered everywhere, but especially at the sites of old encampments. A few were discovered in connection with ruins, but in general "the fewer the traces of real civilization are, the more numerous are the Safaïtic inscriptions." They were written by Arabic Bedawin whose home was the desert and whose life did not differ essentially from that of modern Arabs. From the inscriptions "we learn that they camped at water-places, made robbing excursions against other tribes, fought and killed other Bedawin, hunted the wild animals, and tended their own herds and flocks. While roaming about they wrote or set up marks for their friends and relatives, if they should happen to pass by the same places, just as the Bedawin do now by means of their tribal marks; and in a number of cases we read that the friend or relative really found this mark" (p. 107).

Dr. Littmann's previous study of Thamudene and Safaïtic inscriptions, and his valuable work in the decipherment of these inscriptions and the determination of the vocabulary and grammar of their language, rendered it certain that his treatment of this part of the inscriptional material collected by the expedition would prove particularly interesting. Although, as he says in his preface, "the number of Safaïtic inscriptions gathered here is quite small in comparison with the larger collections of MM. de Vogüé, Dussaud, and Macler" (p. xi.), yet his thorough mastery of the material makes this chapter an important contribution to the more complete understanding of these curious documents of pre-Islamic, North Arabian civilization. (It should be added that on the second expedition, last winter, the results of which have not yet been published, Dr. Littmann collected further inscriptions in the Safa territory, and doubtless ere this has many more inscriptions than all of his predecessors put together discovered.) Preceding the treatment of the individual inscriptions, there are brief but most illuminating discussions on the alphabet, the dates of the inscriptions, the religious beliefs and practices evinced by them, the names contained in them, and much more of the same sort. The inscriptions are, for the most part, short—sometimes no more than the name of a man and his father; but even these contribute valuable information, when rightly collated, with regard to the religion of the people, the gods worshipped by them, and the like. It is noticeable that, while Allat (the feminine form of Allah) is the special god of the country, in composition we have, as the divine element, the form El, precisely as, in Israel, where Elohim was the god worshipped, we yet have El as the divine element in composition in proper names. From references in some of these inscriptions to outside events, especially the "war of the Nabatæans" and the Persian war, and by ingenious combinations, archæological and architectural, Dr. Littmann is led to conclude that the South Arabian alphabet found its way to this region at the latest toward the end of the pre-Christian period, and that it continued in use until the arrival of the Mohammedans in Syria.

While this work is a valuable contribution to our knowledge of Northern Syria, it also suggests the much greater value of the material which lies beneath the surface of the ground throughout this same region, and which this expedition did not aim to explore. The region covered is in general the same as that explored by De Vogüé, but this expedition supplemented his work by the collection of a considerable gleaning of inscriptions not found by him. Both explorations have shown that much valuable material for the post-Christian period of Northern Syria may still be found above the surface of the ground, and have also proved, if that were necessary, how important and prosperous this country was during the first six Christian centuries. We know, from Assyrian and other inscriptions, that it was equally important at a very much earlier period, the remains of which lie beneath the ground, as do, for that matter, a large part, probably the larger part, of the remains of the post-Christian epoch. Ultimately, such work of surface exploration should be supplemented by the excavation of some of the more important sites of this little-known region.

A second expedition, the Princeton expedition to Syria, headed by Mr. Butler, and of which Dr. Littmann was also a member, revisited this region last winter, in the hope of discovering further epigraphical and architectural material. This expedition, which terminated last June, devoted itself at the outset to the region beyond the Jordan, northward into the Hauran, and eastward into the desert. It reports much valuable Nabatæan material from Si', Bosra and Ammân, a complete restoration of the temple, or rather temples, at Si', and of the Græco-Persian temple at Arak el-Emir, a unique monument of the second or third century before Christ, hitherto commonly supposed to be the palace of the Jewish king, John Hyrcanus, described by Josephus (Ant. xii., 4, 11). At the two last-named places small excavations were conducted to determine the ground plans of the buildings. (It is to be wished that some expedition might conduct complete and thorough excavations at one or more of the really important sites, like Ammân, Bosra, Arak el-Emir, etc.) Passing northward from the Hauran through the practically unknown desert region east of Homs the explorers found not a few ruins of large size, besides Roman camps, castles, and numerous small towns, with a harvest of Greek and Syriac inscriptions. The campaign ended in the wild and exceedingly rough country of the Jebel Sim'ân, near Aleppo, where some twenty to thirty sites, containing wonderfully preserved buildings and many important inscriptions in Greek and Syriac, were examined. Readers of the present volume will look forward with interest to the publication of the apparently still richer material discovered in this second, supplementary expedition.

The Science of War: A Collection of Essays and Lectures. By G. F. R. Henderson. 1892-1903. Edited by Capt. Neill Malcolm. With a Memoir of the Author by Field-Marshal Lord Roberts. Longmans, Green & Co. 1905.

It is rare for the reviewer to open the pages of a book in which there is so little to criticise, so much to admire. England has produced great generals, but no theorist until now who could be classed with Jomini and Von Clausewitz. The late Col. Henderson resembles the latter more than the former in his keen sense of the psychological foundation on which strategy must ever repose; he stands by himself in his powerful common sense and statesmanlike breadth of view. The weakest point of his book is due to the premature death of the author at an age when much might yet be expected of him. He would doubtless, in due time, have produced a book of classic rank on his favorite subject; as it is, we have here only disconnected papers of uneven quality and full of repetitions. It must be added, however, that the editor was undoubtedly right in not attempting compression, for the risk of losing some portion of the sense would have been too great.

The finest chapter is the first, entitled "War." It is finished in form, it is full of the deepest political wisdom, and it touches in masterly fashion the intensely difficult problem of the civilian control of military operations. In his strategical theories Henderson always lays stress, as he did in his brilliant study of Stonewall Jackson, on the question of morale: "The issue of battle," he writes, "lies in the hearts of men." In his tactical theories it would be presumptuous for a civilian to follow him into close detail. It may be said, however, that, although he wrote before the Japanese war, his teaching in infantry tactics was entirely justified in Manchuria. The crowning point at which he aimed was the combination of trained skirmishing and the initiative of subordinates with the cohesion of tactical units. In other words, he looked, in this respect, more to the lessons of our civil war than to the Prussian tactics of 1870, in which cohesion was sacrificed. In the particular in which the Japanese showed least regard for military principle, the employment of cavalry in masses, again Henderson points the clear course, and again he grounds himself on the lessons of the civil war. The proportion of only one horseman to sixty-eight infantry in Oyama's army was a serious source of weakness, and it can hardly be doubted that a division of 10,000 cavalry operating on Nogi's left at Mukden, and trained as were the men who followed Sheridan and Stuart, would have played a decisive part. It is curious, on this question of tactics, to find no reference made to Lord Cromer's brilliant but little known Staff College Essays.

The civil war figures prominently in this book, and discussion might be carried to great length; only a few points, however, must be noted. In the Wilderness campaign, it is matter for regret that Lee's position on the North Anna is discussed only from the point of view of grand tactics; the strategy that placed Lee at that point instead of across the road leading to Hanover Court House still awaits comment. Col. Henderson accepts Lord Wolseley's dictum that the presence of a single army corps of regular soldiers would have turned the scale on either side. Is this so clear? To substantiate the point, a close study of the operations of the brigade of regulars attached to the Army of the Potomac would be necessary.

The chapter on the South African war is the least satisfactory; it would have been of far more value to have Col. Henderson's views on the German General Staff's criticism of Lord Roberts's movement across the Modder River than his reply to journalistic and amateur attacks that might well have been treated with indifference. Again, the defence of Buller is far from convincing.

In conclusion, it may be noted that Col. Henderson was an avowed friend and admirer of the American army and people; we may well reciprocate his sentiments. In an eloquent passage, in which he vindicates the fame of British arms, he writes:

"Neither the disasters of the war of the American Revolution, nor the defeats which marked the war of 1812, have a place in our catalogue of failure. Inflicted by an enemy who was flesh of our flesh and bone of our bone, they can no more be cited as a proof of our inferior aptitude for war than Bannockburn or Prestonpans. *Pares aquilas et pila minantia pilis:* our own were the hands that smote us."

The book contains an interesting memoir of the author by Lord Roberts.

The Valerian Persecution: A Study of the Relations between Church and State in the Third Century, A. D. By the Reverend Patrick J. Healy, D.D., of the Catholic University of America. Boston: Houghton, Mifflin & Co. 1905.

The *Nihil obstat* of a deputy censor and the *Imprimatur* of Archbishop Williams may be taken as relieving the critic from any necessity of searching this volume for anything unbecoming to the author as a faithful son of the Church. It is only fair to say, however, that the feeling of suspicion apt to be aroused in an American reader by the mere fact of censorship, however nominal, has no apparent justification in the present case. Dr. Healy has gone about his task with a genuine desire to get at the facts, and betrays no disposition to use for partisan purposes such facts as he finds. A persecuting Emperor is not necessarily a monster of personal wickedness in his eyes, and he is quite ready to relegate to the realm of myth the touching details of so good a story as that of the martyrdom of St. Lawrence, on the evidence of scholarly investigation that these details were of far later origin than the events which they assume to describe. If his book, then, is not entirely satisfying, its measure of failure is to be attributed not so much to any defect of temper or method in the author as to the hard dealing of time with the original evidence which might have settled some of the vexing problems of the subject.

Under any of the earlier Emperors was there any direct and explicit prohibition of Christianity as such? Mommsen and others have answered in the negative, holding that such action as was taken against the Christians came under the general police power of administrative officials, and was not a matter of judicial interpretation or enforcement of written law at all. This view is accepted by Professor Ramsay, in his volume on the 'Church in the Roman Empire before A. D. 170,' and by E. G. Hardy in his short treatise on 'Christianity and the Roman Government.' Dr. Healy dissents, and of course is not without respectable company in his attitude, but his dissent is sustained by no conclusive arguments. It cannot be seriously questioned that the police power recognized and exercised under the Imperial constitution was broad enough to make trouble for a faith so radically at variance with Roman traditions as was early Christianity. Restraint, even to the death penalty, being easily secured without such assistance, the burden of proof lies on him who holds that special legislation was employed, and the evidence so far offered is very far from conclusive. Dr. Healy assumes, for example, that the words used by a number of the early Christian writers, *non licet esse Christianos*, are satisfactorily explained only on the theory that they are the exact words of the law. And yet he tells us only a half-dozen pages later that "the aim of the apologists, from Quadratus and Aristides to Tertullian, was not to obtain any change in the legislation. They demanded that such modifications be introduced into the procedure followed by the magistrates as would ensure for the Christians a fair trial on specific charges, and constantly complained that Christians were condemned for the mere name without any proof that they were guilty of crime or wrongdoing. Now if *non licet esse Christianos* was positive law, it is strange indeed that the whole strength of the apologists was not thrown into an attempt to change the law, on the ground of its essential injustice. If, however, the prejudice naturally aroused by the irreconcilability of Christianity with prevalent modes of thought and feeling had led magistrates to the too easy assumption that Christians were as a matter of course disloyal citizens, presumably guilty of any offences popularly alleged against them, then we can readily see that the available point of attack for the apologists was just that which they chose, the mode of procedure.

After interpreting the phrase in question as positive law, Dr. Healy surprises the reader by adding: "The vague and general character of such a law, neither fully defining the crime nor indicating any regular procedure, will certainly explain the difficulty which Pliny experienced in executing it." It is hard to conceive how *vagueness* could be more completely eliminated than in the form of words quoted. Pliny knew that he had the right to enforce the death penalty, and had been acting on that right before asking the Emperor for further instructions. If he had had such a positive law as Dr. Healy assumes, his task would have been simplicity itself. But if he was merely using his discretionary police power to maintain tranquillity in his province, and found himself under popular pressure to take stern measures against a sect in which he could not find anything ordinarily to be branded as crime, but which was indisputably causing various disorders from the Roman point of view, then a

man of his kindly disposition might well have been perplexed.

It will be borne in mind, of course, that Dr. Healy's attribution of legal standing to the phrase is put forward merely as a matter of opinion, and not as an ascertained fact. He refers to Trajan's reply to Pliny as the first "special legislation on the subject of Christianity" to which we can point with absolute certainty. We must agree here with Mr. Hardy, who says that "to speak of Trajan's letter as an edict either of proscription or of toleration, is a complete misconception of the facts." Ramsay, too, has strongly expressed his surprise that so many critics have made the mistake of exalting into Imperial legislation against Christianity this simple letter of advice to a provincial governor, who was anxious to use his discretion in a purely administrative matter in such a way as to win approval at Rome. Dr. Healy's work is not everywhere self-consistent, and this defect once at least touches an important point. On page 109, Macrianus is distinctly indicated as the man whose evil influence made a persecutor of Valerian, after the promise of better things, while on page 165 the same bad preëminence is just as clearly assigned to Aurelian.

There is a place for a good history, in the English language, of the Roman persecutions of Christianity. Dr. Healy's work is of course narrower in its scope, but, however interesting it may be in some respects, it leaves even the Valerian period still a fair claim to inclusion in that history when it shall be written.

Jean François Millet. By Richard Muther. Charles Scribner's Sons. 1905.

The number of "series" and "libraries" of little books on art and artists is almost incalculable and increasing, while the quality of many of them is surprisingly good. If the general public does not learn something about art, it will not be the fault of the publishers or the writers. Mr. Muther's monograph on Millet in the Langham Series, though it is very brief, is especially notable for the justice of its point of view. The author is not one of those sentimental critics who gush about the "Angelus," or imagine that Millet's work may be understood without regard to technical considerations, and is great solely because of his feeling for the hard lot of the peasant. Of the "Angelus" he remarks that, "quite apart from the fact that this particular painting must be reckoned, on purely technical grounds, one of Millet's weakest productions, its theme is characterized by a sentimentality which is foreign to his work"; while he cautions us against laying too much stress on the fact that Millet was born a peasant. The important thing is that he was born an artist. Mr. Muther perceives very clearly that, in art, the subject is more or less accidental, that the style is the man, and that no artist ever attained real eminence without great qualities of a purely artistic order—qualities which would give value to his productions no matter on what subject he chose to exercise them.

More than this, he perceives clearly and explains lucidly what was the chiefest of Millet's artistic qualities: "the 'eye for greatness' which Goethe extolled in Michelangelo," a "sense of Nature's elementary language of form." This is the true note, and the comparison with Michelangelo is exactly the right one. Since the great Florentine laid down his pencil, there has been no such mastery of line, no such expression of bulk and weight and movement, no such grand style in the treatment of the human figure, as is to be found in the works of Millet. The best pages of the book are those devoted to the exposition of Millet's manner of drawing; of his constant rehandling of a theme until he had entirely mastered it, purging his rendering of all that is merely descriptive so that there remain "only essential lines, massiveness of contour, rhythm of motion." And next to his grandeur of draughtsmanship, Millet's most wonderful gift was his ability to express space—"to endow his perspective with an enormous power of illusion," to give the sense of "infinite distances." His rustic scenes were admirable media for the expression of these qualities, and therefore he painted peasants—not because he was a peasant himself. Many painters have been peasants, and many have painted peasants, but there has been no other Millet, while it cannot be doubted that Millet himself would have produced analogous results no matter what he undertook to represent.

So far, then, and as regards the major part of his thesis, we are in entire accord with Mr. Muther; but it seems to us that in his desire to signalize the qualities of Millet the draughtsman, he is too emphatic in his denial that Millet was a painter. A facile or charming technician he certainly was not, and no one is called upon to admire his handling as such, but Mr. Muther's strictures on his color are excessive. Even here our author sees the merit of appropriateness, and considers that the earthiness—he even says dirtiness—of Millet's tones is expressive of the union of rustic man with the soil. What he would not admit is, that Millet's coloring is often as powerful as it is sober, is harmonious always and, on occasion, subtle. Millet was preëminently and supremely a draughtsman, but, within his purposely limited range, he was also a great colorist.

In common with most critics who have written of Millet, Mr. Muther is, we think, unjust to the early work of that artist, done before his settlement in Barbizon. He does not, indeed, give the impression, too frequently given, that this work is lascivious and immoral, but he does intimate that it is of poor quality. In reality some of it is exceedingly able, cleverer by far than the earliest of the peasant pictures, and interesting for its demonstration of the sound technical education which underlay the later and greater achievements of the painter. Finally, while it is true that too much has been made of Millet's peasant origin, we think hardly enough has been made of his race. It was not for nothing that he was a Norman, and the austere nobility and seriousness of his art remind one frequently of the art of two other great Normans, Nicolas Poussin and Pierre Corneille.

The little book is agreeable in size and shape and very well illustrated. One regrets, however, the yielding to the present fashion of introducing as book illustrations plates loosely mounted on blue-gray cardboard. The use of the "Angelus" as a frontispiece is a concession to the public which the author would hardly have made.

Modern Housing in Town and Country. By James Cornes. Scribners. 1905.

That the English take an intense interest in the homes of the working classes is very clearly shown by the book named above. The problem in England is even more pressing than it is here, and the number and variety of the attempted solutions are correspondingly greater. While, with us, the private owner who builds with an eye single to a profitable venture, or the philanthropic citizen or body of citizens that attempts to house the people well and with some slight return upon the investment, are almost the only forces attacking the problem, in England quite others—taking advantage of an act passed fifteen years ago—are at work. By this act, the public-works loan commissioners are empowered to advance money to corporations or individuals for the purpose of constructing dwellings for the working classes, and local authorities may themselves provide such dwellings. Some of these authorities have undertaken works upon an enormous scale; the London County Council alone having made provision for over one hundred thousand people, involving an expenditure of five millions sterling, the whole of which will be remunerative, no charge whatever being made on the county rate.

These housing schemes fall into four chief classes: First, the "block dwellings," a large building of several stories, in which tenements are grouped around a few main staircases. Second, the "Rowton Houses," hotels for the poorer classes, in which separate bedrooms or cubicles are provided for each man, and comfortable common rooms for eating, reading, recreation, etc. Third, "cottage tenements," two or three stories high, containing but one flat on each floor. Fourth, the self-contained cottage. Mr. Cornes presents an admirable collection of many examples of each of the four classes, with plans in detail, description of materials and arrangements, cost, rentals, and financial schemes. He treats also of such interesting attempts at assembling well-designed cottages for the working classes in the midst of attractive surroundings as those at Port Sunlight, Bournville, and Garden City, Letchworth.

A sympathetic love story, lifelike characters, humor and vivid scenes of German university and English country life are among the attractive features of Mrs. Alfred Sidgwick's THE PROFESSOR'S LEGACY, to be issued this week. Early in the novel a noted German professor leaves an unfinished book on corals and his young daughter to his favorite pupil, an Englishman. 12mo, $1.50. HENRY HOLT & Co., 29 W. 23d St., New York.

CAPT. MAHAN'S IMPORTANT NEW WORK

Sea Power in Its Relations to the War of 1812

By **Capt. A. T. MAHAN, D.C.L., LL.D.,** Author of "The Influence of Sea Power Upon History," "The Life of Nelson," Etc.

In the present work the distinguished author concludes the series of "The Influence of Sea Power Upon History," as originally projected. He has succeeded in unearthing a large amount of new material from government and private documents, and throws a flood of new light on the subject of the imprisonment of American seamen and on the records of American privateers.

With photogravure frontispieces, maps, battle plans, and twenty-three full-page plates in half-tone from original illustrations by Henry Reuterdahl, Stanley M. Arthurs, Carlton T. Chapman, etc.

2 vols. in box, octavo. Cloth, gilt top, $7.00 net; half calf, gilt top, $12.00 net. Express charges additional.

The Novels of Henry James

A Study

By ELISABETH LUTHER CARY
Author of "The Rossettis," etc.

With a Bibliography by F. A. King

8vo. With Portrait in Photogravure. Net, $1.25 (By mail, $1.35.)

The intention of the book is sufficiently indicated by its title. It is an attempt to fix more or less definitely the impression given by the work of Mr. James taken as a whole accomplishment and reviewed with reference to its complete effect. It is not so much a criticism as a comment upon the author's point of view and the inferences he draws from life.

Send for new Illustrated Catalogue.

THE MAKERS OF CANADA

Twenty Volumes by Distinguished Authors

When the Series shall have reached its conclusion its readers will be afforded a comprehensive survey of the history of British North America, passing from the early romantic period through the epoch of reform and reconstruction down to the present day. In point of accuracy, variety and human interest these books will stand apart from everything that has yet been published in connection with the history of the country.

OPINIONS

"Does credit to the publishing enterprise of Canada."—*The Nation, New York.*

"A series of books entitled 'The Makers of Canada' needs no praise from us."
—*The Spectator (London, Eng.)*

"A very handsome series of historical biographies."—*The Times (London, Eng.)*

"'The Makers of Canada' should come to be as well known and commanding a title as 'Rulers of India,' or even 'English Men of Action.'" —*Pall Mall Gazette (London, Eng.)*

"Imperial interest is attached to a series of books on 'The Makers of Canada.'"
—*Standard (London, Eng.)*

Size of page 6x9 inches. **Price per vol., $5.00.**

Delivered carriage and duty paid to any part of the United States.

64 Page Prospectus on Application. Address the Publishers.

MORANG & CO., LIMITED, Toronto, Canada

THE UNIVERSITY OF CHICAGO PRESS

FOR THE FIRST WEEK OF NOVEMBER

GENERAL SOCIOLOGY — ALBION W. SMALL

The birth of a new science is an impressive event. Professor Small here argues that the investigation of social phenomena has acquired sufficient definiteness and system to take its place among the recognized sciences. The book is an exposition of the development of social theory from Spencer to Ratzenhofer. xiv + 739 pp.; 8vo, cloth; net, $4.00; postpaid, $4.23.

A DECADE OF CIVIC DEVELOPMENT — CHARLES ZUEBLIN

The work of a vigorous optimist, who tells his readers in clear, concise terms what has been done in the last ten years for the betterment of our cities. The movement for civic improvement has swept the country; its eventual results are beyond calculation. No citizen can afford to remain in ignorance of a matter which so intimately affects his own welfare. 200 pp., illustrated, 12mo, cloth; net $1.25, postpaid $1.38.

PRIMARY FACTS IN RELIGIOUS THOUGHT — ALFRED W. WISHART

The religious needs of our generation are admittedly peculiar. This attempt to suggest a clue for the solving of some widespread difficulties will prove interesting to all thoughtful minds. The author starts with the conception of religion as a universal, inevitable human experience, shows its intimate connection with the life of society, and suggests how the essence can be kept in spite of changing views on minor points. 125 pp.; 12mo, cloth; net 75 cents, postpaid 85 cents.

Recent Books of Importance

RUSSIA AND ITS CRISIS — PAUL MILYOUKOV

The most authoritative and accurate account of Russian past development and present conditions available in English. The author is a representative of the liberal party known as the "Intellectuals," and was recently imprisoned because of his activity in the cause of freedom. 602 pp.; 8vo, cloth; net $3.00; postpaid $3.20.

CHRISTIAN BELIEF INTERPRETED by CHRISTIAN EXPERIENCE — CHARLES CUTHBERT HALL

This interesting volume contains the "Barrows Lectures," delivered by President Hall in the leading cities of India and Japan, in connection with the lectureship founded by Mrs. Caroline E. Haskell. 300 pp.; 8vo, cloth. net $1.50, postpaid $1.66.

THE PROPHETIC ELEMENT IN THE OLD TESTAMENT — WILLIAM R. HARPER

The latest volume in the series of Constructive Bible Studies. A scholarly handbook for advanced students. The prophetic element is interpreted in the light of Jewish history and literature, and with the help of the ancient monuments. viii+142 pp.; 8vo, cloth, postpaid, $1.00.

RELIGION AND THE HIGHER LIFE — WILLIAM R. HARPER

A series of earnest talks to students. x+184 pp.; 12mo, cloth; net, $1.00; postpaid, $1.09.

THE TREND IN HIGHER EDUCATION — WILLIAM R. HARPER

Essays on timely educational topics. xii+390 pp.; 12mo, cloth; net, $1.50: postpaid, $1.63.

PLACE OF INDUSTRIES IN ELEMENTARY EDUCATION — KATHARINE E. DOPP

A scientific and practical treatise. 278 pp.; illustrated, 12mo, cloth; net, $1.00, postpaid, $1.11.

The Life of GOETHE

By ALBERT BIELSCHOWSKY

Translated by W. A. COOPER.

Three Volumes, Fully Illustrated, Large 8vo, Each, net $3.50. Ready.

PART I., 1749-1788. FROM BIRTH TO RETURN FROM ITALY.

Dr. Bielschowsky was acknowledged as a foremost authority on Goethe in recent times. His biography and verses results all previous study of Goethe, and in addition includes a great many distinct contributions to our knowledge of his times and works, especially of how the writings are the fateful expression of the man in the various phases of his development. The leading German papers are unanimous in declaring it to be the most important life of Goethe, from the standpoint of scholarship, sympathetic interpretation, and literary art,—in fact the most important biography of any man written in German for many years.

for publishers. Mrs. DENISON, 83 Washington Place, N. Y. City.

Important Publication

Lamberton's Thucydides

BOOKS II. and III.

$1.75

This edition of Thucydides has been prepared with special reference to the needs of college students. The introduction gives the life of the author, with a condensed account of his work, method, plan, and purpose. To this is appended a statement of the more prominent features and idioms of his language. In preparing the notes, whatever is unusual has been explained as far as possible, and illustrated by pertinent examples; while at the same time the character of the unusualness has been pointed out, and the reasons, if any are assignable, which led the author to this particular form of expression, have been shown. Much pains has been taken, especially in the notes on the speeches, to set forth the line of thought and the connections, as it is here that students are most likely to become befogged.

AMERICAN BOOK COMPANY
New York Cincinnati Chicago Boston

LIBRARY SERVICE

We aim to serve librarians with the greatest efficiency. We have

(1.) Competent and thoroughly equipped book men.
(2.) The largest miscellaneous book stock in New York City.
(3.) A valuable line of order lists —as follows—

A. Monthly Bulletin of the Latest and Best Selling Books.
B. Standard Library Catalogue.
C. Clearance Catalogue.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 2, 1905.

The Week.

A great railway and telegraphic strike, combined with an industrial, that for the moment all but isolated Russia from the rest of Europe, created a situation of which Count Witte remained the master—the master so far as final determination of the Tsar's mind was concerned. On Monday a constitutional régime was proclaimed in autocratic terms, with mighty concessions from which there can be no steps backward. Practically universal suffrage, a Parliament freely elected and of supreme law-making powers, freedom of the press, and even the writ of habeas corpus, forever ending "administrative exile" and the other resorts of arbitrary power—these are the chief points in the new charter of Russian liberty. It is a great day for democracy. The echoes of this stupendous event will be heard in other lands—in Austria, in Germany, yes, and in the Philippines. Meanwhile, amid wild rejoicing, the racked Empire appears to be settling down into order, with its face to the future.

One curious question, brought to the front by the Czar's surrender to the people, concerns the effect of his action on Russia's public credit. As it happens, means are at hand for measuring this effect. Russia is supposed to have applied for a loan of $360,000,000, to be floated in outside markets. The bankers compromised by agreeing to $260,000,000, of which Paris was to take one-half. Last week the contract was all but signed, and an issue early in November was expected, when the Russian popular uprising occurred. The bankers naturally withdrew, the whole operation was indefinitely postponed. Now comes this new turn in events; what is to happen next? The probability is that Russia's public credit will be greatly enhanced—first, because a revolutionary outbreak, with results impossible to forecast, has been averted; second, because Witte, who enjoys in high degree the personal confidence of the European markets, is at the helm. Light is thrown on the episode by an occurrence during last January's revolutionary demonstration, when a manifesto of the popular leaders, after pledging continued observance of the Imperial Government's prior obligations, added:

> "Every foreign loan contracted after Sunday, January 22, this year, will be unhesitatingly repudiated, because no nation can now lend to the Russian Government in ignorance of the fact that people and bureaucracy are struggling to discover which of them really represents the nation."

Whether foreign lenders did or did not take this threat seriously, it is a fact that from that day forward Paris bankers refused to take a Russian loan. Berlin took some $50,000,000 very reluctantly; for the rest, Russia had to wait.

The "Convention" at Chicago on Thursday to endorse the President's proposed railroad legislation was, strictly speaking, no convention at all. No one was admitted who would not agree beforehand to approve the cut-and-dried resolutions prepared in advance. Mr. E. P. Bacon, who got up the affair, explicitly telegraphed to various bodies whom he had invited to send delegates that none would be "eligible" who did not agree with him. As a matter of fact, many such were refused entrance to the hall, and naturally went off to hold a convention of their own. This result inevitably robs the proceedings of any weight. It was a "ratification meeting," not a convention. As Mr. Bacon frankly stated in anticipation to a reporter of the Milwaukee *Sentinel*, even a delegate "regularly seated" would not be allowed to propose any resolution "not in sympathy" with those who got up the meeting. Of course, gentlemen of a feather are privileged to flock together and resolve that they are unanimously in favor of what they were known unanimously to favor; but it is a trifle absurd to call that sort of thing "a convention to impress upon Congress the extent and persistence of the demand of the people."

In the announcement that Attorney-General Moody has decided to take a hand in the investigation of the wrecked Enterprise National Bank at Allegheny, Senator Boies Penrose and his "gang" will doubtless see fresh evidence of the hostility of the Roosevelt Adminsitration. Indeed, the Attorney-General's orders to the United States District Attorney at Pittsburgh to investigate the failure, with a view to bringing criminal proceedings against the guilty, looks very much like a reprehensible desire to get some of the Republican leaders into jail. In similar cases the machine has known how to "fix" bank examiners, so as to enable them to cover their tracks; but if their own party leaders in Washington are going to join the enemy, what is a poor State politician to do? Of course, there is Mexico—and China, too, has some attractions; but if Quay could reach the Senate after pilfering from the Treasury, why should not his successors brazen it out? Unfortunately, Uncle Sam, once started in an investigation of this kind, is not apt to stay his hand; and in Mr. Moody he has a servant who is quite likely to see the case through to the bitter end, precisely as he has been jailing a Republican Senator and Congressman in Oregon.

The Panama Canal will certainly be dug, for he himself has said it, but that job is easy compared with the labor of keeping the Panama Commission harmonious. Again we have tales of internal "friction"; Secretary Taft and Chairman Shonts do not get on together; each has a feeling of "deep responsibility," etc., and Mr. Shonts's is so deep that rumors of his resignation are flying about. It may be that one cause of difficulty is revealed in the official report on Isthmian Canal expenditures, made public on Saturday. This covers the record up to June 30. At that date there was a balance on hand of a little more than $6,000,000. That is to say, since the appropriation of $10,000,000 by Congress on June 28, 1902, some $4,000,000 had been spent. Now, the startling fact is that, under Chairman Shonts, more has been laid out in four months than had previously been in three years. There is to-day less than $1,000,000 left, barely enough to get along with until Congress meets and votes more money. A new appropriation is the main thing, and the *Tribune's* Washington correspondent innocently states that "it was hoped all knowledge of friction" might be kept from Congress until it had put the Commission in funds again. One can imagine that disagreeable questions from Secretary Taft about the lavish expenditures may have had something to do with the friction, and it is certain that Congress will not do its duty unless it makes a rigid inquiry, and insists upon having all sinecures cut off, before it appropriates another dollar.

The Central Leather Company—sometimes called the Leather Trust—will, according to the statement of A. Augustus Healy, the vice-president, coöperate with the National Shoe Manufacturers' Association in the movement for free hides. The manufacturers are ungrateful wretches; not content with the generosity of the protectionists, who offer free goat skins, they shamelessly demand hides also. They want what they want, even if they take the bread out of the mouth of the hungry Armour Packing Company. They offer the feeble pretext that the tariff on raw material seriously cripples their business. So much the worse for their business. The Dingley tariff is a sacred institution. To pull out one stone may bring down the whole edifice. A manufacturer who asks for free raw material is therefore no patri-

ot. The Central Leather Company is as shockingly selfish as the manufacturers. "It is to our interest," says Mr. Healy in an interview, "that prices for raw material shall remain low, for then consumption is at its best." This is flying in the face of Providence and Secretary Shaw. Mr. Healy ought to have learned by this time that high prices are in themselves an inestimable blessing to the country. Mr. Healy wants prices low enough to stimulate the market; but this is rank commercialism. If prices are all high enough, Americans will dwell in such a state of spiritual exaltation that no one will care whether he is selling anything or not.

"Twelve thousand workers" petition against the importation of goods made by cheap foreign labor; they demand the imposition of a 40 per cent. duty, with the object of maintaining "the high standard of living" which they now enjoy. That sounds familiar, and the reader will wonder how he came to overlook the item in the American news of the day. But, dear reader, it is New Zealand news of the day; and the degrading foreign labor against which the twelve thousand workingmen are petitioning the Australian Parliament for protection, is American labor. This stands our own argument for protective duties and subsidies on its head, of course; but its legs can still wave wildly, and that seems to be enough to convince a certain order of intelligence that Dingleyism is all that saves us.

Mr. Jerome has already won an unexampled triumph. Even if he fails of election, he has at least fought a boss into submission. His final endorsement by the Republican organization, after it had first rejected him with every expression of hatred and contempt, is the most extraordinary tribute ever paid to a candidate. It is also the completest recognition possible of the issue for which Mr. Jerome stands, and an admission that it is cutting a swath through party lines in a way to upset party calculations and discomfit bosses. Thus the very wrath of cunning politicians is made to praise sterling character, with its irresistible appeal to the people. And that Mr. Jerome means to cling to his one issue tenaciously, he made clear in his speech on Thursday night. Republican endorsement did not stay his hand against Republican corruption. He spoke again of Senatorships auctioned off as if they were worn-out fire-horses, and said he would not insult his hearers by imagining that they thought the two Senators from New York fairly represented this State. It is machine tyranny and venality which has foisted such men upon us; and it is the fight against those intolerable evils which Jerome is leading. Let the bosses take him or leave him, his voice rings out the same.

Mr. Cleveland's endorsement of Mayor McClellan is largely, we suppose, a matter of personal friendship. It was one word for McClellan to ten against Hearst. One could wish that virtue would go out of Mr. Cleveland to do the Mayor good. The latter certainly betrays the need of a little of the ex-President's gift of blunt and independent speech. Possibly Mayor McClellan may be spurred on by Mr. Cleveland's approval to exhibit a certain amount of Clevelandesque quality. It was Gov. Cleveland who wrote tersely to the then leader of Tammany Hall, to tell him that Grady was a disreputable person and a pernicious Senator, who ought not to be sent back to Albany. It was President Cleveland who boldly said that Murphy of Troy was not a fit man to be Senator of the United States. How refreshing it would be if Mr. McClellan would indulge in a little plain speaking of this kind!

If the Philadelphia machine had really any hopes of carrying the coming election, they must be blasted by the report of the actual stealings of the Durham ring during the construction of various public works. Even those who believed that the frauds would mount to a high figure must be astounded at the grand total of the graft thus far revealed—about $6,330,000. Major Gillette of the army and John Donald MacLennon, the experts who have been probing the filtration frauds, are convinced that $18,767,541 has been paid or pledged for work which should have cost only $12,430,000. Allowing a profit of 20 per cent., the money stolen from the people of Philadelphia is still over six millions. In addition, the experts find that at least 1,200 lives of typhoid victims would have been saved if the filtration plant had been finished on time. One reservoir, it has been ascertained, is of no value whatever, and never was expected to be of value; the contract for it was let merely in order that the favored contractors might make a large profit on it. There was the most shameless juggling with bids, advertisements, specifications, and contracts; work was done in any fashion which pleased the contractors. In some cases the bidding was restricted to two bidders only. Some contractors were allowed to use the city's property quite at will. In other words, there was a carnival of grafting in which the McNichol firm, with Israel Durham, the Republican boss, as a member, got the lion's share.

The appointment by the Mutual Life Insurance trustees of a special committee to investigate the affairs of the company, is a step the importance of which will depend wholly on the spirit of the committee in undertaking its work. The three committeemen selected are trustees of the Mutual; but this is the usual procedure in an inquiry of this sort, and it by no means follows that, because they are connected with the management, their work will be biassed or superficial. The Frick committee on the Equitable scandal is a case in point; all of its members were trustees, and some were supposed at the time to be fully in sympathy with one faction or the other in the Hyde-Alexander quarrel. Yet the report, when it appeared, was thorough, impartial, and unsparing; it dealt with the management's abuses frankly and quite without respect of persons, and it made reform in the Equitable's practices inevitable. The gentlemen selected for the Mutual's investigating committee all have a standing before the public which they will surely be anxious to preserve, and they are necessarily aware that an evasive or whitewashing report, in a matter with which the public is daily familiarized through the Armstrong committee's work, would gravely impair the reputation of men who signed their names to it. We sincerely trust that, like the Frick committee, they will extend its inquiries and recommendations beyond the field of extravagance, political corruption, and syndicate participation, and will overhaul thoroughly the present methods and practices of life insurance. The question which needs to be dealt with speedily and intelligently is how this stupendous accumulation of surplus capital is to be modified or prevented. This is a problem which should appeal particularly to a committee of insurance trustees, for the reason that it cannot be directly dealt with by a legislative committee.

There is at least one life-insurance company, the Northwestern of Milwaukee, which declined in 1896 to rescue the country from the free silverites. When Messrs. McCall, McCurdy, and others like them were giving Mr. Hanna sums of $50,000 and more to save our institutions from perishing, the Northwestern was also approached. Its agent in Dubuque was asked by the chairman of the Republican Congressional Committee to obtain a contribution of $100 to help defeat Mr. Bryan. The agent referred his request to the head office, and received the following reply from the vice-president of the company, the late Willard Merrill, which is so correct in its point of view that we reprint it in part:

"This company has never made a contribution of that sort. We are aware that some companies have made contributions in some of these cases, but, under our charter and as we understand our duty, we have felt compelled to decline when requests have been made. There are both Dmocrats and Republicans on the official

staff of this company, but we are without exception this fall in favor of sound money and shall vote accordingly. We have no sympathy with the free coinage of silver, but we do not feel at liberty to take part as a company in any political campaign. Undoubtedly, a large number of our policyholders believe in the free coinage of silver, and they certainly would have a grievance if the officers of the company should contribute toward expenses in opposition to their views."

We fancy that either Mr. McCall or Mr. McCurdy would now give a large sum to be able to draw a similar statement from their own letter files. As it is, the Springfield *Republican*, remembering the admirable career of the late Col. Jacob Greene of the Connecticut Mutual, who also died poor, is justified in wondering whether all the life-insurance leaders of the austere school of Mr. Merrill and Col. Greene are in the other world.

The figures of the State census, just made public, illustrate anew the tendency to move to the cities. Greater New York, with practically half of the State's 8,066,672 people, of course has been the greatest gainer in the period from 1900 to 1905, the percentage of increase being 16.8, in comparison with 11 per cent. increase throughout the State. Buffalo, Rochester, and Schenectady also shared liberally in the growth, while cities like Albany and Syracuse advanced more slowly. Smaller cities and the villages, except where factories were introduced in the five-year period, showed a normal increase. It was in the twenty characteristically rural counties, like Seneca, Steuben, and Schoharie, that a decrease of population was noted. In Seneca the population dropped from over 28,000 to a little more than 25,000, the percentage of loss being equivalent to the State's percentage of gain. These returns fall in with the figures of the mid-decade census of Massachusetts, published recently, which indicated a rapid city growth, and stagnation in the country districts. But the old Eastern States are not alone in reporting losses of rural population. Iowa has been for some months attempting to explain a decrease in the State's population, though the fact is that Iowa has no great cities to draw outsiders, and it is true there as elsewhere that fewer men are needed to cultivate the soil than ever before. The "drift to the cities" is still serious enough to call for extra activity on the part of the "back-to-nature" preachers.

That our biggest colleges are still largely local centres of learning is shown in an interesting table of attendance at nine Eastern and Middle Western universities published in *Science*. The figures are those of attendance in 1904-1905 at Harvard, Yale, Columbia, Pennsylvania, Cornell, Princeton, Michigan, Illinois, and Indiana. They include a total registration of 26,954, varying between Princeton's 1,345 and Columbia's 4,121. From the North Atlantic States — Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania—more than half, or 15,066, of the total attendance was drawn. The North Central States contributed over a third, 9,848, while the South Atlantic sent only 787, the South Central only 557, and the Western only 631. The tendency to stick to the home college is, of course, stronger in the East than anywhere else. Out of the total of 3,300 students in the University of Illinois, 3,164 are from the North Central States, and the University of Indiana got 1,453 of her total of 1,531 from the home State. Michigan depended on the North Central States for 3,155 of her 3,794 students, drawing 2,199 from the State.

The Eastern colleges, naturally, "pulled" stronger outside their special territory than the three Middle Western, though the figures indicate that the old rule as to the decrease of interest according to the square of the distance held fairly true. Thus, Columbia got 2,554 of her total of 4,121 men from the enumerated States in the North Atlantic group; Harvard, 3,235 out of 4,098; Cornell, 2,405 out of 3,130; Yale, 2,121 out of 2,899; Pennsylvania, 2,372 out of 2,727, and Princeton, 943 out of 1,354. New York State furnished over two-thirds of Columbia's enrolment, and considerably over a half of Cornell's, while Massachusetts supplied slightly more than half of the men registered at Harvard. Pennsylvania sent 1,939 men to the State University out of a total of 2,727, quite as large a percentage as New York gave to Columbia. Connecticut, however, sent only 1,009 of Yale's 2,899 men to New Haven, and Princeton got only 296 of her students in New Jersey. Harvard and Yale had about an equal attraction throughout the country. In the South Atlantic division the figures were 114 and 99, both being beaten by Columbia and Cornell with 118 and 175 respectively. In the South Central States, Harvard gathered 88 men to Yale's 80; in the North Central, 526 to 506, and in the Western, 126 to 78. Only 67 students came from Alaska, Hawaii, the Philippines, and Porto Rico to these nine colleges, and 603 from all foreign countries.

Another by-election went heavily against the Balfour Government last week. At Hampstead, a seat was not actually lost, but the majority was cut down from 1,800 to 400. A net loss of 1,400 votes to a constituency is now, apparently, about what the Conservatives have to expect. It was registered ten days previously in the Barkston Ash by-election, where a seat which the Tories won by 1,906 in 1885, and 1,241 in 1892, was captured for the Liberals by 228. This came on top of reverse after reverse of the same kind. Since 1900 there have been 65 contested elections in Great Britain. Their result is to turn a Conservative majority of 29 into a Liberal majority of 11. This ratio, applied to a general election, would leave the Conservatives worse beaten than they were in 1880. Of course, Mr. Balfour may constitutionally hold on and defy the known sentiment of the country as long as his majority is not entirely whittled away in the House of Commons, and the septennial act does not come into force. But his dwindling prestige makes it increasingly difficult to carry on the Government; and even his thick-and-thin supporters like the London *Telegraph* and the *Times* are now forecasting an enforced dissolution of Parliament early in the spring.

M. Raymond Recouly, who was with the Russian armu in Mantchuria, has recorded in the *Revue Bleue* his impressions of the war and of the peace of Portsmouth. By the treaty, Japan, he thinks, has gained all that she set out to gain excepting money. Russia was not seriously humiliated by her reverses, although she lost possessions which were not indispensable to the national welfare. It has sometimes been said that Russia must feel the loss of Mantchuria as France felt the loss Alsace-Lorraine. On the contrary, M. Recouly thinks that in the future there will be a cordial understanding between Japan and Russia. Among the Russian soldiers, he noticed an absence of racial and national prejudice and bitterness. The troops felt that Russia was already sufficiently rich in territory without fighting for new Asiatic possessions. Even when they met with defeat, they consoled themselves by saying: "This brings us nearer home." According to M. Recouly, the war should have opened the eyes of England to the folly of fearing a Russian invasion. It was dread of Russia which made the first Anglo-Japanese treaty. Actually, the British Empire is threatened by Russia at but two points—Persia and Constantinople. At present, while Russian influence is paramount in Teheran, and while Russia seeks an outlet by way of the Persian Gulf, the country lying between the frontier and Asiatic waters is "cursed by desolation and death." As for Constantinople, it seems that Germany and Austria are there more powerful than England. M. de Witte praised the German Emperor for his correct attitude during the war in the East. It was easy, says M. Recouly, for him to view the struggle with undisturbed equanimity; for the armies of his Eastern rival were being defeated without the mobilization of a German regiment.

THE PRESIDENT IN THE SOUTH.

The President's Southern tour—"swinging round the circle," in elder parlance—is at an end. It has been marked, with scarcely an exception, by great popular demonstrations mixed of curiosity and of hero-worship, and by official civilities which were less to be expected, for reasons well understood. The South was, in fact, in a very real sense the enemy's country. President Roosevelt had, if we may believe the papers of that section, committed the unpardonable sin. To begin with, he is one of the blackest of black Republicans. The Southern Bourbons felt that he had aggravated his original sin by going out of his way to insult them. For example, he had closed a Mississippi post-office because some whites had made trouble for the colored postmistress. He had appointed a negro collector of the port of Charleston, and had held the man in place and forced the Senate to confirm him, in spite of furious protests from the dominant white faction of the city. Above all, he had invited a distinguished negro to dinner and had thus, so the accusation ran, openly proclaimed a belief in "social equality." Ever since that dinner invitation the press of the South has lost no chance to attack Roosevelt. As a writer in the Raleigh *News and Observer* remarks, "But yesterday we were up in arms against one Teddy Roosevelt because he had, we said, deliberately and of malice aforethought, used his high position to lessen the social chasm which sunders the races in this country." To-day the South can hardly find words to express its admiration. Take one example from the Birmingham *Age-Herald:*

> "The man whom the people came from all parts of Alabama to honor yesterday is emphatically an American who stands for all, regardless of social lines or the size of pocketbooks. A man of heartier American spirit and impulses has never occupied the Presidential office. He is an American from the ground up, a true type of the best aspirations of the republic, the first citizen of this glorious land of liberty."

In such glowing tributes the South has joined the West and the North in recognition of the man Roosevelt.

The political theories propounded by the President in the Southern cities, from Richmond to New Orleans, are those which he has set forth again and again. He favors Government regulation of railway rates; he wants the Panama Canal built with all possible speed; he hopes the republics of Central and South America will behave themselves. Moreover, he has urged his hearers to be good men and good citizens; to keep the rascals out of office. If a candidate be corrupt, he cries, "then refuse, under any plea of party expediency, under any consideration, to refrain from smiting him with the sword of the Lord and of Gideon." In this exhortation, too, there is no novelty, nor did utterances of this character call for any sectional display of tact. Mr. Roosevelt was unstinted in praise of the Southern character *bellum* and *post-bellum*, and adroitly steered clear of the fundamental question, we will not say of negro suffrage, or of civil equality, but of the negro's equal right to demonstrate his perfectibility as a human being—his "square deal." At Tuskegee his task was easy. Here he was careful to recognize the assistance which broad-minded white people had given and are giving to the great cause of negro education. His tribute to the white people of Tuskegee must have been especially grateful to Mr. Washington, for they have stood by the school in its crises and have a full realization of the noble work which it is doing. More noticeable and more honorable still was his frank utterance about lynch law. Within thirty miles of Tuskegee is one of the worst lynching regions in the United States. Tuskegee itself has known lynching alarms, and it was only a couple of weeks ago that Texans were petitioning their Governor for a dispensation which would permit them to lynch without let or hindrance. Recognizing as he does the nature of the conditions which give rise to these crude and hideous attempts to suppress crime in both colors, Mr. Roosevelt spoke out vigorously against mob law, laying stress upon a fact which the majority of Southerners are apt to overlook, namely, that "every time a law is broken, every individual in the community has the moral tone of his life lowered." The President fitly added to this his praise of the white Southerners who have stood out against this evil. We wish it had been possible for him to mention some names, like those of Gov Lanham of Texas and Mr. Edgar Gardner Murphy of Montgomery, prominent in opposition.

The President did not, of course, fail to lay stress upon the duty of the negro race to fit itself for a worthy place in our American republic, and he was able to cite the accumulation of $300,000,000 worth of property in forty years as a proof that the colored man is acquiring wealth with astonishing rapidity. The blotting out of one-half the illiteracy of Reconstruction days is another achievement of whites and blacks alike of which he took proper notice. His declaration that "ignorance is the costliest crop that can be raised in any part of this Union," ought to check a dangerous feeling in some quarters that the education of the negro has gone far enough. Mr. Roosevelt put the question of education primarily on a business basis, but he went on to add that "every white man in America, no matter where he lives, should try to help the negro to help himself"—this "in the interest of humanity, justice, and of self-protection"; and, finally, that it is the interest and duty of the white man to see that the negro is "protected in property and life, and in all his legal rights."

In Arkansas the President would have been more than human had he listened to Gov. Davis's defence of lynching without responding to it. His sharp reply was admirable in both form and substance. The lyncher does, as Mr. Roosevelt affirmed, sink to the bestial level of the negro criminal he helps to kill. The President's statement that three-quarters of the lynchings are not for the unmentionable crime, should go far towards ending false and misleading statements by men of the Tillman, Dixon, and Davis types. Every one who has seen a Southern lynching, or a Northern one for that matter, knows that it springs from and arouses the lowest passions of man. In most cases the first preparation for this bestowal of summary "justice" is a day of hard drinking in low groggeries by "poor whites" and callow youths who love the excitement. When they have dispatched one victim they are often ready to torture or kill another, as in the Mississippi case, where an innocent *woman* was racked by tortures too indecently inhuman to be reported in print. Mr. Roosevelt could not appear by silence to consent to Gov. Davis's utterances. Had he done so, he would have been untrue to the best there is in him.

HISTORY OF SHIPPING SUBSIDIES.

Especially opportune, in view of the activity of the subsidy agitators, is the latest publication of the American Economic Association, upon the "History of Shipping Subsidies." The author, Royal Meeker, Ph.D., is not an "expert" in the employ of our paternal government, but a student of economics who has patiently gathered and sifted facts with the purpose of ascertaining their meaning. Hitherto the field has been left to ex-commissioners of navigation, secretaries of subsidy committees, and similar official or semi-official "experts," who have been naturally unanimous and enthusiastic in their support of the bounty-grabbers. It is fortunate, therefore, that Dr. Meeker has at last given us an uncolored—shall we say unsubsidized?—account of the history of ship subsidies.

Turning first to the experience of Great Britain, Dr. Meeker reminds us that the largest merchant marine in the world has been built up without the payment of subsidies to merchant shipping. The postal subventions which Great Britain pays to certain steamship lines have often contained concealed subsidies, Dr. Meeker believes; but the results are proved to be frequently the reverse of what they are generally supposed to be. He shows, for instance, that the large grants made to the Cunard Company prior to 1867 had the effect of restricting the growth and improvement of the trans-Atlantic service.

It was unsubsidized companies that substituted screw steamers for the old side-wheelers, introduced iron vessels, reduced the time of passage, and provided decent accommodation for cabin passengers. Like all monopolies, the Cunard Company, while subsidized, became unprogressive, and relied upon the privileges which it enjoyed rather than on its own energy and enterprise. The company had to change its ways after the British Government began to deal fairly with other lines, but for a long time it suffered from the unsound traditions inherited from the period when it enjoyed a monopoly.

A striking contrast to the record of British progress with a minimum of state aid is the history of shipping interests in France, Italy, Austria, and other countries, which, besides postal subventions, have paid direct and indirect bounties for the construction and navigation of sea-going ships. The French laws of 1881 and 1892, providing for construction and navigation bounties, confessedly proved unsatisfactory in their working, and only demoralized the shipping interest by pauperizing those engaged in it, besides creating an oppressive ship-building monopoly. The new law of 1902 is, in the light of all experience, more likely to increase the outgo from the Treasury than arrest the persistent decline of French shipping in the foreign trade. It is interesting to note that the policy of France has, like the British fishing bounties described by Adam Smith, led to the building and navigation of ships for the sole purpose of catching the bounty. The postal subventions granted by the French Government may have been effectual in keeping a certain class of vessels upon the ocean, but they have not prevented a decline in the comparative importance of French navigation. Italy and Austria do not exhibit different results, although it should be said that in both countries the bounty system has not been applied on so wide a scale as in France. In all cases, the economic superiority of other countries in respect of constructing or navigating ships has vastly outweighed the ineffectual stimulus offered by subsidies.

Germany, upon the other hand, has paid no bounties on construction or navigation, and has merely offered postal subventions, much smaller, all things considered, than those paid by France, or even England. German shipping, however, has increased by leaps and bounds, on account of the remarkable progress of German industry, particularly in all that concerns the production of coal and iron. Norway, also, and Sweden, which offer nothing but insignificant postal payments, maintain their flourishing merchant marines. Here again natural advantages, the skill of Scandinavian sailors, and the energy of unsubsidized enterprise prevail against the clumsy devices of politicians of the protectionist school. As Dr. Meeker remarks: "The countries that can build the cheapest will eventually do the greater part of the world's shipbuilding, even though bounties given by other countries disturb the normal adjustment."

One other fact stands out in bold type in Dr. Meeker's history: bounties seem everywhere to tend to the establishment and maintenance of monopoly in the carrying trade. This was notoriously the effect of the early subsidies to the Cunard, even though the prize offered by the trans-Atlantic trade finally tempted rival lines which broke up the monopoly. And in the United States, it will be recalled, the hope of securing a subsidy was one of the assets of the unfortunate International Mercantile Marine Company. Most of the subsidy bills introduced into Congress have contained "little jokers," by which the details were so arranged that only the shipping combination could take full advantage of them. Monopoly and subsidies, in fact, are veritable Siamese twins; sever the bond that unites them, and neither will long survive.

Ever since the subsidy movement started, our Government has assiduously gathered and disseminated a vast deal of misinformation designed to aid the agitators. Our commissioners of navigation have turned their annual reports into campaign documents; the present Commissioner, for instance, who in 1894 opposed subsidies on the ground that steel ships could then be built as cheaply in the United States as in England, is now devoting much of his time to proving that the American cost is so much higher than the foreign that our builders cannot compete without a subsidy. Over in the Department of Labor and Commerce, the Bureau of Statistics, with true journalistic enterprise, has been conducting a spirited campaign in behalf of the good cause. The editor of the "Consular Reports" has contributed what he could to the success of the campaign, even though he allowed the unfavorable report of Special Agent Hutchinson to find its way into print. And the Secretary of the Treasury is now devoting less thought to the deficit in the national finances than to methods of increasing it by opening the doors of the Treasury to the subsidy grabbers. It is fortunate, therefore, that we now have something that approaches an authoritative and unpartisan account of the actual working of ship subsidies.

THE FORGOTTEN AMENDMENTS.

So interested are the voters of New York in the trial of the case of the people against the bosses, that they have had no time to remember the seven amendments to the State Constitution to be voted upon at the coming election. Some of them are of very great importance to both city and State, and should not be allowed to go by default or be carried by a small and scattering vote. One amendment in particular, the fourth, ought to be defeated. This is the proposition to get around the decisions of New York's highest court by bestowing upon the Legislature the power to

> "regulate and fix the wages or salaries, the hours of work or labor, and make provision for the protection, welfare, and safety of persons employed by the State, or by any county, city, town, village, or other civil division of the State, by any contractor or sub-contractor, performing work, labor, or services for the State or for any county, city, town, village, or other civil division thereof."

This is by far the most important question to come before the voters of the State this year. It is a radical departure from our political theory and practice, made at the behest of the labor organizations, and it is, in effect, an attack upon the freedom of contract. Every law of the character permitted under this amendment which has come before our courts has invariably been declared unconstitutional, and dangerous if it were constitutional.

This amendment is the result of three such decisions by the Court of Appeals —the Prevailing Rate of Wages law, the Cut Stone law, and the Eight Hour law being the ones passed upon and wiped off the statute-books by the judges. At once the labor leaders declared that they would go beyond that tribunal. They counted full well upon the indifference with which voters regard the Constitutional amendments they are asked to pass upon. This year the labor agitators are fortunate in that public attention is concentrated on other issues. They are favored, too, by the following form in which this gravely important matter appears upon the ballot: "Shall the proposed amendment to Section I. of Article XII. of the Constitution, relating to the organization of cities, be approved?" It would be impossible to conceal more deftly the real question at issue.

If this measure had originated in Kansas, we should all know how to characterize it. Populistic, demagogic, and paternalistic would be some of the adjectives applied. It is class legislation pure and simple, however carefully disguised. It means that the Legislature of New York can prescribe the terms upon which our cities shall conduct their business, for it will inevitably insure the repassage of the Eight Hour law and that concerning the prevailing rate of wages. The proposed change will, moreover, place heavy burdens upon the taxpayers, since it will mean that no city, town, or village can have its work done upon as favorable terms as private persons, for, as has been well said, "municipal workmen are intended to be paid the most and work the least." What the taxpayer is permitted to do individually

he will be forbidden to do when, in combination with other taxpayers, he employs men to do their joint work. "The State will make the contract, and the city will pay the bill."

If this principle becomes embodied in our Constitution, neither cities nor their contractors will be permitted to have any judgment or discretion in the construction of public works. The cost, therefore, may be beyond reasonable expense, in which case, as *American Industries* points out, the property of taxpayers will be taken without due process of law. What the Court of Appeals said in one case is particularly apropos to-day:

> "Such legislation may invade one class of rights to-day and another to-morrow, and if it can be sanctioned under the Constitution, while far removed in time we shall not be far away in practical statesmanship from those ages when governmental prefects supervised the building of houses, the rearing of cattle, and sowing of seed, and the reaping of grain, and governmental ordinances regulated the movement and labor of artisans, the rate of wages, the price of food, the diet and clothing of the people, and a large range of other affairs long since in all civilized lands regarded as outside of governmental functions."

We may finally point out that a Congressional committee and one of the departments of the Federal Government passed upon the question of incorporating such laws as are proposed into the general statutes of the United States. Both decided against the proposition.

Of the other amendments, number one excludes from the computation of the debt of this city, in determining its borrowing capacity, the water-supply bonds issued since January 1, 1904. This amendment should be adopted, for it is, by general consent, proper that the city's borrowing capacity should be increased to this extent. The second amendment provides for the payment of interest and sinking-fund instalments on all State debts out of any funds in the treasury. Its purpose thus is to abolish the direct tax which now meets these charges. The third amendment increases the number of justices in every district except the First and Second, to one for every 60,000 inhabitants. New York and Brooklyn, Democratic districts, would have only one judge for every 80,000. This certainly would not relieve the congestion in the courts of this city. The fifth amendment would authorize the Legislature to expend fifty million dollars for the improvement of highways. It does not call for the submission of this proposition to the voters after it has been enacted into law, as is now required, under the Constitution, with similar propositions. Desirable as may be the improvement of the highways, this measure would give boundless opportunity for graft, and is another of the measures intended to benefit the country communities at the expense of the cities. The sixth amendment proposes the extension of the term of the State's certificates of indebtedness from twenty years, now fixed by the Constitution, to fifty years. This is not a desirable kind of State financing. The last amendment is an unimportant one, permitting justices of the Appellate Division to act as justices of the Supreme Court in any department except the one of the Appellate Division to which they belong.

A CONVERTED PRESS.

The news that our big insurance companies are carrying on missionary work among editors as well as legislators will surprise nobody. The interesting thing is the method of operation, as laid bare by Charles E. Hughes at the investigation on October 25. Recently we learned a great deal about a house which Richard A. McCurdy, the philanthropic president of the Mutual Life, has been maintaining at Albany—a house dedicated to the noble cause of reclaiming Senators and Assemblymen from the error of their ways. Missionary McCurdy has also cast a loving eye upon a press sunk in iniquity, and has called upon it to repent and be saved. The apostle to the legislators was the saintly A. C. Fields, who is now modestly avoiding a subpœna. The apostle to the editors is none other than that shining exemplar of all the virtues, Allan Forman, editor of the *Journalist*, and manager of "The Telegraphic News Bureau." "If I am ever to redeem the wicked press from sin," said Mr. McCurdy to himself, "I must beware of journalistic parasites and prostitutes. The man for my money is honest Allan Forman."

Forman immediately started to hold revival services. The devil who walketh about as a roaring lion seeking whom he may devour, is, according to his notion, none other than the Associated Press. This malignant organization actually sent out news not wholly laudatory of that benevolent enterprise, the Mutual Life. But Forman promptly circumvented the evil one by dispatches through his "Telegraphic News Bureau," announcing that "the profits derived by the policyholders of the Mutual Life and obtained through transactions arranged by the subsidiary trust companies amounted, up to date, to $16,000,000"; that President McCurdy complained that the inquiry was an inquisition, and Mr. Hughes "admitted it was an inquisition"; and that President McCurdy's testimony "made a distinctly favorable impression." So anxious was the Mutual to supply the sincere milk of the word to benighted editors, that it paid Forman a dollar a line for every newspaper that printed the matter. How much of the money Forman passed on does not appear. The complaisant papers which were named at the hearing were the Wilmington (Del.) *News*, Boston *Herald*, St. Paul *Pioneer Press*, Toledo *Blade*, Buffalo *Courier*, Florida *Times-Union*, and Atlanta *Constitution*. If these converted journals, innocently and without hope of reward, published Forman's dispatches from pure love of truth, then all we have to say is that every gold-brick operator in America and every dealer in green goods knows where to look for victims.

This wretched business, however, has a serious as well as a comical side. The president of the Mutual—and in this venture the Mutual is not alone—has been trying to avoid the consequences of his mismanagement of affairs by practising a deliberate deception upon the American public. Paid advertisements—at least Forman is paid—are sent out in the guise of "pure reading-matter." The obvious intention is to convey the idea that this dollar-a-line stuff is the view of an independent observer. Since the investigation began, the Mutual has spent more than $12,000 of policyholders' money in this mean and dirty trick. The facts speak for themselves. Presidents McCall and McCurdy have no ground of complaint against the "yellow" press or any one else if plain men, of no pretension to knowledge of high finance, now commonly regard insurance officers as both thieves and liars.

But the men who have plundered our life-insurance companies are not the only ones who have outraged decency and honesty. Their accomplices after the fact are some of our high-toned newspapers—for every one of the dailies just mentioned prides itself on its respectability. Call it venal, and it would burst with indignation. And yet the editor has either been the guileless dupe of Forman, or else for a dollar or less a line he has practised a deliberate imposition on his readers. The feeble little paid puffs of soap or sarsaparilla, disguised as news, are bad enough, though they are so obviously advertisements as to deceive nobody. But the coloring of reports from a public hearing of immense importance to all policyholders is a more subtle and therefore dangerous form of fraud.

There is yet another grave aspect of the case. The insurance companies are heavy advertisers, and they have never hesitated to shake their big stick at the newspapers. "Hold your pen or lose the full-page advertisement of our annual statement" is a convincing argument in every part of the country. But newspaper readers are not such fools as to suspect no subterranean connection between lawless corporations and the press. And this well-founded suspicion explains in part the popularity of "yellow" journalism. Certain sensational newspapers make hostility to corporations their stock-in-trade. They exaggerate grossly, but at any rate they are not afraid of the money power. "Here," says the small wage-earn-

er "is a paper that dares to speak out about the iniquities of men in high places. Reckless and disreputable this newspaper may be, but none the less it is trying to redress my wrongs." Thus every newspaper that goes into whitewashing at a dollar a line, and every insurance company that pays the dollar, helps strengthen the hold of the yellow demagogue.

THE COMING MUSICAL SEASON.

One might fancy that the Penal Code provided dire punishments for musicians giving concerts in September and October, so strictly do they avoid any public appearance before the first week in November. When once the army of musical invaders has appeared, however, nothing can check its ruthless advance. We are not yet quite in the predicament of Berlin, where a single concert agency reports over 600 "bookings" for the season, and where so prominent an artist as M. Girardy was unable to play last year because he had neglected to hire a hall in time; but we are fast getting there. An English journalist wrote, some weeks ago: "So many musical artists are going to America this autumn that the drain on London will be very heavy, and the London musical season will suffer in consequence." Another critic retorted that the supply of eminent artists in London was so greatly in excess of the demand that enough respectable performers would be left in spite of "America's voracity."

Rotation of crops has been found as useful in the musical world as in agriculture. Most of the eminent foreign players and singers who visited us last year—among them Paderewski, D'Albert, Pachmann, Kreisler, Ysaye—are tilling the soil at home this season. In their place we are to hear within the next six months a host of others; the list includes the pianists Pugno, Reisenauer, Bauer, Bloomfield-Zeisler, Joseffy, Arthur Rubinstein; the violinists Maud Powell, Kubelik, Marteau, Sauret, Otie Chew, Marie Hall, Marie Nichols, Hugo Heermann; the concert singers Calvé, Gadski, Nielsen, Campanari, Witherspoon, Bushnell, Bispham, Ben Davies, Kirkby Lunn, and many others—not to speak of Conried's famous song-birds, several of whom will also be heard in the concert hall. A somewhat disquieting phenomenon is the centrifugal movement (taking the Metropolitan Opera House as the centre of the musical universe) of the stars. Four of the singers just mentioned—Calvé, Gadski, Campanari, and Bispham—used to be among the principal ornaments of our opera company, and would be so now had they not chosen, for one reason or another, to take to solitaire. Two others, Fritzi Scheff and Schumann-Heink, left Conried's happy family to start opera companies of their own. Yet there is no cause for alarm; there will be as many first-class singers at the Metropolitan as ever.

If the race of tenors is really dying out, as some say, we are to hear some remarkable survivors, including Caruso, Knote, Burgstaller, and Reiss, each without an equal in his specialty, besides the protean Dippel, the *Doppelgänger* of any one of his colleagues. Nor could any foreign opera-house begin to equal Conried's list of sopranos, altos, baritones, and basses, among them Abarbanell, Alten, Eames, Morena, Nordica, Sembrich, Weed, Fremstad, Homer, Walker, Dufriche, Goritz, Scotti, Van Rooy, Plançon. On these singers and the costly operatic machinery needed to run them, the New York public spent a million dollars last season, and is doubtless prepared to do the same again. The opera owes its popularity to the fact that it is the neutral ground on which all classes—the musical, the semi-musical, and the unmusical—meet in amity. Time was when it was a savage battlefield, on which the partisans of Italian, Franch, and German opera broke each others' heads. But one day Maurice Grau had the good sense to drop the appellation "Italian Opera," and to give all operas in the language they were written in, and by the best vocal specialists in each style. This policy gradually healed all animosities, and to-day the former bitterness of feeling is a mere vague memory; the Italians are glad to hear that the "Flying Dutchman" is to be revived and the high "Parsifal" prices split in two; while the Wagnerites are pleased with the prospect of hearing Sembrich and Caruso in such Italian revivals as "Favorita," "Sonnambula," and "Il Trovatore."

One of the conspicuous features of the opera season is to be the appearance of Engelbert Humperdinck to conduct his "Hänsel und Gretel." This, the greatest operatic success in Germany since the production of "Parsifal," in 1882, has been heard here before, but under conditions which did not reveal all of its charming features. It is also expected that another opera in the list, "Manon Lescaut," will be conducted by its composer. But even if Puccini does not come, there will be an unprecedented number of emiment foreign composers and conductors on view. The first of them to make his début is André Messager, the French opera and operetta composer, whose "Véronique" was heard here on Monday. His eminent countryman, Vincent d'Indy, will be heard next month at the local concerts of the Boston Symphony Orchestra. England's musical lion of the hour, Edward Elgar, has also promised to cross the Atlantic, but he will appear only at the Cincinnati Festival. Russia sends the well-known composer Rachmaninoff, besides the irresistible Cossack, Safonoff, for whom the Philharmonic Society will no doubt be obliged to arrange an extra concert or two. The same society has also engaged the Dutch Richard-Strauss specialist, Mengelberg, and his eminent German colleagues, Steinbach, Fiedler, and Kunwald, while Weingartner will preside over some of the concerts of the New York Symphony Society.

A glance at the circulars of the diverse organizations gives the impression that more pabulum is being offered than the public will be able to digest; but some alleviation may be found in the division of labor, which is one of the striking aspects of the orchestral situation here. Sam Franko, for instance, in his concerts of old music, confines himself almost entirely to seventeenth and eighteenth-century compositions, Frank Damrosch, besides cultivating old and new choral music with the aid of the Musical Art Society, has a series of concerts for young people. Franz Arens gives the wage-earners a chance to hear, in three halls, the best classic and modern works at nominal prices; while the Russian Symphony Society, under Altschuler, makes us acquainted with much Muscovite music never heard here before. This organization, indeed, produces more novelties than all its rivals combined. It suggests the possible advent of a time when new musical works will receive as much attention as new books do now.

THE BELGIAN EXPOSITION.

LIÈGE, October, 1905.

Another International Exposition, that of Liège, will close on November 5. It is international only in name, for, though all countries contributed something, of foreigners France alone displayed a large variety of her wares; her trade with Belgium being voluminous, and the balance conclusively in favor of France. Germany, which comes next in her commercial relations with this little neutralized country, in the mechanical and mining department makes a large and very interesting exhibit; but England, which ranks third in commercial intercourse with Belgium, sent almost nothing, and the United States even less. Of the exhibits in separate buildings, the most conspicuous is that of Canada, which spread out amply and eloquently her products, and published her liberal offers to immigrants, in order to tempt some of the overflowing population of Belgium to join the stream which is setting in from our own Northwest to Manitoba and the newly created provinces of the Dominion. As might be expected, the misnamed Congo *Free* State makes an interesting separate exhibit, and France gives prominence to her colonial products in Africa and Asia. But the artistically laid-out grounds at the junction of the Meuse and the Orthe and on the adjacent island in the Meuse, which are occupied by the Exhibition, are not disfigured by a great multitude of ugly, empty, so-called national structures or offensive side-shows. The several departments of the Exposition proper are covered by one roof in a build-

ing, it is true, of the most eccentric ground plan, designed well for the purpose, but without the remotest attempt at architectural adornment, once the portal is passed. The cost was so little that there will be a fair financial return on the investment, and the visitor enjoys the comfort of being able to reach what he wants to see without making a long journey in rain or sunshine.

The practical good sense of the Liégeois is also apparent in resisting the temptation to build new hotels for their ephemeral guests. The hotels are full, and have been full all summer, but the prices charged are not more than 25 per cent. above the normal. One reason for the moderation of mine host was the remedy which the public has against local extortion, not only in liberal railroad rates, but in the system of annual or limited-time railroad tickets on the Government railroad lines. These enable the visitor to reach a neighboring town rather than submit to hotel imposition. Though Belgium bulks big industrially and in density of population, its area is small. It can be crossed from east to west or from north to south in about six hours. A visitor from Brussels, or even from Luxembourg, can escape home from Liège in less than two hours; and he can buy a ticket enabling him to travel over one and all of the Government railroads for five days for $6.00 first class, $4.00 second class, and $2.25 third class. If, therefore, he were living in Brussels and visited the Exposition on five consecutive days, each round-trip second-class ticket would cost him only 80 cents, and the second-class cars are exceptionally comfortable and well equipped. A fifteen-day unlimited ticket costs only twice as much as a five-day ticket, and unlimited annual tickets (second-class) cost only 130 francs, while annual tickets for limited distances cost proportionately less. All the railroads of Belgium, with the exception of a very few short lines, belong to the State, and contribute a large revenue to the national treasury, but, no fixed charges being accounted for, the financial showing is somewhat delusive. As in Mexico, the railroad concessions to private companies were granted for only ninety-nine years, and after that date the permanent structure lapses to the State, which must pay for the rolling-stock only, on a valuation. Most of the railroads not yet acquired have but some thirty years longer concessional life, and, therefore, if the Government should purchase them in the interval, it would be on a very low valuation. The same system of unlimited tickets has been introduced by the Swiss State railroads, to the great convenience of those tourists who are aware of their privileges, for, as their tickets cover unlimited journeys by rail or steamer, the traveller is unhampered in his wanderings by any consideration of expense for transportation after the initial outlay has been made.

The most popular section of the Liège Exposition is that of the French millinery. Crowds of men and women jostled one another so rudely to get within sight of the illuminated cases of beautiful Parisian gowns that they had to be kept in line by the police; but the most important and instructive departments were those of mining and machinery. This fact bears upon the financial phase of these industrial agglomerations. Millions will pay to see silks and satins, but hundreds only will contribute gate money to inspect the newest types of steam and gas engines, the maps of coal mines, and the models of coal washers and coke ovens. Yet it was in these classes that Liège excelled all previous expositions. It lies in a coal basin, and its coal has attracted the great John Cockerill iron works, the Vieille Montaigne zinc works, and a host of other metallurgical and industrial enterprises, some of world-wide fame. But when one looks at the maps of the deep-seated coal mines, with their fractured and faulted veins, from which, the statistics imply, it requires about two and a half days' labor to extract a ton of coal, and that of a quality we should pronounce decidedly inferior, one wonders less at our own prosperity, to which coal at seventy-five cents a ton on the cars so largely contributes, than at the skill and excellent organization which has enabled the Belgian ironmaster and manufacturer, working with such inferior material, to raise the Belgian Netherlands to the prominence and position in the industrial world which it occupies.

Low wages are, of course, an essential factor in explaining Belgium's progress, despite the disadvantages under which she labors; but unless the skill of her operatives excelled their scanty remuneration, even this advantage would not enable their handiwork to find a market. That she has become a notable member of the family of world workers since her national integrity was guaranteed, the statistics of her growth in population and manufacturing convincingly affirm. The average of population during the first decennial period of her present political existence—namely, from 1831-1840—was 4,168,856; during the last, 1891-1900, 6,458,710. During the first period her average annual imports were 180,396,714 francs, or 43.27 francs per head of population; and her exports were 128,189,040 francs, or 30.75 francs per head of population. In 1904 her population had increased to 7,074,910, and her imports for home consumption were 2,782,219,972 francs, or 393.25 francs per head of population; and her exports in that year were 2,183,261,722 francs, or 308.59 francs per head of population. England's imports in 1904 were £551,038,628, or only £12 17s. 6d. per head of population, and her exports £922,053,949, or £21 10s. 11d. per head of population. Our own exports for the year 1903, when our population was 80,000,000, were $1,460,808,185, or $18.18 per head of population, while our imports were only $991,090,978, or $12.38 per head of population.

The influence of internal navigation on the commerce of Belgium has been very potent, and the development, not only of her seaport harbors, but of her canal system, with a view to creating inland ports, is well worthy of study. Her imports and exports in 1904, by sea, by land, and by canal, were as follows:

IMPORTS.

	Kilos.	Francs.
By sea	8,501,187,246	2,100,710,682
By land	8,526,277,069	1,935,797,622
By canal	4,435,059,049	389,936,727
To'l commerce general, including goods in transit	21,462,523,364	4,426,445,031
To'l commerce special, for home consumption	18,181,931,088	2,782,219,972

EXPORTS.

	Kilos.	Francs.
By sea	5,691,105,635	1,731,115,435
By land	8,273,121,880	1,623,040,033
By canal	5,033,172,916	488,951,413
To'l general exports	18,997,400,431	3,849,106,881
To'l special exports	15,711,926,798	2,183,260,722

Canals as highways of transportation are almost as essential in the Belgian as in the Dutch Netherlands, but Belgium is more active than Holland in developing foreign commerce by improving her seaports and in giving access to inland points by sea-level canals. One of the most interesting exhibits at Liège is the models of the harbors of Antwerp and Ostend, and the canal system by which Bruges is restored to the commercial position she held before she was isolated from the sea by the gradual invasion of the sand dunes, and by which beautiful Ghent herself is to become a seaport. An ingenious method of scouring out the channel leading to the harbor of Ostend has been adopted. Large basins, contiguous to and connected with the harbor, have been excavated from the sand. During the rising tide they are filled with water, the gates are closed, and at low tide reopened, when the rush of confined water does at least partially the work of dredges. The importance of artificial waterways for the development of inland commerce has come to be recognized in Germany also. From Consul-General Schwabach's report to the British Government one gathers that a great development in inland navigation is about to be inaugurated. The Manchester ship canal, in England, is at last beginning to justify its existence. Everywhere a reaction towards the revival of the discarded canal is apparent; and, looking abroad, we are impressed with the conviction that, if a tithe of the money and engineering skill which has been expended here at home on our railroads had been deflected to the improvement and extension of our canal system, it would be to-day a more active competitor than it is with the railroad, and might assist us in solving that embarrassing rate question.

TALLEYRAND'S MARRIAGE.

PARIS, October 15, 1905.

The Memoirs of Talleyrand are a very insufficient historical document: they were several times copied and were altered systematically; the most delicate parts of his life were either passed over or construed according to circumstances. They underwent so many changes that they have lost all the merit attaching to an original work written under the pressure of direct emotion. Talleyrand's life was such an extraordinary and in one sense romantic part of the period of the French Revolution and of the Empire, that everything which relates to it cannot but assume much interest. M. Bernard de Lacombe has applied himself lately to the study of a most curious episode in this life, Talleyrand's marriage. It was in the early months of 1802 that it was first whispered in Paris that Talleyrand, French Minister of Foreign Affairs, former Bishop of Autun, was on the point of being married to Madame Grand, who helped Talleyrand to do the honors of his soirées at the Hôtel Galliffet, which he inhabited at the time. Little was known of Ma-

dame Grand. She was born Catherine Noël Worlée, November 21, 1762, in the East Indies, at Tranquebar, a small possession of Denmark. She was not Danish, but French, her father, a chevalier of Saint Louis, being attached to the post of Pondicherry. In 1777 he was captain of the port at Chandernagore. Catherine was fifteen years old when she was married to a young Englishman, George Francis Grand, in the Catholic Church as well as in a Protestant chapel.

Madame Grand was very handsome. Her husband, descended from French Protestants who left France after the revocation of the Edict of Nantes, had a post in the English administration of India. She attracted the attention of Sir Philip Francis (the presumed author of the famous Letters of Junius), and did not long resist his entreaties. The unfortunate husband himself gave an account of his misfortune in a memoir which has for its title: 'Narrative of the Life of a Gentleman long Resident in India' (Cape of Good Hope, printed for the author, 1814). There is a copy of this pamphlet in the British Museum; it was probably the first book printed in English at the Cape of Good Hope. On the 6th of March, 1779, the Supreme Court of Calcutta condemned Sir Philip to pay damages to Grand, who declared himself fully satisfied.

Madame Grand left India in November, 1780, on a Dutch ship. Her life in Europe is enveloped in a cloud; she found rich protectors, and in 1783 the fashionable portrait painter, Madame Vigée-Lebrun made a fine portrait of her. At the beginning of the Revolution she became alarmed and left France for England; she gave herself out in London as a royalist *émigrée*, and returned to Paris only in 1798. From that time her name becomes associated with Talleyrand's. She was introduced to him by his friend Montrond, and he was struck by her extraordinary beauty. Colmache, who was private secretary to Talleyrand, gives some amusing details regarding this introduction in his 'Revelations of the Life of Prince Talleyrand' (London, 1850). Talleyrand very soon gave a place to Madame Grand in his own house, and though manners had become very loose at the time of the Directory, his conduct was subjected to severe criticism on the part of some of the Directors. Madame Grand, who claimed a Danish nationality, obtained a decree of divorce, and from that day her liaison with Talleyrand was admitted and, so to speak, recognized. Diplomats, journalists, foreigners, paid court to the beautiful *Indienne*, who was supposed to have much influence with a man who was becoming more and more important, who reconciled France with Russia, who framed the treaties of Lunéville and of Amiens, who was the negotiator of the Concordat, the diplomatic adviser of Bonaparte, the oracle of politics. She became the queen of the Hôtel Galliffet, the rival of Madame de Staël and of Madame Récamier.

On the 3d of May, 1802, Madame de Staël wrote to Madame Récamier: "Nothing new in Paris in the way of social events. Duroc marries Madamoiselle d'Hervas; Madame Grand, they say, marries M. de Talleyrand. Bonaparte will have everybody married, bishops, cardinals, etc." The First Consul had taken for his task the reëstablishment of order in France; a little incident had much struck him. Several ladies of the diplomatic body expressed their repugnance at being presented to the lady who kept house for the Minister of Foreign Affairs. Bonaparte, wishing to be on good terms with all the courts of Europe, asked Talleyrand to dismiss Madame Grand from his house. Madame Grand went at once to the Malmaison and asked for the good offices of Josephine, with whom she had always been in excellent relations. Josephine succeeded in bringing Bonaparte and Mme. Grand together; the latter was very eloquent and wept abundantly. The First Consul put an end to the scene by saying: "Well, let Talleyrand marry you, and all will be arranged. You must bear his name or leave his house." He said the same thing to Talleyrand, and gave him twenty-four hours to make his choice. Talleyrand chose the solution of marriage. Did Madame Grand know many secrets? General Thiebault, in his memoirs, will have it that she threatened him with revelations. Did Talleyrand simply wish to have a more quiet home? This is Chancellor Pasquier's version.

It was easy enough to accept the marriage, not so easy to celebrate it; Talleyrand had been a priest, the Bishop of Autun. During the difficult negotiations which ended in the Concordat, he had had to treat all the questions concerning the status of the priests; he had in vain tried to obtain the same conditions for the secular and for the regular priests. Pius VII., in a letter to Bonaparte, written on the 12th of May, 1801, explained himself thus: "As for the absolution of the married priests (with the exception of the regulars bound by solemn vows, and the bishops, concerning whom there has never been in the Church, since it existed, an example of such an indulgence admitted), and for the absolution of those who have left the Church by other means, we shall see to it by giving the necessary powers in order that they may be absolved according to the rules and to ecclesiastical discipline." The parenthesis in this statement applied directly and visibly to Talleyrand's case; he felt great irritation at this letter, created new difficulties in the negotiation of the Concordat, and became more exacting. In presenting objections to the First Consul, he insisted particularly on the situation of priests who had abandoned the ecclesiastical state; he framed an article which was to be added to the convention, stating that "His Holiness would forego the law of celibacy in favor of priests who, since their consecration, have entered into the bonds of matrimony, agreeing to renounce the exercise of their functions, and would admit to the rank of secular Catholics those who, by other acts, have notoriously abandoned their state." Bonaparte did not like delays. The Concordat was signed on the 15th of July, 1801, without the clause just mentioned. The Pope's clemency was extended to the priests of the secular clergy, but not to the former regular priests, nor to the former bishops. Talleyrand resorted to other means; he addressed himself directly to the Pope, asking to be freed and absolved. He made of his personal secularization an affair of state, and a special messenger was sent to Rome, with a request beginning in these terms:

"It is an object suitable to the dignity of the Government of France, and useful to the discipline of the Church, to grant a brief of secularization to Citizen Talleyrand. This minister has rendered great services to the Church and to the State. He has publicly and irrevocably renounced the functions and dignities of clericalism. He desires that this renunciation should be consecrated by a formal avowal of the supreme chief of religion; he merits this special favor."

Then followed a list of examples furnished by history, of bishops who had lived and died as laics: Cæsar Borgia, Bishop of Valence, afterwards Duke of Valentinois; Ferdinand di Gonzaga, Duke of Mantua; two cardinals of Bourbon; two Casimirs, Kings of Poland; Henry of Portugal, François de Lorraine.

The Court of Rome examined this request. The examples chosen by Talleyrand were specious, but were not considered convincing; the Pope sent in answer a brief in which there was no question of the marriage. He added a personal letter to the First Consul, saying:

"We should have been disposed to gratify your minister in his desire to take a wife if the laws of the Church were not opposed to it. There does not exist, for eighteen centuries, a single example of a dispensation granted to a consecrated bishop allowing him to be married. You will see by the answers in the margin of the note which you sent us, and which we return, that there is an error of fact in all the precedents enunciated. Your wisdom will show you that we could do no more than what we have done. The tenor of the brief which we address to you will show M. Talleyrand how much have weighed with us the interest you manifest for him, and the services which he has rendered for the reëstablishment of religion in France."

The affair was not ended. In a sitting of the Council of State, Portalis read the first article of the organic law stating that "no bull, brief, rescript, decree, mandate, provision, signature serving as provision, nor any dispatch of the Court of Rome, even if it concern a private person, can be received, published, printed, executed, without the authorization of the Government." He then read the pontifical brief, and Cambacérès, who presided, added that the First Consul wished it to be *enregistré*. The Consul immediately promulgated a decree, stating that "the brief of Pius VII., in virtue of which Citizen Charles Maurice Talleyrand, Minister of Foreign Relations, is restored to secular and lay life, will have full and complete effect." The interpretation thus given to the brief was not what the Pope intended, as his brief did not apply to the case of Talleyrand. The civil marriage took place on the 10th of September, 1802. Did Talleyrand content himself with that, or did he have besides a religious marriage? Madame de Rémusat and Pasquier affirm the latter; if we may believe them, the religious marriage was celebrated almost secretly at Épinay, in the valley of Montmorency. The registry of the church has disappeared, and there is no material proof that the religious marriage took place.

When Madame de Talleyrand appeared at the Tuileries, Bonaparte said to her: "I hope that the good conduct of Madame de Talleyrand will make us forget the levity of Madame Grand." To this Madame de Talleyrand is said to have answered with an air of innocence: "I could do no better

than to follow the example of Madame Bonaparte."

Correspondence.

NEWFOUNDLAND AND GLOUCESTER.

TO THE EDITOR OF THE NATION:

SIR: America is the spoilt child of diplomacy. De Witte at Portsmouth was a mere child compared to the American commissioners, Gallatin and Rush, who negotiated the convention of 1814 at Ghent. Although England and America had been engaged in a war in which the latter had been signally unsuccessful, they contended that their countrymen had still an absolute right to the coast fisheries of British North America. Although a foreign country absolutely separated from Great Britain, they still retained their former fishing privileges as colonists.

The argument, absurd as it may appear, is still maintained by several American writers in modern times. Gallatin and Rush were so bold, so persistent, that they finally overcame the poor English commissioner. Great Britain earnestly desired peace; the Americans had hosts of warm friends in the old country; this fishery question alone stood in the way. So it was settled in the usual manner by a compromise. They were given the liberty to take fish of every kind on that part of the coast of Newfoundland from Ramea to Quirpon; also liberty to dry and cure fish in any of the unsettled bays, harbors, and creeks of the said coasts whilst unsettled. Americans were permitted to enter harbors for shelter, repairing damages and obtaining wood and water, and for no other purpose whatever. It will be seen from these provisions that, except for the latter purpose, Americans have no territorial rights whatever in Newfoundland. At the Halifax commission, the representatives of the United States admitted that they had no right to purchase bait, or ice, to ship crews, transship cargo, etc.

All through this convention a distinction is made between the right of fishing, which is confined to the *coast*, and the privilege of drying and curing, which is given in the *bays, harbors*, and *creeks*. Coast, it is contended, means only the outer coast, and does not extend to inland waters with narrow entrances, estuaries of rivers, harbors, or creeks and coves. The distinction made in the convention lends itself to this view. As a matter of fact, American fishing privileges under this convention are practically valueless. A ship fishery carried out on the Banks requires a near, accessible base for its supplies of water, fresh food, bait, ice, etc.; repairs, shipping men, and sale of small fish. The east coast of Newfoundland (not included in the convention) is naturally the nearest and best base. It provides, also, the most regular and cheapest supply of the necessary bait. The Bank fishery begins in March, and there is no bait procurable on the West Coast until about the middle of May.

Every American fisherman understands the value of the rights he and his fellows have so long enjoyed in Newfoundland under the *modus vivendi*. A true test of its importance and the effects of its withdrawal cannot be judged from the operations of the past season. It was put in force very late, and the supply of bait was extremely irregular, quite abnormal. No one believes for a moment that the United States fishermen can successfully carry on their Bank fishery without their regular, certain, cheap, and accessible supply. The commercial results of the season's fishing can now be ascertained. The American, French, and Canadian Bank fishery shows poor returns, and cod is now scarce and very dear. Dry codfish is now higher in Newfoundland than it has been for a half-century, and, as the Islanders have had a good though partial fishery, they are reaping the benefits of enhanced values. The want of bait has even this year materially affected the catch of the Americans and French, who are both prohibited from buying bait in Newfoundland.

The dispute about the winter herring fishery on the West Coast is a very simple affair. The colonial Government has not the smallest intention of interfering with the American fishermen in catching herring for themselves. But it is well known that they do not come to Newfoundland to catch, but to buy herring from the native fishermen. The Newfoundland Government, as the sovereign power, has absolute control over its own subjects, on its own territory, and within its territorial waters. Notwithstanding all the bluff and outcry from Gloucester, it means to carry out its regulations, and to prevent the hiring our native fishermen to catch herring for the Americans to pass off in the States as "the *product of American industry.*" It is a very pretty quarrel, a sort of triangular duel—the Americans against the Newfoundland Government; the Opposition members and some of the more turbulent spirits amongst the Newfoundland fishermen threatening to violate the law.

Every one in America this winter will eat dearer and dearer fish. They will see that Gloucester's contentions and the greedy monopolists of the fish ring hold an untenable position. Newfoundland is fully justified in her policy of retaliation. Until the Senate confirms the Hay-Bond treaty, her laws prohibiting the Americans from buying bait or herring or hiring Newfoundlanders will be rigidly carried out. At present, Providence is on the side of the colony. Herrings are scarce at Bay of Islands, and are making their appearance in Fortune Bay and Placentia, where the Americans have no rights whatever.

D. W. PROWSE.

ST. JOHN'S, NEWFOUNDLAND, October 20, 1905.

LONGINUS ON THE VICES OF THE AGE.

TO THE EDITOR OF THE NATION:

SIR: It is easy, and characteristic of human nature, to find fault with the age in which one lives. Much has been written of late concerning the love of money and the quest of pleasure that are supposed to be sapping the life of this generation in America and in other lands, lands said to be feeling the allurement of a commercial "success" and a spendthrift luxury like ours. Much might be written on the subject of an apparently concomitant failure on the part of this and other successful countries at the present time to produce any national literature worthy the name. Is there any test for the value of such criticism? Perhaps a test, that of comparison, may be found in the following, since the arraignment herein is directed not against our generation, but, probably, against the world of the Roman Empire during the first century of the Christian era. Coming to us from an unexpected source, this indictment of what, I am sure, many readers of the *Nation* consider our paramount national defects, may, if it fits, appeal to our national conscience with surprising vigor; with a vigor at once archaic and modern. The passage is more or less familiar to the scholarly poor; it will hardly prove too familiar to the average American. I make no apology, therefore, for a somewhat extended excerpt from Professor Roberts's version of "Longinus on the Sublime," hoping that the climax may stir in the hearts of others some of the sentiments that it seems always to stir in me:

LANE COOPER.

CORNELL UNIVERSITY, October 26, 1905.

"It remains, however, . . . to clear up, my dear Terentianus, a question which a certain philosopher has recently mooted. 'I wonder,' he says, 'as no doubt do many others, how it happens that in our time there are men who have the gift of persuasion to the utmost extent, and are well fitted for public life, and are keen and ready, and particularly rich in all the charms of language, yet there no longer arise really lofty and transcendent natures unless quite exceptionally. So great and world-wide a dearth of high utterance attends our age.' 'Can it be,' he continued, 'that we are to accept the trite explanation that democracy is the kind nursing-mother of genius, and that literary power may be said to share its rise and fall with democracy, and democracy alone? For freedom, it is said, has power to feed the imaginations of the lofty-minded and inspire hope, and where it prevails there spreads abroad the eagerness of mutual rivalry and the emulous pursuit of the foremost place. . . .' 'To-day,' he went on, 'we seem in our boyhood to learn the lessons of a righteous servitude, being all but enswathed in its customs and observances, when our thoughts are yet young and tender, and never tasting the fairest and most productive source of eloquence ("by which," he added, "I mean freedom") so that we emerge in no other guise than that of sublime flatterers. . . .'

"I answered him thus: 'It is easy, my good sir, and characteristic of human nature, to find fault with the age in which one lives. But consider whether it may not be true that it is not the world's peace that ruins great natures, but far rather this war illimitable which holds our desires in its grasp, aye, and further still those passions which occupy as with troops our present age and utterly harry and plunder it. For the love of money (a disease from which we all now suffer sorely) and the love of pleasure make us their thralls, or rather, as one may say, drown us body and soul in the depths, the love of riches being a malady which makes men petty, and the love of pleasure one which makes them most ignoble. On reflection, I cannot discover how it is possible for us, if we value boundless wealth so highly, or (to speak more truly) deify it, to avoid allowing the entrance into our souls of the evils which are inseparable from it. For vast and unchecked wealth is accompanied, in close conjunction and step for step, as they say, by extravagance, and as soon as the former opens the gates of cities and houses, the latter immediately enters and abides. And when time has passed, the pair build nests in the lives of men, as the wise say, and quickly give themselves to the rearing of offspring, and breed ostentation, and vanity, and luxury, no spurious progeny of theirs, but only too legitimate. If these children of wealth are permitted to come to maturity, straight-

way they beget in the soul inexorable masters—insolence, and lawlessness, and shamelessness. This must necessarily happen, and men will no longer lift up their eyes or have any further regard for fame, but the ruin of such lives will gradually reach its complete consummation, and sublimities of soul fade and wither away and become contemptible when men are lost in admiration of their own mortal parts and omit to exalt that which is immortal. For a man who has once accepted a bribe for a judicial decision cannot be an unbiassed and upright judge of what is just and honorable (since to the man who is venal his own interests must seem honorable and just), and the same is true where the entire life of each of us is ordered by bribes, and huntings after the death of others, and the laying of ambushes for legacies, while gain from any and every source we purchase—each one of us—at the price of life itself, being the slaves of pleasure. In an age which is ravaged by plagues so sore, is it possible for us to imagine that there is still left an unbiassed and incorruptible judge of works that are great and likely to reach posterity, or is it not rather the case that all are influenced in their decisions by the passion for gain? Nay, it is perhaps better for men like ourselves to be ruled than to be free, since our appetites, if let loose without restraint upon our neighbors, like beasts from a cage, would set the world on fire with deeds of evil.'

"Summing up, I maintained that among the banes of the natures which our age produces must be reckoned that half-heartedness in which the life of all of us with few exceptions is passed, for we do not labor or exert ourselves except for the sake of praise and pleasure, never for those solid benefits which are a worthy object of our own efforts and the respect of others."

PAGINATION OF SEPARATE REPRINTS.

To the Editor of The Nation:

Sir: Let me protest with as much vehemence as I may against the reprehensible custom of giving a new pagination to separate reprints. If the article is cited by the original pagination and I have only the reprint, I am defeated in my effort to find the passage cited. If it is cited by the page of the reprint and I have only the original, in this case also again I am balked. To give both numbers separated by the word "or" (as I have done in Whitney's Atharva-Veda) is very unusual, and adds to the cumbersomeness of the whole system of references, which at best are always cumbersome enough. The new rules for reprints from the *Sitzungsberichte* of the Berlin Academy allow or require a double pagination, that of the original and that of the reprint. This is a partial mitigation of a purely gratuitous and self-imposed difficulty. It is hard to see what purpose is served by new or by double pagination other than the purpose of gratifying the vanity of an author, and that at the expense of defeating *pro tanto* the ostensible object of his publication.

In the interest of economy and for the convenience of all concerned, let the publishing committees of learned corporations (academies, societies, and so on) and the editors of scientific periodicals make an inflexible rule that separate reprints shall always bear the pagination of the original and never a new pagination or even a double pagination, and so abolish this much worse than useless custom. It may be added that the reprint should always indicate the title and the volume-number of the original periodical.

Charles R. Lanman.

Harvard University.

Postscript.—The above protest was lying in readiness to send to you when, by a singular coincidence, there came from my eminent colleague, Professor Brugmann of Leipzig, the following communication upon precisely the same subject, with the request that I would ask you to lay it before the readers of the *Nation*.

C. R. L.

To the Editor of The Nation:

Sir: Permit me to direct the attention of your readers to a typographical folly which prevails in scientific literature, both in Germany and abroad. As every one will admit, the paging of books is primarily intended for the purpose of reference and citation. Why, then, does the reprint of a paper often show a separate paging different from that of the journal in which the paper originally appeared? It is presumable that those who first introduced the practice of repaging intended to give thereby an aspect of greater independence and completeness to the reprints (which are mainly intended as gifts), much in the same way as one might prefer to present as a gift the whole of Uhland's works rather than volumes vii.-ix. of Goethe's. There may really be bibliophiles who derive actual enjoyment from this typographical change; but, most assuredly, their joy is not shared by men of science who make actual use of the reprints. Since the reprints are commonly very limited in number and in the hands of only a very few persons, it is obvious that references in general ought not to be made to their independent paging; but, if made to the original paging, it then becomes necessary for the user of the reprint to discover, if he can, what page of the original journal corresponds to page 1 of the reprint, and, having thus determined his minus-constant of correction, to apply the same laboriously to every citation. In the absence of a set of the journal in which the paper originally appeared, this determination is often extremely troublesome; and the case is worse yet if, as often happens, both author and publisher have been so lacking in common sense as to neglect to give on the cover or first page of the reprint the title of the journal from which it is extracted. What was intended as a polite favor—the gift of a reprint—thus turns out to be an unmitigated nuisance. Whether, in times gone by, the separate paging of reprints served any good end, I do not know; but there can be no doubt that it is now a very serious inconvenience, a pure vexation, to everybody concerned; and that energy and time and money would be saved by discontinuing the practice.

Karl Brugmann.

University of Leipzig, Saxony.

Notes.

A. C. McClurg & Co., who have had in preparation for some time a new edition of George Eliot's 'Romola,' edited and illustrated from the historical standpoint by the distinguished Italian scholar, Dr. Guido Biagi, have just received the following note from him: "The work is more important than I imagined. I have found the original cards of all the books studied by George Eliot here in the National Library for 'Romola.' These books, with their ancient views of Florence, gave to her the first idea of the scenery of the novel. I have reproduced the cards, signed by Lewes, studying with her." The work is to be issued uniform with Mrs. McMahan's 'Florence in the Poetry of the Brownings' and 'With Shelley in Italy,' in two volumes.

The American Unitarian Association announces 'James Martineau, Theologian and Teacher,' by J. Estlin Carpenter; 'Daughters of the Puritans,' sketches of Catharine Maria Sedgwick, Mary Lovell Ware, Lydia Maria Child, etc., by Seth Curtis Beach; and a composite work on negro education in the South, with descriptions of leading institutions.

'Around the World in Ninety Days,' by Frederick Chamberlin, with hundreds of snap-shot illustrations by the author, is about to be issued by the C. M. Clark Publishing Co., Boston.

E. L. Jackson's illustrated 'St. Helena, the Historic Island,' which appeared in London a year ago, is soon to be put upon the American market by Thomas Whittaker.

In like manner, G. Lowes Dickinson's 'The Greek View of Life' will take on the American imprint of McClure, Phillips & Co.

John W. Luce & Co., Boston, will shortly issue 'George Bernard Shaw: His Plays.'

The charming "Thumb-Nail Series" of the Century Company is continued in three volumes, one of Dickens's 'Chimes,' one of Mrs. Browning's 'Sonnets from the Portuguese,' eked out by pieces by her husband; and 'Washington,' consisting of his Farewell Address and other papers.

We are glad to learn that Messrs. Macmillan have not, as appeared, ceased issuing in their eighty-cent editions the well-known translation of the Iliad by Lang, Leaf, and Myers, and that of the Odyssey by Butcher and Lang. Nevertheless, "abridged" and cheaper editions (at twenty-five cents) will help supply the semi-popular demand for those translations in the schools. This abridgment of Homer, accomplished by Prof. G. R. Carpenter, however convenient for the general and hasty reader, will hardly content every teacher who wishes to put either the Iliad or the Odyssey into the hands of a class in English. Some teachers, confessing a peculiar respect for the translations in question, must still desire to see them obtainable entire at a price that is not prohibitive for large classes. Further, useful and careful as Professor Carpenter's excision of Homer may be, one may doubt whether so delicate an operation should not have been entrusted to a professed Grecian. The untutored may likewise raise this query: Is not striking out "some of the repetitions so plentifully used in Homer" comparable to striking out some of the recurring lines in Tennyson or the essentially poetical, reduplicating phrases in a Scottish ballad? The good old days when youngsters had to listen to long sermons and to *repeat* the "Shorter" Catechism from memory, and incidentally—who knows how?—caught the trick of writing real English, are past recalling. Shortly, in order to facilitate our education, we shall be singing "Coronation" without the refrain.

The 'American Jewish Year-Book' continues its useful course, now become permanent. The adage on the happiness of the people that has no history, is well

illustrated in its successive volumes; the unhappinesses of the Jewish race are, in truth, the main interest here for the non-Hebrew reader. In the present issue the "story of the year" is long, and of history there has evidently been much, almost all of the unhappy kind. Life in the quieter waters of this country is mirrored in the useful biographical sketches here continued and in the report of the Publication Society, with its ponderous list of members.

Novelty and freshness are hard to attain in giving either story or description of the much be-written Edinburgh, yet Mr. Oliphant Smeaton, in his contribution to the Dent-Macmillan "Mediæval Towns" series, has put together a charming volume, full of matter, but with little in it either of the guide-book or the town history. That little might have been cut out with advantage, and the space given to more characteristic detail. There are many allusions here which are exasperating in their brevity. The illustrations are, if anything, still more charming and suggestive.

There is much refreshment in coming upon a collection of folk-tales which are really new and not an imperfect retelling from other tongues of the same old motifs—*alter et idem*. Even though their absolute authority may be dubious and their artistic elaboration certain, Madame Hélène Vacaresco's 'Songs of the Valiant Voivode' (Scribners), a sequel to her 'Bard of the Dimbovitza,' takes us into a *Märchen*-world as far from that of central and western Europe as any collection of Turkish or Russian tales. Just as distinct and individual in atmosphere and tone are these Rumanian stories, and yet it is plain that the centuries of Balkan conflict have fused into them, in strange mixture, both the Slavic melancholy —that strange modern melancholy, different from the Celtic and still more from the Teutonic—which meets us only there, and also the Turkish gorgeousness, its nomadic instinct and sense of space and air. Entirely different are the gypsy stories, half picaresque, half supernatural, altogether humorous. To what degree the form is the collector's and translator's, only a native of the Balkans could tell, and the Balkan peoples are too deadly at odds among themselves to be willing to tell truly. Yet an outsider may conjecture, and feel tolerably confident, that the base here is solid and genuine, although this is certainly not a contribution which folk-lorists may use and catalogue with an easy mind. The English is most vivid, with a glister as of stones and gold, flowers and sparkling water; but often, too, it is decidedly queer, and colloquialisms come in confusingly. The lack of Miss Alma Strettel's help in this volume, and the extent of it in the previous one, are very plain.

'The Lands of the Eastern Caliphate: Mesopotamia, Persia and Central Asia from the Moslem Conquest to the Time of Timur,' by Mr. G. Le Strange, is a worthy complement and sequel to the same author's 'Palestine under the Moslems' (1890) and 'Bagdad under the Abbasid Caliphate' (1900). It forms part of the Cambridge Geographical Series (New York: The Macmillan Co.), and, as the title suggests, deals with these countries from the point of view of Moslem historical geography. Of geography, as the simple description of the surface of the earth, it has little. Rather, Mr. Le Strange takes the books of the Arabic geographers and travellers, works out, province by province, the material which they give—routes, boundaries, town-sites, etc.—and, with the assistance of the reports of recent travellers, lays it down on the maps which we have. With this he combines an immense mass of information, historical, descriptive, economic, manufacturing, agricultural, drawn from the same sources. At the foot of each page is a wealth of references; at the end, an index of forty-six pages; throughout the volume, ten excellent schematized maps. Of course, these last have almost no geographical features; the reader must take the best map accessible to him and lay out upon it that of Mr. Le Strange. The title fairly gives the ground covered, with the large exception that Syria, Arabia, and Egypt are excluded. To digest the material on Arabia would take a volume in itself; Syria is treated in 'Palestine under the Moslems,' and Egypt has been already most broadly mapped and described, though not after this fashion. Of course such a book cannot be very readable, but its value for the student of mediæval Hither Asia cannot be exaggerated, and even for the student of civilization in the broad it will be full of suggestion. It introduces him for the first time to the immense wealth of information in the Arabic geographers, and furnishes clues which it will be comparatively easy to trace out to the end. It is greatly to be desired that this survey of the Moslem world may be completed and even carried into Spain. The task lies at the door of the author of this book.

There is no subject, however grim, which the human mind may not view humorously, and those predisposed to 'Auto-Fun: Pictures and Comments from Life' (T. Y. Crowell & Co.) will find it highly amusing. There are plenty of crashes and smashes, but no corpses, and much ingenious satire for juggernaut and victim. Love scenes, or it could not be *Life*, are interspersed effectively, and the level of these caricatures is uncommonly high in respect of invention and artistic technique.

'Future Forest Trees,' by A. Harold Unwin (London: T. Fisher Unwin), is a good translation of an Austrian account of experiments in the introduction of American trees. The recorded experiments deal with broad-leaved and with coniferous trees belonging to East and West North America, planted not alone in Austria as might be supposed, but in Germany, Switzerland, and Great Britain as well. The little treatise was originally prepared for a "Forestry Magazine," and hence might better have been recast before going into book form. But, in spite of its lack of proportion and its marked gaps, it is likely to be of use in any forest library.

Volume iii., 'Flowers and Inflorescences,' in Prof. H. Marshall Ward's "Trees: A Handbook of Forest-Botany for the Woodlands and the Laboratory" (Cambridge, Eng., University Press; New York: Macmillan), is, like the earlier volumes in the series, thoroughly interesting and accurate. Even the amateur, who may justly regard most botanical treatises with suspicion as likely to be desperately dry, will find this work charming and very intelligible. No hard places are slurred over; the paths are simply made plain and straight. It is a pity that we do not have in this country such an attractive handbook for our beginners in woodcraft.

A more suitable title for Prof. Frank Goodwin's 'Treatise on the Law of Real Property' (Boston: Little, Brown & Co.) would have been "Lectures on Real Property Subjects." The text has taken shape from the purpose of a teacher to explain to his students a difficult branch of the law. This means occasional repetition. A few subjects get scanty treatment, while others are omitted, thus insuring an adequate discussion of topics of larger importance. The result is a text-book of a high order. The ardor and buoyancy of Professor Goodwin's style remind one of Mr. Justice Story, though there is none of the latter's diffusiveness or display of learning. The practising lawyer may be surprised to find in this single volume so much new material, the product of real-property decisions during the last twenty-five years.

The *Geographical Journal* for October contains an account of the exploration and survey work done in connection with the Tibet Frontier Commission, by Major C. H. D. Ryder. This includes the survey of the Tsangpo River from near Lhasa to its source, a region which had been previously explored only by natives sent in disguise, but their work has turned out to be fairly accurate. An interesting incident was an interview with the head of the great Tashi Lhunpo monastery, who is now, by the deposition of the Dalai Lama, the most important ecclesiastic in Tibet. He was a young man of about twenty-three, of attractive appearance and manners, and seemed to be generally beloved and revered. The tombs of his five predecessors are each separate buildings with golden roof and highly ornamented interior, filled with a wealth of turquoises, gold bowls, and rare old jade and cloisonné. Major Ryder bears testimony to the cordial treatment he everywhere received, a proof to him that the treaty signed at Lhasa was not merely a paper one, "but that it inaugurated an era of truly friendly relations between ourselves and the Tibetans." The paper on the Nile flood and its variations, by Capt. H. G. Lyons, consists largely of data obtained from various gauge-readings, the oldest records being those of the Roda Nilometer at Cairo.

Prof. Simon Newcomb's observations and theories on the periodicity of the solar spots and climatic changes, as well as those of Dr. W. J. S. Lockyer and R. Wolf, are made the subject of the leading article in *Petermann's Mitteilungen*, No. 8. The author, Dr. C. Easton of Rotterdam, expresses the conviction that, through the joint labors of astronomers, meteorologists, and geographers, we may have accurate weather forecasts for extensive regions. Other subjects treated are the meteorological observations made during the past ten years in Bulgaria, with charts and a diagram, and the Italian archæological and ethnographical mission to Montenegro, which is described by Professor Baldacci, its leader. An interesting account is given of Haifa, which, through its connection with the railway now being constructed between Damascus and Mecca, promises to become the most important port on the Syrian coast. It is proposed to spend between one and two million dollars on harbor improvements.

Education was the subject of the first of Lord Curzon's valedictory addresses in In-

dia, in which he maintained that, as the first and most powerful instrument of moral elevation in India, it must ever remain a primary care of the State. In elementary education there had been a considerable advance during his term of office. There was now a permanent annual grant of thirty-five lakhs of rupees ($1,155,000) for this purpose; thousands of new primary schools were opening their doors, training schools for teachers were springing up in every direction, and the pay of primary teachers had been raised. Similar progress was noted in secondary and commercial education, while in the higher university education the Government policy had assumed a wider scope, and had, he hoped, effected a more drastic change in the emancipation of the youth of India from the gyves and manacles of the past. A gratifying feature of the awakening of interest in these reforms was the stimulus it had given to the liberality of wealthy Indians. The hearty appreciation of his work in these directions was shown by the fact that many of the farewell messages and tributes he had received from native sources placed in the forefront the services he was generously credited with having rendered to the cause of Indian education.

The establishment of a "free university" in Moscow has, according to the report of the Berlin *Rundschau*, been made a certainty by a special gift of 500,000 rubles from a friend of free thought in the Empire. It is expressly announced that it is not to be a rival or competitor of the Imperial University: it will probably take the place of the institution that for years has been maintained in Paris by Russian refugees, which now is to be closed. For the present, courses are to be given only in philosophy, political economy, and kindred branches. It has been decided to invite German savants to give semester courses of lectures. In connection with this project a Russian university congress was assembled in Moscow recently; fourteen cities, among them Tomsk and Paris, being represented in a total of 110 university teachers. The convention gave its time and attention to political as well as educational matters, and among other things decided to favor the admission of educated women as students and as teachers in the universities.

A valuable literary find has again been secured from the Egyptian papyri fragments in the shape of a commentary on the 'Theætetus' of Plato. The book dates from the period of the Roman Empire, and is of importance both in furnishing us the ancient interpretation of this difficult dialogue, and in giving new data concerning the later philosophers. The papyrus is now preserved in Berlin, and is being published by Dr. Schubert and Professor Diels.

An important archæological discovery has been made in Sicily, near Collesano, about fifty miles from Palermo. In preparing some land for planting American grape-vines, workmen uncovered, one after the other, forty large skeletons. Further excavations were authorized, and several ancient tombs were discovered, and the fronts of houses with very unusual ornamentation. Signore Salinas, the director of the National Museum of Palermo, has inspected the excavations, and is of the opinion that they form a part of the ancient Paropa, mentioned by Pliny.

The recent installation of President James at the University of Illinois, besides marking the formal reception of a new university head, is of interest as emphasizing in its whole programme, extending over almost an entire week, the ideal relation of the American State University to the community. The topics discussed at the general meetings and the special sessions touched upon Church and State, upon commerce and culture, upon the mechanic and agricultural arts, and upon the science of war. Members of every branch of the Government, national, State, and local, were invited to attend, and representatives of the most diverse forms of Christian belief met to discuss the religious needs of university students. Perhaps the most original contribution to educational thought furnished by this notable gathering was the meeting of university and college trustees for the discussion of the one wholly chaotic branch of our educational system, if there be such a system, the business management of institutions of higher learning. The effect of bringing together a large number of college overseers cannot fail to be beneficial, even though nothing definite could be accomplished at this first meeting. The way has been cleared, and results will follow in due time.

—William Barclay Parsons, of the Board of Consulting Engineers, contributes to the November *Century* a paper on the Panama Canal conspicuous for its plain statement of the problems to be met in making the Culebra cut and in handling the floods of the Chagres River. To complete the Culebra cut to sea level, we are told, means the removal of 5,000 large carloads of material each day for ten years. A dam 150 feet in height will form a lake capable of holding an entire year's flow of the Chagres River, and by under sluices its average flow can be delivered continuously into the canal. With a depth of 100 feet in this lake sufficient pressure would be developed to generate electric power enough to do all the work of the canal and the Panama Railroad, light the canal itself, the cities at its ends, and all the villages of the canal zone, and still leave a surplus for commercial disposal. Ralph D. Paine's second paper on the "Spirit of School and College Sport" deals with English and American football. The chief source of all the present troubles, he is convinced, lies in the evident fact that the game has been carried by false methods to a point where no considerable number of bona-fide college students can hope to play it successfully. Hence the continual search for men who are not bona-fide students, with all the attendant dishonesty, so disgraceful to American colleges. Students of Whitman will be interested in a few pages of extracts from Mr. Horace Traubel's records of the poet's conversation during the last few years of his life. In one passage Whitman traces the genesis of the 'Leaves of Grass' to Walter Scott: "If you could reduce the 'Leaves' to their elements, you would see Scott unmistakably active at the roots." Beside this some will be inclined to place a remark made but a few days later: "Any one of you fellows knows more about my book than I do myself." The approval of Dowden gave Whitman great pleasure: "Dowden is a confirmed scholar. The people who call my friends ignoramuses, unscholarly, off the streets, cannot quarrel with the equipment of Dowden. Dowden has all the points they insist upon—yet he can tolerate Walt Whitman."

—The Bancroft letters, in *Scribner's*, drop suddenly a quarter of a century to the period of Mr. Bancroft's mission at the Court of St. James. The letters of the present instalment, however, deal exclusively with the historian's frequent visits to Paris in search of material for his great work, which had now reached the period of the Revolution. An incident of these visits was the opportunity to hear Rachel in Racine's "Andromaque," and it scarcely need be said that the result was complete captivation; "Her utterance was inspiration, love, hate, tenderness, revenge, all the passions that can agitate the breast of a fond woman; the torture of love unrecognized, the gentle relenting at the slightest transitory hope, the frenzy of seeing another preferred by the man whose faith had been plighted to her, the infinite remorse at the consummation of her vengeance, all flowed from her lips and impressed themselves on her face and mind, in her eyes and person." In the "Point of View" we find an earnest, and certainly a timely, protest against the tendency to make the novel of manners a novel of social usages: "We should be freed from constant attempts on the part of popular novelists to instruct us in matters of etiquette." Let us resort to some "Guide to Good Manners" if deficient in early training, and have an end of "covert hints on behavior coated with the syrup of fiction." Though no names are mentioned, one does not feel sure that these strictures are not partly aimed at 'The House of Mirth,' which reaches its inevitably unmirthful conclusion in this number.

—Dr. Charcot's second paper on his Antarctic explorations, in the November *Harper's*, brings him safely home again laden with 3,000 photographs, medical observations on the effect of the climate on his men, bacteriological analyses of air, water, ice and snow, researches in the intestinal fauna of seals, birds, and fish, voluminous notes on hydrography, geology, meteorology, glaciology, botany, etc. Modern science has at least enabled the polar explorer to get back with something more than his mere life, even if it has not opened to him the route to the coveted pole. Mr. Nevinson's slave-trade revelations continue the monotonous story of heartless greed and oppression, though we are assured in the advertising pages that "it is probable that, owing to Mr. Nevinson's work, the British Government will intervene to put a stop to prevailing conditions on the Portuguese West African coast." Hamilton W. Mabie's paper on East Side kindergarten work, of which we spoke last month, is followed by a description of an East Side music-school settlement, by Philip Verrill Mighels. The work was begun by Miss Emilie Wagner, a young college graduate of philanthropic bent, in 1894. Her single-handed efforts were so evidently justified by their fruits that others engaged in college and university settlement work came to her aid, and the movement has now been taken under the patronage of an incorporated "Society of the Music-School Settlement." It is distinctively a Yiddish institution, for the present situate in the crowded Yiddish district of East Third Street.

—That this year's loan collection of portraits at Oxford was less brilliant than the

collection of last year is to be made out from the illustrated catalogue which has recently been published (Frowde). The period covered is the whole of the Stuart era, with the exception of the reign of James I. Here the names of Van Dyck, Lely and Kneller at once suggest themselves, but Van Dyck, the greatest of the three, was occupied almost exclusively during the six years and a half of his residence in England with painting personages of the Court, while neither Lely nor Kneller found his chief subjects in the dons and bishops of Oxford. Of the forty-two painters represented, little more than twenty were born in Great Britain, and of three we have no better representation in the present catalogue than Dobson, Greenhill, and Mrs. Beale. "In looking on the portraits of this period," says Mr. Lionel Cust, "let us remember the words of Thomas Carlyle, 'In short, any representations made by a faithful human creature of that face and figure which *he* saw with *his* eyes and which I can never see with *mine*, is now valuable to me and much better than none at all.'" No quotation could have been better selected for the purpose of bringing out the characteristic features of such an assemblage as is represented here. Men like Harvey, Falkland, Clarendon, Cowley, Cromwell, Hobbes, Bishop Ken, H. Lawes, Locke, Milton, John Wallis, and Sir Henry Wotton, have a claim upon the interest of each succeeding age; and any portrait which rises above pure crudeness must in such cases possess a measure of historical value. Unfortunately, the Oxford collection did not contain the best extant portraits of Falkland, Clarendon, or Cromwell, to take typical examples; but, judged by an antiquarian standard, these pictures were well worth bringing together. The catalogue, as in the case of its predecessor, is beautifully printed and well illustrated.

—It is convenient for literary students to have, in one neat, well-printed volume, the 'Essays on Mediæval Literature,' by W. P. Ker (Macmillan Co.), that were formerly scattered in various quarters. Although the book is quite devoid of learned apparatus and seems to appeal to the general reading public rather than to the professional scholar, it shows not a trace of the carelessness or the superficiality that we generally associate with the term "popular." On the contrary, the author has, in addition to an unusually thorough acquaintance with the themes discussed, a knack of viewing old subjects from a new angle and looking through petty details at the great principles behind them, which, coupled with a graceful style, makes the 'Essays' not only attractive and valuable to the layman, but instructive even to the specialist. The longest essay deals with Froissart. Originally written as an introduction to Lord Berners's 'Cronykle of Syr John Froissart' in the Tudor Translations, it treats first, and very fully, of Berners's merits and defects as a translator; after which we have an account of Froissart and a penetrating criticism of his style. Shorter studies are devoted to Boccaccio, Chaucer, Gower, and "The Earlier History of English Prose." The book closes with a sympathetic and judicial estimate of Gaston Paris, first printed in the *Quarterly Review*. With the exception of this tribute, the shortest of the papers is a discussion of the "Similes of Dante," which, to most readers, is likely to prove the most interesting of all. The author illustrates the difference between epic simile, as Homer used it, and lyric metaphor, as we find it in the troubadours, dwells on the striking absence of simile in modern epic poetry before Dante, and its natural infrequency in the lyric poets, and establishes the importance of Dante as the transmitter of this chief adornment of narrative verse from the ancient world to ours. Among the examples cited is the figure of the flower chilled and drooping at night and reviving with the sun; Chaucer, who employs it in the 'Troilus,' got it from Boccaccio, who, using it twice—in the 'Teseide' and the 'Filostrato'—derived it in turn from Dante. This particular simile might have been traced back one step further, to William of Poitiers.

—'Espagnols et Portugais chez eux' (Paris: Colin) is not a suggestively auspicious title in the eyes of those who grasp the difficulty of penetrating into the domestic and inner life of the Peninsula, even with the favor of exceptional introductions. M. Quillardet, the writer of this work, has scoured the two Iberian kingdoms, observed with the alert *coup d'œil* of the French traveller, and doubtless taken copious notes, yet without conveying the sense of such intimacy as one gets from the still unmatched, if antiquated, Ford. Valencia and the whole Eastern swath, except Catalonia, are scantily discussed, though here may be seen many signs, quite vital, of the genuinely Spanish Spain of tradition, which convince the traveller that Gautier (who likewise slurred this region) is much less out-of-date than the average Spaniard of to-day can be brought to admit. The week-long Corpus Christi processions of Valencia, or the "Hogueras de San Juan" on the 23d of June, are *fiestas* entirely typical and unspoiled. Some of the statements in this book are open to question. Twelve hundred students would seem a large number in Salamanca the Deserted. The odd custom, now comparatively rare, of keeping one's hat on at *table d'hôte* has been explained to the writer of this note as the survival of any hidalgo's right to cover (*cubrirse*) in any company, and not in contempt of his neighbor; to remove one's hat is, in the cafés of small towns, to make one's self conspicuous. M. Quillardet's most interesting disquisition deals with the marked differences in Spanish and Portuguese character respectively; private preference in this case being shown for the Lusitanian because of his greater cheeriness and warmth of manner. Useful statistics and statements concerning trade and agriculture, borne out by recent melancholy reports, reveal the economic straits of country and people. From several remarks concerning the condition of women, the unwary might be tempted to declare that the writer's initial M does not represent Monsieur.

BRUNOT'S HISTORY OF THE FRENCH LANGUAGE.

Histoire de la Langue Française, des Origines à 1900. Tome I: De l'époque latine à la Renaissance. Par Ferdinand Brunot, professeur d'histoire de la langue française à l'Université de Paris. Paris: Armand Colin. 1905. 8vo, pp. xxxviii., 547.

Advanced students of the French language will not need to be informed that the present history is an outgrowth of the linguistic portion of the great collaborative 'Histoire de la Langue et de la Littérature Française, des Origines à 1900,' published in eight octavo volumes under the direction of the late Professor Petit de Julleville, of the University of Paris; nor will they have to be reminded that, while the history of the literature, in this monumental work, was apportioned among many noted specialists, the history of the language, throughout the entire period of its development, was entrusted to a single hand, that of Ferdinand Brunot. By those already familiar with the linguistic chapters of the collective work, the sentiment first experienced on taking up this portly and handsome volume will doubtless be one of gratification at finding the treatment of the language, in its present separate form, so generously amplified; while the sense of pleasure will only be deepened into gratitude by the more intimate disclosure that, with exceedingly few reserves, a painstaking process of revision has kept even pace with the forward movement of expansion. So far as mere enlargement is concerned, it will be found that the period extending from the Latin epoch to the Renaissance, to which a space of only 166 pages, all told, was accorded in the earlier work, has claimed in the present volume no less than 585. Nor is the promise for the future less reassuring, since not one, but two volumes are assigned for the remainder of the work. Volume ii. will cover the period from the Renaissance to Vaugelas, and is announced to appear in the year 1906; volume iii. will deal with the period from Vaugelas to our own times, and may its consummation be proportionately near.

For a survey of the excellences and possible shortcomings of this important work, a convenient starting-point is afforded by the publisher's circular, in which, on its appearance, the new volume was recently brought to the attention of scholars. An engaging feature of this circular consists of a citation from the elaborate review with which the original chapters were honored by Gaston Paris, in a series of articles aggregating nearly fifty pages, and appearing in the *Journal des Savants* for 1897. With that perfect judicial-mindedness which invariably characterized the reviews of the great master of Romance philology, the one in question apportions praise and blame in a manner somewhat more instructive than could fairly be expected to be reproduced in a publisher's announcement. The foible, which he criticises, of an "exposition dans une généralité qui peut paraître excessive" and of "certains développements superflus" —more manifest, he admits, in the early chapters—is also diminishingly visible in the present separate work, since it is precisely the later portions which have most profited by augmented zeal for exactness and detail of treatment. The reader, therefore, may well be put upon his guard against being unduly prejudiced at the outset by a certain number of trifling infelicities that do not recur later in the work, when the author has definitely settled down to unfolding, simply and clearly, the richly accumulated treasures of his linguistic lore.

To give an example of what may fairly be accounted "infelicity," while making all proper allowance for the popular (yet not, after all, so very popular) intention and

appeal of this distinctly learned book, attention may be pointed to the introductory remarks on the phonetics of the Latin folk-speech (p. 61, *ss.*):

"In the first place the stress which we lay, as in French, on the last non-mute syllable of the word—*patér, rosá, dominús, reginá*—completely mars words which in Latin never had the tonic stress on the last syllable. Notoriously, indeed, dissyllables had it on the penult [etc., etc.]. . . . So that, in this Virgilian line, the syllables whose stress involved a raising and at the same time an increase of intensity of the voice, were those which I mark with a sign. . . . It is already quite a different thing from the ordinary reading:

Infandúm, reginá, jubés renovaré dolorém.

. . . How many errors in the single verse quoted above!"

Whatever may be, in practice, the traditional Latin pronunciation of the French *lycéen* and his elders, it surely tends to bring their theoretical knowledge of Latin into undeserved disrepute to display, in large type and at the head of a chapter, a disquisition of this sort. Most of this, and much more than has been quoted, might well have been relegated to an inconspicuous foot-note.

On page 62 we are told that "le *g* se prononçait dur devant *i* : on disait *reguina* et non *rejina*"; on page 63, "*c* . . . et *g* gardaient toujours leur valeur d'explosives: . . . *reg(u)ina* non *rejina*." On page 62 we read: "Le *i* de *jubes* (exactement *iubes*) se prononçait comme *y* dans *yeux* et non comme *j* dans *jeu*"; on page 63, "*j* se prononçait comme *y* dans *yeux* . . ." The double use, in proximity so close, of statements so rudimentary, must disconcert the scientific *flair* of the neophyte no less than of the pundit. Nor is it a mere quibble of perfection to suggest for note 3, page 65, which reads, "On se souviendra que nous notons les voyelles ouvertes par une cédille, les fermées par un point," the substitution (if necessary): "Pour les signes employés, voir à la page xxxiii." By the majority of scholars having occasion to use or to consult a work of scholarship counting nearly 600 pages, it must be regretted that there has been no division of the matter into numbered sections, while yet of cross-references there are almost literally none, although the reader's desire for them is often whetted by such phrases as "we have already seen," "it is elsewhere explained," etc.

In treating of the disappearance of final *m* in the folk speech (pp. 69, 70), it is surprising that Brunot (with other scholars) fails to cite and to emphasize the phenomenon of ecthlipsis in classical poetry, which shows the invasion of precisely the same tendency in literary speech. Similarly, for the disappearance of *v* between vowels, it is not half so interesting to ferret out a few sporadic occurrences of *vius* for *vivus, juenis* for *juvenis*, as it would be to add: "compare **-ivi* > *-ii*," which is simply folk-speech usage cropping out vigorously among the schoolmasters and the scribes. Again, apropos of the disappearance of *n* before *s*, how can one tell us that "Quintilien (I, 7, 29) affirme que de son temps on disait, comme on écrivait, le plus souvent: *cosul*," without stopping to point the same moral?

On page 89, it is manifestly by inadvertence that the text runs: "*Volere* [read *velle*] entrainé par son parfait *volui*, passe à la seconde: **volére*." On page 105, in a list of Latin words which survived in Old but not in Modern French, we find "*pectus* (v. fr. *pis*)." Whence, then, is Mod. Fr. *pis*? Page 129, note 2: "Ajoutez qu'une foule de noms propres sont d'origine germanique." Is not the author aware that, with the exception, for form's sake, of some Bible names, practically *all* the names of persons of the Old French period are Germanic? At page 213, the adverb of affirmation *oïl* is satisfactorily explained, and its use mentioned in *langue d'oïl* (cf. *langue d'oc, langue de si*); but, strangely enough, the modernized form, *langue d'oui*, which can only mean "Modern French," is later (p. 304, *ss.*) unfortunately used constantly to signify Old French. The misapprehension underlying this simple conception seems to be widely prevalent, and ought certainly to be corrected. The explanation of *langue d'oïl* unfailingly given in English is that it means "language of yes," whereas obviously the English language itself is the language of "yes," just as German is the language of "ja" and Dante's speech is the "bella lingua di sì." It makes as painful an impression to hear Old French called "la langue d'oui" as it would to hear Modern French called "la langue d'oïl." It may be added that the correct explanation of *oïl* given on page 213, which emanates originally from Tobler, and has by no means yet percolated into the current manuals of French, precludes the suspicion that the "*oïl* (Latin *hoc ille*)" of page 304 is intended to convey, as it seems to be, the old tautological explanation over which correspondents of the *Nation* tilted valiantly many years ago.

On the same page (213) the essential point in the history of the negative particle, *non*, is completely overlooked, with curious results. We translate:

"In Old French for a certain period the negative remained the same as in Latin. It is found at first in its full form, *non*. . . . But very shortly also we meet with the weakened forms *nen* and *ne*. . . . All these forms will be found coexisting for a long time. . . . *Non* is met with especially in principal propositions: *non ferez* [!]; after *o* and *ne* (*ni*); after *se*; or finally, quite by itself [!!]."

In all this, strong as the protestation may sound, every single statement is absolutely misleading or meaningless. Nothing undemonstrable can be more certain in philology than that unstressed *nen* (however it might have been spelt if there had been any one to write it down) was already differentiated from stressed *non* long before the Oaths of Strassburg. That there are a trifling number of examples in the earliest documents of the unstressed negation miswritten *non*, under the influence of the Classical Latin, proves nothing. The whole story of French *ne* and *non* from the earliest times is fairly luminous: In unstressed position *nen*, weakening to *ne*; in stressed position, ever and always, *non*. "On trouve surtout *non* dans des propositions principales." As well say, "On trouve surtout *non* dans des phrases." And shall we then affirm that, in the Modern French "oui ou non," *non* is to be classified as following *ou*, and in "ni oui ni non," *non* is classified as following *ni*? This is fortunately not a fair sample of the author's acumen. He is here simply caught soundly napping.

But these are not the columns of a technical journal, and it is necessary to break off somewhere the discussion of the multifarious data of this great thesaurus, even at the cost of leaving whole domains of the subject entirely untouched. It should at least be made clear that the parts of the book left undiscussed are its strongest and best. There are, in particular, long and admirable chapters on syntax and vocabulary, and it is noteworthy and most praiseworthy that wherever the author breaks new ground and works at first hand, as he often does in the latter part of the book, there he is invariably rich in useful material and in suggestive ideas. Such, for example, are his chapters on "La Valeur Linguistique de l'Ancien Français," on "Le Français à l'Étranger" (40 pp.), and on "Le Latinisme" (20 pp.). Commendation, too, should be given to the proofreading. The second volume will cover a period peculiarly Mr. Brunot's own, and will be awaited with a confidence of good things to come that is certain not to be disappointed.

RUSSIA AGAIN.

Russia from Within. By Alexander Ular. Henry Holt & Co. 1905.

People who like to read strong statements couched in language which is plain to the verge of violence at times, and never courteous, will thoroughly enjoy Mr. Ular's arraignment of everybody and everything in Russia—save, possibly, the revolutionists. On the principle that it is as well to know the worst that can be said, people who are not particularly fond of gossip—back-stairs and front-stairs and all the intermediate varieties—may also profitably peruse at least some portions of this volume. The author is, evidently, quite sincere, and perfectly convinced as to the authenticity of his statements, whether they deal with matters Governmental and fiscal, or personal and moral.

An excellent specimen of his methods is presented by the introductory chapter, "The Assassination of Plehve and the Antecedents of the Revolution." It begins with a rapid general survey of the causes leading up to the present situation, which he discerns primarily in the "fatally victorious war with Turkey" (1877-8), pernicious because it restored self-confidence to the nation after the stupendous revelations of rottenness brought out by the Crimean War disasters, and the fact that the Tsar's victories rendered him the arbiter of peace and war in Europe at a crisis when a possible counterpoise to the disquieting ambitions of the rising German Empire had been sought in all directions. The era of "the great reforms of the sixties," engendered by the Crimean War, and the freedom conferred on the serfs, was productive of unrest, he says, and these very reforms contained the germs of fresh dissensions between the people and the autocracy, while the victory over Turkey inaugurated "that internal moral decadence in Russia which ensued on the passing impetus given by the Crimean defeat."

Mr. Ular names as the critical date on which the nation first felt definite hope that the ever-growing oppression might be shaken off, July 28, 1904, when Minister Plehve was assassinated. He asserts that the Terrorist Group was supplied with funds for that deed by manufacturers,

princes, even society ladies, "who contributed to the expenses of the plot; less, perhaps, for the sake of their country than from a desire to experience the emotion of creating a 'sensation.'" He seems to be initiated into the innermost confidence of the Terrorists, for he says that he had assisted, while visiting Russia about the time when the recent war in the Far East broke out, in unmasking an intrigue of the military party, which had for its object to involve in the war both England and France. Immediately after his return to France, a Russian revolutionary came to discuss the general situation connected with Plehve, and it was Mr. Ular's views and advice, given at that conference, which determined Plehve's fate. The conversation is reported in full, and the reader can judge for himself as to its justice:

"From the day of Plehve's death," he proceeds, "Russia was a changed country. . . . The nationalities subjected to Tzardom—Slavs and Turanians—have all a psychology differing considerably from that of the Latin nations. With them great struggles are silent. . . . The mental transformation which came to light on the historic day of the Liberators' exploit, is what at the present moment determines the 'Russian Crisis,' as its well-wishers call it—the 'Russian Revolution,' as it is termed by the Independents. This transformation of the Russian national conscience under the wing of despotism, which has been, and still is, the most astounding anachronism of our time, is, undoubtedly, the most important phenomenon, and the most pregnant with results, that we of these days could possibly contemplate."

This may be regarded as the text for all that follows. "No psychologist," he adds, "has ever been able to analyze or describe the development of simple individual consciousness, let alone that of a nation." He therefore presents portraits of the national representatives, in the persons of the Tsar, the grand dukes, "the ministers, and innumerable army of officials—unconscionable bloodsuckers, but none the less the real masters of the nation," whom he classes as "the Reigning Dynasty of Degenerates and Fools, along with their servile flunkeys." He starts in by calling the Tsar "an anachronism," and declaring that the adoption of the title was "merely a false pretence—a vain attempt to prove that a petty Asiatic despot reigning at Moscow was the direct inheritor of the Byzantine Empire. The introduction of the famous double-headed eagle was but a larceny perpetrated on the Byzantine dynasty, after it had succumbed to the Ottoman invasion." As a matter of fact, the right of certain other persons who bear the title of "Cæsar" under another form than "Tsar" rests on no better—if as good—foundations; and Ivan III., who wedded the Princess Sophia Palæologus (1472), the only child and heiress of the last Emperor of Byzantium's brother, brought the eagle into the Russian coat-of-arms (in a manner not unknown to heraldry in other lands), as well as a certain moral claim to the Imperial title, even if through the female line, as the same title has been handed down in Austria.

Our author pronounces Alexander II. the only Tsar worthy of sympathy; and to Alexander II. he is so opposed that he even cites as a reproach, well-nigh a crime, the fact that he "and his eldest son more often occupied themselves in felling trees in the park [at Gatchina] than in governing the country." Yet he complains elsewhere of over-government and pernicious activity; while tree-felling has been regarded as a merit, not a vice, in English and American statesmen. Naturally, the author devotes his best efforts and most lavish space, in this department, to the reigning Tsar, whom, after the usual fashion, he accuses both of being absolutely self-willed and scornful of advice, and absolutely subservient to the intrigues and dictates of his relatives and Ministers, while it is admitted that he is utterly deprived of initiative because of the established rights of Commission, Senate, Council of the Empire, and Ministers. But Mr. Ular justly remarks: "Nicholas—the man—is deserving of pity. It is his political rôle alone that is iniquitous." Much attention is next paid to the Grand Dukes; and although many of the accusations which Mr. Ular brings against them might be duplicated in regard to the members of any royal or aristocratic families, it may well be that they really are, like Satan, "by merit raised to that bad eminence" to which he so confidently assigns them. At any rate, the legends which he narrates have attained wide circulation in Russia, and almost equally wide credence. It is to be regretted that he dismisses the worthy members of that exalted circle—like the Grand Duke Constantine, for example—with words so few and so colorless that the reader hardly notices them. A more developed artistic sense would have prompted a greater degree of emphasis by way of rendering the contrast more striking, at least.

In his chapter, "The Advent of the Bureaucracy," our attention is directed to the noteworthy fact, that the anti-aristocratic movement is led by the nobility. More noteworthy still is the well-explained circumstance that the tyrannous Bureaucracy, now so universally detested, was formed by Alexander II.'s democratic reforms, with their throwing open official employment to young men of all social castes, instead of confining it, as hitherto, to the nobility alone. But Mr. Ular carries his denunciations of these "parvenus" too far; he makes no exceptions. He classes among them Mr. (now Count) Witte, a man of noble birth, pays no heed whatever to the latter's services which won his promotion, and accuses these upstarts with maliciously "keeping out in the cold the man of high family and exalted rank." The bare circumstance that the set of Cadet School classmates, "The Moscow Group," have risen to posts of prominence and power, does not prove on their part a concerted plan of intrigue and unscrupulous mutual aid, deliberately plotted forty years ago. Fairness dictates the recognition of similar rise to prominence in other lands by groups of classmates or contemporaries whose talents, tastes or temperaments have proved lasting bonds, and have prompted friendly office when opportunities presented themselves in after life. A more serious accusation, and one which it would be difficult to refute, were it worth while, is, that this "Moscow Group" of young officers was joined, later on, by various more exalted personages, including Grand Dukes, the wife of Alexander III., Mr. Plehve, and Mr. Pobiedonostzeff, and deliberately effected the assassination of Alexander II. in order to prevent the establishment of a Constitution; Plehve, as head of the political police, taking the necessary passive measures to ensure the success of the (nominally) Nihilist plot.

"At the very moment," we are told, "when omnipotence seemed well within the grasp of this occult combination, . . . the peace of the conspirators was rudely broken by the sudden appearance of a formidable 'outsider,' an unsuspected 'dark horse,' whose rough, uncompromising energy upset their plans for ten long years. . . . This skeleton at the feast was Serguei Yulievitch Witte." With Mr. Witte's régime our author deals at great length, truly observing: "Witte's activity is the life of Russia from the accession of Nicholas to the eve of the Russo-Japanese war. . . . Witte's governmental activity constitutes, as much from the standpoint of Tsarian as from that of popular interests, the most important element in the course of events preliminary to the Revolution"—the "Revolution," he explains, being really nothing but an aggregate of reforms, dangerous only by reason of their counter-effects. Statistics, in abundance, follow, to demonstrate Mr. Witte's daring and his errors. Mr. Witte is credited with plans for peace, financial sagacity, peasant colonization, relinquishment to others of industrial enterprise, and administrative influence in Asia, peasant reform, and the purification of the powers that be, natural development, the spontaneous cure of the economic fever of the country. But the Tsar's brother-in-law represented to the sovereign that the policy of Alexeieff and Bezobrazoff (of the "Moscow Group")—a policy of provocation of Japan—was the logical consequence of Witte's policy. War came; and the author reports a conversation with Mr. Witte on February 17, 1904, previous to any defeat, in which the latter is represented as saying that he would never again take office "so long as these fools are reigning in Russia. My ideal of government is radically different from what is actually being carried out, internally as well as externally."

As to Finland, Mr. Ular declares that it is less the despotism of the Russian bureaucracy than a vague notion of external policy that has caused its misfortunes—meaning that Finland, culturally, forms a part of the Scandinavian group which blocks Russia's free outlet to the Atlantic. "It has invariably been this obsession of the free ocean that has drawn the Tsar into the fatal course of his policy," he comments. When he attempts to set forth the Ruthenian situation he is very much at fault, to begin with, in asserting that the Ruthenians "have a perfectly independent language that owes nothing to the Russian tongue. . . . Their literature is extremely fine, and if some of their greatest artists, to cite only Gogol, Glinka [Glinka was a musician!], and Korolenko, have preferred to express themselves in Russian, it is after the fashion of the Czechs or the Hungarians, who speak German that they may be listened to in the name of their better-known masters." When he proceeds to treat Galicia (under Austrian rule) as sufficiently under Russia's sway to permit of its inhabitants being deported to Siberia for importing Ruthenian publications, he is decidedly muddling the question.

The author's discussion of the Zemstvo is, in the main, good, but he is mistaken

in thinking that the land of the peasant communities is distributed every three years. He is probably confounding this distribution with the triennial or three-field system of tillage. The *izbas*, or cottages, also, have often more than one room, which he states as the unfailing rule. He is of opinion that the peasants are not by any means yet ready, from the intellectual point of view, to exercise national autonomy; but some of his figures concerning illiteracy are certainly based on a misconception or ignorance of the country. "The most lettered caste," he says, "as in Ancient India, is the clergy; out of 105 priests only twenty-eight can neither read nor write." Many of the priests in the poorer villages are not highly educated, it is true; but a priest who can neither read nor write is a downright impossibility.

The Torch: Eight Lectures on Race Power in Literature. By George Edward Woodberry. McClure, Phillips & Co. 1905.

Mr. Woodberry has chosen as his scripture for the eight discourses that make up the "Torch" that Lucretian text beloved of the humanist, "Augescunt aliae gentes . . . et quasi cursores vitai lampada tradunt." The fundamental thesis of the book is oddly like the familiar one of Taine—with a difference. It is, in brief, as developed in the initial lecture on "Man and the Race," that the race is the real maker of literature, and that the ideal destiny of any single race is sacrifice. Mr. Woodberry has dwelt upon this notion with Oriental absorption, and has carried it valiantly to its logical end in such startling sentences as this: "Nay, if the aristocracy of the whole white race is to melt in a world of the colored races of the earth, I for one should only rejoice in such a divine triumph of the sacrificial idea in history; for it would mean the humanization of mankind."

The work of the race-mind in literature, as it seems to Mr. Woodberry's optimistic idealism, is not so much mere self-expression as self-conquest, liberation, racial euthanasia:

"The race-mind," he writes in one of the finest of his paragraphs, "building itself from immemorial time out of this mystery of thought and passion, as generation after generation kneels and fights and fades, takes unerringly the best that anywhere comes to be in the world, holds to it with the cling of fate, and lets all else fall to oblivion; out of this best it has made, and still fashions, that enduring world of idea and emotion into which we are born as truly as into the natural world. It has a marvellous economy.

> " 'One accent of the Holy Ghost
> The heedless world has never lost.'

Egypt, India, Greece and Rome, Italy, the English, France, America, the Turk, the Persian, the Russian, the Japanese, the Chinese, the negro, feed its pure tradition of what excellence is possible to the race-mind and has grown habitual in its being: and, as in the old myth, it destroys its parent, abolishing all these differences of climate, epoch, and skull. The race-mind unifies the race which it preserves; that is its irresistible line of advance. It wipes out the barriers of time, language, and country. It undoes the mischief of Babel, and restores to mankind one tongue in which all things can be understood by all men. It fuses the Bible of all nations in one wisdom and one practice. It knocks off the tribal fetters of caste and creed; and, substituting thought for blood as the bond of the world, it slowly liberates that free soul which is one in all men and common to all mankind. To free the soul in the individual life, and to accomplish the unity of mankind—that is its work."

In the second lecture, "The Language of All the World," Mr. Woodberry endeavors to show how the *anima gentium*, to borrow an apt phrase from the older humanists, has done this work through the use of three sets of symbols—three tongues, or, in Mr. Woodberry's own peculiar phrase, three "transformations of history," to wit, Mythology, Chivalry, Hebraism; and he is inclined to find a new fourth tongue making itself heard in the Democratic Idea. In the remaining lectures these transformations of history are traced as they appear in the permutation of the Titan Myth, and in the poetry of Spenser, Milton, Wordsworth, and Shelley.

Winding thus along his spiral way, Mr. Woodberry comes at last to a conclusion which will seem to the reader, according to his temperament, whether Aristotelian or Platonist, either a "weird seizure" or the very voice of the Sibyl:

"Of all the webs of illusion in which our mortality is enmeshed, time is the greatest illusion. This race-store, our inheritance, of which I have been speaking, which, vitalized in our lives, is race-power, is not a dead thing, a thing of the past; all that it has of life with us is living. Plato is not a thing of the past, twenty centuries ago; but a mood, a spirit, an approach to supreme beauty, by the pathway of human love; Spenser's 'Red Cross Knight' is not an Elizabethan legend, but the image of the Christian life to-day; and the hopes of man were not burnt away in the fire that consumed Shelley's mortal remains by the bright Mediterranean waves, nor do they sleep with his ashes by the Roman wall; they live in us. I have made much of the idea that all history is at last absorbed in imagination, and takes the form of the ideal in literature; it is a present ideal. We dip in life, as Shelley did, and we put on in our own personality these forms of which I have been speaking all along—forms of liberty, forms of beauty, forms of reason—of righteousness, of kindliness, of love, of courtesy, of charity, of joy in nature, of approach to God—and, these forms being present with us, eternity is with us; they have been shaped in past ages by the chosen among men—by poets, by saints, by dreamers—by Plato, by Virgil and Dante, by Shakspere and Goethe, who live through them in us; except in so far as they so live in us, they are dust and ashes: Babylon is not more a grave. But these ideal forms of thought and emotion, charged with the life of the human spirit through ages, are here and now, a part of present life, of our lives, as our lives take on these forms; casting their shadows on time, they raise us, as by the hands of angels, up the paths of being—we are released from the temporal, we lay hold on eternity, and, entering on our inheritance as heirs of man's past glory, we begin to lead that life of the free soul among the things of the spirit which is the climax of man's race-life and the culmination of the soul's long progress through time."

We have quoted liberally from this remarkable book because it is not easy to present Mr. Woodberry's ideas adequately and fairly, detached from the texture of their expression, from the luminous mist of poetry in which they swim, from the eddying cadences, "musical as Apollo's lute," which weave their magic about the reader's mood. Our author's thought is less convincing in the retrospect than in the reading. It is clear that his choice of typical literature has been very strictly selective, and (though there is much admirable criticism by the way) poetically rather than critically selective. He is a "realist" in the old scholastic sense that for him the universals, Beauty, Truth, Goodness, have a real existence "like that of a person"; and "The Absolute" is for him *terra firma*. The Torch of which he writes is the torch of academic idealism, of Platonism. Shakspere, Montaigne, and Cervantes, for instance, can be but hardly restrained within the bounds of the course; and, indeed, most of the great prose minds, so to say, in literature, which some may think the saner, less deluded minds, cannot be constrained within it at all. Yet here again we are brought to a stand by that great alignment of temperament which divides the world. At any rate, no writer in recent years has presented the cause of the Platonist with greater eloquence and devotion, or has made a more telling synthesis of old poetry and new science. Whether the faith that he upholds shall prove to be a dream of beautiful deceit or a veracious vision, only age-long time can tell.

A Register of National Bibliography. With a Selection of the Chief Bibliographical Books and Articles Printed in Other Countries. By William Prideaux Courtney. London: Constable. 1905.

A new Petzholdt has been for years the dream of many a bibliographer and librarian; but when the first attempt in that direction, M. Léon Vallée's 'Bibliographie des Bibliographies,' appeared in 1883, the disappointment was great. When, fifteen years later, M. Henri Stein published his 'Manuel de Bibliographie Générale,' with its sub-title, "Bibliotheca Bibliographica Nova," hopes were high, indeed; but a closer examination of that ambitious work shattered them most rudely. And now comes Mr. Courtney with a third attempt—and, we regret exceedingly to add, a third disappointment.

Not that he has not produced a useful book. Useful it certainly is, with its wealth of information, especially on the minutiæ of bibliography and on material buried in out-of-the-way places. But one cannot help thinking how much more useful it would have been if more care had been exercised in its preparation, and if Mr. Courtney had confined his efforts, as was originally his intention, to English bibliography:

"I had hardly entered upon my task," he says in the prefaee, "before it became obvious that the undertaking ought to be extended to a selection from the literature of other countries. Many of the best volumes on the writers of our land have been produced abroad, and many Englishmen have won distinction by their works on the literature of foreign nations."

This reason for extending the scope of the work seems not very valid; and Mr. Courtney's selection of "the chief bibliographical books and articles in other countries" makes one often wonder at many things. For instance, we seek in vain for Vanderhaeghen's 'Bibliotheca Belgica,' in vain for the important accessions catalogue of the chief Prussian libraries, prepared under the auspices of the Royal Library at Berlin. On the other hand, we find the titles of a great number of catalogues of foreign libraries of little importance. Under "Libraries, Classification," we miss Schleiermacher's 'Bibliographisches System.' Stammhammer's 'Bibliographie der Socialpolitik' is omitted, though his 'Bibliographie des Socialismus und Communismus' is given—not under Socialism, however, only under Communism. F. E.ch.

ler's two articles on the authorship of academic dissertations are given, but not the contributions to the same subject of Karl Sylvio Köhler and Ewald Horn. These are only a few examples, taken at random.

The arrangement of the titles, alphabetically by subject headings, is not as systematic as it should be. The treatment of catalogues of university dissertations is a fair example: We find under the heading *Theses* about a dozen titles, French, Belgian, and Italian, while two other French dissertation catalogues are entered under *France, Literature*, and *France, Medicine of*. The older catalogues of Swedish (and Finnish) dissertations, by Lidén and Marklin, with the continuation by Wahlberg, are entered under *Sweden, Theses*, but the more recent continuation, by Josephson, under *Finland* only. The catalogue of theological dissertations at the Academy of Geneva is found under *Geneva*, but the one of legal dissertations at the faculty of law in the same city under *Law Dissertations*. The several German lists of "Universitäts-Schriften," which are largely bibliographies of dissertations, are apparently not recognized as such; we find the Bonn list under *Bonn, Univ.*, and the Berlin list under *Berlin, Libraries*—presumably because it was prepared by the University Library. When the same publication is mentioned in different places, the entries are often enough very different. For instance, on page 62, under *Bibliography*, we read: "anzeiger für lit. der bibliothekwissenschaft [von Julius Petzholdt]; 1841 *et seq.*", and on page 64, in a note of "the chief foreign [bibliographical] periodicals and annuals" we find the same periodical entered this way: "anzeiger für lit. [by J. Petzholdt], 1840-1855, contd. as neuer anzeiger, 1856-1886." Enough has been said, perhaps, to show that the compiler's knowledge of foreign bibliographical literature is not very profound. We could give scores of similar examples.

On opening Mr. Courtney's volumes, one is struck by some very marked peculiarities of form. That a working bibliography, like that before us, does not need to give full titles or elaborate collations, we gladly concede, and we may even be ready to admit that the *index* form of inverted titles has some merit in giving added compactness to what might have become a very bulky work. But Mr. Courtney shortens his titles too much, and the inversions often give the entries a very queer look, *e. g.*: "*Clayton.* Bulwer treaty, publs. of the Michigan polit. science assoc., iii. no. 8, hist. of, by J. D. Travis, 1900. bibliog. pp. 309-12." The omission of pagination, except in case of articles in periodicals and chapters of books, must be regarded as unfortunate; but more serious is the nearly consistent failure to give place of publication, and still more the occasional omission of imprint dates. More conspicuous, though intrinsically not more serious, are some innovations which are without example, so far as we know, in bibliographical literature. We mean the use of lower-case initials instead of capitals in *all* cases except for proper names and adjectives derived therefrom, and the habitual, though not consistent, translation of certain words in foreign titles, such as *par, von, de*, and others—for instance: "cours d'épigraphie Latine, 2nd ed., by René Cagnat, 1889, etc., in progress"; or this: "notizia bibliog. di alcuni rari opuscoli pubblicati dai Giunti in Firenze, 1537-91, now in royal univ. lib. of Pisa, by Ferruccio Ferrari; il bibliofilo, viii. 161-9 (1887)."

In spite of the compiler's industry and perseverance, therefore, it must be said that this latest "Petzholdt," no more than the two preceding ones, comes up to the standard of painstaking accuracy, critical discernment, and solid scholarship set by its prototype. There seems to have grown up of recent years a whole school of what might be called amateur bibliographers, literary and scientific men (and some librarians), whose enthusiasm knows no bounds, but who seem to hold to the extraordinary tenet that, while exactness might be proper enough in other branches of literary endeavor, it is unnecessary in bibliography. A very curious and outspoken manifestation of this amateur spirit may be found in the preface to Mr. David Murray's recent work on 'Museums: Their History and their Use.' The author there says:

"Not being a librarian or bibliographer by profession, I have not felt myself bound by any of the ingenious rules laid down for cataloguing. All such rules are apt to be embarrassing when carried out rigidly; and, with long experience of catalogues, I have found that they are generally more useful when not too systematic. I have not always been consistent, and there is a satisfaction in not being subject to any formal rule."

Two of Mr. Murray's three volumes comprise a bibliography of museums, and the compiler might find some satisfaction in knowing that his work is both inconsistent and unsystematic. Those who have occasion to consult it, will not praise it on that account. The same is true of Mr. Courtney's book. The novice will get small comfort out of it. The trained bibliographer, however, and the librarian who has rich collections at his command, will, likely enough, find this work, in spite of its many faults, to be one of his most useful tools. His greatest grievance will be that it was not printed on writing paper with broad magins.

England under the Stuarts. By G. M. Trevelyan. (Vol. V. in the "History of England," edited by C. W. C. Oman.) G. P. Putnam's Sons.

It is now nearly two years since Mr. Trevelyan published a criticism of Professor Bury's inaugural lecture at Cambridge, which not only traversed the views set forth in that deliverance, but contained the writer's own profession of faith on the broad questions of historical research and composition. All who read this lively and attractive essay, whether convinced by it or not, will turn with curiosity to the present volume, in which Mr. Trevelyan is given a chance to show how successfully he can put into effect as an historian the principles he has defended as a critic. A further cause for curiosity is furnished by the subject, since all who care to follow out a family tradition will be interested to see what a grandnephew of Lord Macaulay will say, in the light of actual knowledge, regarding the Stuart period. And quite apart from both these considerations, Mr. Trevelyan's study of England in the age of Wycliffe has attracted a degree of favorable comment which opens an easy way for subsequent works.

Expectation, however aroused, is not likely to be disappointed by the quality of this book. Dealing with a larger and more ambitious theme than he found in the closing years of the fourteenth century, Mr. Trevelyan shows that he has passed beyond the point where success is measured by the standard of undergraduate achievement. *Sunt lacrimae rerum* is a phrase, as we know from his own witness, which means much to him; and in writing of the Great Rebellion his sympathy for all great human deeds and aspirations prevents him from being unjust either to Puritan or Cavalier. His fondness for general statement reflects a love of the large issue, yet while it is clear that he has much imaginative feeling, he does not suffer himself to be overmastered by a love of the picturesque. If, on the one hand, he eschews the precepts of Professor Bury, he does not, on the other, fall into the mannerisms of Mr. Hilaire Belloc. It is also important to point out that Mr. Trevelyan has known how to write on the great constitutional struggle in a strain of his own, taking much material from Gardiner and Firth, but treating their themes without sign of imitation. As for his treatment of social conditions, we can honestly give him the high praise of saying that his familiarity with the general literature of the seventeenth century often recalls the third chapter of Macaulay's History.

Mr. Trevelyan finds the main motive of English history during the age of the Stuarts in a contrast between the insularity of the national achievements when judged by their origin, and their universality when judged by their effects. So well recognized is the force of that trend toward absolutism which warped the life of Continental countries at the same period, that no one can fail to see how the England of Cromwell and Somers differed from the France of Richelieu or the Brandenburg of the Great Elector. But Mr. Trevelyan, more strongly than other historians, lays stress upon the peculiar condition of English society that prompted and controlled the course of the strife between King and Commons. This is the sum and substance of his two opening chapters, the one on the culture and social functions of the upper class, the other on the middle and lower classes in country and town. To give the conclusion barely without the seventy pages of graphic illustration is to do the author an injustice, but the summing up will show at least the drift of the argument.

"For England," says Mr. Trevelyan, "was a land of local government, local armaments, local feeling, where the life of the shire, the parish, and the city was vigorous, yet where no feud existed between country and town; where ranks were forever mingling; where the gentry intermarried with the middle class and shared with them the commercial and professional careers. Bureaucrats and soldiers were almost unknown; the King depended for the execution of his mandates on an unpaid magistracy, and for his defence on the loyalty of his subjects. The religion which most inspired the best and ablest men did not depend, like the Protestantism of Germany or the Catholicism of France, on a State Church, or a Church State, but referred the individual to his own intellect and his own conscience, and inspired him to defend his spiritual liberties."

Here, in epitome, are the distinctive things which marked England off from the

other countries of Europe, and gave her a better chance of escaping from the universal drift towards despotism than was possessed by any of her neighbors. It is one of Mr. Trevelyan's main tasks to amplify this theme, and to show with great wealth of detail how the compatriots of Pym were a peculiar people.

Bristling with marked characters like Strafford, Cromwell, and Shaftesbury, the seventeenth century exacts from the historian a series of personal judgments which disclose at the same time something of his own temper. It is the same with the great issues that centre round the rise, triumph, and decline of Puritanism. Nor can a writer mask his prepossessions so completely as not to reveal traces of himself in his account of episodes like the regicide and the Popish Plot. The keynote of Mr. Trevelyan's *naturel* is moderation—or, perhaps one should say, the unwillingness to applaud or denounce too heartily—which springs from a sense of our invincible ignorance where the deeper issues are concerned. Thus, after he has set forth what seems to him the effect of Charles I.'s execution, he pauses to dwell upon the deceitfulness of appearances and the limitations of the historian:

"For history is a tangle of mysterious threads, of which the most important may be the least perceived. It may be that, deep beyond all consciousness, in the minds of the men who groaned with horror as the King's head was held up to their pitying gaze; deep in future years that lay beyond the Restoration; deep in remote lands beyond the English seas, bound for a time under heavier tyrannies, the knowledge that subjects had sat in rude judgment on their King, man against man, speeded the slow emancipation of the mind from the shackles of custom and ancient reverence. What brave men have done, what patient men have endured—this is known. But what either side has effected by its sufferings or its acts—this not the endless æons shall reveal."

When Lord Auchinleck told Dr. Johnson that at any rate Cromwell "gart Kings ken that they had a lith in their necks," he covered with greater terseness most of the ground which Mr. Trevelyan traverses in the foregoing passage; but the concluding sentence is notable as showing how the verdicts passed in this book are affected by a strong sense of the historian's limitations. So far from writing to glorify the Whigs, Mr. Trevelyan lays bare their weaknesses and shortcomings with much candor, although he can discriminate between the genuine loftiness of their principles and the sharp practice to which they often descended. On the eve of the Oxford Parliament, he points out, some of them "ate, sang, and even slept with the perjured informers of the Popish Plot, who noted what they saw and heard in Whig company, and prepared to bite the hands that fed them."

And this is his final comment on the decline of the party after the discovery of the Rye House Plot:

"It had fallen because its leaders had been ill-advised, selfish, and violent in the methods they chose; but not because they lacked faith in the principles of Parliamentary government and religious toleration, or because these principles were unsuited, like those of the regicides who had suffered twenty years before, to the social conditions of the age and the temper of the English people. And therefore the new party did not perish on the scaffold with Sidney and Russell."

Another sign of immunity from mere prejudice is to be seen in Mr. Trevelyan's appreciation of the credit due to the Tories for their share in securing the Treaty of Utrecht.

We should be glad, were it possible, to discuss at length the views which Mr. Trevelyan advances regarding Puritanism and the emergence of religious toleration; but having given some indication of its spirit and motives, we must be content to say that this book brings sound scholarship, sensitiveness of temperament, and breadth of outlook to bear upon an historical theme of perennial importance.

G. F. Watts: Reminiscences. By Mrs. Russell Barrington. Macmillan. 1905.

Mrs. Barrington, in this handsome volume, has proposed to herself the task of narrating the home life of the artist, his high aims, and the evolution of his work during the years of her intimacy with him. As pupil and confidential friend, during a period of many years of Watts's middle life, amid the production of some of his finest work, Mrs. Barrington had great opportunities of adding an interesting page to contemporary history, had she been gifted with discrimination and the tact which is indispensable in writing of an important person so recently deceased. This difficulty she acknowledges in her preface, for she questions whether it is best that a great man's life in all its details should be written at once, while the general public still remembers and takes an interest in him, by those who really knew him, or rather to wait and hand over the documents and letters to be made up into an official biography when all curiosity as to the personality has probably passed away with those who knew him. The course which seems to us to be safest in the interests of all, is that books of reminiscences of the class of Mrs. Barrington's should be written immediately after the death of a great man, *but not published.* With discreet eliminations, and the selection of what is really significant, they would aid in the building up of a complete life when the time for such a work seemed fitting. At the present moment the impulse for pouring into print all kinds of trivialities of a personal nature, and the eagerness with which these publications are received, have done much to destroy great reputations, and to violate the sense of the responsibility of close friendships. Surely that also is a question to be considered, whether, after being admitted as an own familiar friend, one has the right to cry from the housetop what has been discussed in private when the person written of is beyond the power of vindicating opinions and sentiments, and there are those still living whom such indiscretions may offend. Mr. Watts's own axiom, "What is, is—and one should not desire to make it seem to be other," quoted on the title-page, does not apply to the case in point: for, truthful as any biographer may wish to be, he is in possession only of certain fragmentary portions of truth; and as in painting it is in the general impression of the individual and important characteristics that the portrait lies, so in writing it requires careful selection of what is material and really interesting to build up a character.

Mrs. Barrington's book, with all its enthusiastic fervor and intimate outpourings, adds practically little to what has already been published as to the artist's aims, or to the knowledge of his different methods of painting at different periods during his long career. Dr. Hugh Macmillan, in his book published three years ago, had taken down from Watts's own lips all that would inform the public on this subject. Nor has Mrs. Barrington given us in any entirety, what would have been of great interest, the numerous letters she possesses containing Watts's views on art and on life and thought; and his jottings on scraps of paper relating to painting, to morals and manners, put down just as they occurred to him during the day's work, in continuance of conversations they had had together. These she quotes from, stringing them together with her own remembrances, which are as diffuse as confusing to wade through, for they touch on many matters quite foreign to her theme—chiefly the explanation of her own personality and position in life, that of her husband, sisters, brothers-in-law, and distinguished friends, the society she had lived in, her artistic and literary career, her opinions as to the relative value of Watts's pictures, many incidents and pointless sayings and doings. The book is an extraordinary mixture of Watts's suggestive conversations on high ideals, great aims, and the lofty problems which occupied his mind and life, and the ordinary gossip about ways and means, differences and misgivings, which occur to every mortal, but which hold no place when all is over and such splendid results have been achieved in a life's work. Along with undoubted ability and the power to describe things as they occurred, there is here no sense of proportion; and there are curious lapses in style, which is generally of the order of "fine writing." We note that Leighton is said to have "perpetrated pictures"—which sounds strangely from an enthusiastic admirer of his art.

The book is splendidly presented as to type and illustrations. The latter have been carefully chosen in the main from works which have never been reproduced—the greater part from early wall paintings of Watts at Little Holland House given by him to Mrs. Barrington after the house had been demolished for the new building. These are rather tentative and unattractive, but there are several fine examples of Watts's drawings and portraits. The colored portrait of Watts himself by his pupil, Cecil Schott, is scarcely good enough to hold so prominent a place.

The Principles of Economics. With Applications to Practical Problems. By Frank A. Fetter, Ph.D., Professor of Political Economy and Finance, Cornell University. The Century Co. 1904.

The edifice of the classical political economy in England was showing unmistakable signs of disintegration when, in 1848, John Stuart Mill, by his brilliant formulation of the traditional doctrine, imparted to that body of dogma a vitrified surface. It was therefore a preservative rather than a fructifying work which he accomplished. The two most powerful impulses that have made for vitality and progressive movement in the economic thinking of the last half century have come from other sources—from Jevons and his Austrian compeers, and from

the so-called historical school of political economy. Until the appearance of the present volume, however, the typical modern treatise on economics has been a disguised amalgam. Alongside of the newer analysis of value, there are to be found undigested and incompatible remnants of thought hewn from the alien quarry of Mill. It will serve to emphasize the real power and originality of the present work if we contrast its structural lines with those of the conventional modern text on general economics.

Walker was content with the old, spacious, four-cornered division of the field into Production, Exchange, Distribution, and Consumption. After exorcising in his opening paragraph all aspects of value save value in exchange as being essentially foreign to political economy, he inconsistently devoted a few lines of approval in his book on Exchange to Jevons's theory of final utility. But with this exception, and with the exception of his refreshing repudiation of the Ricardian theory of Wages, Walker was, after all, a thinker of the old school. In England, Marshall recognized the untenable character of the old four-fold schematization. But he revamped it by identifying Demand with Consumption, Supply with Production, and their equilibrium with Exchange. Exactly why he should ever have sought to identify Value (spelled with a capital V) with Distribution has, however, remained a puzzle for these many years. When President Hadley faced the same problem (of arranging his material in a compact logical system), he sought refuge in a wholly eclectic arrangement which frankly confessed the problem insoluble from his standpoint. The ordinary run of general treatises of late has been built on the same general plan.

By contrast to this inconsistent attempt to mediate between contradictories stands the present volume. Value is here recognized as everywhere dependent on the relation of wants to goods. To this fundamental conception every theory is made to bow, whether it is rent or interest or price which is the object of economic analysis. The old schematization is thrown away, and the abstract theory is divided into two parts—the "Value of Material Things" and the "Value of Human Services." The first main division is resolved into the three problems of "Wants and Present Goods" (a lucid formulation of the theory of marginal utility), "Wealth and Rent," and "Capitalization and Time Value." It is in the second of these problems that Fetter swings into his masterly exposition. Rent, according to him, is the net usufruct, or the value of the net usufruct, of durable wealth for a given period, "as distinguished from the value of the use-bearer or thing itself" (p. 55). That all kinds of durable agents vary in the uses or usufructs derivable from them, and that their respective yields may be computed by the employment of the differential formula, Fetter accepts from Clark. But the age-long pretension of land to the monopoly of this method of differential measurement is here shattered into a thousand fragments. Rent being calculated by the marginal theory of value, the value of the rent-bearer, or durable good itself, is seen to be merely the series of prospective rents discounted to their present value. This is the essence of the theory of "Capitalization and Time Value." Here Fetter's general obligation to Boehm-Bawerk is manifest. But, for Fetter, capital is *"economic wealth expressed in terms of the general unit of value"* (p. 115), and, "at any given moment of time, includes all economic goods in existence, when they are thought of in terms of their value" (p. 115).

To the possible criticism that Fetter has at best only combined and adapted concepts of Clark and Boehm-Bawerk, it may be said that he has combined the hints afforded by these two most suggestive and penetrating thinkers into a consistent theory while avoiding the difficulties and errors into which they both have fallen. Boehm-Bawerk, by clinging to the outworn conception of capital as "produced means of production," has never quite escaped confusing the technical and the economic aspects of the productive rôle of capital, while Clark not only adheres to the natural productivity theory of capital, but has elaborated an esoteric concept of "pure capital," which, like the Platonic "Ideas" and Kant's "Thing-in-Itself" is past all finding out. Whatever be the final verdict on Fetter's work, its logical coherency and compactness are undeniable. In this respect it is conspicuously superior to any other recent general treatise.

If the vulnerable points of the volume be canvassed, they will be found on a lower level of considerations. Whether economic history will minutely substantiate Fetter's contention that the chronological priority of the purchase of rent-charges to the money loan on usury is the explanation of associating the renting contract with land and the interest contract with city wealth, remains to be seen. It is quite immaterial from the theoretical standpoint, but it is a very interesting question, on which Professor Fetter owes the economic world the evidence *in extenso*. The treatise is designed for an introductory college text. Here its bulk is against it, as there are over 560 closely printed pages. Moreover, the exposition, while ever severely self-consistent, flags sometimes in point of style, though the frequent note of vivacity relieves the tedium. Experience alone can demonstrate the book's success as a text; as an economic synthesis bottomed on the accepted modern theory of value and extended to all phases of economic analysis, it stands unsurpassed.

The Ancient Landmark. By Elizabeth Cherry Waltz. New York: McClure, Phillips & Co.

The Irrational Knot. By G. Bernard Shaw. Brentano's. 1905.

The 'Ancient Landmark' is a tale of Kentucky life, dedicated to "those men and women who take the larger view and who walk in the light of it." The practised reader, taking the dedication and the title together, will easily conclude that he is to assist at the removal of some ancient landmark which his fathers have set and his contemporaries find inconvenient. The landmark is, in fact, the irrevocable nature of the marriage tie, and we fear that Mrs. Waltz's readers are more likely to be surprised at the backwardness of Kentucky society than shocked, as the Kentuckians were, by the divorce which is the central interest of her story. Even in Kentucky we should have thought that long-continued infidelity, intermittent madness, the use of opium, and drunkenness, all existing together, would amount to sufficient grounds for a final separation. What her novel seems meant to show is that public feeling in the South at the present day is so strongly against divorce, the disgrace of the woman, however innocent she may be, is so inevitable, that a Kentucky woman is encouraged by her friends to endure anything rather than the contamination of the divorce court. Mrs. Waltz writes in a missionary spirit, with her mind set on the miseries of this slavery to social prejudice. The result is a highly emotional style, and a tale full of incident and passion. All the weapons of the Eastern States, their millions, their social prestige, their advanced theories of the independence of the individual woman, hardly avail to rescue one oppressed Southerner whose husband is a maniac and a monster. Mrs. Waltz is a born writer of sensational fiction, and carries her reader triumphantly through scenes that would be intolerable from a less vigorous hand.

'The Irrational Knot' was written a quarter of a century ago in Mr. Shaw's "nonage." It is much inferior in interest to 'Cashel Byron's Profession,' and considerably less repulsive than 'The Unsocial Socialist' and 'Love among the Artists.' Mr. Shaw has forestalled his reviewers by a preface, in which he demonstrates how success may bring out a man's lack of good taste, and an excess of self-consciousness betray his second-rateness. Mr. Shaw should consider the example of Whistler, and remember that there is a way of talking about one's self that would make the best artist seem a silly and inferior human being. This story, which first saw the light in the seclusion of a propagandist magazine of Mrs. Annie Besant in 1880, is a study of the Superman married. Conolly, the Superman, is a perfectly rational being, who has only one moment of weakness, when the Life Force asserts itself and he marries (not, of course, in church) a seductive and one need hardly add highly irrational woman. Marian Conolly is not, however, an unscrupulous fascinator like Ann in the play. She is that far more irritating type to the Superman, a woman who means well, but is an amateur in the art of life. To begin with, she is a woman of sentiment so ingrained that her husband is plainly relieved when she diverts it into a fresh channel and elopes with a conventional prig. Mr. Shaw's ideal man has always been the expert who is never tentative—"even a white tie did not puzzle him into fumbling"—who is superior to every prejudice and regards everything with the eye of cynical intelligence. The result is a perfectly colorless being like Edward Conolly, certainly the least attractive because the most consistently rational character in Mr. Shaw's gallery of Supermen. It is a gallery of prigs, for the superiority that comes of making one's own standards and scorning every tradition of conduct that will not bear the test of reason as applied by one's self, is merely priggishness in a new and extreme form.

Sally Wister's Journal.

"Well, Miss Sally, what would you do if the British were to come here?" "What?" exclaimed I. "I should be frightened just to death." He laughed, and said he would escape their rage by getting behind the representation of a British grenadier, which is upstairs. "Of all things I should like to frighten Tilly with it. Pray, ladies, let us fix it in his chamber to-night."

They did so, and the result is a most laughable story, told by a real Philadelphia girl, who was in the midst of the Revolutionary War. Get this charming book at any bookstore, or of FERRIS & LEACH, Publishers, Philadelphia. Beautifully illustrated. $2, postpaid.

Harding's Essentials in Mediæval and Modern History

$1.50

This work begins with a survey of the world from the fall of the Western Empire to the year 800. From the latter date there is given an account of the development of the various important countries which have influenced the progress of civilization. The book includes such recent happenings as the separation of Norway from Sweden, and the terms of peace between Japan and Russia. The maps and illustrations are particularly noteworthy. Not only are they numerous, but they have been prepared and collected with unusual care.

BY JAMES DOUGLAS, LL.D.

Old France in the New World

(Quebec in the 17th Century.)

8vo, buckram, $2.50 net (postage .21).

An admirable book on the making of Canada under the French rule, and especially of the beginnings of Quebec, Dr. Douglas having made a particular study of the old town and its associations. A scholarly and open minded account, fully illustrated, of the development of that great country to the north of us. First edition nearly exhausted.

By RICARDO FERNANDEZ GUARDIA

Cuentos Ticos

(STORIES OF COSTA RICA)

12mo, cloth, $2.00.

Costa Rica has its own literature and the above collection—a typical one—of Central America stories has been carefully and smoothly translated by Gray Casement, a close student of the Latin American life, and one who makes a strong bid for the future of these southern republics. Guardia is considered the leading exponent of belles-lettres in Costa Rica and his work has exerted a strong influence over his countrymen. Here for the first time he is put in English and the illustrations and lengthy introduction by the translator make the book unique in the position which it fills.

INDIAN CAPTIVITY SERIES, No. 5.

A Narrative of Adventures attending the Capture, Detention and Ransom of Charles Johnston, of Botetourt County, Virginia, who was made prisoner by the Indians on the River Ohio, in the year 1790. Edited by Prof. E. E. Sparks, Ph.D.

One of the best of this important series of early narratives, and exceedingly valuable as an original contribution relating to contemporary affairs. The annotations, introduction and index by Dr. Sparks make the volume particularly useful.

Published in two editions, uniform with the previous volumes. 24 copies on Japanese paper at $4.00 net. And 267 copies in the regular issue at $2.50 net (postage .11).

A NECESSARY BOOK

A History of "Bossism" and "Graft"

FIVE AMERICAN POLITICIANS

Burr Douglas Hamilton Clinton Van Buren

By SAMUEL P. ORTH

Author of "Centralization of Administration in Ohio," etc. A scholarly account of a subject vital in its interest to all Americans. The author has made a special study of this peculiar phase of American politics.

Dodd, Mead and Company's New Illustrated Books

THE ARTIST'S WAY OF WORKING

By Russell Sturgis

Editor of "The Dictionary of Architecture," etc. Over 200 illustrations.

"The Artist's Way of Working" is addressed not to artists or to art students, but distinctly to the art-loving public. It tries to disclose to them in untechnical language so much of the methods by which the artist produces his effects as will enable them to enjoy and appreciate art works much more fully than ever before. The illustrations are a special feature of the work; they go hand-in-hand with the text. 2 vols. 8vo, cloth, *net*, $15.00.

MY LADY'S SLIPPER

By Cyrus Townsend Brady

Author of "For the Freedom of the Sea," etc.

Handsomely illustrated and printed in two colors.

This is a light, breezy romance of the time of John Paul Jones. The scene of the story is largely in Paris. The attractive make-up of the volume makes it a most acceptable holiday book. Square 8vo, $1.50.

HIS VERSION OF IT

By Paul Leicester Ford

Author of "The Honorable Peter Stirling," "Janice Meredith," "Wanted, a Matchmaker," etc.

Illustrated in color by Henry Hutt, with marginal decorations.

This is one of the most clever short stories that the author ever wrote. A most acceptable gift book. 8vo, cloth, $1.50.

"HOWDY, HONEY, HOWDY"

By Paul Laurence Dunbar

Author of "Candle Lighting Time," "Lil' Gal," etc.

Illustrated from photographs with marginal decorations in color.

Readers need no introduction to the inimitable verses of Paul Laurence Dunbar. His talent won immediate recognition, and to-day his fame is secure. 8vo, cloth, *net*, $1.50.

OLD-FASHIONED FLOWERS

By Maurice Maeterlinck

Illustrated in colors and with ornamental decorations.

This beautifully illustrated volume will give a most suitable holiday garb to three of Maeterlinck's charming essays, viz.: Old-Fashioned Flowers, Field Flowers, and Chrysanthemums. Lovers of Maeterlinck cannot fail to be delighted with this book. Large 12mo, *net*, $1.20.

MAUD

By Alfred Lord Tennyson

A beautiful edition of Tennyson's great poem, illustrated and decorated by Margaret and Helen Maitland Armstrong. Several full-page illustrations in colors, and marginal decorations on every page. 12mo, cloth, *net*, $1.60.

THE SILKEN EAST

By V. C. Scott O'Connor

A record of travel and life in Burma. With map and 400 illustrations, including a large number of photographs taken by the author, and with 20 colored plates. 2 vols. 8vo, cloth, *net*, $12.00.

GREAT PORTRAITS DESCRIBED BY GREAT WRITERS

By Esther Singleton

Author of "Great Pictures," "A Guide to the Opera," etc.

Fully illustrated with full-page halftone plates, a companion volume to "Great Pictures Described by Great Writers," etc. Especially appropriate for a gift book. 8vo, cloth, *net*, $1.60.

CATHEDRAL CITIES OF ENGLAND

By George Gilbert

With 60 full-page illustrations in color by W. W. Collins, R.I.

The great cathedrals of England are reproduced in beautiful colored plates by a process which is far superior to that ordinarily in use. Besides the illustrations there is a full and valuable text, and we feel certain that on the whole the volume is the handsomest on the subject ever issued. 8vo, cloth, *net*, $3.50. De Luxe edition, boxed, *special net*, $10.00.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 9, 1905.

The Week.

Bossism proved to be in high disfavor at the polls on Tuesday. In this city, McClellan—certainly with the support of decent men of both parties who feareed Hearst's triumph, possibly by the aid of fraudulent votes, as Hearst contends and threatens to test in the courts—obtained a narrow plurality of less than 4,000 votes. Jerome, on the other hand, though heavily weighted by the court's refusal to place his name on the Republican ticket after Flammer's withdrawal and the machine's recantation, succeeds by 11,000. This victory, we need not say, is of enormous value as an example of independent candidacy, and as checking Tammany where the need is (in the very nature of a criminal organization) greatest. No personal struggle throughout the country has excited so much interest, or enlisted so much voluntary pecuniary backing in places far remote from New York, as Mr. Jerome's. As he figured on many ballots along with Hearst, a recount to the latter's advantage would add to his total; and the recount is not to be decried because it might give us the most disreputable and dangerous Mayor New York has ever been saddled with. *Fiat justitia.*

That other sink of municipal iniquity, Philadelphia, has, to Pennypacker's grief and amazement, redeemed itself from the thieves who, in Secretary Root's parlance, masqueraded under the Republican party name, by some 44,000 majority. The Reform party also lending its support to William H. Berry, Democratic and Prohibition candidate for State Treasurer, he was elected by 100,000 majority, and it may well be that some ventilation of his predecessors in that office will ensue. Most significant of all, perhaps, is the Republican overthrow in Ohio, where Governor Herrick and Boss Cox go under—the latter never to emerge, as he publicly manifests. Secretary Taft, who straddled on these worthies, repudiating Cox while sustaining Herrick, has here food for reflection, as has Senator Foraker, who just escaped allying himself also with the now shattered Durham gang in Philadelphia. A national Te-Deum deserves to be sung in the case of Maryland, which has spewed out the Poe disfranchising amendment. May we not say of Gorman, what the South Carolina chivalry humanely reported of Colonel Shaw of the 54th Massachusetts (colored) Regiment, that he is "buried with his niggers"?

The Treasury ended the month of October with expenditure running even more heavily beyond revenue than it did a year ago. Excess of expenditure for the month, as reported, was $4,857,000; in October, 1904, it was $3,952,000. This comparison is more significant than the simple fact of a deficit in the month when interest payments are large. As a matter of fact, the October public revenue this year was greater by $1,500,000 than that of October last year, but expenditure showed an increase of $2,400,000, of which amount two-thirds fall to the account of army and navy outlay. Since the previous fiscal year ended last June, expenses have risen $3,100,000 over the same period a year ago. But for a sudden expansion of $12,000,000 in customs receipts, the deficit of last autumn would be portentously increased. All experience, however, has taught how unsafe is dependence on the customs revenue as a basis for constant increase in the scale of expenditure. Customs receipts fall suddenly in the vicissitudes of trade—the $11,800,000 decrease of the fiscal year 1904 is one case in point; the $71,000,000 shrinkage in the fiscal year 1894 is another—whereas a schedule of expenditures, once fixed, does not come down along with revenue. Thus, in 1904, expenditures increased $76,000,000 in the face of falling income.

President Roosevelt's famous "muzzling order" to his Cabinet officers turns out to be the most innocuous document ever issued by a Chief Magistrate. The letter appeared on the face of it to be a plain request to the members of the Cabinet not to talk for publication—the indefatigable Secretary Loeb would relieve them of that onerous duty. But the members of the Cabinet speedily informed Mr. Roosevelt that they enjoyed talking for publication; they do not want to turn the job over to the accomplished Mr. Loeb; they see no reason why they should sit mum while their inferiors in rank discourse wisely on the affairs of the nation. Having learned their sentiment, the President gracefully acquiesced. Far be it from him to intimate to any Cabinet officer when he should speak and when hold his tongue. Equally abhorrent to the President is the notion of shutting his dear friends, the newspaper correspondents, from avenues of information and from the pleasure of Cabinet society. In fine, the President meant nothing more than to express a pious hope that a member would not discuss with the reporters Cabinet action on any Department except his own.

The appointment of Charles A. Stillings as Public Printer promises well for the reform of the office. Mr. Stillings is a practical printer; he has had experience in administration, and he is cordially endorsed by large printing firms in New York and Boston. Above all, he will not be hampered by political obligations. The ablest man in the world would make a failure in the office were he to sacrifice it to the demands of party bosses. Of late the incumbents have not displayed conspicuous ability, and too many of them have regarded the subordinate positions as so much patronage. Under the recently dismisse F. W. Palmer, conditions had become simply intolerable. Mr. Stillings will find public opinion on this subject fully aroused and ready to resent any attempt to raid him or unload political hacks upon him. He will be strongly backed by the President, who ordered a special investigation, and who is fully alive to the necessity of economical and efficient management. Thus he takes up the work under uncommonly favorable circumstances. Not for years has a Public Printer enjoyed such an opportunity.

The annual report of the Military Secretary of the Army is singular in being wholly divested of that optimistic official tone so characteristic of public documents. He gives the actual number of desertions during the year as 6,533, or more than one in every ten of the 63,022 men. Of these 63,000 soldiers, 22,254 were discharged on expiration of their enlistment, and 9,460 by reason of disability or because of a court-martial sentence, while 189 were retired, and 377 died or were killed. In all, 38,813 men, or more than 61 per cent. of the entire enrolment, left the army in a year. In other words, if their places have been filled, more than 61 per cent. of the men in the army are raw recruits. Undoubtedly, some of the men discharged reenlisted, but not many, for the great majority of men return to civil life as soon as possible. When it is remembered that of those in the service one in every six is reported by the Surgeon-General to be ill with disease due to immorality, the condition of the army cannot be said to be a very happy or satisfactory one. Indeed, Congress would seem to be justified in instituting an investigation. It should take note of the able annual report of Brig.-Gen. J. M. Lee, who blames the absence of officers from their troops, the lack of a beer canteen, and the want of care in recruiting, for the present evil days of the service. In one case he knows of a boy of seventeen who was falsely enlisted as being twenty-two, only to desert at once—but no one was punished. Between the lines

one reads that lack of discipline and accountability would also figure among Gen. Lee's reasons were his a confidential instead of a public document.

Though the Government has more applicants for most of its jobs than it knows what to do with, it has been in unusual straits this year to get suitable men to take the positions it is especially anxious to fill. The War Department optimistically expected to secure officers for the Philippine Constabulary at $1,100 salaries from the graduates of agricultural colleges and military schools, but a diligent canvass secured only four-fifths of one applicant to each vacancy. Meanwhile, the Isthmian Canal Commission is scouring the world for persons so unfortunately situated at home that they are willing to go to work at Panama. And this is saying nothing of the problem of enlistments for the army and navy. There must be an inequality somewhere. If only the work of a clerk at Washington could be made as hard as that of a constabulary lieutenant in Luzon, the local politician's son might be indifferent which one the Congressman bestowed on him; but so long as an unskilled man is paid more for opening and shutting a door in the Capitol than for toiling in the tropical sun at Culebra, the authorities must expect some variations in the distribution of applicants. If the Keep Commission can really make the District of Columbia a place of terror to loafers, the latter may clamor to be sent to the out-of-the-way places.

Speaker Cannon's reported antagonism to a bill for railway rate regulation is plausibly explained by his declaration not that he will unqualifiedly oppose rate legislation, but that he will oppose it until the Senate has acted. Last year the House passed a bill, but the Senate killed it; and now Mr. Cannon wants to know what the Senate is really willing to do before he lets the House waste its time. In short Mr. Cannon and his friends seem to be sparring for position. The Senate, or those members of it who do not fall in with the President's desire, naturally prefer to let the House frame the bill. Then they can devote as many months as they please to the task of picking flaws in it, and deciding that, after all, the measure is too radical. The members of the House who are not eager for regulation—and probably Speaker Cannon himself will not die of chagrin if nothing is done—are ready to let the Senate take the plunge. This done, the House can shake its head sadly, lament because the Senate has betrayed the people into the hands of the railways, and throw out the bill on the ground that it is feeble and ineffective. It is a pretty game.

President Robbins of the Armour Car Lines may be within his legal rights in refusing to answer questions put by the Interstate Commerce Commission. He can afford to hire skilled lawyers who will instruct him in all the technicalities and evasions of the law, civil and criminal. But there is still a question whether a concern which operates 12,500 cars can justly plead that it is engaged in a purely private business. The contracts between the railways and the car lines are ingenious devices for whip-sawing the shipper. If the California orange-grower complains that he pays too much for laying down his fruit in New York, the railway manager politely assures him that the road is helpless. It cannot redress the wrong, because the freight charge is very reasonable, and the excess has been extorted by the Armours. When the appeal is carried to the Armours, the reply is that the icing and other charges are not exorbitant, that the Armours have no control over the high freight rates, that the Armours are a private company; and what are you going to do about it? This plea of impotence and impudence cannot be tolerated. The Armour Car Lines, whatever their legal standing, are actually engaged in interstate commerce. The oppression and injustice of the monopoly are things of which Congress will take cognizance. If the Commission has no jurisdiction, a committee of Congress can lay bare the details of an iniquitous compact to extort from the great majority of shippers the last possible cent, and to favor certain insiders.

The dying declaration of the self-killed cashier of the Enterprise National Bank of Allegheny, to the effect that "Bull" Andrews, one of Quay's old lieutenants, had "worked my ruin" adds another heavy burden to the load of infamy which the Pennsylvania machine is now carrying. Andrews was the general called back hastily from New Mexico not long ago to rally the demoralized forces of the Penrose organization. It was for his personal benefit, as a prospective Senator, that Quay was believed to have advocated so long and uncompromisingly the four-State bill in Congress. Pennsylvania politics have moved far from the cheerful times of the boss's promise to "shake the plum-tree." Those fat years have ended in a series of the most sordid of tragedies. A Philadelphia contemporary printed the other day a calendar of crimes, suicides, and flights from the country, which had resulted from the alliance of business and politics in the Keystone State. Cashier Clark's confession, coming at a time when the ring is putting forth every effort to appear in a respectable light, and is even spending large sums on advertising designed for its own exculpation, may serve at least one good purpose as a lesson, if another is needed, of what the old régime has meant.

That the wreck of a bank in western Pennsylvania should frustrate the hopes of a Territory in the extreme Southwest seems illogical, but stranger things have happened in politics. New Mexico had not only had her senior Senator picked out in advance by Quay and delivered in advance, when W. H. Andrews moved to that Territory, but definitely approved the choice last fall when it elected him delegate to Congress. Certainly, the accounts of the Enterprise Bank failure would be poor credentials for a member of the most dignified body in the world. But what is the course to be pursued now? Oklahoma and Indian Territory, to whose admission as a single State there is no opposition, have been kept so long waiting on the Southern Territories that they are again agitating separate Statehood. It is of record that several important Arizona newspapers which formerly stood out against amalgamation with New Mexico, have come around to the two-State plan. But amalgamation would not settle the issue raised by the Andrews scandal. New Mexico can outvote Arizona, and, if each of the present Territories were to be given one Senator, he might still be chosen.

Since our recent comment on the refusal of the Northwestern Mutual Life Insurance Company to pay over money to politicians in order to save the Union, our attention has been called to the similar stand by the Mutual Benefit Life Insurance Company of Newark, N. J. The Insurance Commissioner of Tennessee recently wrote to President Frelinghuysen of that company asking for specific information as to any gifts made by its officers during the last ten years for political purposes, or any expenditures to defeat or to advance insurance legislation. In reply, Mr. Frelinghuysen made affidavit that during this period no contribution had been made by or on behalf of his company to any political party or individual candidate, or to any association or organization, or for the purpose of advancing or defeating legislation. Its one gift was $2,500—voted by the board of directors—for the sufferers by the Galveston flood, and its total legislative legal expenditures were $651.58, comprising five separate payments. Every cent of this small sum was paid for counsel fees to regular representatives of the company. This admirable record does more than testify to the fidelity of their trust of the officers of the Mutual Benefit Life. It proves conclusively the needlessness of the vast corruption expenditures of the guilty New York companies. If the

Mutual Benefit Life and the Northwestern can thrive without buying legislatures, every other company can.

Connecticut newspapers are charging the town clerks of that State with being in a conspiracy to defeat the purposes of the corrupt-practices act, passed by the Legislature last spring at Hartford. A majority of these officials have so far failed to file with the Secretary of State the returns of expenses incurred by candidates, and they are supported by the chairman of the Republican State Central Committee, who has publicly said that he is "not in sympathy with the enforcement of the law as to returns." But it seems probable that public sentiment will compel its observance. John A. Wright, who was elected a probate judge at Westbrook on October 2, was fined $25 by a police magistrate on Wednesday week for failing to make a return of election expenses within fifteen days after the poll. Wide publicity is being given this case as a warning to the other candidates in the October election. Judge Wright declared that he filed his statement with the town clerk, who, acting apparently in accord with most of the other town clerks throughout the State, refused to forward it. But the authorities very properly declined to allow Mr. Wright to escape the responsibility. These October town elections were of relatively slight importance, yet they furnish a test of the new law, and if the town clerks ignore its provisions now, they will do so after the more important elections when the influence of a Bulkeley or a Fessenden is behind them.

In dismissing Hinckley Gilbert Mitchell from the professorship of Hebrew and Old Testament Exegesis at the School of Theology of Boston University, the trustees of the institution are exercising their liberty. The bishops of the Methodist Episcopal Church have condemned Professor Mitchell as a heretic, and they are fully entitled to have their teachers of theology as narrow and ignorant as they choose. If well-trained scholars refuse to accept the old dogmas, the supply of mediocrities who will have no troublesome doubts is absolutely inexhaustible. Mr. Mitchell has long lain under suspicion. His first step from the straight path was taking a doctor's degree at Leipzig. A man who studies Semitic languages in Germany is almost sure to become tainted with the higher criticism. This taint Mr. Mitchell has never been able to eradicate, and as a result he has accepted some of the conclusions of modern scholarship. His views are grotesquely out of place in a theological school whose purpose is to maintain the tenets of the eighteenth century; and Professor Mitchell ought to be as glad to go as the bishops are to get rid of him. The change may reinforce the orthodoxy of Methodist students of divinity, render them less accessible to ideas, and therefore more acceptable to their ecclesiastical superiors. But it will hardly strengthen popular confidence in the Boston University School of Theology. People will leap to the inevitable conclusion that the professors are not expected to search for the truth; they are to subscribe once for all to the faith as delivered, and thereafter they are resolutely to close their minds.

Negotiations with the Canadian Government are now beginning with a view to the preservation of Niagara Falls by international action. Whether it will prove legal and feasible for the two general governments to supersede, as is now suggested, the local jurisdiction of the State of New York and the Province of Ontario, remains to be seen; but it may be true that this form of control would be a better safeguard against further encroachments. The gravity of the present menace can hardly be too often emphasized. As Dr. John M. Clarke, the State Geologist, wrote last spring: "The two American and three Canadian companies now in operation or about to operate, when producing to their charter limits, will abstract 48,000 cubic feet per second. That amount will bring the water level to the bottom of the river at the American shore." Hence the recommendation of the International Waterways Commission, a fortnight ago, was that steps be taken to "prevent any corporate rights or franchises being granted or renewed by either Federal, State, or provincial authority . . . until this Commission is able to collect the information necessary to report fully upon the conditions and uses of these waters." The request for such a practical truce between the friends of the Falls and the business interests seeking to exploit them cannot well be refused.

Mr. Balfour appeared to advantage in his reply on Monday to the appeals (mingled with threats) of the London unemployed. Led by a Labor member of Parliament, they marched to Downing Street, expecting, no doubt, all kinds of soothing promises from a Premier whose Government is tottering; but Mr. Balfour met them in manly and wholesome fashion. Abounding in sympathy, and expressing the hope that private charity would make haste to relieve absolute suffering, he held out no hope that the Government would do anything to "make work" for the unemployed. He knows, if impulsive sentimentalists do not, that when you begin to recognize this alleged *droit au travail*, you never can end; that, on those terms, the unemployed will multiply faster than places can be made for them; and that the truest kindness, as well as the soundest statesmanship, consists in throwing back responsibility upon individual effort and private enterprise. But imagine a Hearst in Balfour's shoes! He would have promised (before election) the earth and the fulness thereof.

Such excesses as are still reported from Russia were, perhaps, to be expected after the extreme tension which preceded the Czar's surrender. The most serious troubles, as in Odessa, seem to be rather racial than political. Apart from such bloody and lamentable conflicts—the massacred Jews, as usual, being alleged to have "begun it"—the latest accounts imply that the people are calming down and preparing to make serious trial of their new institutions. M. Witte's task is a mighty one; his work at Portsmouth was child's play, by comparison. As he made an especial appeal for American sympathy, it cheered him, as he showed by his response, to receive the cabled greetings sent him in the name of New York University. Such assurances that educated Americans are watching with intense interest the great experiment of free government in Russia, might well be given M. Witte by other academic bodies.

That the Powers would send a fleet to overawe the Sultan if he persisted in his refusal to turn over the financial control of Macedonia to their agents, has long been evident. They have been waiting patiently for the Porte to surrender before the sailing of cruisers. Of course, surrender will come afterwards. Austria showed a few years ago how readily the Sultan perceives the force of argument in big guns. Yet all through October the Sultan declined positively to allow the financial agents designated by the European Concert to proceed to Macedonia. They actually reached Salonika, but there they stuck. In reply to energetic protests, the Porte replied that, while it did not deny the need of financial reforms in Macedonia, it could not allow the work to be turned over to foreigners. This was not an unnatural feeling. The Sultan might well argue that, if once the Powers got hold of the purse-strings, they would proceed to take over the whole Macedonian administration. But the Powers supposed that they had Turkey's assent to that step, and are, at any rate, determined to take it. Before a show of force, the Porte will yield. It desires to be on good terms with the Powers and all their representatives; and in this connection, we may say that we are informed that the cabled reports of trouble made by Turkish officials for Mr. Bryce, on his recent journey in Macedonia, were devoid of truth. The opposite, rather, was the case.

THE LATE CAMPAIGNS.

For an "off-year," the campaigns of 1905 have roused unusual public interest. In four States—Massachusetts, Rhode Island, Ohio, and Virginia—Governors were to be elected. In Pennsylvania a State treasurer was to be chosen, and in Maryland a suffrage amendment, which led to a fierce campaign, was to be submitted to the voters. Georgia was the scene of an exciting canvass for the Democratic primary nomination for Governor, and in a number of States legislatures were to be chosen that would have the election to a United States Senatorship. Among these is New Jersey, where a successor to Senator Dryden must be considered, and Tennessee, where Senator Carmack and ex-Gov. Taylor have been fighting for control of the Legislature. Various municipal campaigns also developed into contests of country-wide importance, like the three-cornered Mayoralty fight in this city, Jerome's independent appeal, the City Party revolt in Philadelphia, the Johnson-Boyd contest in Cleveland, and the anti-Schmitz campaign in San Francisco.

In a measure, the contests in Massachusetts, in Rhode Island, in Ohio, and in Georgia seemed likely to turn upon the success or failure of a candidate's attack on corporation influence. Clark Howell emphasized, in his appeal to the Democrats of Georgia for support at the primaries, the charge that his opponent, Hoke Smith, had been a railroad attorney, and was presumably under the control of Morgan and the Southern Railway. Ex-Governor Garvin of Rhode Island based his claim for preference over Governor Utter this year, as in previous years, upon his desire to revise the little State's antiquated Constitution—a Constitution that has facilitated the ownership of the corporation of Rhode Island by the street-railway interests, the Aldriches, and the Braytons. The Democrats of Ohio found a number of vulnerable spots in the Herrick candidacy, among them the Governor's close connection with large corporation enterprises. The Republicans, to be sure, retorted that John M. Pattison, the Democratic candidate, is the president of an insurance company. On both sides in Massachusetts taunts as to corporation control were uttered—their targets being Lodge rather than Guild on the Republican side, and Henry M. Whitney, Democratic candidate for Lieutenant-Governor, on the other.

The fact that no national issues were before the people led to a thorough and wholesome discussion of local party organizations. State bosses like Gorman of Maryland, Lodge, and Cox of Ohio became distinct issues. In his struggle to force the Poe disfranchising amendment upon Maryland, Senator Gorman laid himself open to attack both from opponents in his own party, like Senator Rayner, and such aggressive Republican leaders as were headed by Secretary Bonaparte. It was shown that the suffrage amendment was merely a device for fastening on the State indefinitely an organization that had done Gorman's will, and which he would bequeath to his followers. The shadow of George B. Cox of Cincinnati has been over the Ohio Republican campaign. It was charged against Gov. Herrick that he had been under the influence of this ambitious gutter-product, and that the "boss of the worst-governed city in the country" would extend his influence to Columbus if Herrick were elected.

In Pennsylvania, too, where the only State office of any consequence to be filled was that of Treasurer, the issue clearly defined itself—Should the old Quay machine, already loose-jointed under the management of Senator Penrose, control the State Treasury as it has owned the Governor and the city of Philadelphia, or should a beginning be made in independent government? Here city and State campaigns oddly merged. A sheriff, a coroner, and two city commissioners were to be elected in Philadelphia—not a contest to excite general interest throughout the country in ordinary years; but the hint had gone out that this election was to be the first trial of strength of the champions who, under Mayor Weaver, have set out to destroy the Durham organization that has lined up behind a national party banner. The attempt to inject national politics into local campaigns failed altogether in Philadelphia. It succeeded only partially in Ohio, and in Massachusetts Senator Lodge's plea for Republican support for Guild and Draper, on the ground that opposition to them meant opposition to Roosevelt and his policies, met with no enthusiastic response. Gorman's argument that the Poe amendment was necessary to insure white supremacy, and that white supremacy meant the continuance of Democratic rule, the continuance of an effective Opposition, failed to awaken the old-time spirit.

Everett Colby's successful primary fight against Major Lentz in New Jersey has attracted the country's notice as professedly the first skirmish in the battle to redeem the State Legislatures from the corporations that have named and owned United States Senators. The extension of the primary to the selection of party candidates for the Senate in States like Virginia, Illinois, and Tennessee further emphasized this desire to put back into the peoples' hands the power wrested from them by the consolidation of the machine system. From this brief review it appears that though the campaigns of this year were limited in number, they served admirably to point the growth of independence in local affairs.

THE WORK OF STATE RAILROAD COMMISSIONS.

In the prolonged agitation over the question of railroad rate-making by Federal authority, singularly little has been said regarding the experience of those States whose railroad commissions have long enjoyed substantially the same powers which Congress is now asked to confer upon the Interstate Commerce Commission. Some of them have a much longer history than that body, and most of them were granted their comprehensive powers in response to popular movements—the Granger agitation, for instance—similar in character to that of which the so-called Interstate Commerce Convention is now the head. And it may be remarked in passing that, while the demonstrations of last year were not sufficient to secure the passage of the Esch-Townsend bill at Washington, they did result in the establishment of three new State rate commissions—in Indiana, Washington, and Wisconsin—and the passage of a railroad commission bill in Montana as well, though this was vetoed by the Governor.

Since legislators have avowedly declared their purpose of doing within the boundaries of their own State what they would like to see done over the whole country, the history of the rate-making agencies so created ought to develop some of the principles applicable to the national railroad problem. The State commission's jurisdiction extends, of course, in any case, only to shipments which both originate and end within its territory, but what proportion this bears to the entire burden of traffic, neither the railroads nor the commissioners know. They could not know without collecting every bill of lading from every station for a year. This was illustrated in the Wisconsin legislative hearings last year, where the business within the State was variously estimated at from 2 to 16 per cent. of the total.

From a review of the reports of the so-called "strong" State commissions—"regulative" as distinguished from "supervisory"—two facts stand out strikingly. The number of complaints made to them of unjust or discriminating rates is astonishingly small, and an overwhelming proportion of these are settled out of court without even a formal order. The State Commission of real life, in other words, is neither the tireless and conscientious guardian of the people's rights, ever alert, as the advocates of Government rate-making picture it, to hunt out and destroy oppression, nor the crazy group of aggrieved theorists running amuck in the delicately balanced rate-structure, as the other side has described.

This may be illustrated by citing a few figures from various State reports for the year 1904. Of 5 complaints to the Illinois Commission, none related

to rates, nor did any of the 58 made to the North Dakota Commission. Of 95 in South Dakota, 2 were on rates; of 135 in Minnesota, 7; of 241 in Kansas, 14; and of 335 in North Carolina, 26. Everywhere grievances regarding the running of trains, the erection of new stations, the building of side tracks, the failure of companies to supply cars, and similar operating matters greatly outnumber the rate cases. According to Frank Haigh Dixon's table, given in his 'State Railroad Control,' the Iowa Commission, between 1888, when it was granted the rate-making power, and 1894, received 92 complaints of station facilities and service to 37 on rates—a smaller average per year, by the way, than when the Commission was only advisory. But, eliminating this greater bulk of other business, we may summarize the year's work of some of the more important "strong" commissions as regards rate adjustments alone, in a few lines each:

"Alabama—Hearings on application for general reduction of rates. Denied. Made 'material reduction' in rates on grain, hay, potatoes, syrup, etc. Ordered 10 per cent. deducted from sums of local rates.

"Georgia—Ordered general revision of 'standard tariff.' Enjoined by railroad companies. Commission withdrew its orders on promise of the railroads to reduce interstate rates.

"Illinois—No action on rates reported.

"Iowa—Hearings on twenty modifications of rates requested. Embodied sixteen in amendment to classification. Also settled many cases by correspondence.

"Kansas—Complaints on rates 14, relief granted by Commission 3, relief denied by Commission 3, adjusted 7, withdrawn 1.

"Missouri—Promulgated maximum distance freight schedule, abolished toll on grain inspected, reduced switching charges. All complaints but one adjusted.

"North Carolina—Applications of railroads granted 4, denied 1; of shippers, denied or dismissed 5, granted 3, adjusted 5, no jurisdiction 5.

"North Dakota—No action on rates reported.

"South Dakota—Two rate complaints, both adjusted.

"Texas—'Many reductions'; held 97 hearings, issued 270 circulars, 375 'special authorities.' Among reductions, icing charges on cabbages, excess baggage charges, rates on stone, sand, pig iron, wire, rough logs, and rice."

Lack of uniformity in arrangement makes detailed comparison impossible, but is is manifest that, whatever the moral effect of the drastic rate-making powers of these commissions may be, they have very seldom exercised them. Not only are the vast majority of complaints adjusted without a formal order, but, in all States dealt with above, there was only one instance of a railroad company contesting an order in the courts, and that was to avert a general reduction. The so-called "strong" commissions, where they have been active at all, have, in fact, worked on substantially the same lines as a purely advisory Commission might. So their most useful function has been, not the summary correction of abuses by their own authority, but the bringing together of railroad and shipper in an amicable relation.

GOVERNMENT EXPERTS.

Our readers will recall that last May the Bureau of Manufactures at Washington sent out Mr. Lincoln Hutchinson as a special agent to report upon the condition of our trade with South America. It will be remembered, also, that Mr. Hutchinson speedily discovered and reported to the Washington authorities that there was no reason for thinking that American trade with Brazil would be aided by the establishment of additional steamship lines—of course, by means of a subsidy. It appeared, indeed, that there was no lack of steamship facilities, and that the countries which have worked the hardest to establish connections with Brazilian ports have not improved their trade by such efforts. In fact, Mr. Hutchinson had the presumption to suggest that what was needed was not more steamships, but the improvement of postal facilities, which are now very slow and uncertain on account of the unbusinesslike methods of the New York Post-Office.

When his report appeared, we suspected that his conclusions would cause a commotion among the subsidy-hunters at Washington, who seem to have the ears of the officials in the departments. That something had gone wrong with the machinery for disseminating official misinformation seemed to be recognized uneasily by the editor of the *Daily Consular Reports*, who took occasion to insert an editorial paragraph to the effect that Mr. Hutchinson's opinion "does not agree with a very common belief in this country." We have waited with interest to see what action would be taken to counteract the dangerous heresy that trade with any country can ever increase and multiply unless the Government gives somebody a subsidy. How such a pernicious doctrine ever found its way into an official publication of the United States Government, is hard to conjecture.

A recent number of the *Consular Reports* supplies the needed refutation of Mr. Hutchinson's dangerous teachings, and offers the *amende honorable* to the subsidy-seekers for the undeserved affront. The editor of the *Reports* has found a newspaper correspondent who has recently been travelling in South America, and who has become convinced that the only hope of extending our trade with Brazil and other countries is to establish direct steamship connection with their ports. That there is no lack of transportation facilities at present counts for nothing with this patriotic investigator: trade would increase by leaps and bounds "if fine steamers were seen in the Brazilian ports flying the Stars and Stripes." What shall go into the ships is, of course, a matter of secondary importance, provided only that a subsidy form a part of the cargoes; the main thing is to familiarize the people of South America with the sight of the flag. Let the subsidy-grabbers take new courage. Compared with the patriotic sentiments of this "recent traveller," the opinions of Special Agent Hutchinson seem impotent and sordid indeed.

All this suggests certain serious reflections concerning the position and functions of the "expert" who undertakes to investigate economic problems for the United States Government. Like Mr. Hutchinson, he usually comes from some university where, presumably, he has been trained to observe facts, record patiently the results of his observation, and reason soberly upon the evidence he has gathered. But little does your expert realize how poorly his university training has fitted him for the practical, rough-and-tumble work of the official investigator. The first thing that he must learn is, that, to the politician, scientific truth means not conformity with hard and sober fact, but availability for the purpose in view at any particular time. In all things the expert must consider the purpose and policy of the party which happens to be in power, and must guide his researches accordingly. This is the first and greatest commandment for the expert; and the second, third, and all the others are like unto it.

To give these general remarks a practical application, and to furnish a model for Mr. Hutchinson and other inexperienced experts, we may point with pride to the work of the late Industrial Commission. There was a body of experienced investigators who understood precisely what they were appointed for! The country was agitated in 1898 over the growth of Trusts and the manner in which they abused the privileges accorded them by the tariff. There even seemed to be danger that something might be done to remedy the evils of which the people complained, and so Congress decided to have the matter investigated. The members of the Commission, realizing the delicacy of the situation, deliberated until the country had had time to cool off, and then brought in a nineteen-volume report which nobody would, or could, read except under compulsion. The Commission concluded that Trusts were dangerous affairs which had proved a great boon to the American people, and that the tariff was responsible for none of their abuses and most of their benefits. Whenever any of the more untutored experts employed by the Commission were in danger of unearthing some significant and important fact, they were promptly called off and directed into "safer" avenues of investigation; while if their final conclusions ever gave displeasure, the disagreeable passages were conveniently lost somewhere on the way to the Government Printing-Office. That was an investigation worth the having; it endangered no "business interests," and never threatened to cut off contribu-

tions to the Republican National Committee. Inexperienced investigators, fresh from the university, may learn much from the nineteen portly volumes in which the work of the Commission is entombed. Indeed, if Mr. Hutchinson had merely read the first volume, he would not have committed such a *faux pas* as to run foul of the subsidy-grabbers during the second month of his labors. For whose benefit does he suppose that the commercial policy of the United States is now directed?

THE "PATENT MEDICINE" CRUSADE

In order to reduce the "patent" proprietary medicine business to its legitimate field, it is necessary to accomplish only two things: First, the public must be made to understand what these "remedies" are in themselves, and, second, legislators and well-meaning citizens generally must be brought to realize that the "demonstrations of popular sentiment" in favor of these nostrums are purely factitious, being inspired solely by the manufacturerers themselves and those who profit by the sales. The past year—the most harassing, perhaps, that the proprietors of the celebrated cure-alls have ever passed through—has seen so much accomplished by educational work along both of these lines that one might almost declare the whole face of the question to be changed.

The initial difficulty in dealing with this subject is, of course, that the vast majority of so-called "patent medicines" are not patented. If they were, their formulæ would be matters of public record. As it is, those engaged in the fight may easily discredit their cause by such mistakes as that of the editor who some months since described one popular mixture on the basis of an old analysis, and was compelled to retract by the demonstration that the composition as now on sale was something quite different. Concealment of the facts regarding a medicine, combined with the widest publicity for its claims, has been the requisite for success in this business. The facts have long been accessible to any one with but little trouble. Yet when some of the ten-cent monthlies and weeklies, circulating largely among what may be called without disrespect the patent-medicine-taking classes, began to publish them, more genuine consternation and horror was never aroused. Loyal members of temperance societies learned for the first time that the healing fluids they had been taking with such confidence and in such quantities contained percentages of alcohol carrying from twice that of lager beer to that contained in the most fiery whiskey, brandy, or gin. Many, if not most, of the "tonics" and "bitters" advertised are, what the secretary of the Massachusetts Board of Health called "Peruna"—"cheap cocktails." Without the agitation of just such publications as the *Ladies' Home Journal*, *Leslie's Monthly* and *Collier's Weekly*, it would have taken a very much longer time to hammer home this fundamental fact.

Official agencies have been more than usually active, too, in the past year. The Commissioner of Internal Revenue's recent ruling, requiring the payment of a retail liquor dealer's tax for the sale of the highly alcoholic preparations, is important, as also the action of the Post-Office Department in withholding the use of the mails from actually fraudulent medicine concerns. Finally, one State has at last enacted the law requiring the publication of formulæ on all packages or bottles of proprietary remedies. This law, which ought to be in force throughout the country, has thus far been fought successfully by the "patent-medicine" interests everywhere except in North Dakota, which State is thereby entitled to head a roll of honor.

As to the means by which an apparent expression of public sentiment is secured adverse to these salutary statutes, the article on "The Patent Medicine Conspiracy," in the current issue of *Collier's*, presents a greater amount of detailed information than has ever before been brought together. It has long been known by those who have looked into the subject that the crude method of buying Legislatures to head off unfriendly legislation has been succeeded by a more effective system of controlling the press through advertising. The credit for the invention is freely accorded to Mr. F. J. Cheney of Toledo, proprietor of Hall's Catarrh Cure (alcohol 14¾ per cent.), who explained it a few years ago at a session of the Proprietary Association at Delmonico's. The writer of the article referred to shows by facsimiles of the advertising contracts of various leading companies that his hint has been taken. This is one clause found in substance in the advertising contracts of all the leading companies:

> "It is mutually agreed that this contract is void if any law is enacted by your State restricting or prohibiting the manufacture or sale of proprietary medicines."

And the second bears a strong family resemblance to it:

> "It is agreed that the Munyon's H. H. Remedy Co. may cancel this contract pro rata in case advertisements are published in this paper in which their products are offered with a view to substitution or other harmful motive; also, in case any matter otherwise detrimental to the Munyon's H. H. Remedy Co.'s interests is permitted to appear in the reading columns or elsewhere in this paper."

These are brief clauses, but they are potent. Because of them, a most important debate on the "labelling bill" in the Massachusetts Legislature last spring went unreported by every paper in the State except the Springfield *Republican*. Because of them, it was found impossible to procure the publication of one of Mr. Bok's articles, even at advertising rates, in the press of the country generally. Because of them, every dollar of advertising has been withdrawn from North Dakota. Because of them, editors have brought their personal influence to bear on legislators—*Collier's* prints one threatening letter to a Wisconsin Senator—and have written uncounted columns of "editorials" praising the wares of the nostrum makers. Details are given *ad nauseam*. We have seen, in an advertising journal not long ago, a report of the action of an Ohio newspaper publishers' association, whose members voted that if a hostile bill passed the Legislature, their papers would adopt the policy of printing the attending physician's name as a part of every death-notice.

We have said above that general enlightenment on two points would result in putting the proprietary medicine business in its proper place. If any one prefers somebody's Nerve Cure to any other tipple, that is his own affair. The essential point is that no one shall be wheedled into buying it while ignorant of its real nature. Similarly, an editor, like anybody else, has a perfect right, under the Constitution, to shout himself hoarse in the praise of a particular cough syrup. But, "when next a member of a State Legislature arises and states, as I have so often heard, 'Gentlemen, this label bill seems right to me, but I cannot support it; the united press of my district is opposed to it'—when that happens, let every one understand the wires that have moved 'the united press of my district.'"

THE YOUNG MAN AND THE WORLD.

Senator Albert J. Beveridge's book, 'The Young Man and the World,' renews one's faith in human nature. Here is a member of the United States Senate advising beginners in the great business of life. The uninitiated would expect the author to look at the careers of his distinguished colleagues and then utter the exhortation, "Go thou and do likewise." The Senate is indubitably made up of men who have achieved what is commonly regarded as success. Consider but a few of the more prominent names: Morgan G. Bulkeley of Connecticut, Joseph R. Burton of Kansas, Arthur Pue Gorman of Maryland, Henry Cabot Lodge of Massachusetts, William A. Clark of Montana, John F. Dryden of New Jersey, Thomas Collier Platt and Chauncey Mitchell Depew of New York, John H. Mitchell of Oregon, Boies Penrose of Pennsylvania, Nelson W. Aldrich of Rhode Island. From the conduct of these men an ingenious philosopher might deduce a compact and undeniably practical code of morals. The first and great commandment would be to get on; and the second would be like unto

it, to sacrifice everything to that end. If you want money, serve the interests of the corporations which can pay you handsomely. If you have money, debauch the electorate of your State. If you come of good family, comport yourself like a man bred in the gutter. If you have education, devote your accomplishments to demagoguery. Exert every effort to make politics corrupt and disreputable.

But this kind of cynicism is not for Mr. Beveridge. His advice might fitly fall from the lips of any preacher or Sunday-school superintendent in this virtuous land; or it might, without marring the context, be incorporated in the volumes of Dr. Samuel Smiles himself. When there is so much that is sound, it seems almost invidious to make selections. For the benefit of our more depraved readers, however, we venture to summarize briefly the main points of Senator Beveridge's doctrine. We hope that our imperfect statement will serve to whet curiosity and increase the sale of the book, especially among professional politicians of all parties:

"Be honest with the world, and the world will be honest with you." This is the opening sentence, the keynote, so to speak, of the whole twelve chapters. "I do not mean," says the author, "that lowest form of honesty which bids you keep your hands clean of another's goods or money. I do not mean that you shall not be a 'grafter.' . . . . Of course, you will be honest in a money sense." From Mitchell, Burton, Penrose, and Depew comes a hearty chorus of assent. But we listen not to them, but to the sage of Indiana: "You must be intellectually honest. Do not pretend to be what you are not. . . . For example, never try to look wise. Many a front of gravity and weight conceals an intellectual desolation." This is all very true, but, we submit, the honorable gentleman has transgressed the rules of Senatorial courtesy. Can Lodge read these words and yet refrain from rising to a point of personal privilege when the Senate convenes, and chastising the guilty author? What is more, Senator Beveridge is attacking a former member of the Indiana delegation, Charles Warren Fairbanks, now Vice-President of the United States. The phrase "intellectual desolation" is a palpable hit. And if Mr. Fairbanks is not to try to look wise, what in Heaven's name is there left for him to do?

We should like to dwell on the details of Senator Beveridge's counsel about the choice of a profession. In brief, he would have a youth pick out the thing he can do best and then set for himself "the ideal of perfection" in his calling. "Dream of yourself as the best civil engineer of your time, or the soundest banker, or ablest merchant." This suggestion, some hypercritical persons may say, is not novel—is even older than Solomon. It is. But Senator Beveridge is not so old as Solomon; his private life is six or seven hundred times more exemplary; and his words are as true as 'Proverbs.' What more can any one ask of a man of forty-three? "He who worries, not only poisons the very fountains of his own strength, but arouses in the world's attitude toward him a sort of sneering pity." And, we may add, if an author worries because Solomon or any other dead and forgotten dealer in maxims may have said the same thing before, that author will never write such a stimulating book as 'The Young Man and the World.'

The pages which discuss reading should be reprinted entire, but space forbids. The *Congressional Record* is not, we learn with surprise and gratification, Senator Beveridge's conception of a *vade-mecum*. Nor does he offer us a selected list from the voluminous issues of the Patent Office, the Bureau of Navigation, or the Agricultural Department. These ponderous tomes, good though they be in their way, are not, in the opinion of the Senator from Indiana, food for the soul. He vastly prefers the Bible, Shakspere, Burns, Emerson, Plutarch, and Omar Khayyám. We trust that the Senator is favoring his constituents with copies of these classics rather than with Government reports, though on this point he is not explicit. Perhaps he will pardon a suggestion from personal experience. When we first began to take an interest in books, we found that the Government publications were as good as the Bible or Shakspere for pressing autumn leaves. For making scrap-books they were far superior. An agricultural report, with two out of every three sheets neatly cut out, was a scrap-book to be proud of. With the Bible and Shakspere we were not, for some mysterious reason, allowed to take such liberties. The binding of Mr. Beveridge's 'The Young Man and the World' is so strong that the book will not suffer in the least from such cutting. In some ways the process would be beneficial; for—to quote the Senator's own dictum—"after a while one wearies of the endless repetition, the 'damnable iteration,' contained in the great mass of books."

THOUGHTS ON THE NELSON CENTENARY.

LONDON, October 28, 1905.

The celebration in England and throughout the British Empire of Nelson's centenary arouses more than one reflection in the mind of any one who cares to trace the course of public opinion.

First, the emotion caused by the memory of England's greatest seaman and of his exploits marks a singular turn in the current of popular sentiment. It is the sign of the influence exerted by Imperialism—a word which it is wisest to use in a purely neutral sense as meaning enthusiasm in favor of the maintenance of the British Empire. Now the one thing which no candid observer can doubt is, that this sentiment is with Englishmen the fashion of the time. There is no politician of any weight, unless it be Mr. John Morley, who would care to disclaim all sympathy with the sense of Imperial greatness. But Imperialism, though no doubt a fashion, and, as some critics think, one which will pass away, most certainly is a fasnion which represents genuine feeling. It is like the passion for nationality which, during a large portion of the nineteenth century, gave to European politics their whole color; an emotion not likely to lose its force until it has for bad or for good produced marked results. Every one who tries to understand the public life of modern England must note the influence of Imperialism, and ought to admit that it represents ideas and aspirations which, during the last thirty or forty years, have, year by year, attained a stronger hold on the English people.

Secondly, English Imperialism is likely to stimulate national defects no less than national virtues. It assuredly bears, if looked at from its worst side, a resemblance to feelings known twenty years ago as Jingoism. To dwell constantly on the greatness of British power; to recall of set purpose the recollection of triumphs in warfare; to imagine, without it may be anything like adequate ground for the belief, that England can at any given moment produce a Nelson, and that a second Nelson, if he existed, could defeat the navy of every modern State with the same completeness with which our national hero crushed the navy of France, may well produce a state of mind as likely to be the parent of calamity as of triumph. Memories of Frederick the Great did not save Prussian armies from the overwhelming disaster of Jena. The Napoleonic tradition led the soldiers of France not to Berlin, but to Sedan, and the recollection of the ease with which French armies had entered the capitals of modern Europe was one cause of the siege and fall of Paris. We can all of us, with the victories of Japan before our eyes, point the moral to be drawn from the overconfidence, the presumption and the aggressive arrogance of Russia. What man of sense can fail to see that a bad form of Imperialism may prove as calamitous to England as a spirit of the same kind, stimulated by traditional triumphs, has been to foreign countries? Nor is it a blessing to any country that, at a time when social and domestic problems of infinite perplexity can be solved only by the exercise of consummate wisdom and of exceptional self-restraint, public attention should be directed towards questions of foreign policy, and be occupied with thoughts of diplomatic successes. It is right to speak plainly of the evils either inherent in or connected with Imperial sentiment in order that one may also think clearly and speak plainly about a condition of popular feeling which has its good as well as its bad side. The worship of Nelson, and the sentiment which it represents, have the merit that they are grounded on real and important facts. They are the acknowledgment of the immense debt due from every Englishman to the genius and patriotism of Nelson—a debt which in one

respect met with a somewhat inadequate return. "Trafalgar," Mahan is said to have written, "saved England"; this is a consideration which no Englishman should ever forget.

Imperialism, again, expresses the conviction that there is an Imperial as well as a national unity which deserves to be fostered and cherished; Imperialism, looked at from its best side, is nothing else than an extension of patriotism. It is assuredly well that, in an age when men of all classes are tempted to make enjoyment or even physical comfort the end of life, we should recall events which record the readiness of Englishmen to defend their country at the price not only of death, but of injuries or suffering worse than death. Such patriotic pride is no denial that men of other States and of other races have shown, and one trusts always will show, heroism which equals the best that England can produce. Imperialism, lastly, represents the settled belief that the great free States of the world must, in the presence of vast military empires, remain strong if they are to remain free, and that the strength of the British Empire requires that the spirit of Imperial unity should be strengthened, and that the world would gain greatly could the whole English people, under whatever form of government they lived, come to feel themselves to be morally citizens of one great commonwealth.

Thirdly, is it possible that this ideal can be at present realized even as regards that portion of the English people which is subject to the rule of Edward VII.? This is the question which every Englishman asks himself. The omens are in many respects favorable. The sense of unity has increased to a degree hardly possible for any one to realize except an Englishman who for forty or fifty years has, in England, watched the ebb and flow of popular feeling. Yet even such a man stands at some disadvantage. He knows England, he may not know, intimately at least, a single English colony; but unless rumor turns out, as it too often does, to be a liar, it is impossible not to believe that, throughout the dominions of the English Crown, the desire for union has, among English-speaking people at any rate, greatly increased. "Nelson Day" is the outward and visible sign of a change of spirit, and the change is the more important because it is due to obvious and natural causes. The discoveries of science have brought Englishmen throughout the world nearer to one another. When men become neighbors, they tend (though the tendency is often a very slight one) to become neighborly. The growth of great military states, the growing belief in the benefits to be derived from State action, all the most obvious phenomena of the day, point at first sight in the same direction: they all suggest the expediency of the expansion of England.

But the very circumstances which seem to favor the growth of a new and greater unity must suggest to any man of a reflective turn of mind that the attempt to achieve the ideals of what has been termed sane Imperialism, is exposed to at least two dangers which may lead to its failure. The first of these perils is the risk that English statesmen and Englishmen generally may forget the homely but important proverb, "More haste, less speed." To the present writer it is clear that the most dangerous enemies of sane Imperialism are the enthusiasts who try to force on a formal union between England and her colonies, instead of stimulating the spirit of unity and letting forms slowly—it may be very slowly—develop themselves in accordance with the dictates of a new state of feeling. At the present moment an Imperial Constitution, were it framed with the utmost skill, might well break up such Imperial unity as already exists. The second of these perils is the inconsistency, possibly the fundamental and irreconcilable inconsistency, between two popular ideals having something in common, yet likely to come into conflict. These ideals may be popularly summed up under the names Socialism and Imperialism. They have so much in common that they are based on a strong faith in the benefits to be expected from State action as contrasted with the unrestrained activity of individuals, but they each in reality aim at different ends. The object of Socialism is, to benefit the whole State by extending to every man equal advantages, or at lowest the opportunity of obtaining equal advantages. Education Acts which shall, as far as possible, give even to the poor as good an education as may be possessed by a member of the middle classes; the provision at the public expense of old-age pensions for deserving or perhaps even for undeserving poverty; the building, at the expense of the rate-payer, of houses and libraries better than any man not endowed with large means could obtain for himself—all aim at this equalization of advantages, and all increase the weight of taxation. Imperialism, on the other hand, attempts to increase, throughout the whole Empire and for the benefit of the whole Empire, Imperial power; but this increase of power must inevitably be at the expense of the taxpayer. The cost of Imperialism may more than repay itself. So be it. But that a policy of Imperial greatness involves the increase of Imperial burdens cannot in reality be disputed. One of the best-known and certainly one of the most disinterested among the advocates of old-age pensions estimates the cost to England (unless my memory deceives me) at £17,000,000 per annum. Suppose that the choice is placed before the English elector of spending this sum on the provision of old-age pensions or on the defence of the Empire. Can any one say for certain what would be the wish of that "man-in-the-street" who is supposed to govern the policy of England? What is really the same inquiry may take different forms in different parts of the Crown's dominions. What will be the answer of Australians to the question whether they will modify their protective tariffs in order to produce something like free trade throughout the length and breadth of the British Empire? My object is to raise, not to answer, this inquiry.

The possible opposition between Socialism and Imperialism suggests one further thought. Is it certain that Socialistic or anti-Socialistic sympathies may not give a death-blow to national or Imperial protriotism? Socialism is in its way a religion; nor is it at all certain that opposition to Socialism may not become a creed. During the sixteenth and seventeenth centuries, community of religious belief became a stronger tie than community of race or country. Is it not within the bounds of possibility that Socialists, at any rate of different countries, may come to feel that their Socialism, which is a sort of secular religion, is a far closer bond than the tie of nationality or of membership in a given empire? A new cosmopolitanism may then be fatal to the growth of Imperialism.

AN OBSERVER.

THE BATTLE OF SOCIALISM.

SYDNEY, October 2, 1905.

A few weeks ago it seemed as if, for the first time in history, the inhabitants of a whole continent would be called upon to decide by a collective vote at the polling-booths whether a system of State Socialism should be brought into operation in countries whose cities, at least, may claim to belong to the vanguard of civilization. By resorting to the desperate expedient of concluding an alliance between the mass of the free traders and the body of the protectionists, the more moderate members of the Commonwealth Parliament last year succeeded in ousting the Labor Ministry that had held office for only a few months. What policy could the piebald Ministry that emerged from such a combination devise in the hope of uniting its motley band of supporters? It was agreed that the "fiscal question" should be indefinitely postponed, and indeed, with three avowed protectionists in the Cabinet, no other course was practicable. The Prime Minister (that is his official title, adopted to distinguish him from the premiers of the States) deliberately raised the broad issue of Socialism. He traversed several of the States, passing from Victoria to Tasmania, and from New South Wales to Queensland, delivering impassioned addresses denunciatory of Socialism, and calling on the electors to prepare to determine whether Australia should abide by the old English ways or adopt the methods of Continental Socialism. Leading politicians on the same side echoed the call. The Opposition was strangely divided. The hacks of protection had no difficulty in showing that Australia had long been in good part Socialist and was already committed to the system in principle. The protectionist leader, on the other hand, declared that he was at the opposite pole to all Socialist doctrines. The Labor leader did not hesitate to take up the challenge, and avowed himself a thoroughgoing Socialist; reviving the days of Maurice and Kingsley, he called himself a Christian Socialist. The churches took part in the scrimmage. The Anglican bishop of Tasmania, apparently ambitious of emulating Bishop Ketteler in Bavaria, frankly avowed his Socialist sympathies. Catholics would appear, in spite of themselves, to be committed against Socialism by the Pope's encyclical, but his representatives in Australia took another view of the matter. The liberal-minded head of the Church, Cardinal Moran, who was public-spirited enough to stand for election to the convention that drafted the Federal Constitution, drew a sharp distinction between the revolutionary Socialism denounced by the Pope and the "coöperative commonwealth" that is the ideal of the Australian Labor leaders, which he seemed to favor. Another tolerant and cultured prelate, the Catholic archbishop of Melbourne,

adhered to the distinction, but both have been unceremoniously thrown over by the bulk of Catholic laymen, who have gained in Australia an independence of mind such as they would never have acquired in priest-ridden Ireland. The newspapers reflected the agitation of the community without reflecting its differences; especially in New South Wales they are almost unanimously anti-Socialist. Yet they impartially teemed with articles and letters on both sides. The halls rang with speeches. Politics were lifted to a higher level. Men who in England had lived through the great days of Gladstone and Disraeli, Bright and Lowe, and who deplored the pettiness of Australian public life, were gratified to find the greatest questions brought within the field of discussion and to the verge of action. The mediocre personalities of political leaders were aggrandized by the cause they advocated or opposed.

On the eve of the assembling of the Commonwealth Parliament in June last, the protectionist leader formally dissolved the alliance between the protectionists and the free traders. He pretended that the appointment (to which he had been a party) of a commission to adjust inequalities in the tariff had reopened the question of free trade and protection, which had been temporarily closed. He did not yet declare against the coalition Ministry, of whose formation he had approved. The American creators of an irrigation settlement in a parched district of Victoria had, years before, found him (they profanely said) as firm as "the rock of ages." The rock was now turned to sand. Pliantly yielding to the pressure of the Labor leader, he moved a vote of want of confidence in the Ministry. The Labor party and the protectionists once more coalescing for the occasion, the motion was carried by a large majority. The event thus consummated by the treachery of the protectionist chief "sent a thrill of amazement and indignation throughout Australia." So it was expressed by an ex-Premier of Victoria and one of the most respected of Australian Statesmen. The immediate appeal to the constituencies was averted. The Governor-General refused to grant the dissolution which the free-trade Prime Minister solicited.

The conspirators soon reaped the fruits of their mingled astuteness and perfidy. The protectionists, composing the smallest of the three Parliamentary sections, went into office on the promise of "a generous support" from the Labor party. The terms on which the support was to be given were immediately made plain. The very first measure introduced by the Ministry was one for the granting of a large sum as bonuses to establishments engaged or about to embark in the iron trade. So far, there was nothing inconsistent with the stereotyped protectionist policy. But the proposal was only a mask, or at best a preliminary. The bill further provided that, after an unstated number of months, the owners of any particular iron works might be called upon to surrender to the Government of the Commonwealth their plant, buildings, and the ground they occupied. This part of the bill was obviously dictated by the Labor leader. In the Commonwealth, as in New South Wales, one of the foremost planks of the Labor platform is the acquisition of all natural monopolies, and especially of the iron industry. The Labor section only used its commanding position to exact, as the price of its support, that steps should be taken towards that end. But it is strange that such a measure should be introduced by a Minister who, a few weeks earlier, had declared himself to be "at the opposite pole" to Socialist doctrines. It is still stranger that the Minister who thus voided his principles, and so easily digested those of the party which had turned him out of office fifteen months before, should be a man of high character, and one of the few public men in secularly minded Australia who are closely connected with a religious denomination.

How irresistible is the movement that is sweeping both States and Commonwealth in the direction of State Socialism might be shown by the recital of some recent political events. There has never been in Australia a cleaner ministry than that which now governs Victoria. It was sent into office with a mission of retrenchment and reform. It swept the Augean stables of the post-office, the State railways, and the public service generally. An inflexible minister, with the inappropriate name of Bent, grappled with and overthrew a strike of the railway employees that, for a week or more, paralyzed the industry and the entire life of the State. And now this very minister, whose career has been signalized by so many honorable services, has himself embarked on State Socialism. Dissatisfied with the cost of brick-making by private industry, he has induced an anti-Socialist Legislature to sanction the establishment of State brick works. It is no less characteristic that, while these lines are being written, he has abandoned the unwise proposal. The carrying of the bill sufficed to make the companies reduce their terms.

The Ministry formed last year in New South Wales is another product of the reaction against Socialism, and it furnishes another example of the strength of the Socialist movement. The very first measure it introduced was one for the establishment of a State bank. A number of the Premier's supporters rebelliously broke away from him, but he carried the bill through the first chamber. Then the Legislative Council, consisting of unpaid nominees, extinguished it for the time. That was last year; this year the Government is saner. Sixty locomotives were wanted for the State railways; should they be built abroad or in Australia? The Ministry at first decided that they should be built in Philadelphia or in England. Conscious that the State was unprosperous, it yielded to pressure, and resolved to have them locally built. The decision raised a new issue. The leader of the Labor party proposed that they should be built at the State railway workshops, and spoke for three hours in support of the motion. The Premier moved, on the other hand, that they should be built by private contract, and spoke for three and a half hours in support of that proposal. After an animated discussion, the Premier's motion was carried by a large majority, and State Socialism experienced another defeat.

From the Labor Ministry in West Australia, Socialist measures were to be expected, and they have come, but in moderation. Two years ago a prior Ministry had scared the English capitalists who own the chief railway in the State by bringing forward a Railway Traffic bill (fully described in the *Yale Review* for August, 1904, p. 175), requiring the company to afford "reasonable traffic facilities," and otherwise dealing with the railroad in Draconian fashion. The outcry made in London blocked the further prosecution of the measure, and the Labor Ministry that succeeded proposed to make a compulsory purchase of the railway. The step would be in full accordance with colonial precedents. The Socialism of the Labor policy is more clearly shown in another direction. A wave of temperance sentiment is passing over these colonies, and is driving one Government after another to enact optional prohibitory laws. The West Australian Ministry has made a new departure. State hotels are there, as in New Zealand, already in existence, and one of them has just made the substantial profit of £589 on the year's business. It is now proposed to set up such hotels in districts where a local-option poll expresses a desire for a new hotel. The licensing committee should then refuse to issue any new licenses to private applicants. The eventual absorption of the trade by the State is evidently contemplated. The fall of the Ministry in consequence of a split in the Labor party arising from the autocratic character of the Premier has led to the abandonment of the measure and the new Premier (also a Labor member) feels his position too insecure to permit adventures. It is perhaps not singular that a Labor Socialist Minister should aim at autocracy. Marx and Lassalle are both described as having been *autoritaires*.

In New Zealand the Socialist wave is still far from being spent. For thirteen years that enterprising colony has been filling its statute-book with measures almost reconstructing society from base to summit. Its energy is yet unexhausted, and these very months are witnessing new efforts of its Legislature to solve economic problems to which its own changing conditions and the changes of society elsewhere have given birth. The parliamentary session had hardly begun at the end of June (answering to December in northern countries) when the Premier announced another of those schemes in which the imagination of the ex-engine driver and ex-publican has been so fertile. Mr. Seddon introduced it with the melancholy confession that, in spite of all the beneficent industrial legislation of the past ten or twelve years, projected mainly in the interest of the laboring class, the condition of the worker had not been ameliorated. A class of middlemen, who were neither employers nor workmen, had stepped in and reaped the fruit of the efforts that had been made. The very prosperity of the country had penalized the worker and the entire mass of those who lived in other people's houses. The cost of living had risen fully as much as wages had been raised. In that cost, house-rent is a chief element. Workmen cannot procure commodious dwellings at a reasonable rate. The State (and he might have said, with far more truth than the Grand Monarque, that he was the State) would come to the rescue and build cottages for the houseless worker. The scheme is alleged to rest on a sound financial basis (which is

not always the case with the projects of the New Zealand Government), and it is carefully elaborated. It empowers the Minister of Labor to erect buildings suitable for workers' dwellings at a maximum cost of £300, the buildings to be leased to landless workers for a period of fifty years, with the right of renewal at 5 per cent. per annum on the capital value, in addition to the cost of fire insurance. The lessee has to pay monthly, in advance, and he must reside in the house. There are three modes of acquiring the freehold: First, by payment in cash of the capital value at any time less than twenty-five years, at the rate of 6 per cent., plus fire insurance. Secondly, by the payment of the capital value by monthly sums over a period of thirty-two or forty-one years at the lessee's option, in which case the rental is to be 7 per cent. and insurance. Thirdly, by insurance on the lessee's life in the Government office for an amount equal to the cost of the dwelling. If the worker fails to reside, the dwelling reverts to the Crown. He cannot dispose of the lease or the freehold without the consent of the Land Board. If the husband dies, the widow may continue to occupy the house on the same terms.

The Premier of New Zealand, who cannot usually be accused of pessimism, is alarmed by the probable effects of the opening of the Panama Canal. He expects that his colony will be flooded by American manufactures, and he fears that even his Chinese wall of a protective tariff will not be high enough to keep them out. He raises the cost of the prime necessaries of life to his fellow-citizens by high duties that exclude even Australian wheat; he inflates all its manufactures by heavily taxing English imports, already handicapped by onerous freights; and he loads American products with "preferential duties." All this is not enough. The American Trust has invaded New Zealand. The Harvester Trust and the Tobacco Trust are already affecting colonial industry and commerce. In five years, it is estimated, the Harvester Trust will wipe out the corresponding colonial manufactures. Manufacturers and workers alike cry out for total prohibition; the Canterbury farmers naturally reject the heroic remedy. The righteous soul of the Premier is also vexed by the limitations on the retail trade imposed by the Tobacco Trust. Hence the Government has introduced the Trades Monopolies Prevention bill. A trade monopoly is elaborately described, but it would be sending owls to Athens to repeat the description to American readers. Enough to say that the bill strikes at internal as well as external Trusts. At the instance of the Minister of Labor or the Minister of Industries, the courts may do all things to enforce the prevention and continuance of a trade monopoly, may impose a fine of £1,000 on any person or association, and may issue an injunction for the continuance of acts in furtherance of such a monopoly. Penalties are also provided for unduly preventing or lessening competition or production.

Such is the New Zealand official solution of a problem that some ardent disciples of Spencer in the same colony—individualists *pur sang*, who once out-Heroded Herod in advocating *laissez-faire*—deemed so formidable that they were prepared to accept State Socialism as the only efficacious agency for resisting an evil which first wounds the conscience and then crushes the independence of the industrial organism, as the serpents bit before they strangled Laokoön and his sons. "O ye of little faith!" a latter-day teacher might repeat. They are no very profound philosophers who fail to perceive that, along with the diseases it inevitably begets, society infallibly generates their therapeutics.

J. C.

THROUGH THREE CHINESE PROVINCES

HANKOW, October 1, 1905.

To see China by railway seems an anomaly. Indeed, when that new fact becomes more widely possible, the traditional China will have ceased to be; and only because this experience is as yet a novelty, does it seem worth while to record it. In quitting Japan for Korea and northern China we felt that we were exchanging charm for interest, certainly discomfort, possibly repulsion. But former impressions of southern China in the great heats of spring and late summer had to be corrected almost on landing in the north country. There the people seem so much less sulky, brutish, and vindictive, while many of the plainest sort are cheerful and even jolly to the passing contact. Furthermore, I shall be surprised to learn that other Americans have not recorded their sense of certain marked resemblances between this region and parts of their own land. The dry, light-colored soil, the dust-laden winds, which tint the landscape unmistakably; the character of the herbage and wild growth; the distant expression of the trees, which is graceful and feathery; the light gray or yellow-green hue of all vegetation; the wide horizons, and the level flats of arable country, from which the serrated hills rise abruptly, one might almost say brusquely; the dry, pure, bracing air, and, most of all, the sky (nowhere else have I ever encountered the exact cloud and atmospheric effects with the identical tints of our home skies)—all this gives one an odd feeling of "at homeness," until one glances at man and his handiwork, and then one knows that one is still but a "foreign devil." Where all the fields are differently worked and planted from our own; where even the villages attempt to enclose themselves in walls—if only of mud—of a uniform shape and proportion; where every tiny shanty tries for the privacy of a compound, and at least partially secures it by remaining windowless; where the so-called roads, which are often only paths, have cut themselves down below the fields through the wear (and shiftlessness) of the ages; where almost every field has its burial-ground of smaller or larger mounds, sometimes planted in a square or rectangle of rows of red and green bush-grass; where man often works hatless and always hairless, unless the queue twisted up be counted such a protection; where woman works afield sitting on a stool to ease the strain on her tightly bound feet—there, surely, the foreigner's sense of nationality must needs be very strong and distinct.

To leave Pekin on the Pe-han Railway (so named from the two first syllables of its terminals, Pekin and Hankow) is to carry away a far less striking impression of the great fortress city than by the railway to Tientsin. For the walls and towers seem larger and longer towards the eastern approach, while a stray pagoda or two, or a quaint tower, seem suggestions of a large town's suburbs. But to the southward, after running along one whole length of the Tartar city's walls, you lose sight of the entire mass almost instantaneously, and drop out of urban surroundings into agriculture differing only in its smaller holdings and more numerous houses from the country for many miles to come. As one travels in a singularly straight line for the first three days, there are mountains or hills only to the westward and at quite a distance, while a great cultivated plain extends on three sides much further than the eye can see, every inch covered with crops save for villages and clumps of trees or graves, which latter vie with each other in frequency. The crops are usually planted in long narrow ribbons, one growth closely adjoining another. Of rivers, or even rills, there are practically none until, on the third morning, the great Hoang-ho or Yellow River is sighted, while on the fourth morning one runs right into a greener, lusher region, full of streams and with irrigated fields, marking terraces on the pretty hills through which the road turns and twists; these latter, with their round modelling, being singularly Japanesque. (One sees at a glance why Honan and its coastwise neighbor, An-Hui, should, thus watered, be two of the richest of these central Chinese provinces, of which all the European competitors covet the exploitation.) But the large walled towns all lie in the earlier part of the trip, and are quitted with regret, for they are fine and imposing in themselves, and their crenellated masses give point to the flat surroundings into which they fit so perfectly; unlike Lowell's indictment of many of our American buildings, from which "the wronged landscape stands aloof."

It is only just to the railway as well as to the imminent traveller to note the conveniences or their reverse of the trip. The roadbed is excellent, single-tracked, but with sufficient sidings. The schedule time (not yet in print) is adhered to remarkably, in view of the fact that the road will not be officially opened until January, 1906, at earliest, and that meanwhile travel is not encouraged by the managers.* The runs are made only between sunrise and sunset, and, if the train-hands were so minded, one would be forced to spend the three—possibly four—nights in the cumulative horrors of a Chinese inn. But on the Belgian section, which lies to the north of the Yellow River, one is allowed to bunk down in the cars, which are modern European in construction, a side corridor running from end to end, with first and second-class compartments, and the addition of one for cooking, where the Chinese "boys" warm

*The train hands are all Chinese, from ticket puncher to engineer, though fleeting glimpses of an ununiformed European tell a tale of supervision. At the stations, be they ever so small, there is a Chinese guard, varying from two to a dozen in number, who patrol the platform (apparently armed only with sticks) in much the same fashion as the picturesque guardia civile of Spanish trains, though from those sturdy men it is a far cry to these velvet-booted Celestials, with queues twisted up awry, the tasselled end hanging behind one ear, and straw-brimmed hats cocked askew, while their natural tendency to be round-shouldered has been uncorrected by drill, and is undisguised in the loose long shirt with Chinese characters embroidered on the chest. Yet withal they often have that dignity of the Oriental which is strangely at variance with their being such "figures of fun."

water and prepare food for their masters. And very cleverly they do so, with charcoal and a small portable earthenware oven without a top. Of water on the train as yet there is none. The first night, travelling southward, is passed at Shunte-fu, the second at Hsin-hsiang-hsien, forty miles north of the river. From there at dawn a construction train runs to the bank, where the fine bridge of almost two miles in length is apparently completed. But, owing to the ever-shifting currents and sandbars of the stream, the foundations have been displaced during this season's heavy floods, and the structure is pronounced unsafe, while its approach on the southern bank is still unconstructed. So the crossing is made in thirty-foot craft—the sails, poling, the variable currents, combined with the rudder and the drag-anchor, all utilized as motive-power; and, finally, half a mile from the shore, the coolies strip to the waist, and, wading in the shallows, draw the boat near the bank. There other coolies carry the unfortunate globe-trotter "pickaback" over the mud flats, at imminent risk of both falling into the slippery footing; and when once on firm ground, one is almost equally agonized by watching the precarious transit of one's luggage. The crossing of the river is most devious, for the changing deeps and shallows and miniature rapids make steering difficult and uncertain. One day, five hours are required; the next, two, the next, but one.

The train sometimes waits until the tricksy river-god or demon has given up its prey, sometimes not; for us it waited an hour and thirty-five minutes; the day before it waited but forty-five, and started when the passengers were within ten minutes of reaching it. Soon after starting, it cuts through the hills, which here form a contrast to the flat northern banks, and, before emerging on the plain again, it passes under hundreds of cave-dwellings still occupied by moderns with prehistoric tastes. On this, the French, section of the line one still finds courtesy, though more restrictions upon the passenger, and at Chu-ma-tien—a tiny place, not on the map—the railway rule is enforced, so that only private-car passengers may, by an extortionate douceur, sleep on the train. There is a good but ominously dubbed inn (The Bar Hotel) kept by a travelled Chinese, who, in memory of America, has two good beds in two clean rooms. But, alas! the station-master recommends the nearer hostelry—a characteristic touch smacking strongly of "squeeze." Of a night spent there, the least said the better, though the Italianized and Romanized host is full of zeal and good intentions.

Yet when all is said of the fatigue and uncertainties of the route, and when one considers the waste of time in going by sea from Tientsin to Shanghai, as well as the greater interest of the land-travel, with its insight into the Chinese and their ways, one would brave it all again. (The natives are evidently of this opinion, for the third class was always crowded, while it has been found advisable to raise the fare of the second class and lower that of the first.) Then, too, in a few months' time, the run of some 800 miles odd will be continuous, with no stops at night and in entire comfort. Meanwhile one has only praise to give the managers of the two lines, who have already produced such commendable results, and have secured such excellent coöperation from their Oriental working force.

EMILY E. F. SKEEL.

Correspondence.

GARDENS OF ITALY.

TO THE EDITOR OF THE NATION:

SIR: Will you kindly allow me, in justice to myself, to say, with reference to your review of 'Gardens of Italy,' that the letterpress, which was my share of the book, was written as a series of articles for *Country Life?* It was not until I was correcting the proofs that I received any intimation that these were to appear in book form. The "gossiping, semi-historical tone" (which your reviewer admits to be readable) was purposely adapted to the requirements of a weekly journal.—I am, etc.,

EVELYN MARCH PHILLIPPS.

BOSTON, November 2, 1905.

BOTTICELLI AND ORCAGNA.

TO THE EDITOR OF THE NATION:

SIR: Can any of your art-historical readers inform me if any evidence has ever been submitted for Botticelli's repainting of Bernardo Orcagna's "Inferno" at Florence? WILLIAM RANKIN.

RICHMOND, MASS., October 24, 1905.

Notes.

The English Dialect Grammar, which formed part of the 'English Dialect Dictionary,' is about to be issued in a convenient crown octavo form by Henry Frowde, while the great Dictionary itself, now completed, is to be offered to the public, through the booksellers, on the instalment plan, until the end of the year. The same publisher will bring out directly the sixth volume of the "Oxford History of Music," 'The Romantic Period,' by the late Edward Dannreuther. H. E. Woolridge's volume on 'The Ecclesiastical Period,' nearly ready, will conclude the series with the year.

Charles Rudy's 'Cathedrals of Northern Spain' is on the eve of publication by L. C. Page & Co., Boston.

Countess Martinengo-Cesaresco has in press a poem entitled 'The Madonna of the Scales—A Calabrian Memory,' which will be sold for the benefit of the sufferers from the earthquake in Calabria. The booklet will be issued by B. H. Blackwell of Oxford (London: Simpkin, Marshall & Co.). The price is 1s. net.

Early in November, Antonio Fogazzaro will publish a new novel, entitled 'Santo,' which will close the series that began with 'Piccolo Mondo Antico.' The scene is laid partly at Vicenza, partly at Oria (on Lake Lugano), and at Rome.

The 'Rubáiyát of Omar Khayyám' is to be presented to Italian readers through a translation of FitzGerald's version, soon to be published in Venice. A writer in the leading Italian review thinks it necessary to explain that it has passed through many editions in England. The cult spreads.

'The Beautiful Birthday Book' (London: Black; New York: Macmillan) is no misnomer. It is an octavo volume, elegantly but soberly bound, with a pleasing colored frontispiece of the "young person" who is to fill it with the autographs of her friends, and having some other embellishments besides the framing of the date spaces. The design is excellent for stimulus and for preservation.

The same firms unite in a new edition of Alfred Austin's 'The Garden that I Love,' originally issued some ten years ago. The Poet Laureate, in a second preface, deprecates the idea that the illustrations which justify the present venture were hailed as likely to give a fillip to a languishing sale. They will, however, have that effect, for the color designs of George S. Elgood, R. I., are quite out of the common—exquisite, indeed; and in the end the purchaser may prefer them to the touch-and-go discursiveness of the text.

The vamping of old books with decoration is much in evidence this season, and we would ask whether the bad fashion (by no means new) of blotching the type-page with designs in flat tints, pale or otherwise, ought not to be discountenanced and abandoned. An example before us is the reissue of John Luther Long's 'Miss Cherry-Blossom of Tokyo' (Lippincott), in which these colored devices run riot in margin and text. Assuredly they distract the eye and make reading difficult, and in this case are a false imitation of Japanese ornament.

A much better taste has prevailed in Dodd, Mead & Co.'s 'Howdy, Honey, Howdy,' collected poems of Paul Laurence Dunbar, in which the floreated borders in a very pale red becomingly set off the verse, and frame the photographic vignettes, *tableaux vivants* characteristic of the colored folk of whom Mr. Dunbar sings from a full understanding.

Mr. Arthur I. Keller displays a clever pencil, whether point or brush be intended, in his designs for 'His Letter, His Answer, and Her Last Letter,' by Bret Harte (Houghton, Mifflin & Co.). The title-page, in color, is very happy, and it is hard to say whether this artist is stronger in color or in black and white. This is a very proper gift-book of the "society verse" (we suppose we may call it) of the late Truthful James. The third poem has never before been published with the other and better-known two.

The same house has brought out 'The Story of Noah's Ark,' an oblong folio with colored plates and a scanty narrative. With his pencil, Mr. E. Boyd Smith is a humorist whose reputation will grow, and these scenes of the building of the Ark, its loading, the omission of the animals which could not or would not go in—dinosaurs, mastodons, etc., who were to furnish the fossils of subsequent ages—the discomforts of the voyage, etc., will please every childish eye and every adult. Such skilful animal drawing is seldom seen in the juvenile domain. Perhaps the last plate of all is as effective as any, showing the Ark stranded, the retreat of the waters, and the joy of the "enlarged" passengers. Mr. Smith is too good a draughtsman to be side-splittingly comical, but he has a humorous imagination. His text is far less droll, and he should procure a literary running-mate for his next venture.

Mr. George Alfred Williams's pen-draw-

ings to accompany the Baker & Taylor Co.'s generous and very taking edition of 'A Christmas Carol, and The Cricket on the Hearth' are singularly uneven. Those for the latter story fall much below the more than usual excellence of their predecessors. They are all full-page, and serve a decorative purpose, and the frontispiece in color is delicate and well conceived. To be praised, too, is the corresponding plate for 'The Cricket on the Hearth.'

The daily caricaturist, John T. McCutcheon, has long been a power in the West, and needs no introduction to Chicagoans, at least. His 'Mysterious Stranger, and Other Cartoons' (McClure, Phillips & Co.) preserves too much that is trivial and vulgar (not in the most odious sense), and would have been the better for a severe screening. The folio opens with Mr. Roosevelt's Western hunting exploits, and marches (but not always chronologically) with the progress of events, serving as a mirror and chronicle of the time. The Russo-Japanese war cuts a figure here, and there is nothing better than Kuropatkin's "*regret to report that* All is lost save Oyama, and we're trying to find him." Secretary Taft in Japan before the Buddha statue, reminding himself of Napoleon before the Sphinx, and wondering who can name the next President of the United States, is also a happy conceit. The symbolism of "The Wedding of Crown Prince Frederick and Duchess Cecilia," heart-shaped bretzels pierced by an arrow and ringed by a dachshund gripping his own tail, is capital in another way. On the whole, we find the collection rather dreary.

'Representative Essays on the Theory of Style,' chosen and edited by William T. Brewster (Macmillan), is a volume likely to be of good service to academic students of literature and composition. It contains the essays of Newman, De Quincey, Spencer, Lewes, Stevenson, Pater, and Harrison, a clear-headed introduction and adequate notes. This selection of texts is obviously contemporary in its bearing rather than historical, but the authors included represent so many polarities of rhetorical theory that the book may be taken as a fairly comprehensive, as well as an uncommonly wholesome, stylist's enchiridion.

Modern methods of teaching English, which have begotten many *biblia a-biblia*, are sometimes responsible for the making of a real book. Such an one is the volume of 'English Essays' selected and edited by Prof. Walter C. Bronson (Henry Holt & Co.). Twenty-four writers are represented, from Bacon to Stevenson. The lay-reader might complain that Professor Bronson has not been very careful to define the limits of the essay type, so that while such thorough essayists as Cowley and Temple do not appear at all in the book, we have passages from the writings of Burke, Ruskin, and Newman that tend to edification rather than to delight, and are in form and spirit not essays at all. Yet liberally as Professor Bronson has interpreted his title, he has nevertheless contrived to preserve in his selection an admirable unity in variety. The volume is a real book in that it embodies the spirit of three centuries of the best English prose, prose marked by a certain British soberness of thought, and even, as compared with French prose, by a certain uneasy heaviness, yet not seldom visited by wizard lights of imagination, and warmed by a wealth of humor, both delicate and broad, that no similar collection in any foreign tongue could parallel.

The luck of the alphabet has given to Volume X. of the Jewish Encyclopædia (Philipson-Samoscz) several articles of length and interest. Those on the Popes and Rome show the ecclesiastical policy of Christendom towards the Jews, as opposed to the very varying treatment of temporal rulers, and still more to the fanatical outbursts of Christian communities. Russia has, of right, one of the longest articles in the whole work (57 pages). Maps and tables of population, etc., are given. Of a lighter and less melancholy interest is the story of the Rothschild family, from its earliest traced ancestor, in the mid-sixteenth century, and in its two branches of the rabbinate and the world—a story whose artistic value Disraeli appreciated, and which has material enough for a dozen novels. Biographies whose subjects belong to the larger world are those of Rashi, Ricardo, Rubinstein, Saadya, Philo. For his Jewish connection and wealth of Jewish types and portraits, Rembrandt is also added. The frontispiece reproduces a portrait by him, and ten other Jewish heads are shown in black and white. For picturesqueness, the article on Prague, with many good illustrations, easily holds its own, though that on Purim and Purim-plays is untheological enough, and affords refreshing views of life. In folklore there is the Sabbath river Sambation and a plenty of spirits—Raphael, Sammael, and the rest. More serious is a good historical article on Reform Judaism from the reform point of view; another orthodox treatment of the same would have been much to the point. The Book of Revelation is reclaimed as a Jewish apocalypse, with a full acceptance of Vischer's hypothesis. There is the usual immense number of biographies; only use can tell whether they are numerous or full enough.

Those who enjoy the mouthings of spiritual self-conceit will be glad to learn that they can find a surfeit of such airy food in Agamya Guru's 'Sri Brahma Dhârâ' (or 'shower from the highest'), in which the Mahatma kindly condescends to instruct the Occident in the dogmas of Vedanta philosophy. Of argument there is nothing, of assertion there are eighty-seven pages in the form of a catechism, which explains that this world is a delusive charm of the great magician called Màyâ, and that Màyâ is "an illusive fermentation of an Atom of Bliss in the power of the Highest." The much-enduring student of the catechism is told to "abandon the Ego of sole existence in the Infinite, Eternal Bliss, and be the Omniscience of the Unfathomable Reality." Then the journey will be over and the student will be "the same as the Highest." Luzac & Co., London, publish this amusing screed.

The latest volume of the *Journal of the American Oriental Society* contains a succinct statement by Dr. Peters of the facts regarding the Nippur library and Professor Hilprecht's discoveries, real and alleged. The leading article is by Professor Hopkins, who gives a hitherto unpublished Sanskrit text of the fable of the "Fountain of Youth," together with a study of phases of the same fable in the Occident. Professor Toy contributes a study of an early form of animal sacrifice, and Dr. Blake continues his investigations of the Bisayan dialects—to mention only a few of the fifteen papers in the volume.

There can hardly be a more convenient guide for a beginner who, having busied himself somewhat with ferns, wishes to glance at their relatives, than the book entitled 'The Fern Allies of North America North of Mexico,' by Willard Nelson Clute (Frederick A. Stokes Co.). The illustrations, above one hundred and fifty in number, are by Ida Martin Clute. The text is interesting and the drawings are clear, so that there should be little difficulty in making one's way among these interesting plants, which are the existing representatives of a vegetation that (with the ferns of high and low degree) ushered in our present flora.

Twelve attractive California flowers have been selected for reproduction in color on separate sheets of convenient form. The publisher, William M. Bains, Philadelphia, states, in an accompanying leaflet, that the prints are copies, by the Ives Process, of the water-color drawings of Mrs. Elizabeth Hallowell Saunders. The registering of the three colors, especially the yellow factor, is far from perfect, and therefore the reproductions probably do scant justice to the originals, but the general effect is pleasing, and the handful of pictures is well worth having as a companion to any California botany.

M. H. Carton de Wiart's 'La Cité Ardente' (Paris: Perrin & Cie) is an historical novel concerning Liège and its surroundings in the time of Charles the Bold. It seems to be built on a rich fund of archæological lore, and towards the end of the volume there is a moving love story which vividly and truthfully portrays a high-bred young lady, sublimely courageous and self-sacrificing to the honor and traditions of her family. The book dwells minutely on the apparel and picturesque scenes of the period, and certainly graves a deep impression of the misery of the turbulence prevailing at a time when, if there was no more wickedness than now, wickedness at any rate raised its head more audaciously. The novel will especially interest a person familiar with mediæval Belgium.

The Vienna Academy of Sciences has granted to Prof. Dr. Heinrich Sieveking of the University of Marburg a sufficient sum from the Savigny fund to pursue a detailed study of the mediæval business and commercial records in Italian archives. Professor Sieveking has already made extensive investigations in Genoa, Pisa, and Florence, and at a recent meeting of the Academy gave a full report of the business records of the Medici, which he found in the last-mentioned city. He showed that this famous patrician family not only conducted a complete banking business in all its departments, but equally carried on trade and an insurance business. The trade was international, branch houses being founded in France, England, Germany, Switzerland, Burgundy, Spain, and Portugal. On account of the dangers in sending moneys, cash payments were practically never made. The experience of the Medici in commercial transactions with princes and potentates, was unsatisfactory. At any rate, Piero de' Medici states that in lending to princes there was more danger than profit. Insurance on the contents of ocean vessels was

regularly carried, the rate on a voyage across the Atlantic being 11 per cent. A lively business was the management of the funds of German pilgrims to Rome. The Popes, too, dealt with the Medici on a large scale.

The first full census of the Russian Empire was taken in 1897, but the complete results have only now been published. The total population was 125,680,682. The Eastern provinces are very sparsely settled. In Siberia there is only 0.53 person to a square verst, while in the Government of St. Petersburg there are 130.40. The population of St. Petersburg is 1,267,023; Moscow, 988,614; Warsaw, 638,208; Odessa, 405,041; Lodz, 315,209. The average size of a Russian family is 5.7 persons, which is even larger than in Germany, where it is 4.6.

The Rhodes Scholars at the beginning of their second year at Oxford number a little less than 150, out of a possible maximum of 190, there being sixty-seven new students. The qualifying test in scholarship is the Oxford Responsions standard, except in Germany, where the selection is made by the Emperor himself, and in 1904 five of our States or Territories failed to send a qualified candidate. This year the failures have doubled, none coming from Alabama, Arizona, Arkansas, Montana, Nevada, North Dakota, Oregon, South Dakota, Utah, and Wyoming. Among the colonies, only Rhodesia and the Northwest Territory of Canada have not filled up their annual quota. Care has been taken that the men shall not congregate in one college, and they have been evenly distributed throughout the University, Christ Church having seven, the largest number. Their happy assimilation to the academic body was especially commended by Vice-Chancellor Merry in a recent address, in which he congratulated the University on the success which has attended this first year's experience with the Rhodes scholars. The general consensus among the men is that they had better not come directly from schools that some previous university experience was exceedingly desirable. The long vacation was spent by a considerable number on the Continent with a view to the acquisition of French and German. Many joined reading-classes in England, Scotland, and Wales, and a few Americans and Canadians spent the holiday at home.

The promotion of cotton-growing has been the principal work of the Uganda Company, which was formed two years ago to open up and develop the natural resources of that country. In March, 1904, about two and a half tons of cotton seed of various kinds were distributed among twenty-nine chiefs (representing every province in Uganda), and by them redistributed to a large number of peasants. The result of these trial plantings has surpassed all expectations, and already the hand machinery erected is proving insufficient to cope with the quantity of cotton which is coming in. A small chief, who received thirty-five pounds of American upland seed, brought in more than 1,700 pounds of unginned cotton from that, and reported that he was still harvesting and expected to bring twice the quantity. This means a return of one hundred fold, and Uganda will produce two crops annually. The cotton sent to England proved to be of excellent quality, and there can be no doubt that the soil of Uganda is especially adapted to its cultivation. Reports have been received that the natives of the neighboring province of Usoga have also begun to plant cotton seed, and the suggestion has been made that a power-generating plant be established at Ripon Falls, the outflow of the Nile from Lake Victoria, for the purpose of running ginning machinery. The company proposes to purchase the freehold of 10,000 acres of land for the cultivation of cotton, ramie, and rubber, of which a valuable variety has been found to be indigenous to the country. Its success has been so marked that it has been decided to increase the capital from $75,000 to $125,000. On the board of directors are to be found two bearing the honored name of Fowell Buxton, and a Gladstone.

—There could hardly be a more effective indictment of census-taking methods than is found in the *Atlantic* in a paper by William H. Allen, who served as a special agent in gathering manufacturing statistics in Philadelphia for the census of 1900. It is simple truth, as he shows in ample detail, that his work, and that of his fellow-agents in the same branch, was largely that of "manufacturing" statistics, and not of collecting statistics of manufactures. The woman who took in sewing during a few weeks of the year, a day laborer who earned a few dollars at night during the winter by sharpening skates, an undertaker who trimmed his coffins, a dry-goods dealer who occasionally had an unsalable piece of goods turned into aprons or doll clothes—these are samples of what went into the census mill by scores of thousands, under explicit directions of the Chief, as "manufacturing industries." Still further, the agents were given to understand that each industry must show a "reasonable profit," and schedules were repeatedly returned for alteration if they failed to come up to the specification. It is easy to see what a bulwark of support for "protection and prosperity" the census is sure to be when those who have the power go at it in this systematic manner. Mr. Allen says: "Undoubtedly the feeling was widespread among agents that the object of the census was not to obtain the truth, the whole truth, and nothing but the truth, but rather to prove a thesis. The moral tone of the agents suffered depreciation, even in a few days." The country has been rightly shocked at the discovery that insurance premiums have been drawn upon for partisan campaign funds; the time may come when the similar impropriety of using the public revenues for the manufacture of fictitious evidence of the blessings of protectionism will be recognized. Mr. Allen's revelations certainly demand some attention in Congress.

—'The Poems of Keats,' edited by E. de Sélincourt (Dodd, Mead & Co.), is likely to stand as the best edition of the poet for the critical student of poetry as a fine art. The text itself is excellent. Mr. de Sélincourt has wisely left the significant irregularities of orthography as Keats left them; and he has grouped the poems in a logical and significant order, relegating to an appendix certain nonsense rhymes and doggerel ditties that have stood hitherto side by side with "La Belle Dame sans Merci" and the "Ode to Maia." The text stands midway of an Introduction and a body of notes that preserve an even-handed balance between ideal and textual criticism. On the whole, however, the Introduction, with its account of the growth of Keats's art on its imaginative and spiritual sides, is less interesting than the two hundred pages of notes, which trace, with an uncommon union of taste, textual acumen, and common-sense, the literary origins of the Keatsian style. Particularly valuable to the critic is the concluding glossary, in which practically all of the poet's characteristic vocables—four hundred of them—are traced to their probable source in the books Keats is known to have read. This table is of special interest as tending to mitigate the uncritical wonder that has been many times expressed that a "surgeon's apprentice" should write "as if he had mastered the whole history and the frequent variations of the English tongue." As Mr. de Sélincourt pertinently observes, a poet who is steeped in the writings of Chaucer, Spenser, Shakspere, Milton, and Wordsworth has gone a long way towards mastering the English tongue. "The wonder, indeed," as he says, "remains as great, but it is wonder of a different kind—that Keats should have realized so intensely his kinship with his predecessors, and gained his peculiar power of self-expression so that their life became his and their language the only possible utterance for his ideas and moods."

—With Professor Dowden's 'Montaigne' the new "French Men of Letters Series" (Philadelphia: Lippincott) makes a promising beginning in the form of a veteran critic's summing-up of a lifelong familiarity with his theme. In place of the traditional division into the Man and the Work, there is offered here the much more suggestive concurrent, or parallel, treatment, in Montaigne's case so helpful towards the elucidation of his spirit of equitable (though by no means equal) apportionment of time and energy to the too commonly conflicting claims of thought and action. Although the several chapters, from "Childhood and Education" to "Closing Years," cast no new gleam, for the specialist, on either Essayist or Essays, they constitute (to our knowledge) the safest English introduction to the study of the great questioner through their insight into the heart of the work and their revelation of a real affection for the man. In one respect (ch. ix., "The Spirit of the Essays"), Dr. Dowden seems, however, to bear somewhat heavily on the absense in Montaigne of religious fervor, while all the rest of the book demonstrates that this peculiar temperament it is which gives to his meditations their enduring charm of undecisiveness—"cette-cy d'Epicurus, plus voysine a mon style, de transferer la pensee des choses fascheuses aux plaisantes." Some of the translated excerpts suggest a singular "Florio-Cotton-Dowden" blend, not in every case flawlessly accurate, yet, in no instance we have observed, calling for more than marginal correction. What makes this volume specially pleasing is that, in the spirit of the *entente cordiale*, it shows the desire to appreciate, with the graceful help of a

winning style, the essentially French writer, who nevertheless finds a literary home in all countries.

—Under the energetic direction of Prof. Albert S. Cook as general editor, the series of "Yale Studies in English" (Henry Holt & Co.) continues to thrive and put forth. Three of the more recent issues, Nos. XXV, XXVII, and XXVIII, have been devoted to separate plays of Ben Jonson, namely, "Bartholomew Fair," "Poetaster," and "The Staple of News," which, with "The Alchemist," edited some time since (No. XVII), are, we trust, to be the nucleus of an ultimate complete edition of Jonson that shall prove a credit to American scholarship. Nevertheless, in No. XXVI we note with satisfaction a return to the field of Poetics, previously cultivated to good advantage in this series or elsewhere by Professor Cook and several of his pupils, and a field whose cultivation is of more immediate concern to the advance of literary study in this country. Prof. F. M. Padelford, whose "Essays on the Study and Use of Poetry," being translations from the Greek of Plutarch and Basil the Great, constituted No. XV of the series, gives us in No. XXVI some eighty pages of "Select Translations from Scaliger's Poetics," "in the belief that they will be welcomed by the many students . . . who, through lack of access to the original, have had to gain their impressions of this notable work from the meagre digests in handbooks and histories of criticism." Grateful though such students ought to be toward Professor Padelford, we must be permitted to doubt his surmise that they are "many." As a matter of fact, if we try to measure not the special interest, simply, in work like Professor Padelford's, but the general attention to the subject of Poetics, by the number of courses, historical or otherwise, in literary theory that are now given at American universities, in comparison with those who are devoting their time to less fundamental disciplines—practical rhetoric, history of literature in the ordinary sense, "philology" in the narrower—the students of Poetics are painfully few. Conditions are better, perhaps, yet not greatly better, than four years ago, when Professor Cook, who has striven so vigorously for philosophical methods in the teaching of English, could only say: "*Here and there* [the italics are ours] classes in poetical theory are endeavoring to ascertain what qualities insure the permanence and enduring charm of literature." By the fit though few, every effort like Professor Padelford's will be welcomed. Incidentally we observe that the style of these translations shows an improvement over those in No. XV.

—The publication, a few months ago, by Francesco Sforza, of 'Brani inediti dei Promessi Sposi' (Unpublished Passages from I Promessi Sposi), has led to a second and enlarged edition (964 pages divided into two volumes, whereas the original edition was a single volume of 692 pages). The reading public, it is evident, has not agreed with those critics who indignantly regarded Sforza's book as a profanation of Manzoni's memory in bringing to light what had been, after mature judgment, deliberately omitted, but has found a special literary value in the steps through which the masterpiece developed. The "Brani" bear witness to an incessant correcting, retouching, and polishing, and prove to what a degree Manzoni carried his revision, writing and rewriting a line a score of times, and then, perhaps, after all, not printing a word of it. He was moved, apparently, sometimes by religious scruples, sometimes by æsthetic considerations, or by motives of historical accuracy. In the last edition a number of long additional passages are given, "Il principio del Romanzo," "Una digressione," "Il tentativo fallito del matrimonio clandestino," the "Serva di Don Abbondio," originally called Vittoria, but changed (probably for family reasons) to Perpetua. As a preface to the second volume, Sforza has inserted a chapter, based upon private letters and the journals of the day, on the reception given the 'Sposi.' A number of notes throw light on the conditions existing in the monastery of Monza, on the sources of the characters Don Abbondio, Lucia, the Padre Cristoforo, and Fra Galdino, on the plague and opinions regarding the plague current during the Spanish occupation of Milan. The "Brani" have value also as reflecting Manzoni's personality, his goodness and highmindedness, his modesty and sincerity.

—The ninth edition of 'Stieler's Hand-Atlas' (Gotha: Perthes; New York: Lemcke & Buechner) takes on a fairly gala appearance, as well it may, both from the honorable age of the enterprise, more than octogenarian, and from the extent to which it has been overhauled—"von Grund aus," as the illuminated title-page reads. Especially to be remarked is the coloring, which is unusually bright and harmonious. A helpful feature is the stamp on the back of each plate, giving not only its number and scale, but a sketch-map of the larger geographic unit of which it is a member, as indicated by a shaded area. This provision fits in with the separate sale of the sheets. Marks of the lapse of time from edition to edition are the multiplication of oceanic cables; the extension (in the South Polar chart) and increased detail of Victoria Land; the elimination of side-maps from the general map of Europe in favor of the southern shore of the Mediterranean, as if to exhibit the extent to which North Africa is becoming a part of the European system; the Kaiser Wilhelm Canal; the side-maps of the several growing European capitals; the new map, "Russia, China, and Japan in Asia" (the late war by its nature leaving superficial boundaries and dominions unaltered); the development of political geography in Africa; the increased scale adopted for the East Indian archipelago. The ninety-five plates of the well-worn edition at our elbow are now replaced by 100. While the map of Western Canada is repeated, the eastern half is no longer annexed to the United States in presentation, but, as is becoming, has a plate to itself. The sheets allotted to the United States have undergone no change in number or division. The Philippines are given a fresh importance on the new East Indian map above mentioned. It would be superfluous to speak of the artistic beauty of these maps, or of their general accuracy and authority. The invaluable index, which will be found to supplement any gazetteer, now fills 237 seven-column pages in fine type.

GEORGE HERBERT'S ENGLISH WORKS.

The English Works of George Herbert, Newly Arranged and Annotated, and Considered in Relation to his Life. By George Herbert Palmer. 3 vols. Boston: Houghton, Mifflin & Co. 1905.

The purpose and spirit of this new and sumptuous edition of George Herbert can best be stated in the opening words of the editor:

"There are few to whom this book will seem worth while. It embodies long labor, spent on a minor poet, and will probably never be read entire by any one. But that is a reason for its existence. Lavishness is its aim. The book is a box of spikenard, poured in unappeasable love over one who has attended my life. When I lay in my cradle, a devotee of Herbert gave me the old poet's name, so securing him for my godfather. . . . For fifty years, with suitable fluctuations of intimacy, he has been my bounteous comrade. . . . I could not die in peace if I did not raise a costly monument to his beneficent memory."

In this spirit of loving devotion Professor Palmer has undertaked a variorum edition of his author. He is, he says, "attempting a kind of critical dictionary of Herbert, in which his meaning may be systematically fixed with reference to the text itself, to the facts of the author's life, and to the literary conditions under which his poetry arose." Professor Palmer confines his edition to the English works, omitting the Latin verse as uninteresting and commonplace.

The three volumes are supplied with the most complete apparatus. There is an outline chronology of relevant historical, biographical, and literary events, and a careful life based on Walton and Oley but reinforced by the study of Herbert's writings and by visits to the places in which he lived. This is succeeded by essays on the Traits of the Man, on the Type of Religious Poetry, on Herbert's Style and Technique, and finally a most important essay on the Text and Order of the Poems. The first volume contains, besides "The Country Parson," Cornaro's treatise on Temperance translated by Herbert, Herbert's notes on the 'Divine Considerations' of Valdesso, all the English letters of Herbert now extant, and Herbert's will. There are four indices to the poems: in the first the titles are arranged alphabetically, in the second in the traditional order, in the third in the arrangement which Professor Palmer has worked out from a study of the manuscripts, and the fourth is an index of first lines—the first ever made for an edition of Herbert. These indices are repeated for convenience' sake in both the second and third volumes. There is no general index to the whole work—a lack which is to be regretted in spite of the clear and careful plan of the work.

Two features of the editing deserve special comment. In the first place, Professor Palmer has reproduced the text of Ferrar's edition of 1633, with rare corrections, and those scrupulously noted; but he provides in the appendices the readings of the two important contemporaneous manuscripts—that in the Bodleian, and that in the Williams Library in London. The second and the more important of the two features of the editing is the rearrangement of the poems into what Professor

Palmer believes to be approximately their chronological order.

In studying the Williams manuscript, which had been discovered by Dr. Grosart, and whose history seems to be definitely connected with Nicholas Ferrar and Little Gidding, he noticed that it contains but seventy-three of the one hundred and sixty-nine poems of the Bodleian, and that two series of Latin poems were in Herbert's own handwriting. The readings of this manuscript differ notably from those of the edition of 1633 and of the Bodleian MS. After studying these differences, Professor Palmer came to the conclusion that this Williams manuscript was a copy of Herbert's poems, sent probably to Ferrar some time before Herbert had completed his full work. Arguing from this, he holds that poems which are not found in the Williams manuscript are probably from the later period of Herbert's life. Going still further, from a study of the subject-matter of the poems which are found in the Williams manuscript and those which are not, he finds that "no Williams poem contains any hint that its author is a priest, many distinctly state that he is not. A large part of the non-Williams poems deals with the joys and perplexities of the priesthood. It is impossible, then, that the Williams manuscript can have been written at Bemerton." Hence he concludes that the Williams manuscript is a collection of Herbert's poems made a year or two before Herbert's ordination as priest, in 1630, and that it contains only poems from this earlier period of Herbert's life, though other poems of this earlier period may have been held back to be polished, and therefore could not appear until the Bodleian manuscript and the edition of 1633. The evidence, as indeed Professor Palmer is scrupulous to point out, cannot be said to be conclusive; but on the other hand it is cumulative, and may fairly be held to establish a reasonable probability.

On the basis of this very plausible theory, Professor Palmer has divided the poems into three divisions: in the first he puts the poems all of which are found in the Williams manuscript, and which would have been written during Herbert's residence at Cambridge; in the second he puts those poems (some of which are found in the Williams manuscript) which he thinks came from the failure of his hopes for political advancement and his hesitation about entering the ministry; in the third division he puts those poems which he conceives were written at Bemerton after Herbert's ordination in 1630 and during his brief career as a country parson. Within each of these divisions Professor Palmer makes groups in which he has classified the poems in typical order, such as "The Resolve," "The Church," "Meditation," and "The Inner Life" in the first division; "The Crisis" in the second division; and in the third division "The Happy Priest," "Bemerton Study," "Rest," "Suffering," and "Death." It may be doubted whether some of these divisions do not smack too much of modern subjectivity, and whether in such arrangement there be not danger of unconsciously ascribing to a seventeenth-century author modes of thought which are characteristic of the nineteenth. Apart from that danger, however, it must be said that the arrangement justifies itself by its convenience; and that it makes possible something like consecutive reading of Herbert, which, in the arrangement of earlier editions, would have appalled even a devotee. Professor Palmer's enthusiasm over his discovery and his most plausible rearrangement is contagious, but we may doubt whether it has not occasionally led him into assertions which are somewhat too absolute for a matter so conjectural.

The annotations are very thorough. They cover words whose meaning has changed, throw light on dark passages, and give minute cross-references to the use of words or phrases in Herbert's own works and in those of some of his important contemporaries. The study of the matter and the style is exhaustive. Wherever there is a reflection of Biblical phrasing, Professor Palmer points it out, sometimes in cases where the ordinary reader may find the allusion somewhat nebulous. In the case of phrases drawn from the Psalms, Professor Palmer has not remarked that in some cases, as, for example, the first line of "Repentance" (vol. ii., p. 305), and in the twelfth line of "Love," (vol. ii., p. 401), Herbert's phrasing is closer to that of the Psalter in the Book of Common Prayer than to the corresponding passage in the Authorized Version. But the notes are full of matter, almost all of it highly significant; and there are besides many curious details, as, for example, the number of times that Herbert uses the word "star," the fact that the sports mentioned by Herbert are hawking, fencing, bowling, archery, and cards, but not ball-play, hunting, or dancing. Each page of the notes bears evidence of Professor Palmer's devotion and searching study of the works of his spiritual godfather.

And, after all, Professor Palmer need have made no such apology as that we have quoted above. It is worthy occupation for a scholar to edit even a minor author with such exactness and painstaking effort as he has given to this edition, and the world of letters is under obligation to him for his long labors. Herbert, though a minor poet, is established in English literature as are few minor poets of the seventeenth century. His poems have been constantly reprinted for general readers, where those of Giles Fletcher and Wither, even of Vaughan and Crashaw, are hardly known except to professional students of literature. He has not the smouldering passion which flares up every now and then to fuse the obstinate intricacies of Donne's style into a stream of glowing beauty, nor has he the Spenserian enthusiasm and rush of Giles Fletcher. He never attains the soaring beauty of the closing lines of Crashaw's "Flaming Heart," nor the limpid and melodious simplicity of Vaughan at his best, and in general his verse needs no more music than will express the emotions of a man of the world and a scholar. He began his life with a wholly natural ambition for a successful career in affairs of men and state; and when he turned in impulsive disappointment to his little rectory at Bemerton, he carried thither no spirit of mysticism, nor desire for an ascetic and cloistered life. His poems accordingly embody the ideal of the English Church, the *Via Media*, and its aspirations for a religious life which should be not only sincerely pious, but also reasonable and well ordered; and his verse embodies the insatiable and subtle analysis of a student, not the vague and half-light obscurity of the mystic. One feels that for him the universe was adequately thought out. Moreover, it was the age of embroidery; but where the ornament of Lyly and Sidney and Spenser was well termed "bravery," that of Herbert is subdued in color, and gains its richness from minute and complicated tracery. He inherited from Donne, his mother's friend, that delight in reticulated intricacies of phrasing which so roused Doctor Johnson's scorn; but one feels that with Herbert the intricacies are created by the poet's own ingenuity rather than by any profound difficulties of thought. For all the fact that Herbert's style is so archaic, his thought is the thought of many a pious soul of our own day.

The form of this edition is altogether admirable. The print is clear and restful to the eye, the margins wide without being affected, the paper light, and the volumes comfortable to hold. The notes to the poems are printed opposite the poems, so that one has the poem on the right-hand page, the corresponding notes on the left-hand. The illustrations are interesting and apt. The portrait of Herbert, published here for the first time, as the frontispiece to volume i., is a notable addition to literary portraiture. It is, obviously, White's original of his own engraving which was inserted in the 'Temple' of 1674, but the pencil drawing has a delicacy and expressiveness which are largely blurred in the engraving. In it one can see the fastidiousness, the traces of ill-health, the thought, and the courtly qualities which contributed to make Herbert what he was.

MOORE'S RENAISSANCE ARCHITECTURE.

Character of Renaissance Architecture. By Charles Herbert Moore, Author of 'Development and Character of Gothic Architecture.' Pp. xix., 270. With twelve plates in photogravure and thirty-nine illustrations in the text. The Macmillan Co. 1905.

This book, which matches in size and general appearance the second edition of the author's well-known 'Gothic Architecture,' is illustrated in the same way by means of "line cuts" in the text, and, in addition, a dozen photographic plates. These plates represent such epoch-making buildings as the great cupolas of Florence, Rome, and London, a Florentine palazzo, a Venetian palazzo, a Veronese palazzo, the banqueting hall (*i. e.*, royal chapel) at Whitehall, in London, and that curious eastern front on the great court of the Ducal Palace in Venice. Of the text cuts a large number, perhaps half, are drawn from the published works of Vignola, Serlio, Gotch, Du Cerceau, and other well-known authors of established treatises on the architecture of the times since the beginning of the Risorgimento in Italy.

There are, accordingly, fewer in proportion of those drawings which we assume to be made by the author's own hand or under his immediate supervision. This, however, is a natural result of Professor Moore's evident feeling towards his two great subjects—the triumphant culmina-

tion of Mediæval art, and the replacing it by that of the classical revival. In the one case the treatise is, of necessity, enthusiastic—a dithyramb, indeed; in the other it is in the main a long sigh of regret that so much splendid ability was misused. To Professor Moore the art of the Middle Ages—expressive, logical, and significant in all its manifestations—reaches its supreme type of excellence in the architecture which we call, by long accepted usage, "Gothic." In the later epoch, the architecture of the Renaissance is accepted as the unfortunate going astray of artists who were so very strong, so very intelligent, in their better understood labors with the painter's pencil and with the modelling tools of the sculptor.

This is a brief description of the two books in their essential characteristics, without the slightest desire to exalt one at the expense of the other. It may often be more important, as it is more difficult, to express disapproval of the spirit and meaning of a great style than it is to accept a great style as great in every sense and from every point of view. But there is one thing more which must be said, namely, that Professor Moore is not one of those authors who analyze and explain, balance merit against merit, compare style with style, as to virtues and shortcomings, and say continually to their readers that here are different manifestations of the human thought—that there may be many opinions about their relative importance. Such purely tentative and non-assertive ways are not characteristic of our author's work. He is a man of profound and strongly held convictions, and hardly allows a page or a half-dozen pages to pass from under his hand without a reassertion of the most important of them. The book on 'Gothic Architecture' caused much remark by its limiting the term to the French architecture of the years 1165 to 1300, speaking generally, and the setting down of all other architectures than that, whether non-French or French of a later period, as "pointed" architecture as distinguished from Gothic, or else as corrupt, and decadent in the worst sense of that word. But this bold assertion, which has, of course, met with contradiction, especially in England, is not more strongly urged than the continued statement in the new book of the want of constructive skill in the Renaissance architects, the want of logic in the Renaissance designs, the want of that true architectural beauty which comes from logical thinking, and the inexpressibly great superiority over all these later and derived styles of the Mediæval work of France.

It is curious to note how much of the book is taken up by the analysis of the two great cupolas—that of Florence Cathedral, built after 1420, and that of St. Peter's Church, built after the death of Michelangelo in 1564. It is perhaps a mistake to call this last-named building a work of the Renaissance, for the movement in Italy to which that name is properly applied, the Risorgimento, had ceased long before, and the Italians themselves speak of the second half of the sixteenth century as *la Decadenza*—assuredly a very different thing from a "rebirth" of any kind. But this use of the term "Renaissance" occurs generally in English books on fine art, contrary as it is to the more careful wording common in the languages of the more artistic nations—Italy and France; and the use of it in this too indiscriminating fashion is not to be imputed as blameworthy to an American writer. But, disregarding that interesting point of verbal criticism, it is, we repeat, curious to note that 67 pages out of 250 are devoted to the analysis of those two great structures; and that in a book not by an engineer—not by a Rondellet or a Choisy—but by an artist brought up as a painter and turning to the study of architecture on account of its absorbing artistic interest. But, lest the reader should suppose that our words imply any disparagement of the value of these two chapters, it must be said at once that there are many important considerations urged in this text which one would look for in vain in the works of the men brought up to the task of such analysis. The student misses but one important consideration, namely, that of the constructional difficulty caused by the lantern in each case, the enormous weight of which has so much to do with the doubtful stability of those masonry domes. The point is well urged by Professor Moore, that the masonry domes of antiquity, and those of the Byzantine style in its highest development, are sunk low amid masses of masonry which abut them and make them the immovable things they are, while the attempt made at Florence and at Rome to build a great bulging shell raised high in the air upon a "drum" has hardly been repeated in later times. The most famous domes or cupolas of the modern world—St. Paul's, the Invalides, the Val-de-Grâce, and St. Mark's at Venice—are of wood and covered with lead. But a masonry dome is one thing (and we have it in perfection in the Roman Pantheon and in the great church at Constantinople), while a cupola crowned by a lantern is a very different thing. You take a building of solid cut stone and constructed in the most massive way—a building eighty feet high over all, or at least sixty-five feet at the topmost course of cut stone. You put that building, weighing so many thousand tons, but seeming small to you by contrast with the huge bulbous structure which carries it, upon the top of this bulging shell, at the place where the Roman left a huge open *oculus*, and where the Byzantine builder left his shell, incomparably less daring, less boldly raised into the air, at its thinnest, and then you wonder that your dome is not as substantial as you had hoped. You notice cracks; and you are not sure how far they are the result of a little earthquake shock and how far they come of constructive reasons, and you put a huge iron chain, or two or three chains, around the base of your cupola. Well, this discussion of the vast weight of the lantern as the main difficulty does not receive that notice from Professor Moore which would be necessary to establish completely the demonstration of the feebleness of those two great neo-classic structures. On the other hand, the pages which deal with those structures are full of suggestion and of interest, and nothing that has been written on cupolas is more attractive than the comparison between the Florence Baptistery, with its curious semi-Gothic vaulting, and the *cimborio* of Salamanca, with its ribs, which yet do not make it a Gothic structure, and the solid-shell cupolas which form the principal subject of these chapters.

For many persons the most interesting chapters will be those devoted to the palace architecture of Florence, of Rome, and of the north of Italy (Chapters VI., VII., and IX.). The chapter on the architectural carving of the Renaissance is another of extreme interest because of the delicate discrimination made between the work of different men and of different epochs in execution and in design. Chapters XI. and XII. are devoted to the Renaissance architecture of France, and these, though full of acumen, seem also to fail a little in perception of the fact that a new architectural style was in process of formation in the north, during the years between 1460 and 1550—that is to say, during the period from the close of the Hundred Years' War and the restoration of peace in the royal domain of France to the beginning of the religious wars. To a Frenchman, that is the Renaissance; and, as all later styles are known by the names of kings, and are excluded from the Renaissance, so that term includes all the great flamboyant Gothic of France—Saint Maclou at Rouen as well as "the Church of Brou." But this architecture, the mingling of Gothic construction with semi-classical details in some cases (as at Blois and Chenonceau, to take our author's illustrations and them only), the mere avoidance of Gothic construction and the pointed arch in other cases (as in Azay-le-Rideau and Châteaudun), seem to pass unnoticed by our author, whose natural feeling of resentment at the supersession of the glorious and strictly logical Gothic building and Gothic design controls perhaps too strongly his feeling towards a later style.

The chapter on the Renaissance in England is of less importance because there was no Renaissance in England, as, indeed, Professor Moore tells us very plainly. The chapter resolves itself into an account of St. Paul's Church and the curious arrangement of its vaulting within, and its safe but most illogical cupola.

The Duke of Reichstadt (Napoleon the Second): A Biography, Compiled from New Sources of Information, by Edward de Wertheimer. John Lane Co. 1905.

History, unlike Art, delights in violent contrasts. Many of its most prominent figures owe much to the background against which they are set. Seneca and Savonarola, Robespierre and Lucretia Borgia, Thomas More and Marcus Aurelius, stand out in bold relief from their surrounding circumstances and impress our imaginations the more vividly. It is something akin to this that makes of the Duke of Reichstadt—who died young and accomplished nothing—one of the most pathetic and interesting figures of the nineteenth century.

His birth was an event wellnigh prodigious. Napoleon, the great scene-shifter of Europe, had announced a new transformation. The mighty French Empire was no longer to remain the private portion of a successful adventurer, it was to be converted into a European institution. Long married and childless, he announced that he would endow France with a direct male heir; and once more his imperial will triumphed. Josephine was repudiated; the Archduchess Marie Louise was married; and, on the 20th of March, 1811, the promised prince was born. Europe stood spell-

bound by the cradle of the King of Rome; but, twenty-one years later, only a few friends and attendants watched by the deathbed of the Duke of Reichstadt.

Mr. de Wertheimer's book has much to recommend it, but it is difficult to forgive him for not granting more than a few lines to Napoleon in his most human, most lovable aspect, to Napoleon paternally devoted to the little baby whose cherub head has been so charmingly depicted by Lawrence and by Isabey. Marie Louise, whom elsewhere the author does not spare, was but a clumsy mother, and Napoleon would often snatch the child from her arms and romp with it boisterously in true democratic fashion. How dearly Napoleon loved him is shown by an anecdote placed by Bausset as having occurred only a few hours before the battle of Borodino in 1812. A portrait of the little King of Rome had been sent to the Emperor from Paris. "I supposed that he would put off for a few days the opening of the case that contained the portrait. I was mistaken. . . . I can hardly express the joy the sight of it caused him. . . . His eyes were filled with tears, and he personally called about him the officers of his household and the generals who were awaiting his orders to make them share in the sentiments with which he overflowed." The Emperor then ordered the portrait to be placed on a chair outside his tent, so that the veterans of the Imperial Guard should share their master's joy.

On the Austrian policy during the period of Napoleon's fall Mr. de Wertheimer has much that is new and valuable to offer as a result of his extensive researches in the Austrian archives. His traversal of Welschinger's arguments as to Metternich's desire for a regency under Marie Louise at the time of Ottenfels's mission appears conclusive. At the same time his disparagement of Welschinger is carried too far, and also his neglect of the French point of view. In Méneval's Memoirs, for instance, there is nothing so poignant as the scene between Napoleon's secretary and the four-year-old child when all his French attendants were dismissed to be replaced by Austrian ones. This occurred just before Waterloo, Méneval being allowed to proceed from Vienna to Paris.

"Before leaving I went to the Imperial palace to say farewell to the Prince. I was pained to find him looking serious and unhappy. His charming vivacity and childish prattling appeared to have left him. He did not run up to me as usual, and watched me come in without making the slightest sign of recognition. . . . Although it was already more than six weeks since he had been under the care of the persons whom I found about him, he had not yet grown accustomed to them, and he seemed to view their faces with suspicion. . . . I asked him in their presence if he had anything he would charge me with for his father, whom I was about to see. He looked at me sadly and significantly without answering, then, withdrawing his hand from mine, he silently retired to the recess of a window. After exchanging a few words with the other persons present, I approached the spot where he stood observing us, and, as I bent to say farewell, struck by my emotion, he drew me to the window, and, looking at me with a most touching expression, said: Monsieur Méva, tell him I still love him."

The poor boy continued to love steadfastly the father whose name was proscribed, whose achievements had to be learned by stealth, whose memory had to be cherished in secret. During the rest of his life he was kept under the strictest supervision, a prisoner of state under ticket of leave. All intercourse with the Bonapartes was forbidden, and even when he was dying of consumption the letters of sympathy addressed to him by his uncle, the ex-King of Holland, and by his cousin, who was to be Napoleon III., did not reach him, but disappeared into the dark recesses of the Metternich archives to reappear only at Mr. de Wertheimer's bidding. The only Bonaparte he ever saw was his cousin, the impetuous Countess Camerata, who reached his presence by stealth one day, fell at his feet, and kissed his hand as that of her lawful sovereign. Was it wonderful that he should have learned the arts of dissimulation, that he should have built castles in the air?

Mr. de Wertheimer's book is a valuable contribution to historical knowledge. The policy of Metternich is in many details strongly illuminated by the documents here utilized for the first time. The author's style, however, is somewhat confused, and his judgment is far from critical. This is especially apparent when he deals with Prokesch, and it is beyond doubt that the Prince's attitude towards the revolution of Romagna was far less innocent than a perusal of Mr. de Wertheimer's book would suggest. On other less important points criticism might be offered, but, on the whole, the author may be congratulated on a painstaking accomplishment. The illustrations are well executed, and the portraits, several of them here reproduced for the first time, are very interesting. That by Euler, showing the Duke's profile on his deathbed, suggests strongly the well-known one of Napoleon taken at St. Helena after death.

The Speeches of Isaeus. With critical and explanatory notes by William Wyse. Cambridge (Eng.) University Press; New York: Macmillan. 1904.

Eighty-three pages of critical introduction, one hundred and seventy-four of Greek text with *apparatus criticus*, and five hundred and sixty-one of commentary—such is the census of the first edition of Isaeus in the English language. It is the work of many years of preparation and execution, by one who has shown himself not infrequently, and particularly in his legal articles in Smith's 'Dictionary of Antiquities,' exceptionally qualified to deal with the subject. And of it may be said at once that it will serve for a long time as an indispensable handbook to every scholar who is interested in the study of Greek testamentary law and our principal exponent thereof, Isaeus.

While the editor has throughout the book done his best, as he says, to meet fairly all textual and grammatical difficulties, yet it is the matter rather than the manner that has received most of his attention. And, as he also gives warning, the leading purpose of his treatment of the matter is

"to show, by analysis of the extant speeches, that ancient scholars had a juster appreciation of this orator's art than is shown by modern writers on Greek Law, for some of whom his unsupported statements appear to carry the authority of decisions of a Supreme Court; and that to extract truth from the arguments of an advocate bent on winning a verdict from an ignorant tribunal is a more delicate operation than many people seem to suppose."

Just here we may remark that who these modern writers are, does not quite appear. It cannot be that Mr. Wyse has in mind such authorities as Thalheim and Bauchet (yet see his note to 1, 4); and Seeliger, with his "simplicity worthy of Tom Pinch," supporting the thesis that Isaeus was a champion of equity against strict law (p. 178), is rather too much of a butterfly to be broken in this proclamation of the preface. We suspect that, rather than the scholar who has committed himself in cold type, it is the average reader who needs the constantly recurring warnings not to trust the advocate's pleading against the now lost presentation of the case of his opponents. Some of these warnings branch out in another direction. Thus, paragraphs 21-25 of the fourth oration may be "impudent" enough, but if we are to see in this sort of impudence "a measure of Isaeus's contempt for the intelligence of an Athenian audience," we shall have to rate the judgment of many a modern advocate on the intelligence of his fellow-countrymen as singularly low. And who, after all, are the ancient scholars that rated Isaeus more justly, that is, lower, than do the moderns? Mr. Wyse cites Dionysius's well-known summary against him: *πρὸς μὲν ἀντίδικον διαπονηρεύεται, τοὺς δὲ δικαστὰς καταστρατηγεῖ, τοῖς δὲ πράγμασιν, ὑπὲρ ὧν ὁ λόγος, ἐκ παντὸς πειρᾶται βοηθεῖν.* But the only truly invidious word here is *διαπονηρεύεται*; and if we are to condemn every lawyer who in a speech "deals unfairly" with his opponent's case, not a few high heads would fall. However, it is easy to be on one's guard against our editor's preoccupation—we had almost said fad—that Isaeus is always in the wrong, and to remember what he seems hardly to recognize, that in almost every important case, especially where equity plays a rôle, there is something worth the attention of the court in what is said for each party to the suit.

On the critical side, in the narrow sense of that term, the edition leaves little to be desired. Its printed apparatus, especially as regards codex Q, is much fuller than that of Thalheim, whose new edition of 1903 appeared after the text and most of the introduction of this were already in print. It is a relief to find that both scholars have independently come to the same conclusion about the only burning question of the text of Isaeus, that A1 is to be preferred to Apr. Mr. Wyse's expressions (p. lix.) of his doubts of the boldness with which Thalheim restores the effaced readings of Apr. are themselves somewhat bold in view of his own confession (p. xxii.) that he is not a trained observer of palæographical minutiæ, and they ought to be solved by Thalheim's explanation of the scientific procedure of his collation, recently given in a review of this book in the *Wochenschrift*. Of the history and condition of A itself, Mr. Wyse offers us the fullest account to be found anywhere, and it is very welcome. In dealing with crasis and elision in the text, we are glad to see that he simply reproduces the irregularity of A, remarking truly that "even if we could recover the

original copy of the orations in Isaeus's own hand, there is no reason to suppose that its spelling would reflect faithfully the elisions of contemporary speech" (p. xx.). In respect to conjectural emendations, he has admitted about a dozen of his own into the text, though suggesting many others in his apparatus. Of the former, τοιούτων for τοσούτων (1, 5) must be considered doubtful. It makes the thought smoother, as indeed do most of the admitted conjectures, but this is not always in their favor. In 1, 3 we should certainly prefer to keep ὡς ὑμᾶς instead of accepting Cobet's εἰς ὑμᾶς, for the reasons given by Thalheim in his new edition. Still, we agree with Mr. Wyse in his remark (p. 336) that "the most tenacious upholders of MS. authority are generally people who have not studied MSS."; and of his dictum that "good critics take account of the quality of a document before using it as a criterion of grammatical principles," there can be no better illustration than his accompanying note on the accidental omission of ἄν in manuscripts of various authors.

In the *apparatus criticus* we note a few slips. The certain emendation ἅπαις in Hypoth. 10 was originally suggested not by Fuhr, but by the lamented Ch. Graux in Tournier's 'Exercices Critiques.' In 1, 1, the suggestion κατέλειπε seems due to Hitzig, not Lugebil, and Herwerden has been (as so often in his emendations) anticipated in 1, 3, by another, this time by Frohberger.

In the explanatory notes we are glad to find much that is helpful on the usually neglected arguments to the speeches. A good deal of attention is paid throughout to rhetorical terms, which are apt to be passed over in English and American editions of the authors. Testamentary and other legal points, of course, receive exhaustive treatment; see, for instance, the note on ἐγγύησις (pp. 289-292). Many other things which we should scarcely expect to find here come in for copious annotation; for example, we have more than five pages on the use of horses in Greece, apropos of the word καθιπποτρόφηκας (5, 43) —all interesting enough, but rather "lugged in" to a book like this. In truth, the gathering from far and wide of different views from treatises by all sorts of scholars, and piling them together into a long note, is a trick rather too often played by Mr. Wyse, and sometimes the wood can scarcely be seen for the trees. Thus, in the corrupt passage in 5, 26, we have more than three pages in which all the proposed corrections are repudiated, and nothing new proposed to resolve the problem.

But these are ungrateful strictures on the work of one who has given generously of his best. We wish that he would next turn his attention to a treatise on Greek testamentary law, accompanied by a collection of the sources other than Isaeus. For the production of such a book, much wanted, he is eminently fitted.

New Creations in Plant Life: An Authoritative Account of the Life and Work of Luther Burbank. By W. S. Harwood. The Macmillan Co. 1905.

This volume, prepared by one who is heartily in sympathy with Mr. Burbank, and who realizes some of the peculiar difficulties under which a good deal of his work is carried on, is by far the most satisfactory account we have yet seen of Burbank's successful labors. Here and there the style is a little difficult to follow—in fact, it is worse than difficult, as will be shown by the following extract from the preface:

"The preparation of the volume has been a work of particular pleasure: First, because of the unusual interest which has centred in the development of the material, material which takes its rise in primal places and flows in a broad stream outward; and, second, and paramount, it has been a pleasure because of the contact it has brought with the man whose life and achievements it can but inadequately portray."

We do not know at all what is meant by "material which takes its rise in primal places and flows in a broad stream outward."

In our own country as well as in many parts of insular and Continental Europe, there have been some remarkable plant-breeders whose triumphs are well-known to horticulturists, and whose names will occur to all who are familiar with the progress of gardening and farming. But it is to be doubted whether any one of these enthusiastic and successful plant-breeders has ever conducted his work on a scale of such magnitude and diversity as that which Mr. Burbank has now developed. Part of the prejudice which has existed in certain quarters against his work, has arisen from the fact that his perfervid friends have appeared sometimes to ignore wholly the achievements of these other diligent workers in the same field, and they naturally have resented the slight.

Mr. Burbank's distinct contribution to plant-improvement as a whole consists in the untiring application of well-known principles to vast numbers of progeny and in a wide range. The method is one which demands absolute devotion to the appointed task, and hence it is characterized by a certain amount of what may be called necessary waste. It is the waste which we see everywhere in careful and yet prodigal nature in the endeavor to *keep* the type,

> "So careful of the type she seems,
> So careless of the single life."

In the earnest endeavor to *improve* the type, by crossing and by selection, the single life and the thousand lives must be sacrificed. It seems to be a great misfortune to our modern science of biometry that means are not at hand to record more carefully than can now be done the essential features of the myriad individuals lost in every experiment in which the improved type is sought. Plainly, Mr. Burbank has no time for this: he is working with the definite purpose of obtaining a single better plant, in any given case. But there has not yet been, so far as we have learned, any thoroughly systematic attempt on the part of any investigator to avail himself of the stupendous mass of material which is now going to waste.

We can recommend this volume as a readable and truthful description of a remarkable career.

Shakespeare and Holy Scripture. By Thomas Carter, Dr. Theol. London: Hodder & Stoughton; New York: E. P. Dutton & Co. 1905.

The student of Shakspere will hardly take up a new work by the author of 'Shakespeare, Puritan and Recusant,' with any very favorable prepossessions. As a matter of fact, an actual perusal of Dr. Carter's latest book, 'Shakespeare and Holy Scripture,' will be likely to confirm most readers in this anticipatory attitude of distrust. With the exception of two brief opening chapters, the work consists of a vast array of supposed parallels between passages in Shakspere and passages in Holy Scripture which the author sets before the reader with only here and there a word of comment. The plays are arranged in a chronological order which, for the most part, differs but little from the arrangements adopted in the most recent works on Shakspere. In the table of the plays according to the "order of their probable composition," one is surprised, however, to find "Richard II." and "Richard III." assigned to 1597, and so dated later than "The Merchant of Venice." Such an assignment is not likely to raise one's opinion of the author's critical judgment. It may be said at once that the same deficiency in judgment in a different application shows itself in the lists of parallel passages. If a passage in Shakspere and a passage in the Bible contain one word which is the same, that is practically enough for our author—the passages are printed here in juxtaposition. Thus, when Jack Cade's rabblement in the "Second Part of Henry VI." (Act iv., sc. viii. 19) cry out "God save the King!" this is commented on as a "direct quotation of Scripture," 1 Samuel x. 24: "And all the people shouted and say'd, God save the King." It is safe to say that the "rabblement" in question would have been even more surprised to learn that they were quoting Scripture on this occasion than M. Jourdain in the "Bourgeois Gentilhomme" when first informed that he had been speaking prose all his life without being aware of it. On a par with the above—or perhaps a little less exact—is the citation of Psalm xx. 5: "Set up the banner in the Name of our God," in illustration of the common asseveration "In God's name" as we find it in the "Third Part of Henry VI." (Act v., sc. iv. 81): "Then in God's name, lords, be valiant," Or, finally, take the words of Guiderius in "Cymbeline," Act iv., sc. ii. 191, "All solemne things should answer solemne accidents." How can Dr. Carter pretend to connect these words with Psalm xlii, 7: "One deepe calleth another deepe"? In consequence of this fatal want of judgment, the book may be pronounced to be practically valueless. The most that can be said in its favor is that future editors of Shakspere, by sifting carefully this huge bulk of chaff, may possibly find in it a few grains of wheat—a few genuine parallels hitherto unnoticed; but a cursory examination does not inspire one with much hope even of that.

With regard to the two opening chapters, in one of them Dr. Carter sets forth, in line with his previous work, views of Shakspere's leanings towards Puritanism which are not likely to meet with acceptance; in the other he urges that Shakspere's knowledge of the Bible was gained from the Genevan version. This being the version in commonest use in the years when Shakspere's plays were written, in the main there is no objection to the view here expressed—indeed, the evidence, generally speaking,

confirms it; but reference to such an accessible work as Anders's 'Shakespeare's Books' (p. 201) would have warned the author against putting his statement in an unqualified form.

Zwiedineck-Südenhorst, H. von. Maria Theresia. Lemcke & Buechner.

A good deal depends on how it's done, and love, imminent peril and heroic sacrifice have figured in many books, but the publishers' readers believe that a new California author, Charles Tenney Jackson, has so handled these themes in his LOSERS' LUCK, to appear this month, as to have made of them, with a good amount of humor, "The True Romance." The story centres around some filibusters from Frisco. The scenes are mostly at sea and in Guatemala. $1.50.

Henry Holt & Co. 29 W. 23d St. New York.
